R E P O R T

FROM

SELECT COMMITTEE

ON THE

S I L K T R A D E:

WITH

THE MINUTES OF EVIDENCE,

AN APPENDIX,

AND

I N D E X.

Ordered, by The House of Commons, to be Printed,
2 August 1832.

Jovis, 1^o die Martii, 1832.

Ordered,

THAT a Select Committee be appointed to examine into the present State of the Silk Trade, and to inquire what effects have been produced by the changes in the Laws relating to it, since the Year 1824; and whether any, and what Legislative Measures, compatible with the general interest of the Country, may be advisable, in order to promote it, or to check Smuggling in Silk Manufactures; and to Report their Observations thereupon to The House:—And a Committee is appointed of

Earl Grosvenor.

Mr. Henry L. Bulwer.

Mr. Poulett Thomson.

Sir Robert Peel, Bart.

Mr. Alderman Venables.

Mr. Courtenay.

Mr. G. Bankes.

Mr. Hume.

Mr. Alexander Baring.

Sir H. Parnell, Bart.

Mr. Frankland Lewis.

Mr. Fowell Buxton.

Sir Michael Stewart, Bart.

Mr. Strutt.

Mr. Heywood.

Mr. Stewart Mackenzie.

Mr. Edward Stewart (of Wigton.)

Mr. Sheil.

Lord Dudley Stuart.

Mr. Ayshford Sanford.

Mr. James Morrison.

Ordered, That the said Committee have Power to send for Persons, Papers and Records.

Ordered, That Five be the Quorum of the Committee.

Martis, 6^o die Martii, 1832.

Ordered, THAT Mr. Alderman Waithman be added to the Committee.

Mercurii, 7^o die Martii, 1832.

Ordered, THAT all Petitions presented in the present Session, on the subject of the Silk Trade, be referred to the Committee.

Jovis, 15^o die Martii, 1832.

Ordered, THAT Mr. Wynn Ellis be added to the Committee.

Lunæ, 26^o die Martii, 1832.

Ordered, THAT the Petitions of Silk Throwsters of Blockley, and of the Vicar, Churchwardens, Guardians, Overseers and Inhabitants, Owners of Property in the parish of Foleshill, complaining of the distressed state of that Trade, and praying for relief, be referred to the Committee.

Ordered, That the Petition of Silk Manufacturers and Throwsters in Manchester, against any alteration of the Laws relating thereto, be referred to the said Committee.

Lunæ, 9^o die Aprilis, 1832.

Ordered, THAT Accounts of Drawback on Silk Manufactures exported in 1830 and 1831, and of Raw and Waste Silk imported and entered for Consumption, in each year, from the year 1814 (presented 9th April), be referred to the said Committee.

R E P O R T.

THE SELECT COMMITTEE appointed to examine into the present State of the **SILK TRADE**, and to inquire what effects have been produced by the changes in the Laws relating to it, since the Year 1824; and whether any, and what Legislative Measures, compatible with the general interest of the Country, may be advisable, in order to promote it, or to check Smuggling in Silk Manufactures; and to report their Observations thereupon to The House; and to whom the several Petitions, presented to The House in the present Session of Parliament on the Silk Trade, were referred; and who were empowered to report the **MINUTES** of the **EVIDENCE** taken before them, to The House:—HAVE examined the Matters to them referred, and have agreed to submit to The House the Evidence already taken before them.

YOUR COMMITTEE regret that they are unable to make any General or full Report on the several Matters submitted to their consideration; but the various Interests involved, and the extent of the Subjects brought before the Committee, as well as the great number of Witnesses they have had to examine, and the knowledge that many others still remain to be examined, compel them, at this late period of the Session, only to lay the Evidence before The House.

2 August 1832.

MINUTES OF EVIDENCE.

Veneris, 16° die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR,

IN THE CHAIR.

James Deacon Hume, Esquire, called in; and Examined.

1. YOU are Joint Secretary to the Board of Trade?—I am.

2. The Committee have desired your attendance in order to state the changes which have taken place in the laws relating to silk, and also to put in certain Custom-house Accounts, which you can furnish from the proper office; the first change that took place was in 1824, was it not?—Yes, in April 1824.

3. Were you employed in 1824, in preparing the Act of Parliament of that year, relating to the silk trade?—I drew the Bill.

4. And afterwards in framing the Tables of Duties on the Act of Parliament of 1826?—I was.

5. Have the goodness to state to the Committee on what principles these Acts of Parliament and the Table were constructed?—The intention of the Act of 1824 was to substitute a protecting duty of 30 per cent. in lieu of total prohibition.

6. Then the Committee are to understand, that it was upon the principle of substituting a duty of 30 per cent. that the rated duties were fixed in the Act of Parliament of 1826?—The Committee will remember, that two years or rather more was given before the Act came into operation, and in the progress of that time the

James D. Hume,
Esq.16 March,
1832.

James D. Hume,
Esq.

16 March,
1832.

trade became of opinion that an *ad valorem* duty would not be effectual; they therefore begged and suggested, that certain rates of duty, by weight, should be computed, so as to give the 30 per cent. as nearly as such rates could be made to do so; and it was upon that principle, and in consequence of the change of opinion in the trade, that the Tables of 1826 were prepared before importation commenced, and I was employed in preparing them.

7. They were prepared strictly with the view to give 30 per cent.?—That was the intention; and I have good reason to believe, that according to the value of silks at that time the intention was not frustrated, and that the Table then gave 30 per cent. as nearly as rated duties possibly could give it; the articles could only be classed in descriptions, but there will be varieties of values of the same description; a fixed rate will give different per centages on the different values of the same sorts of goods; it will be a heavier duty on the inferior and a lighter duty on the superior articles; the average on each description was supposed to be 30 per cent. as nearly as possible, by the Tables of 1826.

8. That was the principle which regulated the construction of the first Tables?—It was considered at that time by the Government that 30 per cent. should be the maximum of protection to any trade when they were relinquishing prohibition and prohibitory duties, and changing to the protective system. At that time the Government kept two points in view, one was the facility of smuggling, the other was the giving an adequate protection to home industry; 30 per cent. was deemed a maximum for protection, and in respect of silk it was supposed to be the minimum of smuggling.

9. The correctness of that Table was afterwards destroyed by the changes in the value of the goods, was it not?—Very considerably so; the goods generally became of less value than when the Table was framed, and some in a greater degree than others; the value of silk, the material had fallen.

10. And an attempt was made in 1829, when the duty was again altered, was it not, to adjust the rates of duties again to the original scale?—The Table was then re-constructed, with a view in great measure to such adjustment; but the previous principle was not quite strictly adhered to; some articles were found to be less liable to smuggling than others, and where smuggling did not interfere there was rather more protection given; so far one of the principles may be said to have been departed from in the second Table, that is the fixing of a maximum of protection.

11. The other principle, namely, the fixing the duty at the minimum cost of smuggling was attempted to be adhered to?—It was attempted and fully intended, for on one article, plain silk, the duty was put at 25 per cent. because at that time it was understood that that was the article chiefly smuggled, certainty and quickness of arrival being less important in plain than in fancy silks.

12. Can you state, from the Returns you have brought, how the importation of raw silk has gone on since the repeal of the prohibition declared in the Act of Parliament of 1824?—Yes.

13. Do I understand you to mean, that the duty in 1829, was in any case intended to be more than 30 per cent.?—Yes; the fact is, that velvets, for instance, were allowed to remain at more, and there was no reduction on several of the other articles, although their values had fallen. I also think that crape was conceived not to be so easily smuggled as the plain silks.

14. Are we to understand that you conceive that the principle of the arrangement of 1829 was, that the minimum of smuggling would be attained by taking 30 per cent., or 25 per cent., or any other rate of per centage as the rate of protection of the trade?—According to the best of my opinion, the minimum of smuggling was believed to be attained in 1829, as much as in 1826, the intention was to stop smuggling at all events.

15. And that was supposed to be 25 per cent.?—25 per cent. on plain goods, and there was some variation in regard to some others; in some it was conceived that the risk of smuggling did not create a necessity for reduction, although the rated duties gave much more than 30 per cent.

16. With the exception of velvets and peculiar articles of that nature, was not 25 per cent. taken in 1829, as 30 per cent. had been taken in 1824 and 1826?—Only for plain goods: the Tables will show that, in the option given to the officers.

17. As far as I understand, I think the reduction did not take place in consequence of the desire to reduce the duties; but the reason of it was, because the goods had fallen in price, and, consequently, the duty on them was relatively higher than it

it

it was in 1824?—The duty had become higher relatively to the prices at that time. The Table of 1829 was conceived to give higher *ad valorem* duties than the Table of 1826. The change when reduction was made was forced on us by the apprehension of smuggling. We went no further than the necessity required.

18. Have you an account of the Table of Duties as fixed by the law in 1826?—Yes.

19. I have understood you to say, that the duties were determined on in April 1824, but that they were not brought into operation until April 1826?—They were altered in 1826, and before they came into operation, which was not till the 5th July 1826.

20. I wish to know whether the duties brought into operation in 1826 were the same duties that were decided on in the year 1824?—The duty in 1824 was stated in one word—simply 30 per cent. The Table which was prepared in 1826 meant to give the same, and the principle was to be the same. It had been arranged in the year 1824 that the duty should be 30 per cent.

21. But were not the officers of the Customs allowed, in the year 1826, to take the same *ad valorem* if they chose it?—No, not in 1826: in 1829 they were, and that was with a view to the getting the full 30 per cent. in case that any goods of very great value should be introduced at that rate of duty which applied to them.

22. Another alteration was made in the Tables in the year 1829?—Yes.

23. Are the Committee to understand that these alterations were intended to be equal on the whole to 30 per cent.?—I have meant to be understood, that the alterations in 1829 departed, in some degree, from the original intention; some articles, in particular the plain goods, were so much smuggled, that it was intended the duty on them should be only 25 per cent., and on others it was left unchanged, with a consciousness that they were more than 30 per cent. The Table in 1829 was not, like that in 1826, framed upon one single direction: in the former instance the direction was to make it 30 per cent.; in the second there was a modification; 25 per cent. was adopted in some cases, and even more than 30 per cent., in other cases, was consented to by the manufacturers.

24. Then am I to understand you to say that this modification was applied to the different qualities of goods, but still it was intended to be in the same proportion of 30 per cent. as it was originally?—I meant to say, that I considered it was not so intended.

25. Was it intended to be more than 30 per cent. or less than 30 per cent. on the average?—I do not exactly feel the application of an average. The duty on one article does not average with the duty on another; each pays by itself. Some goods, as I have said, were placed at 25 per cent. and others at 30 per cent., and some at much more than 30. In the last case, it was not a raising of the duty, for the duty might be said to have been left, rather than fixed, at more than 30 per cent.

26. In 1824, do you mean that the articles rated at an *ad valorem* of 30 per cent., which you say were plain goods, were in 1829 considered to be taken at 25 per cent.?—The rate in 1829 was meant to give 25 per cent. on plain goods.

27. Was not there an arrangement in 1829, that the officers should be allowed to take an *ad valorem*, or a duty per pound, at their pleasure?—The officers were allowed, at their sole option, to take the *ad valorem* duty instead of the rate; that is to say, to the parties who were the owners of the goods, you shall enter their goods at value, and as the option was only on their side, and was of course given for the protection of the revenue, they would only do that when the goods were of very great value, and were entered at a rate, which in the judgment of the officers, would not give the intended per centage, whether it was 25 or 30; but there is no instance in which the officers had a right to demand more than 30 per cent. if they required the goods to be entered at value.

28. In 1826 there was no *ad valorem* duty at all?—There was no choice; there were some goods that could not be rated; but there was no choice except in instances of millinery, or some things of that sort.

29. And 25 per cent. was the maximum, previously it had been 30?—Yes; on plain goods.

30. Then the Committee understand, that in 1829, with the exception of the plain goods, which were reduced from 30 to 25 per cent., there was no alteration in the rating; but in consequence of the goods having decreased in value, and the same rating being continued, it operated so as to produce a higher rate of duty?—There were alterations in the rating of many of the articles, and in some there was none. The plain silk which had been 15s. the lb. was reduced to 11s. the lb.; that 15s. was understood to be 30 per cent. in the former case, but in the latter case the

James D. Hume,
Esq.

16 March,
1832.

James D. Hume,
Esq.

16 March,
1832.

11 s. was understood to give only 25 per cent; then there came the figured and the satin, they were reduced, but still they were meant to give 30 per cent.; others were left at the original duties, with the knowledge that they gave more than 30 per cent.

31. In fact, according to your account, it seems that there were three divisions of silk goods, some where the principle of 30 per cent. was adhered to, others where it was taken at 25 per cent. which is a reduction, and others for which certain duties were assessed, amounting to more than 30 per cent.?—Yes; but these last were not alterations.

32. Did you draw out both Schedules?—Yes.

33. What were your instructions in drawing up the Schedule of April 1826?—To adhere strictly to 30 per cent.

34. What were your instructions for drawing up the Schedule for 1829?—Certainly not such instructions as in the former case, because it was agreed that there should not be an universal rule; it was rather a matter of discussion through the whole time of drawing up the Tables. In the first case there was an universal rule, in the other there was constant discussion without a fixed rule.

35. The effect of the Table of 1829 was to reduce the protection of the silk trade?—I should certainly say it increased the protection as compared with that of 1826, except on one article.

36. The Table of 1829, the duty was fixed at the minimum cost of smuggling in all cases?—That was the intention of the government of that day; it was believed, that the articles, on which they left the higher duty unreduced, were less likely to be exposed to smuggling than those on which they had reduced the duties.

37. Was not there an understanding at that time, on the part of the silk trade, that a duty of 30 per cent. was absolutely necessary for their protection, and was not that stated in their communications with the government?—I conceive that the silk trade thought a great deal more than 30 per cent. was necessary.

38. Was not the result of their negotiations, if we may call them so, with the government, that they were to have that protection?—They were to have 30 per cent. if practicable. I stated at first that two principles were acted on, one of these was to give the maximum of protection, which was agreed on not merely for silk but any goods; to give that maximum to silk, provided the minimum of smuggling would admit of it; therefore when 30 per cent. was agreed on, and might be considered as a compact with the trade, it was likewise accompanied with the condition of the practicability of it in preventing smuggling; consequently the 30 per cent. would give way whenever it was found necessary to go lower in order to undersell the smuggler.

39. Was it not believed that such an arrangement could be made on the part of government as would ensure the collection of 30 per cent.?—There may be various opinions as to the stopping of smuggling. I believe when the temptation to smuggling is great it is very difficult to put an end to; it was intended to use every salutary endeavour that could be devised to prevent the continuance of smuggling.

40. Did you, from the knowledge you then possessed, believe that 30 per cent. could be collected, so as to prevent smuggling?—In 1826 I certainly entertained a very strong hope, as far as my opinion is worth any thing, that it could be collected, because accounts had been given of the price of smuggling, which led us to believe it would be collected; smuggling, like every thing else, has been lowered in price.

41. In 1829 you were convinced that that opinion had been an erroneous one?—I conceive that before 1829 the erroneousness of that opinion had been proved.

42. Be good enough to hand in a Table of the Duties of 1826, and also a Table of the Duties of 1829?—They are in columns, with observations as to the percentages.

[The Witness delivered in the following Paper.]

43. Have you a Table showing how the importation of raw silk has gone on since the repeal of the prohibition was declared in 1824, and how it was in the previous years?—I have prepared a Table of that description.

44. How far back does that Table go?—To the origin of the prohibition.

45. When did the prohibition take place?—Partly in 1765 and partly in 1766; some prohibition was imposed in 1765, and then it was made complete in 1766.

46. What was the amount of the importation of raw silk at that time?—I have the average of 1765, 1766 and 1767, 352,000 pounds weight.

47. And of thrown silk?—Three hundred and sixty-three thousand.

48. Will you state the progress of the trade from the paper you hold in your hand?—I have the average from 1785, 1786 and 1787, which is a period of 20 years after the prohibition. The raw silk was then raised from 352,000 to 544,000, and the thrown silk was reduced from 363,000 to 337,000, that is at the end of 20 years after prohibition had been enforced. I then have taken the average of 12 years, from 1801 to 1812, to show the progress in a term of 30 years, between the last and the next triennial average. The raw silk, in those 12 years, was 760,000; the thrown silk 350,000; then I have taken three years again, 1815, 1816 and 1817, which is a period of 50 years after prohibition and the first years of peace, 1,095,000 of raw silk and 293,000 of thrown. I then take the three last years prior to the change of the law, 1821, 1822 and 1823, the raw silk was then 1,970,000, the thrown silk was then 355,000. I then take the three last years, 1829, 1830 and 1831; and the raw silk was then 3,075,000 the thrown silk 374,000.

49. In the account of raw silk, do you include waste during the last three years?—I do not; there were four years in which they paid the same duty, and were not distinguished. I have made a deduction, to the best of my judgment, for the waste in those

James D. Hume,
Esq.

16 March,
1832.

those four years, from 1826 to 1829. In this account I have also the progress of the waste silk which may be worth stating; I have not the account for any distant period, only from 1815. In the three years 1815, 1816 and 1817 the quantity of waste silk, including any "knubs or husks" was 27,000 pounds; and the next three years 1821, 1822 and 1823, it rises to 74,000, and in the next three years 1829, 1830 and 1831 it was 515,000. In 1831 it was 762,000, therefore rising from the year 1815 from 27,000 to 762,000, in addition to the necessarily great increase of the produce of our own throwing mills.

50. What duty was paid upon it in the year 1815?—Until 1824 the duty was 4 s. the pound, then 3 d. a pound, afterwards a penny, in common with raw silk, and now it is 1 s. per hundred weight.

[The Witness here delivered in the following Return.]

QUANTITIES of RAW SILK, WASTE SILK, and THROWN SILK, Imported at certain periods.

In 1765 and 1766, Prohibitions on Manufactures enacted.	Raw Silk.	Waste Silk.	Thrown Silk.

* In these Years, Waste Silk was included with the Raw Silk; assumed Quantities have therefore been transferred from one Account to the other.

52. You

52. You have not stated what the alterations were in the duty on raw and thrown silk since the year 1824; will you be good enough to state what alterations have taken place in the law relating to thrown silk since that period?—The duty on raw silk, prior to the 25th March 1824 from British India was 4s. the pound, from other places 5s. 6d. On the 25th March 1824, and afterwards, raw silk 3d., from all places. On 5th July 1826 1d. from all places; then thrown silk, prior to 25th March 1824, all sorts 14s. 8d.; 25th March 1824, 7s. 6d.; 5th November 1825, 5s. on all sorts; 5th July 1826, 5s. on organzine and crape, and 3s. on tram and singles; 5th July 1829, 3s. 6d. on organzine and crape, and 2s. on tram and 1s. 6d. on singles.

James D. Hume,
Esq.

16 March,
1832.

[The Witness here delivered in the following Return.]

53. You have stated, that the duties upon thrown silk were reduced in 1824, again in 1825, again in 1826, and again in 1829; by the Papers which you have given in, it appears, that in spite of that great reduction, the import of thrown silk did not increase in any material degree, certainly not in the least degree in proportion to the increase of raw silk?—By no means; because in 1765 the thrown silk was 363,000, and the average of 1829, 1830 and 1831 is only 374,000, while the raw silk has increased from 352,000 to 3,355,000.

54. While you were at the Board of Trade have you had occasion to hear, in the consultations you have had with the Board, the frequent complaints of the silk trade during the time the prohibition was in force?—I am aware of the applications made by the trade, for a considerable length of time, and of the character of those applications.

55. What account did they give of the cause of the distress, and the nature of it at that time?—In 1817 an application was made, very numerously signed by the throwsters, complaining of the duty then on raw silk, and that it was not drawn back, which consequently prevented them from exporting thrown silk. This application was backed by a similar application from the East India Company, and the representation

James D. Hume,
Esq.

16 March,
1832.

representation was that "if the silk thrown in this country could be discharged from all duty imposed on the raw silk, that they could export thrown silk for the use of other countries, and that they looked at the progress, as they stated, which had been made in the exportation of cotton yarn, and they anticipated an ability to carry on a trade by the export of thrown silk similar in a great degree to that which was carried on in the export of cotton yarn;" that was the case of the throwsters. It was signed by seventy-seven throwsters. The East India Company presented a memorial at the same time to the same tenor; they also used the expression in their application that, "they believed that we could export thrown silk like cotton yarn." A petition, in some degree similar, was presented in 1818, by the manufacturers, and several others in 1819, stating "that the demand of manufactured goods had for some time past so decreased as to afford serious ground of alarm to the manufacturers, and to threaten the existence of the silk manufactory of this country."

56. From what part of the country did this come?—From the London district; the Spitalfields district.

57. Was the Coventry district united with the Spitalfields?—That was from Spitalfields; then there was one from Nottingham and another from the Dublin silk trade. In the first petition, after what I have quoted, they in another part say, "The principal cause is the duty preventing competition with foreigners," meaning the duty on the raw and thrown silk, and of course alluding to exportation. In 1818 the trade of Nottingham made a similar representation: they stated in their petition, "that the trade was in great distress, and that men who used to earn from 30s. to 40s. a week, now can only earn 10s. or 11s." this was in 1818. They state, "that their dependence is on an export trade; that the trade was stopped for want of a sufficient drawback of the duty on the Piedmontese thrown silk, which alone can be used in the articles that they make."

58. Do they state the articles?—Plain point silk net; they, like the others, look to relief from exportation. The Dublin silk trade complain of the "insufficient drawback of the duty on the raw material, as the reason why the British manufacturer cannot compete with the French in the foreign market." In June 1819 a similar application came from Spitalfields. It proceeds on the assumption that British silk, fairly discharged from the home consumption duty on the raw material, by a sufficient drawback, can compete with French silks in the Foreign markets.

59. Does it distinguish what branch of manufacture it was that made this application?—No, I do not think it does; I took these extracts from the memorials in the books in our office.

60. Are these all entered in your books?—Yes, they are; according to their complaint, a sufficient drawback not being given a sort of transit duty remained on the goods, and that must always be considered to be a great impediment to a foreign trade. I should say that the general complexion of these applications was this: That the home trade was saturated, and that therefore it was time they looked, like the cotton spinners and the cotton manufacturers, to a foreign trade; and they described, that if the foreign trade was not interrupted or opposed in any way by any duty, that is, if an adequate export drawback were given on the manufactured goods, equal to the duty on the materials, if that was done then like cotton, (for they constantly refer to the great success of cotton), silk also might have an ample export trade, and in some places they say that it would become one of the staple commodities of export from this country. In consequence of these representations, as I presume, the Act of 59th of Geo. 3, c. 112, dated the 12th of July 1819, gave the following additional bounties, 3s. 4d. a pound on ribbons, and 5s. 4d. on broad silks, in addition to the bounties which had long been in force before, and which, though called bounties, were in reality drawbacks.

61. You do not know what those bounties were, do you?—No; I have not brought a memorandum of them.

62. Do any of these petitions complain of the introduction of contraband silks?—No, they were on a very different subject; the petitioners were then asking only for a fair stage, in order that they might compete with foreign silks on equal terms; but in 1810 there was an association of the silk trade formed to prevent smuggling, and the papers, with their proceedings, were laid before the government of the day. The title of it is "To stop the alarming introduction of foreign manufactured silks." I have not perceived, in looking over the books for the other petitions, that the subject of smuggling was formally complained of again after that, but the complaints out of doors were constant and notorious.

63. They have made no complaint since then?—I am not aware of any presented in writing,

writing, perhaps they might; but such subjects are often mentioned at interviews or in conversation.

64. Have you any other papers you wish to give in?—Yes.

James D. Hume,
Esq.

16 March,
1832.

James D. Hunt,
Esq.

16 March,
1832.

65. You have not mentioned particularly any memorials presented from Coventry, prior to 1824?—I am not aware that there are any.

66. Do you think that the prohibition was more effectual against smuggling than the protecting duty?—Yes; I think that the smuggling of an article that cannot be legally possessed within the country at all may be more effectually guarded against than that of one which is admissible, however high the duty; no doubt a more rigid rule may be adopted, and the severity of the law may be applied with more decision, so as to make it more effectual.

67. You gave us the years 1829, 1830 and 1831; could you give the average of the import of raw silk in the years 1826, 1827 and 1828?—Every year, singly, from 1814, is included in the other Return which I have handed in.

68. When you say that you think that, in the event of a prohibition fewer goods would be imported, or a more effectual prevention of smuggling take place, that would depend on the power of distinguishing the French manufactured goods from the English manufactured goods?—I understand they are not so distinguishable as they were some years ago, and of course if that is the case, the success in detection would be less than it has been previously.

69. You have stated, that 30 per cent. was fixed by those who made the law which you have alluded to in a former answer; was that as high a protection as should have been fixed with any chance of keeping out the smuggler?—I stated, that the 30 per cent. was at the first established on two principles; one was, that it was hoped it would be the minimum of smuggling; but it was not intended to give more than 30 per cent. originally, in any case whatever, when it was considered how large a portion of the value of silk consist of the material itself, perhaps half, 30 is perhaps 60 per cent. on the industry, which was the subject intended to be protected.

70. In point of fact was it discovered that this protection did not operate in the way that was expected?—We were told that smuggling took place, and the alterations were made to prevent smuggling.

71. Do you conceive that these alterations have, in point of fact, in any degree prevented smuggling?—I understand that those articles on which the duty was reduced, the plain goods, are not now smuggled, except sometimes, in conjunction with other articles on which the duty is so excessively high, that the payment on the one helps to cover the other; gauzes for instance. An assortment may be made where the gauze, being subject to 60 or 70 per cent., would carry with it some other silks which would not have paid more than 25 or 30 per cent., such as plain silks, and which would not have been smuggled by themselves.

72. That is your opinion?—My opinion is, from all the information I have been able to obtain on the subject, that plain silks by themselves are not much smuggled.

73. Explain why there is an advantage in bringing plain silks over with gauze, when, as you state, there is no advantage in smuggling a plain silk by itself?—The advantage is in the assortment; and in occasional opportunities of bringing a variety of things together at a low price. If some of them are subject to a very high duty, it may answer the purpose to unite with them a portion of goods which are subject to a moderate duty, and so smuggle the whole; the high duty on one article covering as it were, or extending a portion of its advantage to the other, which is subject to a low duty.

74. I do not comprehend in what way there is an advantage in smuggling the plain with the silk crape and lighter articles; it appears to me the advantage would be greater if a certain sized package was to be brought over, the whole consisting of lighter articles rather than that you should include in that package a grosser fabric on which they say there is no advantage whatever in smuggling?—On which there is no advantage in smuggling singly; the advantage, as described to me by the trade, consists in buying an assortment together, and in the better purchase thereby made of the whole.

75. In saying that the advantage is in the purchase; do you mean that in France these articles of different kinds are purchased from the same manufacturers?—I do not mean to say that there or are not; but I believe it is so in ribbons. There may be middle dealers in France as there are in England; I am speaking from what has been represented to me; I am only stating the impression on my own mind; and what I have brought my belief to—the value of that belief the Committee will judge of. I cannot give specific information or evidence on such subjects, and I may have been misled by others; but I think that large purchases are made of many sorts of goods in lots; and made much more advantageously than by buying one particular sort separately, and having bought such lots, the party is anxious to
bring

James D. Hume,
Esq.

16 March,
1832.

bring them all into this country upon the best terms he can ; he accordingly compares the duty and the payment for smuggling as per centages on the goods, and if he finds an advantage on the whole in smuggling, he smuggles his whole parcel ; what I mean to say is this, that the duty on some articles is so excessive, that they may actually become the vehicles of smuggling other articles in their company, which, were it not so high, would be very little, or not at all smuggled alone.

76. Then I understand it to be the result of your opinion, that the plain silks are in no instance smuggled solely with a view to the benefit the smuggler can gain on this particular article ?—I do not mean to say no instance. I mean to say, that smuggling in the sense in which it is understood to be important, does not take place as I am told, and believe, in plain silks, it occurs chiefly in inferior gauzes ; but that 25 per cent., may not lead to occasional smuggling of plain silks, by themselves, I do not mean to deny. It is a near race between smuggling and regular entry, and the mixture of some high dutied gauzes will decide the question in favour of smuggling.

77. Do you conceive that smuggling upon the whole has increased or diminished, comparing this period with the period of 1826 ?—I am induced to think there has been more smuggling of late, but really it must be like the greatest part of my evidence, only matter of opinion, formed in the best manner I am able.

78. When you say that you think smuggling has increased of late, do you mean that it has increased continually since 1829, or that it has been greater within a very short period now passed ?—I mean particularly recently ; I should say since the latter end of 1830. Since the distress and difficulties at Lyons the temporary loss of trade in France was supposed to have thrown a great quantity of goods on the market, those which were sold at less than their cost of manufacture, and were purchased by the smugglers.

79. You say that since the distress in France a great quantity of goods have been thrown on the market at a low price ?—I meant it to be understood, that a great quantity of goods were thrown on the French market, and that made an opening for persons who intended to smuggle to buy at very low prices, which reduced the risk of smuggling as compared with the duty ; the lower you purchase the goods the less your stake at risk compared with the prize, which is the duty.

80. You say it is not worth smuggling articles under 25 per cent. ?—It is so understood ; the trade will always pay considerably more to the revenue than to the smuggler, equal to five or six per cent.

81. Do you consider that there is a disposition generally in the trade that they would, supposing they have the option, rather pay five per cent. more on the goods to the revenue than they would save themselves to that amount by smuggling ?—I certainly think that they would ; the regular importer can give his order, and can have it executed immediately ; he knows when his goods will arrive, and we must also allow something I suppose for a man's wishing to comply with the laws of his country. These considerations, put together, are supposed to be sufficient to induce men rather to give, say 25 per cent. to the revenue, than 20 or even 19 to the smuggler.

82. Then in the answers you have given, when you said 25 per cent. would be a sufficient protection, you have spoken on that impression, have you not ?—Yes, certainly, against smuggling at 20 per cent. ; I conceive that they would give 25 per cent. in duty for any such goods, rather than smuggle them at 20.

83. You do not consider that it would be advisable to reduce the duty below 25 per cent. ?—I conceive that you may always keep the duty rather above the cost of smuggling ; but I am not prepared to say that 25 per cent. or any other per centage would be the proper sum. I must be understood to speak from the impression which my mind has received in consequence of those inquiries which, in my situation I feel it my duty to be perpetually making. The price of smuggling is variously stated, and whatever it is now, it may become lower.

84. You have put in an account of the quantity of British silk exported in the last year ?—Yes.

85. Has the quantity increased since the year 1826 ?—Yes, it has.

86. State what it was in 1826 ?—In 1826 the total quantity was 106,931.

87. What was it in the last year ?—The last year is not made up ; but I can give you a tolerable good estimate. In 1830 it was 427,860 ; in 1831 it was not less than 500,000.

88. Since the change of the law in 1829, has not the exporter had the advantage of the debentures that have been received ?—Yes ; it could not be supposed that they could export any manufactured goods, and not get back the duty they had paid on the material.

89. Has

James D. Hume,
Esq.

16 March,
1832.

89. Has not the change of law had the effect of stimulating exportation?—It has at least removed the impediment from a certain description of goods, inferior articles.

90. And that has operated very beneficially?—I conceive the effect of that to be this; that the fine Italian silks are made into superior goods for the use of this country, and that the East India silks are made into inferior articles which suit the export trade.

91. Your opinion is, that that state of the law is very beneficial as regards the exportation of goods?—I think it has done good; the home silk being dearer by reason of the duty on the foreign silk; the exporter requires the drawback for the one as well as the other.

92. Of course in the proportion in which it is beneficial to the exporter, it is injurious to the consumer or worker of the fine silk in this country on which the duty is paid?—No, it is a benefit to him; if it does any injury it is to the throwster of the fine silk; the rate of export is sold for the benefit of the importer at some price in the market; the quantity of import is so large, compared with the export, that the price is now at a very low rate, almost nominal; to whatever extent it went it would go to the reduction or alleviation of the duty on foreign thrown silk, and so be beneficial to the worker-up of that material.

93. Not to the manufacturer of the fine silk, as he manufactures an article which is charged with the duty?—I am speaking of the drawback; I assume the duty that exists, whether there be a drawback or not, and then the question is, what effect the drawback has. I have shown that it is beneficial to the manufacturer, who uses the duty-paid thrown silk.

94. Suppose it should appear that the duty levied on thrown silk falls chiefly on Coventry and Spitalfields, and that the drawback is allowed on goods manufactured at Macclesfield and Manchester, if the export trade be beneficial to the two latter, the duty would be injurious to the former ones?—The duty is a direct evil to those who work up the description of thrown silks liable to it; the drawback is an indirect alleviation of that evil, and is a direct benefit to those who work up a different description of thrown silks for exportation; while there is the duty the drawback must work beneficially on the whole trade. I conceive that the question put to me was, how it worked at the different districts of the trade; the duty is injurious to Coventry and Spitalfields, and the drawback is beneficial to Macclesfield and Manchester; these were the places named in the question.

95. Is there any party to whom the drawback is other than beneficial?—I should imagine not; except, as before observed, to the throwsters of Italian raw silk. I do not conceive that any fine silk goods whatever are exported; there is no export, or very little, of goods made from the Italian thrown silk, or from British thrown silk of similar quality.

96. Supposing there had been an export of silk made up from Italian silk, how would that be?—They would receive the drawback, but the prices of the foreign market will not enable them to export such goods.

97. Supposing the export to take place, is the drawback injurious to any party?—To none, if the practical reduction of the duty by debenture sales does not operate as a lessening of the protection to the throwster.

98. If it is an injury to any party, it is no benefit to the manufacturer, who sees the article charged with the duty, because you state, that in point of fact the articles on which the silk is used are for export?—It is a benefit to any manufacturer to whatever amount the debentures sell.

99. You stated that the debentures now sell for nothing?—I am told very little; it depends on the quantity; the sum received on thrown silk is so large, and it is so unlikely that the quantity exported will draw hard on the fund, that the right of exporting is very trifling.

100. The value of the debenture, in point of fact, would depend on the proportion of thrown silk imported, as compared with the quantity of British goods exported?—Precisely so.

101. Could any export trade exist without the advantage of debentures?—I should almost doubt it.

102. The duty is paid upon the silk used in this country?—Yes.

103. Then the debenture upon the silk gives a drawback upon a different quality of silk?—Identification is not insisted on.

104. It gives a drawback on silk that in fact pays no duty?—It does so; but then the law assumes, that the price of the one silk to the manufacturer is so much the greater by reason of the duty on the other, and therefore the exporter stands in need of a drawback, just as much as if he used the same that had paid the duty.

James D. Hume,
Esq.

16 March,
1832.

It is assumed, but perhaps falsely, that the throwster here enhances the price by force of the duty.

105. The fact, as I take it, is, that the duty is paid upon a silk, and the drawback is allowed, not on the silk that pays the duty, but on another inferior description of silk that pays no duty?—Yes, certainly.

106. Is not that a bounty?—Very like it, abstractedly considered.

107. May he not have paid the duty in the shape of enhanced price?—There is the qualification which I have before pointed out.

108. Can you make any thing else but a bounty?—I put this position; there is a certain duty on thrown silk imported; it is assumed that British thrown silk is the dearer by reason of the duty to the exporter; therefore he feels the weight of the duty, even though he exports the article made of that which did not pay it; therefore identification is not required, and, so far as the money which is received is not exceeded, Parliament has consented to let it be returned in drawbacks upon either sort of silk, indifferently.

109. The consumer of the silk on which the duty is paid of course must pay the duty, and the drawback operates as a bounty on the other silk that pays no duty; is not the fact so?—The person here has the silk so much the dearer.

110. Who has the silk the dearer?—The manufacturer who works up the British silk has the price so much the higher to him, because there is the duty on the foreign silk.

111. Did not the drawback originate in a representation of the manufacturers of English thrown silk that their power of exporting was impeded by the duty?—Certainly they felt that the export trade was impeded by the duty on the imported thrown silk.

112. In point of fact, it produced the effect intended, increasing the export of silk?—The intention was to make the export possible.

113. If the duty be paid on Italian silks, which silks are used in this country, and if the drawback be allowed on Bengal silks which are exported, is it not a tax on the manufacturer of Italian silk, and a bounty to the manufacturer of Bengal?—The duty is a tax on the manufacturer of Italian silk, which tax is eased to the extent of the sum for which he can sell his right of exportation, and therefore the drawback is not an evil to him; to the manufacturer of Bengal silk, which is thrown here, the drawback, I should say, is rather a compensation than a bounty.

114. The value of the drawback has been hitherto nominal to the importer?—It has, at times, been of some value, but I believe it is now very low.

115. If Italian silks, on which the duty is paid, are chiefly used in Spitalfields and Coventry, and the drawback allowed on British silks manufactured at Macclesfield and Manchester, is it not a tax upon Spitalfields for the benefit of Manchester?—The duty is a tax on Spitalfields and Coventry, but not the more so because of the return of it to Macclesfield and Manchester, but rather the less, to the extent of the sum given for the right of exportation.

116. As the law now applies, it is an encouragement to the use of Bengal silks, in preference to the Italian?—I do not know as to the preference. The home consumption takes the Italian; the export takes the other.

117. If there was no bounty, there would not be so great an importation of Bengal silk?—There would be a less export, and perhaps a less demand and the less import.

118. Was not the effect of the duty to raise the price of British thrown silk?—Yes; it is supposed to do so.

119. And does not that apply to Macclesfield and Manchester, as well as to other places?—It certainly applies to all.

Lunæ, 19^o die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. William Brunskill, called in; and Examined.

Mr.
William Brunskill.

19 March,
1832.

120. WHAT are you?—A broad silk manufacturer in Spitalfields, and a ribbon manufacturer at Coventry; and since the Ports have been opened, I have been an importer and dealer in foreign goods to a considerable extent.

121. What is the state of the ribbon trade at present?—Great distress, arising entirely, in my opinion, from foreign competition, the demand being very good, but supplied by foreigners.

222. Suppose

Mr.
William Brunskill.

19 March,
1832.

122. Suppose foreign ribbons were prohibited, what effect would it produce on the ribbon manufacture?—It would at once cause a large outlay of capital in jacquard looms, which are necessary to make the figured gauze ribbons, of which an immense quantity are imported.

123. In what does your distress at the present differ from that which existed in 1817?—In 1817, the Princess Charlotte died, that caused a great stagnation in the trade; but there might have been other causes. I think there was an over supply of goods as well as a want of demand.

124. Does fashion operate injuriously upon the ribbon trade?—Yes; and on this point hangs the most important part of this case; so powerfully does it operate, that in my opinion, the ingenuity of man will never be able to devise a plan by which we can get over it, except by a total prohibition. I should state that this applies more particularly to fancy goods.

125. Are not the present duties a sufficient protection?—No; if they were 20 per cent. higher, then a larger quantity would still pay the duty; the reason why they would pay the duty is, that expensive fancy goods cannot be delayed upon their passage.

126. Do you mean that they would sell if they paid 20 per cent. higher duties than they do now?—Yes, I do.

127. In preference to English ribbons of any fashion, or any beauty, do you mean that French ribbons, however expensive, would sell in preference to English ribbons, however beautiful?—Yes.

128. What kind of ribbons are principally imported?—Plain satins, figured satins, figured and striped gauzes.

129. If they were prohibited, could you make that description of ribbon at Coventry?—Yes; they are all made to a certain extent, and they would be immensely increased under a prohibitory system.

130. What is the rate of duty upon those ribbons?—Upon plain satins, from 15 to 20 per cent., according to the way they are bought; sometimes perhaps they are 22½, that is when the duty is collected by weight, which the officers invariably do.

131. What is the duty on figured satin ribbons?—From 15 to 16 per cent.

132. The duty on gauze ribbons?—Our striped gauzes from 30 to 45 per cent., according to the way they are bought also.

133. On figured gauzes?—From 25 to 35 per cent., depending upon the manner in which they are bought, and the quality.

134. Would not an *ad valorem* duty be better?—An *ad valorem* duty would not do at all in my opinion; so much depends upon the immediate sale, that the importer might give in a very low value, knowing that the officer durst not seize them, being aware that the fashion would be gone by before he could bring them into the market, and even if he could bring them into the market directly, he could not make near so much of them as the importer.

135. Then you think they might be considerably undervalued?—Yes.

136. So that if an officer were to detain ribbons entered to pay the duty, *ad valorem*, in the month of April, he would not be able to sell them till September or October; and they would be reduced in value at least 30 per cent. by the change of fashion; is that your opinion?—Yes.

137. Has smuggling increased since the ports were opened, and why has it increased?—Yes; if the smuggler had been consulted what would tend most to his interest, I should think he would have recommended the very course that was adopted; yet, strange to say, the getting rid of smuggling was assigned as one of two principal reasons for the adoption of the measure.

138. Adopted, when?—In 1824; the Chancellor of the Exchequer assigned that as a reason.

139. Do you mean the measure that came into operation in 1826?—Yes.

140. Why has smuggling increased?—Because of its operating as a license. The smuggled goods which were already in the country could then be shown as goods that had paid duty, there being no distinction between them and those which had paid the duty.

141. In that case they would have been previously introduced?—Yes; but you could smuggle to any extent afterwards, and not be detected; previously you were obliged to keep them in secret places, and showed them only to persons you had confidence in.

Mr.
William Brunskill.

19 March,
1832.

142. You mean to say, since the ports have been opened, goods, however introduced, might be offered for sale without risk?—Yes.

143. Before, that could not be done?—No.

144. There was great danger in attempting to dispose of smuggled goods before?—Yes; the goods being liable to be seized wherever found, and the parties liable to be exchequered for three times the amount, as well as the loss of the goods.

145. Do you think it possible to prevent smuggling?—In a great degree I do; by a total prohibition, and making the offence personal degradation to the principal and agent, and giving a large portion of the fine to the informer.

146. Do you not think there are other modes by which smuggling might be prevented, even supposing that goods were still allowed to be sold in this country?—I think it might be checked; the same principle would operate very much in the absence of total prohibition.

147. Have the debentures or drawback facilitated the export of ribbons?—I am not aware of any quantity having been exported.

148. What is the present price of debentures, valued at 3*s.* 6*d.*?—Three halfpence to two-pence.

149. Then a debenture, that would entitle the exporter to 3*s.* 6*d.* a pound drawback, now fetches three halfpence and two-pence; is that so?—Yes.

150. What would be the effect of lowering the present rate of duty to a rate at which there would be no inducement to smuggle?—Total destruction to all the finer branches of the trade.

151. Do you know what is the present rate of smuggling; what goods can be introduced for?—Generally, I believe, from 20 to 25 per cent.

152. You are not of opinion that goods have been introduced at a much lower rate than that?—Except in one instance that has been so much before the public, I do not believe it has been done at a much lower rate than that.

153. At what rate do you imagine the house, to which you have alluded, imported?—It would be mere surmise; I cannot tell what they paid the superior men, but it was a mere trifle they paid for the landing; I should think five to ten per cent.

154. You mean in the case of Messrs. Leaf's?—Yes.

155. Where the goods were handed over the side of the vessel?—Yes.

156. How do you found that calculation?—I ascertained the fact of their only paying 2*s.* per cartoon on the landing, which a regular importer must have paid about 4*l.* 4*s.* to 6*l.* for.

157. What is the cartoon?—A box of ribbons, containing twelve or eighteen garnitures or pieces of 36 yards each.

158. Do you mean to say that that was the whole expense incurred?—No, but a very small sum was paid for the landing of those cartoons; if they only paid the other men after the same rate, it could not amount to more than I have stated.

159. What other men do you allude to?—There were, for instance, the captain of the vessel; he would require remunerating for the risk he took; and three superior servants I should more properly have stated.

160. Do you mean men employed on board the vessel?—No, employed by the house.

161. In addition to the captain of the vessel, you have no reason to suppose any body else was paid but their own servants?—Certain individuals that had the doing of the transaction; I cannot say to what extent they were paid.

162. What was the employment of those individuals?—The one had a barge, which he would require being paid for; and he employed another individual under him, I think.

163. You did not, in point of fact, mean any Custom-house officer, or any officer of Government?—No, I did not.

164. Is it your custom to prepare a stock of goods before each season commences?—It used to be done to a very large extent.

165. Is it so now?—No; fatal experience has taught us all to act with the greatest caution, and therefore we are obliged to leave the people unemployed in the winter months.

166. Why is that?—Because of foreign competition entirely in my opinion.

167. What is the consumption of silk at Coventry; is it as large as formerly?—Much the same.

168. Then the consumption of silk at Coventry being much the same, how do you reconcile that fact with your statement of the distress?—A commoner article is made now, upon which a very small amount of labour is paid.

169. You

Mr.

*William Brunskill*19 March,
1832.

169. You mean plain goods?—Yes, a very heavy description of goods.
170. There is a great consumption of raw material, but with a small amount of wages paid upon it?—Just so.
171. Are you of opinion, that English manufacture is improved in consequence of French goods being admitted?—In some cases, particularly in country places, where the manufacture was in its infancy; but in the finer branches I do not think any improvement has taken place at all.
172. Do you confine your answer to plain silks?—I speak generally.
173. And ribbons?—Ribbons may have improved a little.
174. Is it your opinion there would be any difficulty in finding hands at this moment to make goods of the character you formerly made in the broad trade principally?—No, I think we should have no difficulty in finding as much skill as they have in France in the broad trade.
175. But in the ribbon trade, should you have any difficulty in procuring hands?—At present we are not quite equal to them in skill.
176. Do you consider that you have less skill than formerly?—No, not less; but the ribbon trade certainly was very inferior indeed to the foreign ribbons.
177. Are you of opinion, that in the broad trade the hands are employed in plainer works than formerly?—Decidedly so.
178. Then of course there is no need for the exercise of that skill they formerly exercised?—No, certainly.
179. With regard to the ribbon trade, do you think that in the ribbon trade the hands have improved in skill; that is, that they make a better description of fabric?—Yes, in a slight degree; but they have been very short of machinery for the purpose of making the higher articles.
180. Is the improvement that as so taken place been in machinery principally, or do you mean that the hands make your goods in a superior style?—I cannot say that there may have been any great increase of skill, but they have since obtained machinery to enable them to make the goods required that could not be made formerly by the old mode.
181. Was that machinery unknown to them formerly?—It was known to them in 1823.
182. Not previously to that period?—I think not, in Coventry; in London we had it two years earlier.
183. What machinery do you allude to principally?—The jacquard loom, principally.
184. Any other description of machinery?—The bar loom has been imported, but it has not been used at Coventry.
185. Will you explain what it is?—It is called a la bar loom; it is a description of power loom that may be carried by power; I have never seen it worked by power.
186. Is it a later machine than the jacquard?—No; it has been used in France for a long time.
187. Is it used at St. Etienne?—Yes.
188. Where has it been used in England?—It has been used at Coggleshall; at Battersea they have a large quantity, and some other places; it is used, I believe, also at Evesham, and I understand they have some at Manchester, I am not sure that it is so.
189. Would a return to the prohibitory system increase the price of silks and ribbons?—In a slight degree, where labour is not remunerated.
190. What do you mean by slight degree?—Perhaps five per cent.
191. How would that increase of price be distributed?—It would never be perceived by the purchaser.
192. Who would obtain the advantage of it?—It would be distributed among the various operatives employed in the trade, dyers, winders, weavers and warpers.
193. Do you not think that increase, to the extent of five per cent., would injure the sale?—Not materially.
194. Do you think it would at all injure it?—In the higher branches it would not.
195. How has foreign competition operated upon the morals of your work people?—A deplorable change for the worse has taken place, owing to the extreme poverty to which they have been reduced.
196. You are engaged in the manufacture of broad silks as well as ribbons?—Yes, in Spitalfields.
197. What is the state of that trade?—Extreme distress.
198. Do

Mr.
William Brunskill.

19 March,
1832.

198. Do you mean at the present moment?—Yes; I am not aware that any great improvement has taken place in Spitalfields.

199. Is not this the season at which you ought to be very busy?—Yes; we used to be preparing very largely for the spring trade.

200. How do you account for the want of that business; does it arise from foreign competition?—Yes; I should say almost entirely; the weavers of Spitalfields having been accustomed to make almost exclusively the finer kinds of goods, which are now imported from France.

201. Do you not think that the Spitalfields trade has been very much injured by Manchester and other provincial manufactures?—Very little since the ports were opened.

202. State your reason for this?—They make much commoner goods at Manchester and elsewhere, with few exceptions.

203. Do you consider, at present, Spitalfields is struggling rather against Manchester, than Manchester against Spitalfields?—Yes, I do.

204. You consider, that from the fact of the operatives in Spitalfields having lost that superior employment they were accustomed to, they are now struggling against the plainer fabrics of Manchester that they did not formerly care about; is that your opinion?—Decidedly.

205. Is the Spitalfields trade affected in any thing but fancy goods?—Yes.

206. I have understood that foreign plain goods have been beaten out of the market; is it so?—No; they are not.

207. Have you imported any plain goods yourself recently?—Yes; we cleared a case the other day, upon which we paid $32\frac{1}{2}$ per cent. duty.

208. What was the value of that case?—About 370*l.* exclusive of duty.

209. What description of goods?—Plain Gros de Naples.

210. When you have so paid that duty, are they dearer or cheaper than English plain goods?—They are dearer; but there are certain connections that will have foreign goods so long as they are to be obtained.

211. Even plain goods?—Yes.

212. How much dearer are they?—About 10 per cent. having paid the duty.

213. And yet they sell in preference to English of greater cheapness?—Yes, decidedly so.

214. What is the reason of it?—I suppose it is prejudice; but it exists, and we cannot control it.

215. You have so sold them?—Yes.

216. In preference to English goods you had in your stock?—Yes.

217. Supposing a piece of English goods of the same quality as the French, and ten per cent. lower, do you mean you can sell the French article in preference to the English?—Yes, decidedly.

218. You have said in certain channels; what do you mean by certain channels?—I sell them to parties that supply milliners, who must sell foreign articles, or they will not sell at all.

219. Suppose an English manufacturer had been permitted to make those goods, what amount would he have paid for labour?—At least 100*l.* in that particular case.

220. Do you believe that a considerable quantity of these goods are now coming into the market?—Yes; I have reason to know that large quantities of these and other kinds are being imported, peculiarly adapted to the Spitalfields manufacture.

221. Have you an idea of the quantity?—No; I cannot state the quantity.

222. Do you mean that there are a certain number of ells in a case, and that you calculated the cost per English yard, in making it?—Yes.

223. And therefore you arrive at a certainty, or near a certainty, of what you would expend in making them?—Yes.

224. Do you know the number of ells in that case?—No; I have not the particular numbers.

225. Do you also import velvets from Germany?—Yes.

226. What quantity did you import last season?—Between four and 5,000 yards, as well as many yards of plush.

227. Did you sell them when you imported them?—The plush were all sold, but not the whole of the velvets.

228. How much would you have paid for labour in Spitalfields, had you been permitted to make them there?—Between thirteen and fourteen hundred pounds.

229. The two together?—Yes.

230. What

Mr.
William Brunskill.

19 March,
1832.

230. What is the rate of duty you pay upon velvets?—From 40 to 50 per cent. according to the quality and make.

231. And yet with those duties, you still sell foreign velvets?—Yes; we have hitherto.

232. What is the rate of duty upon plushes?—Thirty per cent. *ad valorem*.

233. You pay about 20 or 25 per cent.?—No; they manage some how or other to prevent that; they are rated at so much a yard, so that they get it up to 33 per cent. with the expenses.

234. That rather proves that an *ad valorem* duty can be collected?—Yes; in a case of that kind it is a heavier article, but not on fancy articles.

235. Are not these duties sufficiently high to protect you?—If they had been, I should have made the goods instead of importing them.

236. Are you of opinion that trade would revive in Spitalfields, if prohibition were granted?—I have no doubt of it.

237. You have stated that the superiority of the French goods depends upon being made by machinery in France?—That is a particular species of ribbon, the light figured ribbon.

238. Does that give them the principal advantage?—Yes.

239. And you think if prohibition took place, that you would immediately have an increase of machinery in Coventry to meet the demand?—Decidedly so; an amazing increase of machinery would take place immediately.

240. Are you aware of any effort having lately been made in Coventry to use machinery?—Yes; I use it myself to a certain extent, but it is at a very great discount notwithstanding.

241. Is not there a great objection in Coventry to use machinery?—Not at all; the weavers get much the best wages in machinery.

242. Are you aware of a mill having been burnt down in 1831, in Coventry?—That is, as to the power-looms, there is an objection to them.

243. What kind of articles would those looms have made?—I am not aware what they might have been applied to, but they were making plain goods, but they might have been applied to other kinds.

244. Do you conceive the wages in France are cheaper than the wages of England for the making of narrow goods, or is it in the machinery that the French have the advantage?—Their wages are much cheaper for those kinds of articles.

245. Can you state to the Committee what took place when Messrs. Woodhouse's mill was nearly finished in Coventry, what led to its destruction?—I am not very well acquainted with that circumstance; but I believe it was entirely owing to its being a power-loom, that the weavers were determined not to have it there.

246. Were not there meetings of the workmen held, protesting against the use and introduction of machinery?—The power-looms; we must confine ourselves to power-looms; they have not the slightest objection to the jacquard looms; on the contrary.

247. Are you aware that that loom would have been moved by steam, and have made five or six pieces where one only is now made?—No, I am not aware of it; nor can I believe it till I have strong evidence of the fact.

248. Are you aware that a list of prices now exists at Coventry, below which the people will not work?—Yes; the list was made by the masters, not the men.

249. Have you ever seen those lists [*handing two Papers to the Witness*]; the prices for single-hand work and engine loom-work?—Yes, I think I have; those are the last regulated lists that were made.

250. Are you aware, whether the goods may be made cheaper by an engine than by the hand?—Certain kinds of goods can.

251. Are you aware that those lists make the same price paid for engine as for hand-labour?—No, I am not.

252. Take one; the first list, letter (A.): by that list, what is the rate charged for work, called "Sixteen-penny"?—Five shillings is the printed mark.

253. That is the wages?—Yes.

254. Now look on the other paper, the Engine List (B.), and see what is charged for the same article?—Three shillings and sixpence.

255. In the first list is not there the preparatory process, including winding, weaving and warping?—Yes.

256. If you deduct that, which is 1 s. 6d., from the 5 s., what is left?—Then they would be upon a par nearly.

257. Then on the one list, the charge for winding and warping is included in the

Mr.
William Brunskill.

19 March,
1832.

5s.; in the other for 3s. 6d. they are not included; are they not on a par; does not the piece turn out to be made at the same expense by the engine and the hand?—It depends upon what the engine would cost winding and warping.

258. Supposing it is 1s. 6d.?—Yes; but it is not so.

259. Can you tell how much it is?—No, I cannot; but there is always a saving to the undertaker in the winding and warping, or he would not do it.

260. Assuming that to be the price, the cost of the article, whether done by the engine or the hand would be the same?—Decidedly.

261. You are aware that a committee was appointed in November, by the masters and men, to fix this Table?—Yes.

262. Were you a party to that settlement?—I was.

263. Were you present at any of the meetings?—Yes, some of them.

264. Are those wages higher or lower than wages for the same article in any other part of the country where silk articles are made?—It is very likely they are higher than where they are made by power-looms; there are a few ribbons made in some parts of the country by power-looms, but a very small quantity; I mean any where but in Coventry.

265. But if higher, will not that operate against Coventry being employed to make the article?—Yes, unquestionably; if they produce an article equally good.

266. Have they any regulated prices at any other places of the same nature?—I cannot speak to that.

267. Was there not a great difficulty in agreeing to those tables, between the masters' committee and the committee of the men?—No very great difficulty; the masters made up their minds to pay those prices, and the weavers were obliged to accept them.

268. Do you mean that they considered them as low as they could have the work done for in other parts of the country, or did they make up their minds without entering into that consideration?—They considered them at that time such prices as the circumstances of the times would afford, and the weavers, I suppose, thought so too; they accepted without much hesitation.

269. You have made a great many ribbons at Coventry?—Yes.

270. You have stated that the French excel; will you state whether they excel in the article by putting more work into the article, or in what way?—They use a better commodity; their silk is of a very superior kind, and they have always been in the habit of using a superior kind of silk to what the Coventry people generally do, there are very few Coventry manufacturers that make those kinds of goods.

271. Do they not also put more work into the article?—Yes; they get more labour in.

272. That makes the article superior?—Yes.

273. Have you not been very anxious to make the manufactures of Coventry equal, if possible, to the French?—Yes; as far as I possibly could.

274. Great exertions have been made?—Some alterations have been made certainly.

275. Have you not been able, in some instances, to bring the article so near that it requires a practical man to distinguish them?—Yes, in some instances I have been very successful, such as striped gauzes.

276. Have you not known Coventry garnitures sold occasionally as French garnitures?—No, I cannot say that ever I did; I am not aware that I ever knew it.

277. You think they are not so good?—We seldom can get them done up in so complete a way.

278. Do you remember last year your giving directions in Coventry that the quantity of work which is now done in which 80 are put in should be increased to 100 in a certain sort of fancy work; will you state whether it was done, or objections were taken by the workmen to it?—I accompanied it with a condition, that I should fine them if they did not do it.

279. Then in your anxiety to obtain a superior work, what were your instructions?—To put a certain quantity of shoots.

280. How much?—In some cases 90 shoots; I always instructed them to put that quantity, but could not get it done.

281. It was 90 shoots to an inch?—Yes.

282. Were those instructions complied with?—No, they were not; they did not like the idea of being fined; they would not submit to it.

283. They would not make the article as fine as you wished?—No, I imagine they would not; they protested very strongly against it.

284. Then

Mr.
William Brunskill.

19 March,
1832.

284. Then they would not exert themselves to complete the article you were anxious to have to compete with the French?—I should say, that they had reason on their side; in some respects the quantity of labour I required them to put in would give them very little wages; I required a good deal of silk to be put in, and very rich, and they have only scanty wages; I could get the labour if I was to give them more wages, but I have the foreign competition to look to, and cannot afford it.

285. As there is a committee of masters to protect the trade of Coventry, did you call that committee together, and claim their assistance to have that work done?—No.

286. Did you not apply to the masters to assist you to get that work done?—Yes, I applied to them; but I found a reluctance in some to meddle with it; they approved of the plan, but did not wish to adopt that particular system at that particular moment.

287. On what account?—They have been in the habit of conducting their business on a particular principle, and did not choose to alter it.

288. It did not arise from any supposition on their part, that you were pressing too much upon the people for what they earned?—No, not at all; I was paying the same per piece, but perhaps getting more done for my money.

289. Your neighbours would not insist upon the same quantity of labour?—No, in some instances they did not.

290. Did they think it putting too hard upon the men?—No, they perfectly justified me.

291. In what way did you ascertain from the committee that they would not support you?—I never applied to the committee, only to individual manufacturers; I had a desire to accomplish it, and applied to them.

292. Has not every innovation and improvement in Coventry been a matter of some difficulty?—Yes, I dare say it has; the weavers have got a very good living generally, and have been in a certain degree uncontrollable.

293. Do they get a good living now?—No.

294. As long as they can get a good living, they have not paid attention to introducing any improvement in the goods they make?—I cannot speak to it generally; I have always endeavoured, as far as I could, to get my goods made as well as possible, and as near the French as possible.

295. Is not this an example of your endeavouring to get a better article, and being prevented by the workmen refusing?—Certainly; I should say the manufacturers do not attempt so high an article.

296. But in this instance you could not obtain the improvement you desired?—Not at this moment.

297. Why did not the masters unite as the men were without employment, why should not the masters unite?—I cannot say I pressed them much; I called upon one or two, they did not seem inclined to adopt the same course, and I am very sure if I did, I should get much obloquy, and I thought it better to drop it at present; I do not mean to give it up altogether.

298.—From whom would you get obloquy?—From the weavers, it created a very strong feeling at the time.

299.—Did you take any trouble to explain to them, if you could get work done in this way, you could come nearer the French?—Yes, I took all the pains I could, and had all the men up; I stated to them that they were more interested in adopting it than I was.

300. What objections did they state at that time to it?—That their wages would not afford such a quantity of labour, and particularly not afford their being fined; and they thought it arbitrary to be fined.

301. Are you aware that at St. Etienne, or in France, novelties are introduced almost every year, and great efforts made to vary the fashions, and study the taste of their customers?—Undoubtedly, more frequently than every year.

302. That is done by the manufacturers themselves?—Yes; the same thing is done in England, only the goods are of a different cast altogether.

303. Have you ever been at St. Etienne yourself?—No.

304. You are not aware whether they find any difficulty in varying their work, or putting what portion of labour they please into the article?—No, I am not; I know they get it for all that.

305. But you know in Coventry you cannot get it?—I do not know whether we shall be able to get it; I hope we shall.

Mr.
William Brunskill.

19 March,
1832.

306. You do not mean to say you cannot get your patterns changed as often as you wish it?—Certainly not; I understood the question to allude to the quantity of labour.

307. Did you make more than one effort to persuade them it would be for their advantage to take this work?—No, I was down there the whole time.

308. In consequence of not getting that work done, have you been obliged to increase your orders for French articles?—I do not know that I have; it is too late.

309. But as you cannot get them made at Coventry, you must get them somewhere?—I can get any quantity made, but not the same amount of labour.

310. Will that oblige you to increase your orders elsewhere?—Not at present, certainly; although I, as a manufacturer, can distinguish the difference between the quantity of labour that a weaver would give me, and the quantity I require, it would not be so with every body. It is a minute distinction, but it makes the article perfect and complete.

311. And makes the article better?—Yes.

312. Does not the public require a fine article?—Yes.

313. Does not every obstacle to that check the mode of supply?—Yes.

314. Was this case you have mentioned a single case, or had it happened to you in two or three other cases?—I never tried it before.

315. That was the only instance in which you met with any disappointment from the people?—Yes.

316. Previous to that you had always found the men conformable to your wishes?—We cannot always say that.

317. You have stated the difference in the value between the French and the Coventry manufacturers in price?—No, I have not.

318. Will you state the difference in value between the same article made in France and at Coventry; two or three leading articles?—I have not got the calculation with me; I cannot give the precise per centages, but I can state generally, that the English goods are cheaper than the foreign goods, I mean they cost me less than those I import.

319. That is supposing you pay the duty?—Yes.

320. In the case of plain satin ribbons, of which a duty of about twenty per cent. is paid, when you have so paid that duty, would the commodity you make at home be cheaper than the French ribbon?—If I was to make it of the same material the French would be cheaper, because the duty is so low.

321. Now the gauze ribbons, made from silk of an equal quality, having paid the duty of 30 per cent., would your commodity you make at home be cheaper or dearer than the French?—Mine would be cheaper; our labour upon plain gauze ribbons is very low.

322. Is your labour very low upon figured gauze ribbons?—No; it is owing to a short supply of machinery.

323. Why have you not more machinery?—The original cost is so very great, we do not see our way to get our money back.

324. There is very considerable difference between the wages of plain work and fancy work?—Yes, of certain kinds.

325. Are you aware, that at St. Etienne the wages for both kinds are the same?—They approach much nearer than ours do.

326. Are you not aware, that since the introduction of the jacquard loom, the skill required for doing the work is much less than formerly existed, and consequently the wages have equalized, the same person being able of nearly doing the same work?—That has certainly lowered the price of those goods, they used to cost a great deal more.

327. Do they not in Coventry keep the distinction between plain and fancy goods?—Yes.

328. If a man can do the plain and fancy goods by the same machine, is there any reason why there should be a difference in the price of labour?—That is not the case; it requires considerably more of skill in the work of a fine article.

329. I wish to ask you as to the quality; how much per cent. are your goods worse than the French?—It is a very difficult question; I should say, perhaps five per cent.

330. As the value of the goods must consist in the quantity of work, suppose you could get the weavers to throw in 90 instead of 80 shoots, or 100 instead of 90, would

Mr.
William Brunskill.

19 March
1832.

would not that bring them nearly upon a par?—In that description of goods I hope we shall soon be equal to the French, that is in the striped gauzes.

331. Supposing that difficulty got over with the men, to put in the quantity of work you require?—They would do it if I could give them more money, but I cannot afford it.

332. Are you able to state what wages per week, the rate you would pay them, would give?—No, I have not made a calculation, but they vary according to the different widths, some will earn 4s. 5s. or 6s. or 8s. per week.

333. You mean each individual of a family?—Each individual at a loom; in the narrow descriptions they would not get more than 3s. 6d.

334. Is that the price by those tables?—Yes, that is the price I pay.

335. What is the highest wages you pay to clever workmen?—We have men that can earn from 2l. to 3l. per week, one or two instances.

336. Are they by hand looms?—No, jacquard looms; it depends upon his exertions, they vary very much indeed.

337. Have you many such weavers as those?—No, very few; there are very few that earn those kind of wages.

338. What are the kinds of work in which the men can earn upwards of 2l.?—Upon figured gauzes; they are very skilful industrious men, that will work a great many hours per day; by working extra hours.

339. You state extreme distress exists, do you mean among the single-hand work, or among the engine weavers?—I ought to have qualified it in this way, it existed to a much greater degree a month ago than it does now; but this is a season of the year in which, if they have ever employment at all they have it now; but there is much distress.

340. Among which class is the greatest distress?—The single-hand weavers are the most distressed I think; in the latter part of January an estimate was taken, and I think out of about 10,800 single-hand looms, there were 8,600 totally out of employment.

341. The Coventry trade has been liable to these changes for years?—I think less so than any other trade in the kingdom.

342. How have they been employed to your own knowledge in 1827, 1828, 1829 and 1830, have they not been pretty well employed?—Up to 1828 they were very well employed, since that time they have, perhaps, been only half employed, not more.

343. What is the difference in work that a single-hand loom and an engine loom can do, supposing the same article; and how much of the same article can an engine make in comparison with the single-hand loom?—I should think nearly three times as much.

344. Are you not aware, that the engine loom, in which the shuttle is thrown by machinery, can make five or six pieces where one is done by the hand loom?—Yes.

345. It is one to five?—Yes; but that is not the way to make the calculation, there is a large quantity of silk to manage, and the man is only shooting half his time.

346. If a table of wages should be so constructed, to enable a man with the single-hand work to earn the same as engine loom work, must not that necessarily check the production of the engine loom work?—There is no objection to anybody increasing their engine looms, and of course they do so as their interest directs them; of course a man can earn more money, a good deal, in an engine loom than in a single hand loom.

347. But if the effect of that Table of Prices should make work done by single hand or engine loom the same, must not that stop the quantity made by the engine loom?—Certainly, to a certain degree.

348. Will not that drive it to the places where it can be got cheaper?—It never has yet; we have no facts to guide us in that opinion.

349. You are not able to state to what extent the branches of Coventry have been copied in other places?—No; but I can state positively it is to a very small extent.

350. At Congleton, do they not make a great quantity of plain common black ribbon?—Not a great quantity; they make very good goods, I believe.

351. Jent and Smeaton, do they not supply a great portion of the trade with an article that was formerly made at Coventry?—Undoubtedly; they have a very good trade, but it is to a very small extent compared to the Coventry trade.

Mr.
William Brunskill.

19 March,
1832.

352. Has not the black been a trade in which the workmen were employed when the other fancy articles were not required, was not it an article on which the workmen were frequently employed in the winter?—No, I do not think that is the case; it is very seldom a plain weaver has any thing to do with fancy weaving.

353. In Coventry?—Yes.

354. You have stated the difference in price; are you aware whether in France the raw article, the article used in the ribbon, costs more or less than what we are able to purchase it for at Spitalfields or Coventry?—Their market is almost always a little lower than ours, exclusive of the 3 s. 6d.

355. You are aware that the Italian thrown silk introduced into this country, is principally used in Spitalfields and Coventry?—Yes.

356. Do you know the proportion used in any other part of the country?—No, I cannot speak to that; it is much the same as usual, by the annual returns.

357. If you are unable to give wages, which you say you are unable to give, in order to compete with the French, if you had the article cheaper should you not be able to give better wages?—In the fancy branch of the trade very little; because fancy goods will come to a very great extent, so long as they are permitted to do so.

358. Supposing you pay now 22s. 6d. upon fancy goods, and you could get it for 19s. would not that enable you to give better wages?—Yes, upon plain goods it would.

359. Why not upon fancy goods?—Upon fancy goods it all depends upon the newness of them.

360. You mean to say that the difference is not a question of price?—No.

361. Matter of fashion?—Yes, decidedly.

362. Have you ever made a calculation to know what proportion of the value of 100 l. of your fancy goods you pay for labour, and what is the proportion you pay for material?—No; I never made a calculation, but the weavers always get the best wages upon fancy goods.

363.—Suppose 100 l. value of plain goods made at Spitalfields, to be thus divided, 70½ for material, 11½ including dying, winding and warping, and about 18 for weaving, supposing that to be the case, if you could get that 70 l. reduced to 67, would you not be able to produce an article cheaper?—Unquestionably; I should be able to produce it so much cheaper, but as I said before, we cannot govern fashion.

364. Does not the duty now levied upon the importation of Italian thrown become, as the Italian thrown is principally used in Spitalfields and Coventry, as far as the amount of 3s. 6d. goes, a burthen on the manufactures of those two places?—Unquestionably it does.

365. Is the foreign thrown silk used principally at Coventry and Spitalfields?—Yes.

366. Would not the reduction of that duty now paid enable you to produce your article cheaper, or give higher wages?—Yes; I should say that that is a question of extreme difficulty, for it would affect all our stocks, the removal of it to that extent; the throwsters know best how it would operate upon them; I think it would operate very injuriously, and my opinion is, sooner or later we must return to a total prohibition, which would obviate the necessity of the removal of that.

367. Can you inform the Committee, what proportion of British thrown silk and Foreign thrown silk is used at Coventry and Spitalfields?—Really I cannot say; I cannot give an opinion. We have from four to 500,000 lbs. of foreign to dispose of, and that is principally disposed of in those two places.

368. Do you know the quantity of British?—No.

369. Are you aware of the whole quantity used in those two places?—No, I am not; I could not give a probable opinion as to what is used at Spitalfields.

370. Could you at Coventry?—Yes; we have some idea of the total consumption; I have not the document with me; it is from four to 500,000 lbs. dyed, which would be one-third more, or 600,000 weight.

371. Did they use the foreign thrown tram for the shoot?—Not to a very great extent; they generally are inferior.

372. Is not some English thrown silk superior to any Italian thrown?—I am not aware that it is so.

373. Not the organzine?—For certain purposes we have English thrown silks that we cannot get foreign to answer so well.

374. Do

Mr.
William Brunskill.

19 March,
1832.

374. Do you not think that the effect of removing those duties on foreign thrown silk would destroy the production of that commodity here?—I cannot say how it would operate; I should imagine not.

375. Are the Committee to understand that it is your opinion, that the difficulties in competing with the French manufacture arise not so much from the difference in the price of labour and material, in the two countries, as the superiority of the French goods, as to fashion?—It is not only the superiority; generally I should say they are superior, but not in all cases; but it is the style more particularly; they bring out new styles continually that are sold immediately.

376. Can any protecting duty affect the fashion?—I do not think that any duty could protect the fancy branch.

377. You say the patterns in France are very fine, and if you had time you could imitate them?—I think we could produce as good patterns; but as they govern the fashions entirely, we have no inducement.

378. You have stated that the distress arising in Coventry is owing to the decreased number of looms?—No, I did not say that, because they have a large number of jacquard looms; it is not that they are decreased, they are increased; but if they have a larger number, there would be more employment.

379. Did you not say there was as much work done in Coventry, as when the trade was open?—Yes, as much silk consumed.

380. Are you aware of the increase that has taken place in the number of weavers in the last ten years?—There has been an increase, no doubt, as population has materially increased, and of course principally the silk manufacturers.

381. You do not consider that the silk manufacture has increased in proportion to the population?—Not at all.

382. That may account for the difficulty?—Partly so, perhaps.

383. If prohibition was to take place, are you quite sure you could distinguish the French goods from the English?—Quite sufficiently so; we had a long experience of that kind of thing previous to the opening of the ports in 1826; I was, previous to that time, connected with a house, where we used to make 50 or 60,000 l. a year to order, for the principle fashionable houses at the west end of the town, made entirely from patterns that were smuggled by these people; and therefore it was no injury to us, but a good to that extent.

384. Do you recollect the house at Depolier?—Yes.

385. Do you recollect a large seizure on his premises?—Yes.

386. Alleging they were French goods?—Yes.

387. Were you one of the party selected to report whether they were French?—No.

388. Do you know the facts of that case?—No.

389. Were the goods seized as French, and detained and examined as French, and afterwards given up proved to have been manufactured in Spitalfields?—I should have a strong suspicion there was a very small portion manufactured in Spitalfields.

390. Are you not aware that some of the most experienced Manufacturers' Committee in London were appointed by the Government to examine into that point, and they declared they could not distinguish?—I have already stated that I believe we have as much skill in Spitalfields as they have in France.

391. How are the public to distinguish the foreign goods from the home, when such an instance as that has taken place?—There might be difficulties at times, but we had a long experience of those things previous to the measure taking effect in 1826; and we felt no sort of inconvenience from the smuggling, but we rather approved of the extent to which it was done.

392. Was not it a fact, that the silk was introduced into this country previously dyed and warped ready to put into the loom; and being made from silk dyed in France, the difficulty of stating where it was woven was not to be surmounted?—I believe it was a fact, but I should not say that the winding and warping could have much to do with the ultimate finishing of the goods; there is no difficulty in the winding and warping; we can do that in any way we think fit.

393. Is not the dyeing the essential thing?—I think our dyers have been quite equal to the French for some time past.

394. Suppose that a warp is made of silk, and that it is then separated into two parts, and the silk which is intended to be used in shoot is divided also, and a part is sent to this country, and the other part is dyed at Lyons, would it be impossible to

Mr.
William Brunskill.

19 March,
1832.

ascertain which was the French and the English piece?—If the manufacturer wished to imitate the French, then it could not be distinguished.

395. Do you know whether it was so?—Yes; I believe it was, whilst Depolier had a license to import the silk dyed without duty.

396. That would account for the difficulty, and explain the mistake made when the parties said the goods were made in Spitalfields, when they were made in France?—Yes, certainly.

397. You do not think there is any difficulty in ascertaining which is made in Spitalfields and France, except where the silk is dyed in France?—Yes, I should say there may, at times, be great difficulty in distinguishing.

398. Where the silk is dyed here?—Yes; it is immaterial where it is dyed.

399. Do you think, upon the whole matter, you are capable of distinguishing between the French and British manufactures at present?—Not in all cases.

400. Does this apply to all species of goods?—In fancy goods we can distinguish rather better; but still we are liable to be deceived in them.

401. Supposing two bales of Italian thrown silk, one dyed at Lyons and the other in London, would there be just the same difference as if both were dyed at Lyons, one being wove here, and the other being wove in France; are our colours exactly like the French?—Yes; but we do not make our goods in the same way. In plain Gros de Naples there is generally a distinction that may be known by an accurate judge, but still it is not to be depended upon.

402. But in mere colour there is no such distinction?—No.

403. Are you aware, when Mons. Depolier established his warehouse in London, that we were at that time supposed not to dye so well as the French?—Yes, that was the case at that time.

404. But since the opening with France, we have copied the same colours, and dye quite as well as the French?—Yes, I think we have dyed quite as well for a longer period.

405. Is not the Italian mode of dyeing superior to the English and the French?—I am not aware that it is; but I am not acquainted with the Italian mode of dyeing.

406. You have said, that the morals of the weavers have been deteriorated by foreign competition?—I am alluding more particularly to Spitalfields in that case.

407. May not the competition at home have lowered the wages as much as competition abroad, as you admit the price is not so much an object as fashion?—I think, with respect to Spitalfields, owing to the skill in working the finer kinds of goods, that the competition with France is the principal cause of their distress.

408. You think there is no competition between Spitalfields and Manchester as to the finer sorts of goods?—If there is a competition it is Spitalfields against Manchester, rather than Manchester against Spitalfields, because they were not formerly accustomed to make those sorts of goods.

409. May not that competition produce the distress as much as the introduction of foreign goods?—If they are to be deprived of the finer branches altogether it would be so.

410. If they leave Spitalfields and go to other parts of the country, that would be the effect produced?—Yes, but they do not do so.

411. Do the operatives get as good a price for the work now made in Spitalfields as they did for the fancy work which was formerly done in Spitalfields?—No, certainly not.

412. You say, that workmen in Spitalfields get better wages than the workmen in Manchester?—Yes, but they make a better article and use more skill.

413. You mean to say, that at Manchester they never have made the fancy goods that were formerly made at Spitalfields?—No, certainly not, to any extent.

414. In point of fact, they have never made at Manchester what was made at Spitalfields?—Not of the rich goods.

415. But they have made latterly, in Spitalfields, goods that were the staple of Manchester?—Yes.

416. Are not figured poplins made at Manchester to a great extent?—I am not aware whether any quantity of it is made any where.

417. Is it not the fact, that in Manchester they make figured goods as well as at Spitalfields?—Yes, a very common article; but not such as they make at Spitalfields.

418. Do you know whether they are now making more fancy goods at Manchester?—Yes; but that of a very common kind.

419. Supposing

Mr.
William Brunskill.

19 March,
1832.

419. Supposing that a prohibition entirely excluded foreign goods, and there was a demand for fancy goods, do you not think that the Manchester people would immediately compete with the Spitalfields weavers?—They could not make the finer sorts of goods.

420. Are you not aware, that in Manchester they make plain Gros de Naples quite as well as at Spitalfields?—I do not think they do; I never saw any such.

421. Are you not aware that a great number of weavers that were employed in Spitalfields, are thrown out of employment by the same article being made at Manchester?—I am not aware of that.

422. You have stated that the Spitalfields weavers were endeavouring to get back the inferior part of the trade they had formerly abandoned, in consequence of now having lost the better sort of trade?—I think they never made any great quantity of these inferior goods in Spitalfields.

423. The distress they are now in obliges them to endeavour to get back a part of that trade?—Yes.

424. Is it not the fact, that taking the whole of the goods now made in Spitalfields, that the quality is much better than it was a few years ago?—I should say not; I can say that we made much better goods ten years ago than now.

425. Do you mean plain Gros de Naples?—Yes, Levantines and plain Gros de Naples were better ten years ago than now in Spitalfields; but then we made them with boiled off shoot, which produced a better article than we can do with supple shoots.

426. You have been questioned a good deal as to the competition Spitalfields receives from Manchester and other places, and whether that competition, if it takes any hands from London, must not be injurious to it; if that be the case, the Committee wish to know whether the letting in a large quantity of foreign manufactures must not greatly add to that injury?—Unquestionably.

427. A good deal has been said with respect to fashions; in all fancy trades almost, does not a manufacturer prepare a quantity of goods for a particular season?—Yes.

428. In order to procure new patterns adapted for the season, is it not necessary that he should be remunerated by a larger profit?—Certainly; his risk is greater than on plain goods.

429. Is that risk owing to a great loss falling upon the goods after the season is over?—Yes, in case they should not take.

430. Then if a manufacturer is to be met in his own market by foreign goods, and a prejudice in favour of those goods exists, must it not deter him from coming into competition with those goods?—Decidedly.

431. Then on the whole, must not this competition very greatly diminish the profits of the manufacturer?—Most decidedly.

432. And he consequently reduces the wages of his labourers?—Yes, certainly; they may have been reduced nearly 50 per cent. since the opening of the ports.

433. You have been asked a good deal upon this point, whether, if there was a reduction on the thrown silk, the manufacturer would not bring his goods cheaper into the market; if that was the case, would it confer a benefit upon the manufacturer and the labourer?—It might, so far, if we confine our consideration to the manufacturer and the labourer, because it would be a check to smuggling to that extent.

434. If you have a reduction of duty, and you bring your goods to market at a cheaper rate, would there not be a lower price put upon foreign goods that were to come into competition with you?—It is more than probable, when they found the English competition too much for them, they would lower their price immediately; we have found that the case in plain goods.

435. Have you not had to contend constantly with a glutted market?—Yes; which is one of the greatest evils we can possibly have.

436. You could manufacture more goods if there was a demand for them?—Certainly.

437. If you have to contend with a glutted market, must not that oppress any trade where it happens?—Unquestionably; that is the effect of forcing into the market large lots of goods at reduced prices; they interfere afterwards with the regular trade.

438. Do you happen to know whether the manufacturers, who have been rather bold in bringing out new things, have been compelled to make very large sacrifices?—Yes; I know that has been the case to a very large extent.

Mr.
William Brunskill.

19 March,
1832.

439. That is sufficient to deter them from repeating the same?—I should think it would.

440. You have stated that fashion has a great influence upon the price of an article; is there not always in the upper ranks of society, at least, a great preference for foreign articles, although inferior to English?—That is my opinion.

441. You have generally observed it?—I have; and as an instance I would remark, that at the time to which my observation applied, that we made better gros de Naples ten years ago, they were made with boiled-off silk; yet the French introduced the common supple article, which is of a very inferior kind and much cheaper certainly, and the English immediately adopted it, and it has been followed up ever since.

442. Will you explain to the Committee what is meant by supple and boiled-off?—The supple comes in from the dyer's the same weight, or a little heavier than it is sent to them; but owing to there being a gum upon the silk when it is boiled off, it reduces it one-fourth.

443. You think you could make as good patterns, but as you have this competition to meet, you say it would be useless?—Yes, we find it so.

444. You say there is as much silk consumed, but not nearly so much labour upon it?—Yes, decidedly; all the lighter and finer articles are made by the French.

445. There is what you call the round or coarse silk, that is not near so long?—Yes.

446. And which takes only half the labour?—Yes.

447. You thought that the smuggling which existed before these laws passed, rather favourable than unfavourable to you?—Yes; we used to consider it very serviceable to us, it supplied us with patterns and styles that we immediately copied.

448. At that time the principal and most respectable houses were not much concerned in smuggling?—No.

449. It was done in small quantities?—Yes, generally in dress lengths.

450. It was done by private families?—Yes, the couriers used to bring them.

451. Do you know that there is great distress existing at Congleton, Manchester and Macclesfield, and other places where weaving has been carried on?—I believe it is very general, and has been throughout the winter.

452. Do you know that there has been good a deal of distress among the throwsters?—Yes, there has.

453. Supposing you could be relieved by the reduction of the duty upon certain manufactured goods, although it would be relieving one party, would it not be throwing a greater burthen on the other party, the throwster?—I should think it very probable.

454. Would the condition of the people, in a general point of view, be bettered?—No, not altogether.

455. With respect to the degree of distress existing at Coventry, are there other persons better acquainted with it who can state it more particularly?—There are several other persons who can go into it more minute particulars, and who have come up with all the calculations.

456. You have stated that out of ten thousand and odd looms there were eight thousand and odd out of employment?—Yes, in January.

457. Was the trade generally progressive before the prohibition was removed?—Yes.

458.—In general, was the trade increasing?—Yes; from the year 1814 to 1826, there was an increase of imports to the amount of 140 per cent. and during the whole of that period or nearly so, the manufacturers were well remunerated for their capital and labour.

459. If you had gone on without interruption, and these laws had not passed, do you think the trade would have been in a state of progressive improvement?—I have no doubt, instead of the increase of imports being about from 20 to 25 per cent. I am inclined to think it would be double that.

460. At the time you speak of up to 1826, though the silk trade had been progressing as to the quantity of pounds weight, was not the raw material worked at a very heavy expense?—Yes.

461. That must have retarded its improvement?—Yes, certainly.

462. In the year 1824, when you were told there was to be this remission of duty, and that it was to lead to such extraordinary success in your manufacture, and an

an increase of foreign trade, should you reckon it a very foolish thing for people to make mills and extend their concerns when such an expectation was held out at that time?—I suppose they might be induced to do so under the representation of the Government, but I confess I should not have done it; I had a very bad opinion of the measure from the beginning.

Mr.
William Brunskill.

19 March,
1832.

463. Did you find an immediate alteration after the prohibition was removed?—Yes; we were obliged to put down all our jacquard looms immediately, and we were thrown on to a commoner or coarser article, while the French supplied the finer articles; when our customers found it difficult to obtain finer things by smuggling, they gave us the orders, but when they could get them as they now do, they ceased giving us orders.

464. Have you been able to export many goods?—No; I never exported any.

465. With respect to exportation, is it not found that the debentures assist very materially?—I should think there would be very little exportation without it.

466. Do you not find them particularly useful when there is a glut in the trade?—In what way.

467. In assisting the exportation?—They only assist in exporting certain very common goods; then the next question is, whether, nationally speaking, there is much profit in them; the labour upon the article exported is very small indeed.

468. Would they not be sold lower in this country?—I am not aware that they would.

469. Are you not aware there has been a change in the fashions to such an extent, that instead of silks, cottons are now generally substituted?—We have had the trade a little interfered with by printed muslins, and an article called shally.

470. And there has been a great change among the weavers, in consequence of an alteration of fashion, going from the coarser kinds of silks into finer woollens and mixed goods?—Yes, I dare say there has.

471. Do you happen to know, that the goods that have been exported, have been Bengal silks; the coarser silks, the bandannas, and goods mixed with silk and cotton, and silk and worsted?—Yes; that was the observation I was making, that the original cost was so small, and the amount of labour expended upon them was so trifling, that it was of very little importance in a national point of view.

472. Then in point of fact, the price of weaving a piece of grey bandannas being two shillings and three pence, and as two pieces would weigh a pound, the labour on those two pieces would amount to four and six pence, and the drawback upon the exportation would be three and sixpence out of that?—Yes, so that there is very little profit.

473. That is the description of article?—Yes.

474. You mean to say that the superior silk is not exported at all?—No, it is not, except in a very trifling degree.

475. Is it not your opinion, that in consequence of reducing the price of fancy silk goods, and silk goods generally, that as a matter of necessity all cotton articles must be reduced in price, because the public would naturally take the superior commodity if they could get it for a lower price, and those cotton manufacturers would be compelled to lower the price of their fancy commodities, in order to sell them?—Yes.

476. You stated, that the lowering of the duty upon cotton goods last year had interfered with the consumption of silk?—No, I did not say anything about that; but I said that the fancy cotton goods had interfered with the sale of silks; they were fashionable last summer.

477. They were worn last year more than they had previously been?—Yes.

478. Were not there some mixed goods also that came into competition with the inferior silks?—Yes.

479. That was in consequence of the reduction of the duty on cotton goods, was not it?—I am not aware of that; I dare say it might be the case.

480. You stated that smuggling is usually done now at from 20 to 25 per cent.?—Yes.

481. But in the particular instance it was supposed to have been done at five per cent.?—Yes, from five to ten per cent.

482. If it could be done in that singular instance, why do not all those persons who are engaged in smuggling transactions adopt the same principle?—I hope we never shall hear of another transaction like that, it was so very barefaced; it was a case of that wholesale kind of smuggling I had never heard of before.

678.

E

483. Were

Mr.
William Brunskill.

19 March,
1832.

483. Were you at all aware that such transactions were going on before it was found out?—We had a strong suspicion they had some channel by which they got their goods through at a very low rate.

484. Can you conceive any reason why another tradesman should not adopt the same plan?—It might so happen, but we never heard of such a thing before; the ports have been opened six years.

485. Then it only comes to this, that no one has ever been detected?—Certainly; we have strong reason for supposing it never has been done before.

486. You stated there would be an increase of price in the case of a prohibition, what do you imagine that increase would be?—Not more than five per cent. upon the goods.

487. What are the wages a workman can earn, at the list of prices put in?—That would be a very complicated question; some can earn only 3*s.* per week, and others from 2*l.* to 3*l.*; but it is a very rare circumstance for a man to earn so much as the latter sum.

488. Does it depend upon the loom at which they work?—Yes.

489. Does it require a better workman to work a jacquard loom?—Yes; he must be a skilful weaver to work at a jacquard loom.

490. The high wages apply only to the jacquard looms?—Yes.

491. What is the average price of working at a jacquard loom?—I should think under 1*l.* per week.

492. Do you think there are 100 weavers at Coventry earning more than 1*l.* a-week?—I should think not.

493. What is the difference of wages between an English workman and a foreign workman, both working at a jacquard loom?—I should think that the English is very nearly double, generally speaking.

494. Is the jacquard loom employed for plain as well as fancy work?—No, fancy work only.

495. You have stated that the weavers were well employed up to 1828?—Yes.

496. The prohibition was removed in 1826; how do you account for their being well employed in those two years between 1826 and 1828?—It took some time before the foreigner found out the channels of trade, and up to that time it was not so much felt; but since they have found out those channels, we feel it the more.

497. You are aware of the number of pounds of raw silk, and the number of pounds of thrown silk introduced into the country?—Yes.

498. As far as the information of the Committee goes, the number of pounds of thrown silk in the last three years was 374,000 pounds, but the raw silk was 3,075,000 pounds; what, in your opinion, would be the effect upon the price of thrown silk introduced into this country, supposing the duty of 3*s.* 6*d.* was removed?—Ultimately it would lower the price of silk to that extent.

499. Do you not think the event of a greater demand in the foreign market would have the effect of raising the price?—The foreigner must still pay the same price as we do; if it rose here, it would rise abroad.

500. If the 3*s.* 6*d.* protecting duty that the throwster has was removed, and that removal had the effect of reducing the throwster's profits so much that he must give up his trade, what would be the effect upon the foreign market?—It would certainly make the trade of a foreign throwster a very good one, but still the price would be the same all over Europe, or very nearly so.

501. Would the English manufacturer gain in that case the whole profit of the 3*s.* 6*d.* which he would be supposed to gain by the removal of the duty?—No, it is very likely he would not; but it would not matter as the foreigner would have to pay a higher price also.

502. What effect has the duty upon foreign silk on the price of ribbons?—Five or six per cent. upon ribbons if a light make.

503. Upon ribbons of heavy make?—I have no calculation by me.

504. Would the silk trade be in a more advantageous state generally, if the supply of thrown silk was foreign?—Speaking as a manufacturer, I should prefer it so.

505. Why so?—We always prefer foreign thrown, if we can get it, with few exceptions.

506. Have not the English thrown silks improved of late years?—I cannot say that they have, although we have some good throwsters.

507. What proportion of British thrown silk do you use compared with foreign?—We use a large proportion of foreign.

508. What

Mr.
William Brunskill.

19 March,
1832.

508. What proportion?—I have not ascertained that fact.

509. Do you chiefly use, in your manufacture, English or foreign?—We use a great deal of foreign.

510. Do you use chiefly English or chiefly foreign in your manufacture?—About half each.

511. In what part of this kingdom do you consider that the silk is best thrown?—I think that the best throwster we have in England is at Manchester.

512. If the duty was taken off foreign thrown silks, and the duty on foreign manufactured silks were taken off in an equal proportion, would that have an equally beneficial effect?—Yes, to that extent, because it would be an attack upon smuggling.

513. If the duty was taken off foreign thrown silk, and the duty lowered upon foreign manufactured silks, you would consider that a benefit?—Yes, speaking merely as a manufacturer; because it would reduce the inducement to smuggle to that extent.

514. Are there not occasions when you are in want of an immediate supply of thrown silk which you might not be able to obtain if you depended upon a foreign supply?—No, I should think not.

515. You say the price paid for smuggled goods is from 20 to 25 per cent., do you not know, that generally speaking they are introduced at a much lower rate?—No, I should think not. I know that they are not introduced at a lower rate to any extent.

516. But that a larger quantity is introduced now at that rate?—Yes.

517. In point of fact, they order with great confidence, knowing they will be subject to a duty to that extent; they do not regard the smuggler as the importer?—Certainly not.

518. Are there not people there who regularly insure the delivery of the goods here?—Yes, responsible people.

519. Who, for a certain per centage, agree to deliver the goods?—Yes.

520. Are there not many persons in town, who import their goods in that way, instead of having recourse to the measure that Messrs. Leaf resorted to?—I should think there is no house in the habit of doing it as Messrs. Leaf did; all the smuggling is carried on in that way.

521. Did you formerly manufacture the goods that you now do?—Yes, except figured gauzes were never very much made in this country; but the striped gauzes were very commonly manufactured.

522. How many looms would the 5,000 yards of velvet you have spoken of, have employed?—I do not recollect that exactly.

523. What is the rate paid upon the insurance on smuggling in the mode you have adverted to?—From 20 to 25 per cent.

524. That is the general rate?—Yes.

525. Does that apply to the heavier goods as well as the lighter?—Yes.

526. There is a difference in the insurance between the lighter and the heavier goods?—Sometimes that is the case. I do not know that it is now.

527. Do you know whether that practice of insuring was in existence before 1826?—Yes; but I do not think that the same channels were made use of.

528. Has it not been found that goods have been landed, and been detained three months before they could be delivered?—Yes.

529. On account of the risk?—Yes.

530. And that a respectable man, with one or two exceptions, would not run the risk of having smuggled goods in his possession?—He would not.

531. Do you consider that smuggling has increased at this period, as compared with the period prior to 1826?—I should say amazingly.

532. You have said that for your own part you had a bad opinion of the experiment of the change that took place in the year 1826?—Yes.

533. There were some manufacturers that thought better of it?—Yes.

534. Are you aware of any manufacturers who thought well of the scheme when it was first proposed, who have since altered their opinion?—Yes, I have reason to think several have; some of those who held those opinions have left the trade altogether.

535. Could you instance any in particular?—Yes, if it was not invidious to do so; if the Committee desire an answer I will give it.

536. Not if you think it any secret, or that you shall hurt any body's feelings?—I believe I may mention the name of Mr. Beckwith as one.

537. You stated that it was in November last that the Table of wages was adopted?—Yes.

678.

Mr.
William Brunskill.

19 March,
1832.

538. Was it before or since that the circumstance occurred, you have adverted to, of your endeavouring to get the workmen to consent to a greater increase of labour on a particular manufacture; did that happen before or after the settlement of the wages?—It happened about a month ago.

539. Consequently since what happened in November?—Yes.

540. Do the Committee understand you right, that what you desired of the workmen was, that they should give a greater quantity of labour at the same rate of wages?—I did not exactly ask them for more labour than I had been requiring them to give previously, but I wished to bring them all up to the same point, which I could not do without I fined them.

541. You wished to impose a fine?—Yes.

542. Was that a new proposition?—Entirely.

543. Had any thing been said about fines at the time the Table of wages was settled?—No.

544. This was new?—Yes.

545. Was that the main reason of the work-people objecting?—Yes; that was the principal reason.

546. You said that the small proportion of foreign organzine was chiefly used at Coventry and Spitalfields?—Yes.

547. But that is only used for the warp?—Only for the warp.

548. Therefore half of it must be British organzine?—No, the rest is not organzine.

549. It is British thrown silk?—It is what we call "Shute."

550. The warp is foreign?—Yes; we have foreign trams also, but not to a great extent.

551. Is not a very large proportion of the shute used in plain goods at Coventry, Brutia singles, and is that affected by the duty on foreign thrown silk?—If the duty was taken off foreign thrown silk it would very likely be reduced a little in value.

552. It is your opinion that a duty of 25 per cent. can be collected, without much risk from smuggling?—Yes, most decidedly.

553. Could a higher duty than 25 per cent. be collected?—Yes, if you are willing to throw more difficulties in the way of the smuggler.

554. Is it not your opinion that a protection of 25 per cent., as far as regards any difference in labour there may be, and any difference in price in the two countries, would be an ample protection to the manufacturer?—I should think on all plain goods it certainly would, but it would not do, in some cases, upon ribbons.

555. Then do you mean that the difference between the labour and the material in France, and the labour and material in England, is more than 25 per cent. in some cases?—Yes, their labour on light articles is so much lower than ours.

556. As there is very little difference in the cost of the material, there must be a difference of 25 per cent. upon the labour done?—No, I did not say there was very little difference in the cost of the material.

557. You think that that increase of duty would not be sufficient to afford protection to the English manufacturer, as far as fancy goods are concerned?—Yes; nothing but prohibition will answer.

Martis, 20^o die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. William Brunskill, again called in; and further Examined.

Mr.
William Brunskill.

20 March,
1832.

558. HOW much did you allow in your prime cost of the goods imported from France, for the necessary expenses, beyond what you would incur in purchasing them in Spitalfields and Coventry?—You mean freight and commission, and Custom-house charges altogether?

559. Yes?—I am not exactly prepared to say; indeed it must always vary very much according to the size of the package.

560. How much per cent.?—It must vary per cent. according to the size of the packages.

561. Suppose you take any certain sum in the course of the year, how much upon the average would it come to?—I think two per cent. for expenses, and two per cent. more for commission upon purchasing the goods in France.

562. Do

Mr.
William Brunskill.

20 March,
1832.

562. Do you not believe, in round numbers, it amounts to five per cent., including all the expenses, beyond what you would have to pay in Spitalfields?—No, not quite five per cent.; I should think from three to four per cent., about four per cent.; I speak from recollection.

563. Whatever it is, it must be so much additional protection to the English manufacturer?—Unquestionably.

564. Having stated that a duty of 25 per cent. may be collected, do you mean that 29 per cent. is not a sufficient protection to the English manufacturer for the difference of labour in France and England?—No, I do not think it is a sufficient protection, on account of fashion; on account of labour generally, it would be so; in some cases it would not; it would not be a protection in all cases.

565. It would be a protection against the difference in the cost of labour and the material?—I think not in light gauze ribbons.

566. Then you mean in some instances, the cost in France is more than 30 per cent.; that is to say, that the cost in England is more than 30 per cent. beyond what it is in France?—Yes, I do.

567. When therefore you state that the difference of the cost is more than 30 per cent., do you state that upon any knowledge you possess of the prices of wages in the two countries, or the materials?—Yes, it is from calculations I have made from time to time; but it varies at different times of the year; it will vary from 10 to 15 per cent. in the course of a year.

568. You mean wages in France vary to that extent?—Yes.

569. But in some instances more than 30 per cent. difference?—Yes.

570. You have never been at St. Etienne?—No.

571. Have you had an opportunity of comparing the price of labour in the same article, at St. Etienne and Coventry?—Yes, I have found in some instances 100 per cent.

572. In what instances?—In cut gauzes.

573. Can you state the actual prices paid in each instance?—Yes, in England we pay 12s., and in France 6s. for the piece.

574. What would be the price of the article?—They are sold by the garniture, I have not made the calculation in that way; I am speaking of the particular width of the ribbon; but then the French always put a narrower width with a wide width; I am speaking of thirty-penny ribbon.

575. When you speak of a hundred per cent., do you not mean upon the value of the article?—No, in the labour.

576. What proportion of the whole value would that be; would it be more than 30 per cent. upon the value of the article?—Yes, in our case considerably more than 30 per cent., and in theirs, not quite so much; it would not be quite so much on theirs.

577. Would it be less than 18s. a piece; would it be three times the labour?—No, I should think not in France.

578. But 30 per cent. upon the value of the article would cover perhaps 100 per cent. in wages, in most instances?—No, I think it would not do that; 30 per cent. would not cover 100 per cent. in the labour, but it requires a very minute calculation upon that; I could have given it, had I been aware of the question.

579. What proportion of the wages enter into the cost of the articles made at Coventry?—They vary so very much, I could hardly state it.

580. If you take a piece of gauze ribbon, the value of which when you shall sell it shall be 40s., what amount of wages would you pay for making that piece, taking what you call the thirty-penny gauze?—About a pound, no not quite so much as that; I do not know any article that embraces that price, for a thirty-penny width usually sold for 36s., we calculate that the weaver should receive 18s., that is at first hand.

581. Supposing the price of that article to be in England 18s., and in France 9s., that is one half, an extreme case; it would be 25 per cent. upon the cost of the article, would it not?—Upon the selling price it would, but that is for weaving labour alone; there are other descriptions of labour that would have to be included.

582. But as far as regards the weaving, 25 per cent. would be sufficient?—Yes, except in light articles.

583. Do you happen to know whether France imports large quantities of thrown silk from Italy?—No, I am not aware that they do; I have understood but a small quantity.

584. You have understood that they do import?—Yes; but it decreases every year,

Mr.
William Brunskill.

20 March,
1832.

year, as they find it answers their purpose to produce their own silk, which is the best silk produced in any country.

585. The two articles offered to the manufacturers at Lyons, the one Italian, and the other French, of equal qualities; they would fetch equal prices, would they not?—Yes, I suppose they would.

586. And it is equally true that the Italian thrown silk must sell for the same price at Lyons as it does in London?—Yes, with the exception of 3s. 6d. duty.

587. Independent of the duty?—We generally pay a little more, our merchants have sundry charges that raise it to us a little.

588. You mean the French manufacturers buy better than you do?—Yes; they are not subject to so many changes as we are.

589. There is a small difference of carriage?—Yes.

590. If, therefore, the English manufacturer is to pay 1s. 10d. more duty than the French manufacturer has to pay, it follows as a matter of course, does not it, that the English manufacturer must pay that additional price for his silk beyond what the French manufacturer does?—Yes, he must pay that, at all events, if not more.

591. One shilling and ten pence upon a pound of Piedmont silk would be about eight per cent.?—Yes, eight or nine per cent.

592. Consequently the duty in England obliges the manufacturer to pay eight per cent. more for his silk than is paid by the French manufacturer?—Yes, at the least.

593. You stated yesterday that the labour in France, you had reason to suppose, was 50 per cent. cheaper than it was in England?—I am not aware that I stated it; in some cases it is so.

594. You do not mean that as a general answer, but only to apply to particular cases?—Yes, certainly.

595. What would you state to be the average difference?—I really do not recollect at this moment, but it can be easily ascertained.

596. Should you say 20 per cent.?—In May last I made the calculation upon plain gros de Naples; the English were then 40 or 50 per cent. higher, but that was owing to their labour being then exceedingly low, and ours rather higher than usual.

597. Not looking to particular instances, what, in your opinion, is the average difference in labour in the two countries?—In confining my observation to labour, I cannot speak precisely; my calculations have generally applied to the cost of goods, and I do not remember it.

598. Do you think that the labour in France is one-fifth cheaper than that of England?—Yes, more than that.

599. Should you say one-fourth?—Yes, I should say full that.

600. Twenty-five per cent., in your opinion?—I cannot speak positively to the point; I should think more than that.

601. You stated yesterday, you had imported a particular parcel of goods from France that cost you 370l.?—Three hundred and seventy pounds French cost.

602. Do you mean you have ascertained that that was what you paid in France?—Yes, or thereabouts.

603. And you say there would have been 100l. paid upon the same goods for labour?—Yes, at least.

604. What did you pay duty upon it?—About One hundred and sixteen pounds.

605. Consequently, if the French had made them for nothing they would have been liable to a difference of 16l., the English manufacturer would have had a protection to that extent?—Yes; but the Committee is aware we are subject to a duty of 3s. 6d.; I stated yesterday I could make the goods cheaper.

606. You said, with reference to those goods, they were 12½ per cent. dearer?—Ten per cent.

607. And yet that they sold in preference?—Yes, in certain channels.

608. What was the amount of duty in this case?—One hundred and sixteen pounds.

609. What would have been the amount of labour to be expended?—About 100l., it might be a little more or less.

610. How have you taken your cost, at the par of exchange, or at 25?—We have taken the cost as they have drawn upon us, which I think is rather favourable to us just now.

611. You stated yesterday that wages in Spitalfields had been reduced 50 per cent. since 1826?—Yes, or thereabouts, from 40 to 50 per cent.

612. Do you attribute that reduction to the introduction of goods from France?—Yes, mainly.

613. Is

Mr.
William Brunskill.

20 March,
1832.

613. Is gros de Naples one of the articles you meant?—Yes, we used to pay 11*d.* or 1*s.* and we now pay from 7*d.* to 6*d.*

614. Were any of the goods in this parcel gros de Naples?—All plain gros de Naples.

615. You think that the importations from France have reduced the wages on plain gros de Naples from 11*d.* and 1*s.* to 6*d.* or 7*d.*?—I do not attribute it entirely to that; it may not have produced all that effect, but it must have produced a considerable alteration.

616. You have taken an instance of 100*l.* and 116*l.*?—Yes, that is at the present rate of wages.

617. The importations cannot have reduced wages, taking that as an example, to that extent?—We have had a continual glut of goods.

618. Do you know that gros de Naples are manufactured at Manchester?—Yes.

619. Are you acquainted with the Manchester goods?—Not particularly.

620. Do you know the prices paid there?—From 3½*d.* to 5*d.*

621. Those are not the goods you pay 6*d.* or 7*d.* for?—No, 5*d.*; the article may be what we pay 6*d.* for.

622. Do you not think that the competition at Manchester has reduced the price of weaving gros de Naples?—It may have had its share, but Spitalfields would have been employed principally in the higher description of article, had it not been for the importation.

623. You mean to say, that formerly the Spitalfields people did not care about the inferior fabrics being made in the country; they had sufficient employment in making velvets, and a superior description of silks; but having now lost that, they are struggling against Manchester, and other towns in the country, to gain back that trade they did not care about formerly?—Yes, in the absence of all other employment.

624. France having taken up all those superior branches of the manufacture, or having supplied us with those articles which used to be made in Spitalfields?—Yes, certainly.

625. Do you know that it is so?—Yes, I know it within myself, to a very considerable extent; I have been a large importer all along.

626. You are aware that the silk manufacture has increased at Manchester since 1826?—Yes; a low description of goods has been made, to an immense extent, there.

627. Do you not know that they make also very good goods?—Yes, in a few instances, I believe.

628. Have you not seen goods made at Manchester and Macclesfield, quite as good as any you have seen at Spitalfields?—No, not the richer goods; they are not equal in texture.

629. Did you ever hear of velvets made at Manchester?—No.

630. Did you ever hear of satins made at Manchester?—No, I never did.

631. And in few instances only have figured silks been made at Manchester?—Excepting the common kinds, and those have been made to a considerable extent.

632. Are velvets imported from France?—Yes, of the richest kind.

633. Many?—No, not a very large quantity; the largest quantities are imported from Germany.

634. Are satins imported from France in any quantities?—Yes, rich ones.

635. Broad satins?—Yes; the principal part used are French.

636. Are there many figured silks made at Spitalfields now?—No.

637. What have been made lately have been made at Manchester?—Yes, low goods.

638. Are there not a great many fancy goods now making at Manchester?—I really cannot speak to that.

639. But the figured goods made at Manchester are of a lower description?—Yes.

640. You spoke yesterday of importing a considerable quantity of velvets?—Yes.

641. You said you had not sold them?—Not the whole of them; I have sold the principal part of them.

642. You know that the importation has fallen off generally?—No, I do not know it; I know the contrary is the fact. Last year was the largest importation we ever had.

643. Have you been at Elverfeld and Crifeld?—No, I have not.

644. Do you happen to know that the manufacture of velvets there, differs materially from the manufacture here?—No, I am not aware that it does; I am aware that an impression is gone abroad that they make two at once, but I do not think that is the fact; they do of ribbons a little.

678.

Mr.
William Brunskill.

20 March,
1832.

645. Can you say it is not the fact?—I have been told it is not the fact by the manufacturers themselves; they make ribbons in that way, but not that to any great extent.

646. Ribbon velvets?—Yes.

647. You stated you made striped gauze ribbons quite equal to French?—Perhaps not quite equal, but we make them so near, we sell a great quantity.

648. But you have not the material so beautiful for making them?—No, we are a little short of that material.

649. And that material they grow at home?—Yes.

650. And prevent the export of it?—Yes, they do not allow it to be exported.

651. That is cheaper than in England?—Yes, the maraboo.

652. That is what you use in gauze ribbons?—Yes, that is one of the material articles.

653. If that was obtained from France, you could make them as good?—Yes, I think so.

654. You think it of great importance to the manufacturer to have those materials from France?—Yes.

655. Do not the English manufacturers copy the French patterns?—Yes.

656. And after having copied them, they cease to import them from France?—I do not import the stripe gauze ribbons at all; all we sell we make ourselves.

657. Are they not out of fashion before you can imitate them?—Yes, the figured ones are; but in stripes, we make our patterns.

658. You say you copy French patterns, and when you have done so, it does not pay to bring them from France?—No, that is not the case in stripe gauzes; we do not copy the patterns at all.

659. Speaking generally of fancy goods?—They are generally stale in a short time.

660. But when copied, it does not answer to bring them?—No.

661. Do you know whether or not the Swiss ribbons continue to be imported in such large quantities as they were?—I am told not.

662. The improvement here has shut them out?—No, I am told that they can sell cheaper than we can; but the distance is so great, the stocks get unassorted, and the warehousemen feel great inconvenience in that, and they therefore do not depend upon a supply from that quarter.

663. In point of fact, they are not brought in such quantities as they were?—No, they are not; I used to import them myself.

664. The duty is collected upon them, upon per pound weight?—Yes.

665. If the English and Swiss ribbon fell in price, and the duty remained the same, the duty would be much higher in England?—Yes.

666. The duty may be 50 per cent., that is now 60 for that reason?—Yes.

667. Do you know the duty?—It used to be from 40 to 50 per cent. I have not ascertained the fact lately.

668. When do you mean that was the duty?—Three or four years ago.

669. When you state that English fancy goods are worse by five per cent. than French goods, do you mean that that is owing to the difference of material or the difference of labour?—It is owing partly to the inferior skill on our part, and partly to the material.

670. Have you ever been at Lyons?—No.

671. Have you ever seen the French raw silk?—Yes.

672. Is it not superior to any thing you get from Italy?—Yes, it is a lighter bodied silk than we get from any other place.

673. Have not the English manufacturers improved very much in the last five or six years at Coventry?—I think some improvement has taken place, but I think it has been very much retarded in consequence of the harassing competition.

674. Do you not think, in a very few years, we shall be quite equal to the French?—No, I think not, because I do not see any prospect of increasing the quantity of machinery.

675. Machinery may be increased for throwing the silk; but you think the machinery to be used for the production of fancy goods will not be increased?—No, being too expensive for any profits that can be obtained upon the goods, whilst we are exposed to foreign competition.

676. Persons will not engage their capital in it?—No.

677. Does that observation apply to both branches of the trade?—Yes; the fancy branch we have almost abandoned.

678. Is there any encouragement for embarking capital in the throwing machinery?—I should think not.

679. Do

Mr.
William Brunskill.

20 March,
1832.

679. Do you mean there has been no considerable increase of machinery in the manufacture of ribbon in Coventry since 1821?—Yes; there has been an increase, but it has been found to be a bad speculation, I have bought figured looms at a third, and sometimes half their original cost.

680. Are there not better goods making for the summer trade at Coventry than have been made before?—I should say, generally, that that is the case, owing to the list made in November, when the manufacturers were bound down to pay a particular price; and they can have a richer piece of goods made at the same price as a poor one.

681. Did you never make as good goods before as you are now making?—Yes, we have, certainly.

682. It is no new thing to make goods as beautiful as you are now making them at Coventry?—No, it is not new.

683. Are not the goods manufactured at Coventry now much better than they were ten years ago?—I should think they are a little better.

684. You stated yesterday, that Leaf & Company had smuggled goods at five per cent.?—From 5 to 10 per cent., I imagined; but I stated that opinion in a very doubtful shape.

685. You mean, that it is a conjecture of yours?—Yes, it is.

686. When you were asked whether you did not imitate the French goods, you stated you could not go to the expense of the machinery; does that arise from the French goods, when first introduced, obtaining better prices than the goods made here?—They obtain quite as high prices as we get.

687. If you were to imitate the patterns, and after you imitated them they ceased to import them, would that arise from your selling them at a less price?—No; from their having gone out of fashion.

688. Can you obtain as good prices when they are gone out of fashion?—No, we can sell them cheaper.

689. When you receive a pattern from France, of the finest and most difficult fabric, in point of execution, how long will it take you to prepare your loom, so as completely to imitate the pattern?—From a week to ten days, I should say; that is, supposing we have a loom that would make that kind of article.

690. What would be the expense of setting the pattern?—It depends upon the extent of it; they vary from 2*l.* to 5*l.* or 6*l.*, or more than that, according to the extent of them.

691. You stated yesterday, that the consumption at Coventry of silk was 600,000*lbs.* annually; can you state how much of that quantity is foreign thrown silk?—No; but if the Committee wish me to give a probable opinion, I should say, perhaps, about 150,000*lbs.*

692. Are there not large quantities of Bengal and China organzine used at Coventry?—Yes, very large.

693. Is not the organzine used for the warp?—Yes.

694. Are not the following sorts of silk used as shute: Italian tram?—In small quantities at Coventry.

695. Bengal tram?—Also in very small quantities.

696. China tram?—In very small quantities.

697. China singles?—That to a very considerable extent.

698. Bengal singles?—Yes; that to a considerable extent.

699. Brutia singles?—Yes; that is used to a very large extent.

700. Is there much Italian tram used?—No, very little indeed; it is hardly used at all.

701. What proportion of Italian tram is foreign thrown?—That I cannot tell; not a very large proportion; a very small proportion.

702. Can you tell what proportion the Italian tram used in Coventry bears to all the other sorts?—I should say it is the smallest proportion imaginable.

703. What number of looms do you employ in Coventry?—I cannot say at this moment.

704. All the observations you have made in regard to the duty, apply to the small proportion of foreign thrown silk used at Coventry?—Not in allusion to Coventry only, but the broad trade as well.

705. When you say that the duty of 1*s.* 10*d.*, the actual protecting duty, occasions the manufacturer of Coventry to pay eight per cent. more for his silk, that applies to the small proportion of foreign organzine he uses?—Yes.

706. It is not correct to say he pays it generally?—No, not generally.

678.

F

707. Yesterday

Mr.
William Brunskill.

20 March,
1832.

707. Yesterday you stated, in your own particular manufacture you used a very large proportion of foreign thrown silk?—About half.

708. You stated, that since 1826 there has been a considerable addition to the machinery at Coventry and elsewhere?—I said, not a very considerable addition. There has been an addition, but it has been found a bad speculation; for instance, in the factory sold at Battersea, in the early part of February, they had laid out about 14,000*l.* in machinery, which did not sell for one penny.

709. Was that Ames & Atkinson's?—Yes; the building cost more than it fetched, including the machinery.

710. Has there been any increase in the quantity of machinery, or any improvement in it since 1828?—I am not aware of any material improvement.

711. To what do you impute this cessation?—I am not aware that the French have made any improvement of theirs since that.

712. Did you not say that the English machinery was not quite so perfect as the French?—No, I said it was quite as perfect.

713. You said, that the arrangements made in 1826 for the prevention of smuggling were very incorrect; you said, that if the smuggler had been consulted, he would have recommended the very course adopted by Government?—I did.

714. Do you think that you could upon consideration, or that the trade can, point out means by which the duty might be collected, and the revenue, and consequently the manufacturer, effectually protected?—I stated yesterday, if personal degradation for principal and agent was adopted, it would go a great way, in my opinion.

715. That is matter of opinion?—Yes, that is my opinion.

716. Was Ames & Atkinson's machinery the best?—Yes, the very best.

717. You mentioned that the best throwster in England was at Manchester?—Yes, that is my opinion.

718. Are you acquainted with the machinery used by that throwster?—I am not a judge of machinery; I judge of the work; and I have understood his machinery is of a very perfect kind.

719. Does this throwster make use of the same machinery that Ames and Atkinson used?—They have no throwing machinery at all.

720. You stated you are an importer yourself?—Yes.

721. Is it to a considerable extent?—Yes.

722. In what way, speaking generally, do you make your purchases in France; do you purchase an assortment of goods?—Yes, we employ agents to buy whatever we require, in some cases, and in other cases we give our orders direct to the manufacturers; sometimes the one way and sometimes the other.

723. Have you any different rule as respects the particular sort of goods, or do you do it indifferently as to all goods; sometimes you go to the manufacturer and sometimes through agents?—The ribbons have generally come direct from the manufacturer.

724. Is it the practice with yourself, or any others who are importers, to buy up the whole quantity of any particular sorts of ribbons or any other silk fabric?—It is very seldom that the manufacturers have any ribbons ready manufactured in France; they do not do as we do; first of all they make patterns and show their patterns, and take their orders, and then work to order, and send them off when ready; but the reverse is the fact of the English manufacturer; he makes the goods, and offers them ready made for sale.

725. At what period of the year do you usually give the orders?—We give for the spring the order in December, or sometimes as early as November.

726. Do they send over to you the patterns?—They bring them over and expose them for sale, and we order what we like, and have them delivered in any month we please in the spring.

727. Supposing a particular ribbon brought over from France, which should become peculiarly fashionable in this town, what time would it take you to get your looms set at Coventry, and introduce the same article into this town, so as to be able to rival that ribbon of foreign manufacture?—It would depend very much upon the kind of ribbon it was; but a portion might be introduced in a month.

728. Do you think it might be done sooner in some cases?—Yes; if it was easy to make.

729. The question applies to those articles where labour constitutes so great a part of the value, and consequently is more difficult to make, and which takes more time?—Not much earlier than a month, certainly not any quantity.

730. Do

Mr.
William Brunskill.

20 March,
1832.

730. Do you consider that, in point of fact, it will generally answer to make the imitation such as has been referred to, of a French article which has already found its way into this country and got into general use and fashion?—In fancy articles they generally become stale by the time that the English manufacturer could get any quantity round; and therefore it seldom happens he does imitate them now.

731. You mentioned before, you could set your looms for a pattern to produce it in a week or ten days?—Yes; then the goods would be to be produced.

732. You were understood to say, that you could set a loom in the course of a week or ten days?—Yes.

733. But to manufacture an article in any quantity, would take, in the case of goods requiring much skill and labour, a period of not much less than a month?—Not less.

734. Then in point of fact it appears to be the result of what you have said, that the introduction of these French articles of fabric to any very great extent indeed, excludes the introduction of English fabrics, which might otherwise have led the fashion of which the French have now the advantage?—Decidedly so.

735. That is the ground upon which you consider nothing short of prohibition sufficient to protect the fancy articles made in England?—Yes.

736. Under the present system of protection of 30 per cent., those articles are brought in at a considerable expense by smuggling; and they are brought in because you stated that a number of the rich and more tasty persons in this country choose foreign fancy articles?—Yes.

737. Then do you not expect that smuggling will be at a greater premium, and foreign articles be still brought in, if that is a taste that is to be satisfied only by foreign articles?—We can judge best of that from the experience we had before those laws passed; the smuggling we used to consider then as a benefit instead of an injury, it supplied us with styles and patterns useful to us.

738. Then the prohibition is not to be entire, but it is to be subject to that degree of smuggling?—My opinion is, we can never stop smuggling entirely, but we can reduce it to so small extent as not to suffer by it, we should receive some goods, but not to any great extent.

739. Did you not say you had as good patterns here as they had in France?—Yes.

740. At the same price?—They are cheaper, speaking of good.

741. On those goods that most interfere with your trade, the regular duty is generally paid?—Yes.

742. Because that does not amount to 30 per cent. upon the value of the cost?—About that.

743. That is the rich figured gauzes?—Yes.

744. The reason why the public will have those things is, because they are French?—Yes.

745. Do you mean to say that the rich gauze ribbons of France are decidedly superior in price, having paid the duty of 30 per cent.?—They are quite as high or higher than ours.

746. Do you mean to say it is a matter of taste?—Entirely so.

747. You state, that in France they do not manufacture stocks on hand, but receive orders, and make them to order?—Yes.

748. Is that the case here, or do you make stocks on hand?—We make stocks on hand, and run the risk of the stock ourselves.

749. Do you labour under great disadvantage from being subject to change of fashions, that the French manufacture is not?—Yes.

750. You receive orders as well as manufacture?—Yes, occasionally.

751. Is not it more the case now than formerly?—No. I should think when ribbons were much in demand, the orders were tenfold what they are now.

752. How far can you go back?—To 1827 or 1828.

753. There were more orders then?—Yes.

754. In your opinion, is it a competition of price, or a competition of fashion only?—It is a competition of fashion decidedly; we could sell as cheap or cheaper than they could, and the public would not pay more for their goods if we had prohibition.

755. You said there were large imports just now, this is the season for it?—Yes, I spoke of a large quantity of goods of the description I have been speaking of, the plain gros de Naples that were coming, peculiarly suited to the Spitalfields manufacture.

Mr.
Anthony Cheeper.

20 March,
1832.

Mr. Anthony Cheeper, called in; and Examined.

756. WHERE do you live?—At Coventry.

757. What are you?—A ribbon manufacturer.

758. Do you know what are the relative proportions of the value of labour in making ribbons?—I have made a calculation, with the assistance of one or two other manufacturers, which I will explain, if the Committee will allow me.

759. Will you state to the Committee the proportion of labour?—The proportion of labour on narrow plain sarsnett ribbons, amounts to $35\frac{1}{4}$ per cent. on the whole cost of producing them; on broad sarsnets from 16*d.* width to 40*d.*, the proportion of labour on the whole cost of producing them amounts to 40 per cent.; on narrow satins 37 per cent.; on broad eight-leish satins $38\frac{1}{4}$ per cent.; on orientals and small pattern leys, rather a cheap fancy ribbon, $37\frac{1}{2}$ per cent.; on satin striped gauzes, 43 per cent.; on rich figured gauzes, 58 per cent.; on damask figures 47 per cent.; on satin figures, 49 per cent.; on rich lutestrings, $31\frac{1}{4}$ per cent.; on plain pads (that is waist ribbons) 32 per cent.; and on rich figured pads, 45 per cent. In all these calculations the proportion of the cost of labour is always considered in reference to the whole of the cost of the ribbons when completed, and the average of the whole of the articles enumerated is $41\frac{1}{2}$ per cent.; that is to say, it would cost 41*l.* 10*s.* for labour, and 58*l.* 10*s.* for dyed silk to make 100*l.* worth of ribbons, in an equal proportion of all the articles stated.

760. That is supposing equal quantities of each?—Yes; there are twelve articles, and the average of the twelve is $41\frac{1}{2}$.

761. From what quality of goods is this calculation made?—This is on the better qualities; the rich goods, generally speaking.

762. Made by the better description of manufacturers?—Yes. If they were inferior goods, the proportion of labour would be very much greater to the silk.

763. The same workmen are employed?—Yes, to make the light weights or the heavier.

764. Does this include all sorts of labour?—It includes winding, warping, draught drawing, clipping, and all the labour, except that of the dyeing and throwsters.

765. On what description of these works are the hands at Coventry principally employed in the ribbon manufacture, as far as you are acquainted with it?—I should say on lutestrings, satins and orientals, and small figures and eight-leese of that kind.

766. That is the description of labour that is of the least value, compared with the commodity?—Yes, the bulk would be.

767. So that those articles on which you would pay 43, 45, 47, 49 and 58 per cent. are less made than the others?—Yes; in small proportions, certainly.

768. Do these take up more silk?—Generally speaking they do; the gauzes, which pay the highest rate in proportion to any thing else, there is less silk in.

769. The coarser goods, where there is less wages, take the most silk?—Yes.

770. So that there may be a great consumption of the material, and yet a very little amount of wages paid?—Certainly, and *vice versa*.

771. Do you know the quantity of gauze ribbons imported in the last quarter, ending the 10th of October 1831, according to the official statement?—I have the official statement for that period. The amount imported in the quarter ending the 10th of October 1831, of stripe gauzes, amounts to 10,913 lbs. weight; there is an entry above, of 252 lbs. which I allow for broad gauze, not ribbons at all.

772. Is it stated in value?—No, it is pounds weight.

773. What was the amount of duty paid upon it?—£. 14,995. 6. 9.

774. Do you know the quantity of other ribbons imported?—I have the quantity of other ribbons imported; but they are mixed with the general description of silks that are imported, and I can only arrive by calculation at what proportion are ribbons; I take the ribbons to be two-thirds; the amount of the whole is stated together at 26,636 lbs. 5 oz.

775. Of the whole quantity, you take the proportion to be two-thirds of ribbons?—Yes; I consider of the whole quantity imported, 17,758 are ribbons.

776. Have you given the amount of duty collected, or can you state the duty collected?—No, I cannot; I have the amount stated here of the whole; it would be a work of time to divide it.

777. What is the amount there stated?—It is about 15,000*l.*; it is in two items.

778. Does

778. Does the present duty that is paid by the pound show clearly that those goods, in some instances, pay no more than from 15 to 22½ per cent. ?—Yes, most certainly; on the article most consumed during the season; these goods were brought in, and the duty paid was not more than 16 per cent.; I mean French satin figures.

779. Was not it understood that 30 per cent. was the duty to be collected?—That was the idea we received from Mr. Huskisson's statement.

780. You have a protection less by that difference ?—Yes, 14 per cent.

781. There is no smuggling in those goods that pay 14 per cent. ?—No, I should think not; the smuggling is in the article of gauze alone.

782. You think the duty could be raised on those articles ?—Yes; and collected very easily.

783. And beneficially to the trade ?—Yes; as far as there could be any benefit by duty.

784. Do you think that a duty of 25 per cent. could be collected ?—Yes.

785. Do you think that smuggling could take place under laws prohibiting the importation of foreign manufactured silks ?—Under prohibitory laws I should think it would be impossible to smuggle to any extent; from the circumstance, that if their goods were different from ours, by that difference they would be detected, which a manufacturer can immediately detect; and if they followed our styles and designs, we should be now in the situation in which they are placed, we should have that advantage; if we should set the fashion, we should not mind their following us; they would be in the situation in which we now are.

786. They would follow you, instead of your being obliged to follow them at a disadvantage ?—Yes.

787. Have not the English always followed the French ?—Yes; the French decidedly set the fashion; most decidedly.

788. If their goods come in here in great quantities, and the public will consume them, they must displace so many fancy goods that might be made at home ?—Decidedly.

789. You say, that the patterns would be known; that supposes that the people of Coventry, either by themselves, or agents employed for that purpose, would look out for the goods ?—Yes, I should say that they would; their interest would be at stake.

790. Therefore they would not be exhibited in the warehouses ?—No.

791. That would not prevent their being sold by private houses, milliners and others, where they would not be exposed ?—I do not see how the milliners are to obtain them.

792. By smuggling ?—They are not, generally speaking, the class that would smuggle.

793. Are you aware that a great quantity of goods are sold by them ?—Yes; but not smuggled by them.

794. In the event of prohibition, do you not consider that they would smuggle ?—Yes, to a certain extent, but not injuriously to the trade.

795. Others might smuggle for them ?—Yes; smuggling might take place to a small extent, but not to an extent injurious to the trade.

796. The exposure would not prevent their being sold privately, in the way suggested, nor prevent their being sold in the large country towns ?—I think that would do every good; a lady wearing a bonnet trimmed with a ribbon of French manufacture, would lead to inquiry where it was obtained.

797. You mean, that the manufacturers at Coventry, who could alone know where the ribbon was made, would stop that lady, and inquire where it was obtained ?—I do not say that they would do that; but they would attend to their interests.

798. Under a state of prohibition, the moment goods are landed here they are seizable ?—I believe they are.

799. There is great risk in bringing them from the coast to London ?—Yes.

800. And bringing them to the country towns ?—Yes.

801. Do you know that they were sold principally in bathing rooms and hair-dresser's shops ?—Yes.

802. The quantity sold was very considerable ?—Very slight.

803. So that, when you were first exposed to competition with France, you were quite surprized at the style of goods you had to contend with ?—We had no idea, from the smuggling that had taken place, of the extent of their manufactures, or the style or pattern they would produce.

678.

F 3

804. If

Mr.
Anthony Cheeper.

20 March,
1832.

Mr.
Anthony Cheeper.

20 March,
1832.

804. If that smuggling had been extensive, previously to the free importation of foreign silks, you would have known what goods you had to contend with?—Yes.

805. But you did not know?—No, we could not know.

806. That clearly proves there was no considerable extent of smuggling?—No, there was not.

807. Would not the difficulty of smuggling before 1826, compared with the present time, in your opinion, be measured by the difference of the premium paid then in London and now; before prohibition and since prohibition?—I could not form an idea upon that point.

808. The cost of smuggling being now 25 per cent., if it was shown that the premium paid before 1826 was not more than 25 per cent., you would not say that the difficulties were greater then than now?—No.

809. Independent of the rate paid for smuggling into this country, was not there considerable difficulty in disposing of those goods?—Every difficulty they had to contend with; the tradespeople having to contend against the laws, they were innumerable.

810. Supposing a person had smuggled goods into London, would he not find great difficulty in disposing of those goods in the country or elsewhere?—Very great indeed.

811. So that he had not only the cost of smuggling, in the first instance, but the risk of disposing of them afterwards?—Yes.

812. And was always at the mercy of his servants?—Certainly.

813. Supposing, in the event of prohibition, that a manufacturer was to obtain a commission in France, and put it to work there and in London at the same time, for the spring trade, if he manufactured 10 pieces here, might he not manufacture 100 in France, and introduce them here without the risk of detection?—I question whether it would answer his purpose, if he could do so.

814. If the goods are made cheaper there than here, it would answer his purpose to bring them out at the same time?—Yes; I know nothing of the rate of labour in France.

815. In the event of prohibition, you stated you should be able to detect the French goods by the pattern being different; supposing that a manufacturer in England to make 10 pieces, and to import from France 100 pieces, might he not import those without detection?—I should think he might.

816. You know, that during the prohibition, all French goods found upon a person's premises were liable to seizure?—Yes.

817. That must have left a man not only at the mercy of informers and his customers, but even of his servants?—Yes.

818. Do you also know that the proof of those goods not being contraband by our Custom Laws, rested with the person on whose premises they were found?—I was not aware of that.

819. If that was the case, must not that, with the other circumstances mentioned, deter at least respectable dealers from entering into smuggling transactions?—It certainly would.

820. You live at Coventry?—Yes.

821. How is the state of trade at Coventry; are the manufacturers reduced in their profits?—Yes, very much.

822. And the trade depressed?—Yes, very much indeed.

823. How were they with respect to the operatives?—The price of labour is very much less than it was before the introduction of French goods.

824. Is there great want of employment?—Taking the whole district, there is not half employment.

825. Do you happen to know anything of the state of the poor?—I know very little of the state of the poor.

826. Independently of the influence that fashion has, and the influence that price has, so as to affect the interests of the home manufacturers, is there not also a very great injury by having constantly a great glut of goods in the market?—Certainly.

827. Then even if you could manufacture goods here as cheap as they could in France, and even had no prejudice existing against you as to fashion, would not that itself tend to depress trade, and lower the profits?—I should say, if we were not exposed to the coming in of a quantity of French goods, when the market became overstocked, the manufacturer would decrease giving out, thereby bringing the thing to a level.

828. It has been stated, that in France the goods are generally made to order?—I believe it is so universally.

829. They

Mr.
Anthony Cheeper.

20 March,
1832.

829. They do not run the risk of having large stocks on hand?—No.

830. Is that the case with the English manufacturer?—Invariably the English make almost all on speculation.

831. Does not the success of the manufacturer a great deal depend upon the advanced price he gets at the commencement of the season?—In a great degree it does; as there is almost certain to be a loss at the end of the season.

832. Is that loss occasioned by the preference of French fashions?—Yes, certainly; to nothing else do we attribute it.

833. Then previous to the admission of foreign goods, had the trade been, generally speaking, not looking to any particular casual circumstances, a flourishing and increasing trade?—Decidedly; it was an increasing trade, and progressively increasing up to 1828, I should say.

834. Has it been as thriving and increasing since?—It has been falling off since 1828.

835. Do you apprehend if it was not for the introduction of foreign manufactured goods meeting you in the market, your trade would have continued to flourish as it had done from 1814 to 1826?—I think it would have increased still more; the improvement in the machinery, and beauty in the style of goods, would have increased the consumption and the fashion for them.

836. If you had the prospect of leading the fashions, and had no French competition, could you produce good patterns, and a variety in goods?—Yes, equal to the French.

837. You would be relieved from a good deal of the hazard you now have?—Yes.

838. If French goods are introduced, and you imitate them afterwards, the fashion, before you could come into the market, must have gone by?—Always.

839. Can you obtain equal profit from those imitations?—I should think the English manufacturer never gets half the profits that the Frenchman does on any one article; they take the cream of the market, and they could afford to sell much lower than they do.

840. Does the manufacturer of fancy goods depend a good deal upon his success in introducing new and fancy goods at the commencement of the season?—I think he generally provides for any loss that may arise from change of fashion.

841. When the most fashionable people are supplied at a higher rate, the public at large were benefited by having goods at a lower rate?—Yes, to a certain degree.

842. The tide comes in afterwards?—Yes; it frequently happens that an article that has been produced for the rich and more opulent class of society is imitated and made of an inferior style, which also affects the value of that previously made.

843. In consequence of all those difficulties you have to contend with, and the risk of manufacturing goods upon speculation, and having to meet with foreign competition, are not the manufacturers frequently subject to great losses by their stocks on hand, and obliged to job at a low rate?—Yes; certainly it is the case.

844. You have known instances of it?—I have experienced instances of it.

845. And great sacrifice and loss attending it?—Yes, with a stock over produced.

846. Then you are of opinion, that if foreign goods were prohibited altogether, the smuggled goods would come in in such small proportions that they would not affect your interest?—If it affects them, it would affect them beneficially.

847. Are you aware of the price at which smuggled goods were sold before the prohibition was removed, in comparison with the home made goods?—No, I am not; I think the article smuggled was generally gauzes, and I do not make them.

848. Does not the fancy article lose much of its value if not rapidly brought into consumption?—Certainly.

849. Suppose the case of a manufacturer here under the prohibitory laws that should make 100 pieces of goods here, and he should give an order for 1,000 pieces to be made in France, if a delay of two or three months was to take place between the time of their being first landed or hovering round the coast before they could be brought into the capital, what would be the effect upon that 1,000 pieces?—A very serious loss indeed.

850. It would cure him of a second speculation?—I think it would.

851. So that you consider, that in case of prohibition, the insurance payable on smuggling transactions would be at a higher rate than it is, according to the law as it now exists?—I should think double, in consequence of the increased risk; I have no data to go upon; it is mere matter of opinion.

678.

F 4

852. Comparing

Mr
Anthony Cheeper.

20 March,
1832.

852. Comparing the present period with that prior to 1826, do you consider that there is a very great difference in the amount of smuggling at present to what it existed prior to 1826?—It has increased to an enormous extent.

853.—Can you give any estimate of the rate at which it has increased?—I can only give an estimate according to my own opinion; when I learn that two-thirds of the quantity of French gauzes have come through illegal channels, I must believe that the smuggling has increased to a degree I hardly dare state.

854. You have stated there were 10,913 lbs. of gauze ribbons imported through the Custom House in the quarter ending the 10th of October last?—Yes.

855. And you have now stated that you think a great deal more was smuggled than paid the duty?—I have no doubt of it.

856. What would be the amount of labour that would have been employed in the production of that 10,913 lbs. of gauze ribbons?—The produce for English labour would be 26,191 *l.* 4*s.*

857. You consider that upon that particular article alone Coventry lost the whole of that amount of wages?—Yes, and the proportion also that was smuggled.

858. You have stated that you would consider smuggling to be beneficial to the silk trade, supposing the prohibitory system was introduced; will you have the goodness to explain to the Committee how you consider it would operate beneficially?—I think an opportunity of seeing the style of goods that the French were making would be advantageous to us.

859. Therefore you still think, that the French taste, and French patterns, would be preferred in this country?—I am not clearly of that opinion.

860. What other benefit is to arise from the degree of smuggling that you have been alluding to?—Benefit would arise from the simple fact of seeing them; the manufacturers, in putting together articles of taste, refer, very frequently, to old pattern cards for general ideas and mixture of colouring, and so forth, not with any view of bringing the old pattern in again.

861. Is it not the fact, that in what are called fancy houses, it is the custom to keep pattern books for 50, 60 or 100 years, for the purposes you have alluded to?—Yes, I believe it is so.

862. Supposing you had entire prohibition, is it your belief that you could supply fancy articles to the satisfaction of the public in this country?—I have no doubt of it.

863. Do you not think if prohibition was to take place, that the standard of taste in this country would cease in a great measure to be regulated by France?—I certainly think we have sufficient national taste.

864. You think that the Coventry people would make speculations, and that some article of their manufacture would be the fashion?—Yes; but I have no idea that the fashion in ribbons would be affected by prohibition; I think they would be as much worn, and as tastefully made.

865. Are there not more fancy ribbons made now than there were prior to 1820?—Certainly, there are more fancy ribbons made; the fashion then was, for twelve-penny and sixteen-penny satins, or articles at all events much narrower and simpler than those manufactured now.

866. Do you not attribute that improved taste, and change of fashion, to the importations from France?—I cannot say so entirely, because I have myself seen patterns of ribbons made from 50 to 100 years ago in England, wider, richer and of larger figure, than were made just prior to the introduction of French ribbons.

867. Do you not know, that 100 years ago, or nearly so, the French had an acknowledged superiority in taste?—I am not aware of that; I do not know that circumstance. I have seen patterns of ribbons, forty penny widths, made in this country a great many years ago, and therefore I cannot suppose that it is to the French we are entirely indebted.

868. But then those might have been copied from France?—Yes, they might.

869. Is it not the fact, that the French have set the fashions generally almost all over the world?—Almost invariably, I believe.

870. Would it not be useful to the manufacturers of fancy goods in England generally, and especially to the manufacturers of Coventry, that they should have the benefit of the taste of all civilized countries, in order to improve the patterns of their own goods after having seen those of other countries?—I think there is an advantage derived from seeing a variety of patterns.

871. You

Mr.
Anthony Cheepe.

26 March,
1832.

871. You are aware that foreign colours have been very beneficial in that respect?—I am not aware of that; I am not aware that they have superseded ours.

872. They have increased the numbers of them?—I do not know that they have; in the very last autumn trade the French introduced a very old colour that had been long known in England, and I should give it as my opinion, that if it had been made by the English it would not have been sold at all.

873. Is there not a greater variety of colours now than there was ten years ago?—I do not think there is, myself.

874. You spoke of the large quantity of goods which you thought were smuggled, have you any knowledge upon that subject yourself?—No other knowledge than the admission at the Board of Trade to that extent, to the extent of nearly two-thirds; Lord Auckland admitted that two-thirds of what was imported were imported illegally.

875. You state it upon the opinion of Lord Auckland?—Yes, I so understood him distinctly to state; it was stated by one of the members of our deputation to Lord Auckland, and by him, as I understood it, admitted.

876. Do you found your opinion of the extent to which smuggling prevails, from what you heard at the Board of Trade alone, or upon information derived from other sources?—I do not found it upon that circumstance entirely, because the public newspapers have asserted the same fact over and over again, and our own local papers have stated it.

877. You have given the proportion of labour upon a variety of articles, is it not your opinion, that as far as respects the price of labour, a duty of 25 per cent., which it is admitted might be collected, would be an ample protection for any probable difference there may be in that respect between the two countries?—I do not know the rate of labour in France, but from what I see I think we could sell ribbons as cheap or cheaper than in France, but the fashion prevents it; when the French ribbons are introduced, they supersede us.

878. It is not a question of price, but a question of fashion?—As I said before, I am not aware of the rate of wages in France; I am not aware that they can make cheaper than we do: but my opinion is, that we could, if permitted, make them as cheap as they are sold; I am not speaking of as cheap as they are manufactured.

879. Has not this competition the great effect of bringing down the prices in each market?—I do not know how it affects their own market.

880. You know there has been great distress at Lyons?—Yes, by public report I know it.

881. Must not that have arisen from competition with England?—That applies only to the broad trade.

882. It has been stated, that part of the distress here arises from competition with Manchester, Macclesfield, Congleton and other places?—I have heard it.

883. Then it cannot mend the matter to have a foreign competition introduced also?—Certainly not; but I am not aware that we have any competition in those places.

884. Do you imagine that the competition at Macclesfield, Manchester and other places, is any thing more than that fair competition which is necessary to protect the public?—Certainly not; and I am of opinion that a fair competition is always necessary to protect the public.

885. Do you not think that that is sufficient here already, without the introduction of foreign competition?—Certainly, there is sufficient capital in this country; if the trade was monopolized, it would immediately be obviated.

886. Does foreign competition tend to overload the market, and occasion universal depression?—Yes, and throw our operatives out of employment.

887. What is the difference of price at present, compared with the period when the prohibition was taken off the gauze ribbons?—I am not aware of that.

888. You resort either to duty or prohibition?—Certainly.

889. You say you prefer prohibition to duty for two reasons, the one is, in case of prohibition you could distinguish the French goods from English, and the other is, that in the case of prohibition the French would have to follow the English, whereas now the English have to follow the French?—Yes.

890. Those are the only two reasons why you prefer a prohibition to a duty, or are there any other reasons?—The question of price would not arise if French goods are admitted; it does not affect the British manufacturer at what price they are admitted, or what duty is imposed; I think the taste for them is so paramount, that the price is not a consideration with the parties consuming them.

Mr.
Anthony Cheeper.

20 March,
1832.

891. Is not a third reason why you wish for a prohibition, that you wish to exclude the quantity of foreign goods that now press upon your market?—Yes, certainly.

892. You would exclude the French goods either by prohibition or duty?—I have not said that duty would exclude them at all; I do not think any amount of duty would.

893. Nor do you think prohibition would?—It would more effectually than any other mode.

894. More effectually, for two reasons; the first is, that it is more easy to distinguish French goods in case of prohibition?—I did not say it was more easy to distinguish them because of the prohibition; I could distinguish the one from the other; now they are distinguishable to any body, not merely manufacturers alone.

895. Then, if the amount imported at present be one million sterling per annum, what proportion of that do you consider would come in under a state of prohibition; do you think a fourth or a tenth would be brought into the market of this country by smuggling?—Any thing I could say would be mere matter of opinion; I should say that there could not be smuggling carried on to the extent of 100,000*l.*; I do not believe there could be one twentieth.

896. Then you believe there are two millions smuggled?—I do not know the amount.

897. You have said before, that the manufacturers, by having a large stock in hand, and being met by foreign goods, are frequently subject to great losses?—Yes.

898. And obliged to job off their goods, as it is called?—Yes.

899. Has not that a very pernicious effect upon the general and fair trader?—It affects every one, more or less.

900. Do you not find that some of your customers are often ruined by this jobbing?—There are repeated instances of men being ruined by jobbing.

901. Are you not aware that those jobbings go on every day in London?—Yes; I have understood so.

902. There was a Committee of the House of Commons, which sat in 1766, to inquire into the condition of the Spitalfields weavers, and it was there stated, that a very great injury was sustained, as it could be only a very few houses that could be importers, and of course it was an injury to the great body of traders, by causing a monopoly; do you apprehend that that is the case now?—Certainly not; there are a great number of people in a situation to be importers to a very large extent.

903. Do you mean to say there are more than 15 or 20 large importers?—I do not know the number, but I believe there is sufficient capital embarked in the silk trade; and if importing ribbons was at all desirable to a greater extent, it would be immediately done.

904. How long have the weavers of Coventry been in the distressed state that they are now in?—All this winter they have been in a state of dreadful distress.

905. Do you remember, in November last, an advertisement appearing in the Coventry papers, from a silk manufacturer at Manchester, for weavers to work a certain description of work that could be easily done?—I saw an advertisement of the description alluded to, but not last November.

906. Do you recollect when it was?—No, I do not; but I am confident it was some time previous; as far as my impression goes, it was some time in the summer.

907. You are aware, that not a single application was made in consequence?—I do not know that; I certainly saw the advertisement; I forget what article it was to make.

908. Are you aware that, whilst prohibition was the law, if silks which were then contraband goods were found on board any vessel, that vessel was forfeited?—I am aware of that.

909. Do you not consider that that circumstance forms a most essential difference between what is prohibited and what is only chargeable with duty, let the duty be ever so high?—It must make a very great difference.

910. In the rate of insurance?—Yes; in the calculation of the difficulties, that amounts to a very considerable proportion.

911. Consequently, in the case put of a person who should fabricate ten pieces in this country, and order 100 of the same kind from France, to be produced in this market at the same moment, that circumstance would operate, supposing there was a prohibition, to enhance most enormously the sum paid upon the hundred pieces to be introduced from France?—Certainly.

912. You

Mr.
Anthony Cheeper.

20 March,
1832.

912. You do not know the premium paid on smuggling then or now?—No.

913. Do you not think you can manufacture goods at the present time in Coventry, quite as well as in France?—I believe there are goods in Coventry, produced quite equal to any thing produced in France.

914. You have no doubt of it?—No.

915. Supposing that to be the case, and supposing the same pattern to be made in France and England, could you readily distinguish the one from the other?—Generally speaking, I think I could.

916. But you do not think that any person could, who is not engaged in the trade?—I should say that a factor could, as well as a manufacturer.

917. Parties not engaged in the trade could not distinguish the one from the other?—I think not; certainly not so well as manufacturers; there might be some who could distinguish them.

918. In the event of a suit in the Exchequer for smuggling, the juries, composed as they always are, would not be able to distinguish the one from the other, so as to convict the party charged?—In that case I think the jury decide upon the evidence produced, whether they are French or English.

919. You do not know of any instance occurring of that kind?—No.

920. If you were told that in the case of Depolier, the manufacturers in London could not distinguish the difference, your opinion would be different?—I should doubt it, certainly.

921. You would have very little difficulty in deciding between two pieces of English and French ribbon?—I think I could decide without any difficulty.

922. Every dealer could tell?—Yes, I should think so.

923. You do not know anything about Depolier's case?—I do not.

924. Suppose a buyer at Coventry, who was there every week, and familiar with every manufacturer's goods, do you think he would be able to distinguish the same pattern made by different manufacturers, the one from the other?—Yes, I do.

925. It is just in the same way you would distinguish between the manufacture of this country, and the manufacture of France?—There might be slight differences in style.

926. Is it not the fact, that an experienced eye can tell when he sees two pieces of silk, where they are made?—Yes, it is very easy to do so; and in French articles the superiority of the silk would detect them.

927. Any experienced man would tell you where they were made, though made of the same silk?—I think so, certainly.

928. It would be also easy to vary them in two or three months, so that it might be ascertained at once; and if the French imitated you, you might almost have a certain guide?—I cannot anticipate any difficulty in it.

929. If you were told that previously to the admission of French goods in 1826, a slip had been cut away of some English goods, showing the leasure, and sent over to France, and accurately copied, leasure and all, should you not think it rather difficult to distinguish the one from the other?—I think the manufacture would detect itself; the French would tell itself from the English, even though the leasure should be exactly the same.

930. You have stated the value of labour upon different ribbons, and the average was $41\frac{1}{2}$ per cent.?—Yes.

931. If 25 per cent. were to be collected upon foreign silks, that would leave only $16\frac{1}{2}$ per cent. for the labour of the foreign manufacturer?—Yes; it would be so, if that was the case.

932. Is that a higher amount or a lower amount than you think the wages would amount to?—I have no idea of the amount of the wages. I heard a statement the other day that would reduce it to very much less than that; I heard a statement the other day of a quantity of ribbons made in this country, upon which the labour amounted to 16s., whereas the same quantity was produced in Switzerland for 18d.; but I wish to be understood as not vouching for this fact, though I believe it.

933. You have stated enough to induce the Committee to believe that you think the great difficulty is in the patterns that rule the market being always from France, and the impossibility of your being able to get them?—Yes; that applies to fancy goods.

934. You do not make the same description of fancy goods or plain goods that you made before the importation of foreign manufactured silks was allowed, but you can perhaps tell the Committee whether you consider your manufactures to have materially improved?—I have known manufacturers in the Coventry trade,

Mr.
Anthony Cheeper.

20 March,
1832.

that in the years 1815 and 1816 made better goods than I have ever seen since ; the article I allude to is the black sarsnets, that Green of Nuneaton made.

935. Did not the house of Adams & Co. in Bread-street, make things far more beautiful than are made now?—I am not aware of that ; they certainly made beautiful goods.

936. You are not aware of any great improvement intrinsically, setting aside the question of difference?—There is an improvement since that period ; we have now the jacquard loom that produces different patterns ; setting that aside, there is no advantage gained at present.

937. That is an advantage gained since the opening of the trade?—They were in existence in Coventry before that circumstance took place.

938. For how long before were they in existence at Coventry?—Two years, I believe.

939. Have they increased much?—Yes, they have.

Veneris, 23^o die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Benjamin Poole, called in ; and Examined.

Benjamin Poole.

940. WHERE do you reside?—At Coventry.

941. What are you?—I am a ribbon weaver.

942. How long have you resided at Coventry?—I was born at Coventry, and have resided there ever since, 32 years.

943. Have you any knowledge of the condition of the working classes of society there?—I have ; and my knowledge enables me to say, that the condition of the working classes of Coventry is one of the most complete distress ; and in my recollection it has never been so great as at the present time, particularly affecting persons in the ribbon trade.

944. How long have you perceived that distress to exist?—More particularly these last three years.

945. What are the particular descriptions of manufacture carried on at Coventry?—The two principal branches of manufacture are the ribbon trade and the watch trade.

946. On which of those branches are the greatest number of persons depending for a livelihood?—Decidedly the ribbon trade.

947. Have any improvements taken place lately in the manufactures of Coventry?—Not in the last three, four or five years, or beyond that time, I do not remember any that have taken place within seven years.

948. Do you mean that no improvements have taken place since the introduction of foreign manufactured ribbons?—There have not, to my knowledge ; the machinery we have now in use, was in use prior to that time, for a considerable length of time.

949. Has it increased?—Not latterly ; the machinery used in the fancy branch of the ribbon trade has not increased.

950. Is there any indisposition shown by the working classes to the introduction of machinery at Coventry?—Never ; the improvements that have taken place were received with alacrity by the working hands at Coventry, at the time of their introduction.

951. What is the reason that the machinery you already possess, has not been more generally adopted?—The manifest reason appears to me to be, that the very low profits of the manufacturers will not warrant them in speculating, by laying money out in machinery ; and the poverty of the working classes is so great, they cannot procure it on their own account.

952. Then to what do you attribute the want of employment you have alluded to, if that machinery did not interfere with you?—I attribute the want of employment to the fact that ribbons of a certain description are in great demand in this country, and those ribbons are supplied by foreign artizans, and that we have artizans destitute of employment, competent and anxious to supply that demand by their own hand labour.

953. Is it not your belief that the introduction of foreign manufactured goods has given a stimulus to the improvements in machinery you know to exist in Coventry?—My opinion is, it has rather prevented it than otherwise of late years.

954. Is

Benjamin Poole.

23 March,
1832.

954. Is it your opinion, that if foreign manufactured ribbons had not been introduced, the machinery would have been extended in quantity?—I believe it would have been in more general use than at this time.

955. About what is the general rate of wages in Coventry?—In the plain branches from 9s. to 12s. 6d. per week, and that is the greatest extent that any ribbon weaver can earn by employment.

956. In the fancy branches, will you say what it is?—From about 14s. to 16s. the extent of the earnings in the fancy branch.

957. You are speaking of the wages that they can earn?—Yes, with full employment.

958. Do they find employment at that rate of wages?—By no means the whole number.

959. Has any considerable reduction of wages taken place in the last few years?—A very considerable reduction has taken place in the wages of ribbon weavers since 1826.

960. Was the rate of wages generally uniform and steady previous to that time?—Yes, generally so; and, as a proof of it, I may say that the rate of wages from 1804 to 1824 was not diminished more than four or five per cent.

961. Do you recollect whether any particular distress existed in Coventry about 1816 and 1817?—Yes, there was very great distress prevailing at that time in Coventry.

962. To what do you attribute that distress?—In the ribbon trade, about 1812, a considerable demand arose for ribbons, and an increase of hands was in requisition, and brought into exercise; a depression, to my knowledge, took place about 1815, and in addition to this depression, a disbanding of the militia occurred, which sent home a great many men who had no other resource to look to but the ribbon trade, they having been brought up to it in their younger years; this, added to the depression occasioned by the diminution of the demand, increased the distress, and it continued up to 1816 and 1817, when it was further protracted by the decease of the Princess Charlotte.

963. You first perceived the distress about 1815?—Yes.

964. Were the poor-rates of Coventry high at that time?—Very high.

965. What is the amount of poor-rates at present in Coventry?—The total amount of poor-rates for the year ending April 1831, was 17,792*l.* 7*s.* 9*d.*

[*The Witness delivered in a Paper.*]

AN ACCOUNT of the SUMS expended in the United Parishes of the City of Coventry, by WEEKLY PAYMENTS to the Permanent and Casual OUT POOR of the same City, in each of the Years ending April, from 1815 to 1831, with the Gross Amount of Parish Expenditure for each Year; also the Average Price of Wheat.

YEAR.	Permanent Poor.			Casual Poor.			Gross Parochial Expenditure.	Average Price of Wheat.

G 3

Benjamin Poole.

23 March,
1832.

AN ACCOUNT of the AVERAGE WEEKLY EARNINGS of WEAVERS, *having full employment* in the PLAIN RIBBON TRADE, including SATINS and SARNNETTS, from the Year 1815 to 1832.

	YEARS.			Per Week.	
				s.	d.
Various prices paid in these years, but not correct; average about 14/6 -	1815	-	-	18	1 ½
	1816	-	-	14	6
	1817	-	-		
	1818	-	-		
	1819	-	-	18	1 ½
	1820	-	-	-	-
	1821	-	-	-	-
	1822	-	-	-	-
	1823	-	-	-	-
	1824	-	-	17	-
	1825	-	-	-	-
	1826	-	-	14	-
	1827	-	-	-	-
	1828	-	-	-	-
	1829	-	-	10	10
	1830	-	-	-	-
	1831	-	-	-	-
	1832	-	-	-	-

In putting in the above Statements, the Witness feels called upon to say, that the average is somewhat higher than would otherwise be, in consequence of including satin ribbons, and that the proportion of plain satin looms to those of plain sarsnett, is not more than as one to twenty. Also, that in addition to a reduction of wages of about twenty-five per cent. since 1824, the income of a weaver is further diminished by the charge of 1 s. per week loom hire. This, however, is included in the average as given above.

966. Do the working classes at Coventry, particularly the ribbon-weavers, contribute to the poor-rates?—Of late years they have not, and by far the greatest proportion do not at this time, and have not for some time.

967. It appears that the poor-rates for the year ending April 1830, in Coventry, were much higher than at present; how do you account for this?—When I obtained the statement, I observed a manifest difference between the year ending April 1830 and the last year; I gave myself the trouble to inquire how it occurred, and I went to a director, who was in office in 1829. The explanation he gave me was this: that at that time they had what was denominated a very liberal board, and they distributed the rates more liberal than was usual, and at the close of the year they found themselves upwards of 3,000*l.* in debt. A choice of directors took place in April 1831, and a resolution was determined upon, to adopt a different system, a more saving mode of distributing the poor-rates, in order to liquidate the debt, and make the rates collected spend according to the applications for relief; and in consequence of this determination, the rate per head allowed to the poor was very greatly diminished; and this will be explained, in a great measure, by stating the amount paid to the casual poor in the quarter ending April 1830, and the quarter commencing April 1830. The sum distributed by public payments to the casual poor in the city of Coventry, for the quarter ending April, 21st, 1830, amounted to 2,818*l.* 8*s.* The sum distributed to the same class of persons, for the quarter ending the 21st of July 1830, was 1,134*l.* 6*s.* 3*d.*, a little more than one-third of the amount paid in the previous quarter.

968. You have stated that the distress never was so great in Coventry; in what trade is it, in the engine or the hand loom trade?—The engine trade is the prevailing trade at Coventry; there are very few single hand looms in Coventry.

969. You speak of the engine loom trade?—Yes.

970. You have stated that you have been thirty-two years in Coventry; do you recollect a Committee of this House in 1818, appointed to inquire into the ribbon-trade?—I know there was a Committee at that time.

971. Are you aware whether the distress as stated then, or now, is the greatest?—My opinion is, that the distress as stated now is the greatest; for this reason, that the distress at that time was not confined to the ribbon-trade, but to the watch-trade also; and by referring to the records of The House of Commons, it will be found

*Benjamin Poole.*23 March,
1832.

found there is the Report of a Committee appointed to inquire into the distressed state of the watch trade, which was instituted at the same time.

972. Was it a protracted distress?—It was; it continued for two or three years in the watch trade; their petition was forwarded to The House of Commons in 1816.

973. How long was the ribbon trade in a state of distress then?—The distress in that trade began in 1815, continued through 1816, and also through 1817, for the reason I have assigned, the death of the Princess Charlotte, and the consequent mourning; but in 1819 the ribbon trade had recovered itself, and a considerable rise of wages took place.

974. When did the present distress commence?—In the ribbon trade alone it has existed without intermission, I may say, I will not say always in the same degree, but there has been a vast number of hands out of employment, to my certain knowledge, for the last three years.

975. Are you aware that in 1818, Mr. Carter stated before a Committee of this House, that the ribbon weavers had suffered great privations and distress, in consequence of the inadequate wages paid for labour, which had the effect of reducing hundreds of them to seek relief from the poor rates, instead of contributing as formerly?—I am not aware of the nature of Mr. Carter's Evidence, but I am ready to admit such might be the fact.

976. You were understood to say in 1818, the distress had been less; that it began in 1815, and continued in 1816, but was lessened in 1818?—Yes.

977. Then the Evidence at that time taken could not be correct, or your Evidence now is not consistent with that Evidence?—I am not exactly certain as to the object of the question.

978. Were you understood to say, that in 1818 the distress had disappeared?—It had considerably diminished.

979. That it was greatest in 1817?—Yes; and by reference to the poor rates at that time, so far as it can be considered Evidence, it will bear me out in that opinion.

980. You have stated that the wages are from 9s. to 12s., will you state what part of the year you receive those wages; do you speak of the average of the whole year?—I speak of the average of the whole year, provided that a man has full employment at the present rate of wages; but in addition to this, we have a vast number of hands entirely destitute of employ, and who cannot earn any thing.

981. How many hours work do you consider them to perform?—From fourteen to sixteen; and I believe in some parts of the year, it extends so far as eighteen hours a day.

982. Are you aware that William Pears, in 1818, when asked this question, what can a man earn in a single hand loom? said, in a single hand loom, upon sarsnets, a man cannot earn more than 6s. if he works from twelve to fourteen hours a day, each day alike; you say he can earn from 9s. to 12s.?—The witness there alludes to the single hand trade; I am speaking of the engine loom.

983. Then you are not able to say what the single hand looms now can earn?—No, I am not.

984. Samuel Makin was asked, "What does the engine weaver now earn upon an average?" the answer is, "There is a great deal of difference; but, according to the nearest calculation, I should say about 10s.; that is as near as I can tell?"—That refers to the plain trade, engine weavers.

985. Did you not allude to the plain work, when you said that a plain weaver got from 9s. to 12s.?—I did.

986. Then, if 10s. at that period only was paid, you do not mean to say the wages are now decreased, and less than they were at that time?—I am certain, so far as the price paid for different articles is concerned, that they have considerably diminished since that time; I cannot speak to the correctness of the Evidence of 1818, but I can certify to the correctness of what I say myself; I have made my calculation accurately, with an intention not to underrate the truth.

987. If it was stated by Mr. Makin that from 10s. to 18s. a week was the average wages for an engine weaver, you do not consider that that was correct?—I will not vouch for the correctness of it; I can only certify to my own statement; but I think that at the time that was given in evidence, that there were no hands out of employment; if you refer to the evidence of Peter Gregory, Mr. Fletcher and Mr. Dalby, you will find that stated.

988. Do you receive any assistance in the earning of these wages, from 9s to 12s.?—No, not in the plain trade.

989. Do you pay any thing out of it to any body to assist you?—There is nothing regularly to be deducted from it.

678.

G 4

990. Have

Benjamin Poole.

23 March,
1832.

990. Have you any thing to pay for quill winding?—I have deducted it.

991. Are there more people out of employment now than there were in 1818?—I do not know that there were any out of employment at that time, but my own knowledge is, that there are a great number destitute of it now.

992. Are you sure that there were not thousands out of employment at that time?—I cannot speak to that.

993. Do you speak of wages received from the undertakers or the manufacturers?—When I speak of the engine trade, I speak of the wages received from the manufacturers.

994. What is the difference between the wages received direct from the manufacturers and the undertakers?—The wages received by the journeymen from the undertakers is the same as received by the journeyman from the manufacturer.

995. Explain what is the nature of the undertaker at Coventry?—The undertaker is the individual who receives the silk as it comes from the dyers; he receives it from the manufacturers; his business is to get it manufactured into certain articles, as directed by the manufacturer; in doing which he employs what is denominated the journey hand. The undertaker is answerable that they are produced of such quality and nature as the manufacturer prescribes, for which he finds looms, tackling and room for the machinery employed in the manufacture; he receives it from the manufacturer, and returns it to him.

996. Do you know what proportion of the work is done in Coventry by undertakers?—Very little in Coventry; I am not aware of any.

997. Is not the system of undertaking abolished in Coventry by the engine looms?—Yes.

998. They are principally used?—Yes.

999. In the engine looms the master finds the warp, and gives out to the men the article ready for manufacture?—Yes.

1000. And your observation is made upon the engine receiving the material so prepared?—Yes.

1001. Are the undertakers more employed in the villages round Coventry?—Yes, entirely in the single-handed branch.

1002. You have stated that no improvement has taken place in the ribbon trade in the last three years at Coventry?—I say the last seven years in the machinery.

1003. Are you aware whether improvements have taken place in any other parts of the country in weaving ribbons?—I am not aware of any.

1004. The loom you speak of is the engine loom commonly called the Dutch loom?—Yes; I believe it is called the Dutch loom, not exclusively; the Dutch loom is used in the plain branches of the engine trade.

1005. How many widths can an engine loom make, from 3 to 40?—From 4 to 28; and there formerly used to be some of the number of 36. They made an article called halfpenny Chinas, but there are very few of that number now.

1006. You mean that kind of narrow ribbon which was usually sold for 3s. 6d. a gross?—I do not know what it was sold for, but the 24 or 28 is generally now used for twopenny sarsnett.

1007. Do you know what the a-la-bar loom is?—I do not know exactly the nature of the a-la-bar loom, except that it is an extraordinary power applied to machinery for weaving ribbons, but I am not acquainted with it.

1008. You are not aware that it is an engine by which ribbons can be woven by steam or other power?—I have heard that engine looms have been worked for ribbons by steam.

1009. You say, no indisposition has been shown to receive improvements in Coventry, by the men?—Yes.

1010. Do you know Mr. Woodhouse there?—Yes.

1011. Did not Mr. Beck attempt to set up a manufactory for Messrs. Woodhouse?—I am not aware exactly who Mr. Beck acted for; but I know there was a Mr. Beck in Coventry, who set up engine looms, to work by steam.

1012. Were not those looms destroyed by the workmen?—Looms were destroyed about November last.

1013. Was not there a public meeting of the workmen on some early day in November; were you one of those assembled?—There was a meeting on the 7th of November, in the morning, and I attended it.

1014. Are you one of the committee appointed there?—I am not.

1015. What was the object of that meeting of the workmen?—I will take the liberty

*Benjamin Poole.*23 March,
1832.

liberty of briefly stating the circumstances that induced that meeting, which were these; but I will first state my reason for saying what I have in reference to improvements in machinery. In 1819, 1820, 1821, and in 1822, at various periods in one or other of those years, three different improvements in the ribbon machinery were introduced, one by Mr. Thompson, one by Mr. Sawbridge, and another by a Mr. Goddard; and finally, in 1822 or 1823, the jacquard machines were introduced, which are now generally used in the figured trade; and in none of those cases was any opposition shown to the introduction of that machinery, but it was cheerfully and readily adopted by all whom it was set before.

1016. What was the nature of those improvements; the Committee know what was the nature of the jacquard?—I am not aware of the nature of them any further than that they were considered a great improvement upon the manufacture of figured ribbons.

1017. Do you mean that they improved the figure, or increased the quantity of work?—Improved the quality of goods manufactured, and afforded greater facility for their production.

1018. Did these improvements save labour in the manufacture of ribbons as well as improve the quality?—In some instances I believe the labour was considerably saved.

1019. Have you ever yourself worked with any of those improvements?—I am not particularly conversant with the nature of them. The circumstances which induced the meeting were these; a very great number of hands were entirely destitute of employment at that time, and a great reduction of wages had taken place in the prices for weaving articles, particularly in the single hand loom, and in the greater widths in the engine loom; a list of prices was in existence which had never been abandoned fairly by either the masters or workmen, and generally it was thought desirable to come to some understanding, either to obtain a reason why the list of prices should be departed from, or to endeavour to get a list of prices that should introduce an equality of wages for the same article throughout the trade, so that one manufacturer might not be manufacturing the same article at half the price for making as another; this was the only object of the meeting which took place upon the morning of the 7th of November; a provisional committee was then appointed to wait upon the manufacturers to know their opinions upon the subject, and to obtain, if possible, something like an equal rate of wages; by no means was any rise of wages contemplated. The persons then present at the meeting, which was not a very numerous one, were requested to go round the trade to inform those hands not present at the meeting, that a meeting would be held at five in the afternoon to receive the report of the provisional committee appointed in the morning, and thereby to know the opinion of the manufacturers as to the regulated rate of wages. In the course of the afternoon the person who was the proprietor or superintendent of this factory, was met by the weavers who were going about the town to inform their fellow workmen of the meeting to take place in the afternoon, and some complaints were made, but of the nature of which I am not aware; I was at work myself, but some observations were made at the time, and some complaints uttered with regard to making articles by steam while they were destitute, and those complaints were caused principally for this reason, from the certain knowledge that the cost of weaving those articles by steam was considerably more than the rate of wages they had been working at by hand. They were then taken down to the factory by the superintendent of the factory, or in other words, Mr. Beck, who has been mentioned; but from what circumstances the factory was set on fire I do not know; my conviction is, that the thing was never a premeditated act, and my knowledge enables me to say, that such a thing was never adverted to at the meeting in the morning.

1020. Do you allude to the meeting in Little Park-street?—Yes.

1021. Do you mean that they did not adjourn from that to meet at three o'clock at Cross Cheaping?—Yes; to receive the report of the provisional committee appointed to wait upon the masters, but it was at five o'clock, and not three.

1022. Did not, from that meeting, a body of 200 and upwards proceed to the premises and gut it, to use a common phrase, and destroy the machinery, and set the house on fire?—Decidedly not from that meeting, the meeting broke up about half past eleven in the morning.

1023. Did it not break up in the morning in Little Park-street, and agree to assemble at Cross Cheaping?—Yes, at five o'clock.

1024. After that, did not a collection of people proceed to the manufactory, and destroy it?—No, not after the meeting, because the meeting never took place, in consequence of the burning of the factory, it having occurred before that time.

Benjamin Poole.

23 March,
1832.

1025. You do not know by whom the factory was burnt?—Certainly not; I have not the most distant knowledge.

1026. If the factory would have given more wages, as you say, why should the factory have been destroyed; would not more wages have been beneficial to them?—I am not aware that the factory would have given more wages; there were hands employed; and my own knowledge enables me to say, that the cost of manufacturing articles in that place, by steam, was greater than the weavers had been in the habit of receiving previous to that time.

1027. If so, what possible reason could there have been for destroying the machinery, if the men were getting low wages?—I can give no explanation of that sort; but I can conceive that the knowledge of that fact produced an irritation that overcame the better judgment, perhaps, of some persons at that time; but how it operated I cannot tell.

1028. The knowledge of what fact?—That they were at play, and destitute of the means of supplying their families with food, while more money was paid for producing the articles by steam than they had received for supplying by the hand.

1029. Was not this machinery intended to produce a greater quantity of goods in a given space of time?—Certainly; my opinion is, that the cost of manufacturing twenty pieces of a certain article by the steam looms then at work, was greater than had been paid for manufacturing twenty pieces of the same article by the hand.

1030. But the twenty pieces would have been produced in a shorter space of time?—Yes, they would have been produced in a shorter space by the steam loom than by the hand.

1031. How do you estimate the expense of making by the steam-loom?—I am not prepared to give any detailed proof of the expense; but according to all the information I have been able to gather, the cost of the machinery, and the maintaining it and keeping it at work, and the sum allowed to the hand which is always necessary to superintend even a steam loom; that those costs, put together, were considerably more than had been afforded, previous to this time, to the hand loom weaver.

1032. Then you do not speak from your own knowledge, but from the information you have generally received?—Yes.

1033. Do you mean that a cause of discontent among the people arose from the circumstance of this machinery doing more labour and at more wages than they were receiving?—That was the conviction, that it was making by steam what they were waiting to make; and provided they had been enabled to get even a very moderate livelihood, they would have had no objection to steam.

1034. If they got less wages, that was one cause of discontent; but you were understood to say, that this loom would manufacture a considerable quantity more goods in the same time?—Yes.

1035. That would throw them out of employ?—Yes.

1036. Was that one cause of dissatisfaction?—It was their opinion that it did, in some measure, contribute to the depriving them of employment; but although they had been working at a less rate of wages, they had nothing to do, and consequently, nothing to receive.

1037. You mean to say, that the cost of producing the commodity by that machine would have been expended in coals, and the wear and tear of the machinery, rather than the cost of manual labour?—Yes.

1038. And no saving in the cost?—No.

1039. That was the first introduction of weaving by steam?—Yes, I believe it was.

1040. The workmen thought it would displace their labour?—It had been in existence some time, and I do not believe one quarter of the people knew it was in existence.

1041. Have you any doubt that that was the cause that it was destroyed?—I have no doubt that some such feeling operated upon the people; but as a matured prejudice, I do not think any such objection exists to the introduction of machinery, provided a man can get a very moderate livelihood.

1042. Have you any doubt that the prevalence of that feeling among the men led to the destruction of the machinery?—At the moment I believe it did.

1043. Will you state, whether at that meeting there was not a general expression of dissatisfaction at the existence of those looms?—I am certain no such expression was manifested at that meeting.

*Benjamin Poole.*23 March,
1832.

1044. Do you know Joseph Wright and Richard Holmes in Coventry?—I do not know them that I know of.

1045. Are you aware, that a short time after the destruction of those machines in Coventry, a letter was sent by Joseph Beck, stating, that as the public opinion was against him, he sacrificed his private views to that of the general voice, and requests it may be stated to Coventry and the public at large, he will not apply the power of steam to the weaving of ribbons in Coventry?—I have some recollection of something of that kind appearing in the papers.

1046. No attempt has been made since that time to introduce machinery by steam?—I do not know that there has, there may be, but I do not know it.

1047. Do you know, that in 1816, sarsnett ribbons, as narrow as twelve-penny, and plain satin ribbons as narrow as eight-penny, were made in single-hand looms at that time?—I will not undertake to say there was no small breadths, but I will say it was nothing like the general make of ribbons; there might be an instance, I will admit.

1048. Are there many of these now made in single hand looms; are they not all made in engine looms?—Six-penny, eight-penny and twelve-penny are.

1049. In the engine loom?—Yes; I am not aware of any making in the single hand looms.

1050. You do not know when they ceased to be made in that loom?—I cannot state when they ceased to be made; but that they have been making in the engine loom I know. I made a twelve-penny sarsnett myself in an engine loom, as far back as 1814.

1051. Will you have the goodness to state, what arose out of that meeting; was not a committee appointed to meet the masters to arrange a Table of Prices?—A provisional committee was appointed for that purpose.

1052. Was not the purpose of that meeting to fix such a rate of wages as should give to the single hand weaver what was considered fair wages, nearly approximating to the engine weavers?—The object of the conference of the weavers' committee and the manufacturers' committee, was to arrange such a rate of wages for the engine and the single hand loom, which under the circumstances of the trade were considered fair and equitable to both parties.

1053. You stated there was a previous Table existing at that time; do you speak of the Table of 1816?—I allude to the Table of Wages adopted by the manufacturers and workmen conjointly in 1829.

1054. You are aware that Tables of Wages were made in 1816?—Yes.

1055. And after 1816, were there any before 1829?—Yes, there was another List of Prices adopted in 1819; but from the list of 1816, in consequence of the distress that existed at that time, and to which I have before referred, that list was departed from generally; it was lowered; but as I have before stated, the trade recovered itself, and in 1819 the same list was re-adopted by the unanimous consent of the masters and workmen; the same lists, or very nearly so, uniformly so, with the exception of one or two articles, the same list was adopted in 1819, that was in existence in 1816.

1056. Will you state the comparative prices of 1816 and 1819 and 1829, according to those Tables?—The list of 1816 was as near as possible the same rate of wages that had been paid in the ribbon trade from 1804. Some diminution of wages took place in consequence of the distress in 1816 and 1817. The list of 1819 was, with the exception of one or two articles, a mere ratification of the list of 1816: the list of 1819 continued in force up to 1824, when another list of prices was agreed to by the manufacturers and workmen, and at about five or six per cent. reduction from the list of 1819, or, I may say, from the list of 1804. Another list was adopted by the same parties in 1826, which was a reduction of about 10 per cent. from the list of 1824, in addition to the loss sustained in 1824, which makes about 15 per cent. from 1804. The list of 1829 was a reduction of 15 per cent. from 1826.

1057. That is a reduction of 30 per cent.?—Yes.

1058. What was the list of the 10th of November 1831, as compared with the list of 1829?—The list of November 1831 was a ratification of the list of 1829.

1059. A continuation of that list?—Yes; it was re-adopted in consequence of its having been departed from in many instances on no reasonable grounds that could be given, and it was re-adopted by the unanimous consent of the masters and workmen, under all the circumstances of the trade at that time.

1060. Can you, from your own recollection, state that the list of 1816 was no sooner made than departed from by some of the masters, and the same in each successive

Benjamin Poole.

23 March,
1832.

successive list, soon after the agreement, that the list was departed from?—I know that the list of 1816 was, for a very short time, abided by, by the whole number of masters; the trade was in a very bad state at that time, but the list that was adopted in 1819, which was a renewal of the list of 1816 to my own knowledge, continued to be uniformly paid for some years.

1061. Do you mean to say, that as long as the trade is flourishing and there is plenty of work, no attempt is made to alter the Tables, and that it is only when they are distressed, as in 1816, the list is departed from?—As the demand diminishes, we naturally expect some reduction of wages follows.

1062. Between 1829 and 1831, have not the wages of the hand loom weavers, in the neighbourhood of Coventry, decreased much more in proportion than the engine weavers?—I have before stated, that the rate of wages in a single hand loom have been most grievously low; so low as not, even with work, to afford a single hand loom weaver a morsel of bread.

1063. What have they earned, compared with former times?—Compared with former times, of many years past, I am not prepared to say; but I know this much, that for many articles made previous to November 1831, in the single hand loom not more than half the price was given which was recorded upon the list of 1829. In many instances I know that to be the fact; but in others it was still kept up by the manufacturers, which produced a great deal of discontent.

1064. Just state in figures what the reductions in single hand looms had come to, before this Table of 1831, as far as any papers you have will enable you to state. Do you believe those are the lists made at the time, both for single hand looms and the engine looms? [*handing the two following Papers to the Witness:*—Yes, I believe they are.

RIBBON TRADE.

LIST of PRICES of ENGINE LOOM WORK, agreed to at a Meeting of Manufacturers, held at the Castle Inn, in the City of Coventry, on Thursday November 10th, 1831, and to commence the following day.

SARSNETTS, per Piece.	s.	d.
1 dy.	-	6
2 -	-	7
4 -	-	9
6 -	1	-
8 -	1	3
10 -	1	7
12 -	1	11
14 -	2	3
16 -	2	7
20 -	3	4
24 -	4	1
30 -	5	-

No Pads to be made at a less price than Sarsnetts.

LOVES and SATINS, 5-Leish.	s.	d.

24 - - - - -	8	-
30 - - - - -	12	-
40 - - - - -	15	-

AT a Meeting of the Committee of Ten appointed at the General Meeting to make a new Standard, held at the Castle Inn on the 9th of November 1831, it was Resolved, That the following deviations from the Standard of 1822 be made, and that the following be the width of Sarsnetts.

1 dy. - - - - -	quarter of an inch.	14 - - - - -	1 & 10-12 of an inch.
2 - - - - -	7-16 - ditto.	16 - - - - -	2 & 1-12 - ditto.
4 - - - - -	5-8 - ditto.	20 - - - - -	2 & 7-12 - ditto.
6 - - - - -	10-12 - ditto.	24 - - - - -	3 & 1-12 - ditto.
8 - - - - -	1 & 1-12 ditto.	30 - - - - -	3 & 10-12 - ditto.
10 - - - - -	1 & 4-12 ditto.	40 - - - - -	4 & 7-12 - ditto.
12 - - - - -	1 & 7-12 ditto.		

Resolved, That Satins, Satin Loves, Satin Figures, Sarsnett Figures, Orientals and all dressed goods, excepting Gauzes, be 1-12 of an inch wider than Sarsnetts; that fine Gauzes be 2-12 of an inch wider than Sarsnetts; that Pads be the same width as Sarsnetts; that on the Standard, Gauzes be named as undressed; that the Standard be marked Coventry 1831. If any manufacturer requires a weaver to make any breadth exceeding the standard width, it is to be paid for as the next width wider.

RIBBON TRADE.

LIST of PRICES of SINGLE HAND WORK agreed to at a Meeting of Manufacturers held at the Castle Inn, in the City of Coventry, on Thursday, November 10th, 1831, and to commence the following day.

LUTESTRINGS.	s.	d.
20 dy. - - - - -	5	-
24 - - - - -	6	-
30 - - - - -	7	6
40 - - - - -	9	-

with 1s. per piece extra for Grogram.

8-LEISH SATINS.

12 dy. - - - - -	4	-
16 - - - - -	5	-
20 - - - - -	6	-
24 - - - - -	7	-
30 - - - - -	8	6
40 - - - - -	11	-

5-Leish Satins and Satin Loves 2s. per gross less than 8-Leish Satins.

SATIN GAUZES.

16 dy. - - - - -	4	6
20 - - - - -	5	6
24 - - - - -	6	6
30 - - - - -	8	-
40 - - - - -	9	6

PADS, New Standard.

8 dy. and narrower - - - - -	3	-
10 - - - - -	3	6
12 - - - - -	4	-
14 - - - - -	4	6
16 - - - - -	5	-

all other breadths in proportion.

ORIENTALS.

16 dy. - - - - -	5	-
20 - - - - -	6	-
24 - - - - -	7	-
30 - - - - -	8	6
40 - - - - -	11	-

standing course leys at the same price.

All Tyer Sarsnett figures, not exceeding 80 shoots, with or without Satin, to be paid for 2s. per piece extra if exceeding 80 shoots, according to trouble.

SATIN FIGURES.

20 dy. - - - - -	8	-
24 - - - - -	10	-
30 - - - - -	12	-
40 - - - - -	15	-

not exceeding 80 shoots; if exceeding 80 shoots, according to trouble.

All other articles not enumerated in this list, to be paid for according to trouble.

Benjamin Poole.

23 March,
1832.

1065. Were not they settled in Coventry at a meeting at the George Inn, as well for the single hand looms, although few were used in Coventry, as the engine looms?—Not at the George Inn; that was a meeting of the weavers exclusively; the lists of prices were agreed to at the Castle Inn by the committee of masters and weavers.

1066. At this meeting was not there a resolution come to, that a committee should be appointed by the workmen to co-operate with the masters, to form a list of prices?—Yes; these are the lists agreed to by the weavers' committee and the master manufacturers.

1067. Those apply to the single hand looms and the engine looms?—Yes; the one is a list of the single hand looms, and the other of the engine looms.

1068. Can you state to what rate the wages of the single hand weavers have been reduced?—My belief is, on many articles they could not earn more than 2 s. or 2 s. 6 d. a week with work.

1069. While the engine loom weaver was receiving from 9 s. to 12 s.?—In my reason I assigned for the convening of the meeting in November, many of the articles common to the engine loom, as well as the single hand loom, had suffered a considerable reduction; but the rate of wages I have stated as being from 9 s. to 12 s. a week, applies to the rate of wages, presuming that the hand receives the price given in the list, which at that time was not the case.

1070. Before this list was renewed on the 10th of November 1831, state in figures what the engine weaver earned, and what the hand loom weaver earned by the week, equally employed?—In reference to some articles, not more than 7 s. or 7 s. 6 d. in an engine loom, and about 2 s. or 2 s. 6 d. in the single hand loom. Many of the country weavers were not earning more than that; I confine my remarks to those articles only that were common to the single hand loom and the engine loom, the greater number of articles made in the engine loom were paid for according to the list of 1829.

1071. You stated that all the reductions that have taken place amount to about 30 per cent.?—Yes.

1072. Was there an effort between 1829 and 1831 to reduce it still lower?—A partial one there was, and that gave rise to general discontent.

1073. Some of the masters insisted upon a reduction?—Yes, some of them.

1074. You mean to say that those wages, having been reduced in 1829 to 30 per cent., you became dissatisfied in 1831 because many of you were paid still lower?—Yes; paid still lower than the list agreed upon as an equitable list, for certain articles, and no reason had been shown for such a reduction; and there was no proof that any increase of supply was afforded to the working hand.

1075. You were asked just now the amount received by the engine loom weaver and the single hand loom weaver; you say one will receive 7 s. 6 d. per week, and the hand loom weaver 2 s. 6 d.?—I referred to the period immediately before the 7th of November, not to the present time, or any time before that.

1076. And those comparative amounts are correct?—Yes, to the best of my knowledge; but as there was no list, I am not able to say exactly.

1077. What is the amount that would be paid to the engine loom weaver, for the highest rate of wages he could receive, and the highest rate of wages paid to the hand loom weaver?—I believe the highest rate of wages I can state, in the plain trade and in an engine loom, is 12 s. a week, and not exceeding 12 s. 6 d., and varying down to 9 s. in the plain trade.

1078. Now state the highest amount paid to a single hand loom weaver?—I am not acquainted with those wages.

1079. They are almost exploded?—Not by any means.

1080. Are there not goods made in the engine looms that cannot be made in a single hand loom?—I am not aware there are any made in an engine that cannot be made in the hand loom. I know there are articles made in the hand loom that cannot be made in the engine loom.

1081. At those rates of wages, was the employment constant?—By no means; a vast number of hands were out of employment at that time.

1082. Look at List A., which is the single hand list of wages; does that include the preparatory process of winding and warping?—Yes, this includes the winding and warping.

1083. Now look at List B., which is the engine work; that does not include the winding and warping?—No.

1084. Previous

Benjamin Poole.

1084. Previous to those lists, the wages were as 2*s.* 6*d.* to 7*s.* 6*d.* for a week's labour?—Yes.

1085. How many pieces more could a man in an engine make than in a single hand loom, take eight-leish satins, sixteen-penny?—A weaver in an engine loom, making sixteen-penny eight-leish satin, would perhaps make them in a ten-shuttle loom, but he would not make ten pieces to the single hand weaver's one.

1086. How many on the average?—I should say, that an engine loom weaver would make double the quantity of the single hand loom weaver.

1087. Not more than two to one; where a single hand would make one piece, would not the engine make more than two?—I would rather decline answering that question, because, not being acquainted with the single hand trade, I am not aware of the quantity they can make.

1088. How many can you make in an engine of that description?—About five pieces.

1089. Were you not paid by the piece, as you are now, before that Table of Wages was agreed upon?—Yes, in the engine loom.

1090. Did not the engine weaver receive increased wages, because he made more pieces than in the single hand loom; was not that the cause of the difference of wages?—I conceive that the engine weaver receives less per piece than the single hand weaver.

1091. How much less: the question supposes that a man is employed all the week in a single hand loom, and at an engine loom; now the difference of wages was as 2*s.* 6*d.* to 7*s.* 6*d.*, what was the difference of work made by the one in proportion to the other; you say, only two to one; now, no man would pay 7*s.* 6*d.* for two pieces in an engine, when he could get it made for 5*s.* in the single hand loom?—I am not acquainted with the single hand weaving.

1092. Was not the object of those two Tables to bring the wages that the single hand weaver should earn as nearly as possible to the wages an engine weaver should earn?—I was not aware of that; the object of the list is to include all the articles made in the single hand loom and in the engine loom.

1093. If there is the same charge in the single hand list as in the engine list, for making a piece, surely the intention was to make them equal?—They are not equal, whatever the intention might be; the price paid in the single hand loom is more than the price paid in the engine loom.

1094. Take the eight-leish satin, sixteen-penny wide; look at the list, and see what is to be paid for making it?—Five shillings per piece; that includes winding and warping.

1095. How much would you deduct for winding and warping; would it amount to 1*s.* 6*d.*?—No, not 1*s.* 6*d.*

1096. How much should you think?—About 1*s.*

1097. That would bring down the price to 4*s.*?—Yes, in a single hand loom.

1098. If it was 1*s.* 6*d.* for winding and warping, that would bring it down to 3*s.* 6*d.*?—Yes.

1099. Look at list B.; where you see the same kind of work made by an engine loom, where the winding and warping is previously done by the master, and where the labour only is stated; what is the rate there stated?—Three shillings and sixpence for a piece.

1100. If the winding and warping was 1*s.* 6*d.* that deducted from 5*s.* would leave 3*s.* 6*d.* for a single hand loom and the same for an engine?—Yes; but I have stated it does not amount to 1*s.* 6*d.*, it is about 1*s.*

1101. That would make 4*s.* at the single hand and 3*s.* 6*d.* at the engine?—Yes.

1102. Is it the same proportion throughout the other articles?—To the best of my judgment it is.

1103. Then the intention of that list for the hand loom was to bring the rate of wages for one piece of eight-leish sixteen-penny to 4*s.* whilst the engine was to receive 6*d.* less?—I never heard such a view taken of the reasons for arranging the list.

1104. Is not that the fact you have now stated; will not that be the effect?—That the single hand weaver has about 6*d.* in 4*s.* more than the engine weaver for making the same article.

1105. That is the effect of it?—I believe it is.

1106. Has not, since those Tables were agreed upon, a large portion of the work that was formerly done by the single hand weaver been done by the engine-weaver?

23 March,
1832.

Benjamin Poole.

23 March,
1832.

—I am not aware that any difference has been made in the number of single hand looms and engine looms since these lists were made.

1107. Do you mean to say that the distress or difficulty in the single hand weaver has not increased of late?—Not any more than the proportion has in the engine trade.

1108. Do you mean to say that they have been employed to make twelve-penny and eight-penny, and a great variety of other articles that the engines can make; has the single hand looms that employment, continued as before?—The single hand weaver when he can get any thing better than those articles, for they are not very lucrative, is glad to do it if he can.

1109. Putting it to you not now as a workman, but as a manufacturer, would you pay 4s. for making a piece to the hand loom weaver when you can get the same piece made for 3s. 6d. by an engine?—In regard to many articles the article is made better, so much better in the single hand looms as to induce me to give the additional price.

1110. Are there any articles much better in the engine than in the single hand loom?—I am not aware of any.

1111. Your opinion is that the single hand would turn out better articles, so that you could afford to pay 4s. instead of 3s. 6d.?—Yes, on some articles.

1112. State those articles?—Eight-leish satin, and on satin figures of the greatest width.

1113. State what articles can be made as good in the engine as in the single hand loom?—There are some that can be made as good, but there are few that can be made equal in richness.

1114. Do you not consider, that in a regulation by which the master is called upon to pay more for making by hand looms than by the engine, must necessarily stop employment to the hand loom?—I am not aware of any such effect, because whenever such an effect is likely to arise, the manufacturers have it in their power to call their hands together without it, and by general knowledge of the state of the trade, to regulate the prices according as the circumstances of the trade require.

1115. As long as that list continues, you consider the rates ought to be paid accordingly?—Yes, as long as the list continues, we presume there is no good reason shown for its being departed from.

1116. And you think it perfectly right, that the hand loom weaver under the circumstances stated, should continue to receive that increased rate of wages over the engine weaver?—Yes; I think it right so far as the manufacturers agree, such a price is equitable.

1117. Are the articles on which you have now been questioned, articles much in demand?—Not being acquainted with that branch of the trade, I am not aware.

1118. Does that difference between the engine and single hand looms occur in any other article in the list?—I believe something like a uniform proportion is observed in all the articles.

1119. As to the price of winding and warping?—Yes.

1120. You say the quality of hand loom articles is preferable, in your estimation, to the other?—In some articles.

1121. Is that quality paid for by the purchaser in an increased price?—I am not aware of the prices paid by the purchaser.

1122. Whenever there is any depression in the trade, the hand-weavers feel it first; it presses upon them with more severity?—It depends more particularly upon the articles upon which that depression falls, and the majority of the articles made in the engine loom belong to it, and are apart from the single hand loom.

1123. Is it not the fact, that the single hand loom weavers feel it first?—I am not aware of that.

1124. Are there any such tables of wages existing at Congleton or Reading, or any other places where ribbons are made?—I do not know whether there are or are not, but my belief is that the articles made at those places are not the same as those made at Coventry; those made at Coventry are finer than those made at those places.

1125. You have stated that the wages are low, by competition with the French goods?—My belief is so.

1126. Are there any of those plain goods imported from France of which we have been speaking?—I am not aware that the importation of foreign goods is in the plain articles of ribbons.

1127. You believe that that kind of plain ribbons are also imported, as well as the

*Benjamin Poole.*23 March,
1832.

the fancy goods?—No, I do not know that the plain goods are imported to any amount.

1128. Do you know any thing, except by the official accounts?—No, I have not observed any thing as to plain ribbons.

1129. If an engine loom can make goods as well, and perform a great deal more work in a certain time than the hand loom, must not it displace labour, and cause distress?—In reference to those articles which can be made as well in the engine loom as in a single hand loom, my opinion is that they would; that the engine loom would supersede the single hand loom, if the article was in demand.

1130. Must not that throw persons out of employ, and cause distress?—Except they can find that those articles that are in demand can be preferably made in the single hand loom.

1131. Is not there a greater consumption of silk than was ever known?—I believe it is so.

1132. Can you give a reason when that is the case, why wages are so much reduced?—I think I have stated, that the manifest cause is, that those goods that are in demand are supplied by foreign artizans, that might be supplied by our own, being fully competent to make them.

1133. The fine fancy goods pay the workman and the manufacturer more than plain goods?—Yes, more than plain goods, it pays something more; but the profits on even the fine fabrics are so impoverished, as not to warrant the manufacturers speculating in the making of them.

1134. Does not foreign competition compel the manufacturer and workmen to go to a much lower description of goods?—Decidedly.

1135. You mean that lustrings would be as well made in the engine loom as in the single hand loom?—Yes.

1136. Would you say so of satins?—I have said, that the preference given to single hand looms is in eight-leish satins, and broad satin figures.

1137. So that the engine loom will not make so beautiful an article in satin goods as the single hand?—No.

1138. Do you know the proportion of gauze made in Coventry now, compared with 1824 and 1825?—I do not know that.

1139. You have spoken with regard to machinery, are you aware, that at Reading machinery has been introduced for many years, which makes articles to come in competition with Coventry?—I am not aware of the nature of the machinery; I believe they are chiefly blacks, India, and other sorts of goods, of which there are not many making in Coventry.

1140. Do you know, that there are any a-la-bar looms worked by a long pole in Coventry?—No, I do not.

1141. Are there any called the Swivel looms that are used in Reading?—I have heard that there may be one or two, but they are not to any considerable amount I am certain.

1142. Have you ever heard of what is called the San or the Swiss loom, that is an improvement on the a-la-bar loom?—No.

1143. You are not aware how it makes an improvement in the fancy work?—No.

1144. Then are the Committee to understand, that the only machines for weaving in Coventry, are the engine loom and the jacquard machine?—Yes; those are the two principal machines in use in Coventry.

1145. You were asked why the machinery was not increased, and you stated that the low profit prevented it?—Yes.

1146. If the machinery used in other parts of the country and in France were introduced at Coventry, would not you be able to compete with the foreigner?—I am not aware there is any superior machinery used in France to that we have in Coventry; the jacquard loom is the machine used in Coventry, and I am informed it is of the same description in France.

1147. You know nothing but what you have been told about France?—No.

1148. You have spoken of Mr. Beck's machine, or Woodhouse's machine?—Yes.

1149. You were understood to say that it would make 20 pieces where a man would make one?—No.

1150. Can you state the proportions?—It might make 15 where a man would make 10; on the whole, perhaps, produce 15 pieces to 10.

1151. But then it employed the power of steam instead of manual labour?—

Benjamin Poole.

23 March,
1832.

Yes; the steam, in some degree, produced quicker than manual labour, but manual labour was combined with it.

1152. But yet there was steam power used to a considerable extent?—Yes, it facilitated the production.

1153. Do you know that in 1817 there was general distress pervading all parts of the country?—I am not aware of what distress pervaded all parts of the country; I know it affected all Coventry.

1154. Do they allow to the poor in Coventry so much as they used to do formerly?—No, much less.

1155. Whether the amount of the poor rates have increased or not, has the number of the poor increased?—I believe that the number of the poor in Coventry, so far as refers to the silk trade, and the number of applicants for relief, has considerably increased.

1156. The number is stated to have increased from 147 to 323?—The number in the house varies; sometimes it may be more and sometimes less.

1157. Do you know that the casual poor have increased much?—Yes, very much indeed.

1158. Have they reduced their allowance?—Yes; I know many individuals who have been in the habit of receiving 4s. 6d. a week, who do not receive now more than 2s. or 2s. 6d., a man and his wife and two or three children.

1159. Do you know the amount per pound of the poor rate in the year for which you have given the returns?—I am not aware of the assessment, or how the directors have managed it; I only know what is collected and expended, and I know that a vast number of those who formerly contributed to the poor rate are unable to do it now.

1160. You say that the distress began in 1815 and continued down to 1818, are you aware that the poor rates for those years were 10,000*l.*, 12,000*l.* and 15,000*l.*, how do account for the distress beginning when the poor rates were so low?—Trade had not declined so materially in 1815.

1161. You stated that trade began to decline in 1827, 1828 and 1829, and that it has been gradually getting worse?—Particularly 1829. I do not say any thing about any particular decline in 1827 and 1828, for this reason, that previous to the 5th of July, the time appointed for the introduction of foreign goods, the manufacturers' warehouses were completely empty; after that time they went on with a desire to keep their hands employed, and they concluded in 1828 with their warehouses full.

1162. Do you consider that the paper you have given in marks the deficiency of employment in Coventry?—I conclude that it is a pretty fair criterion of the condition of the poor.

1163. If, in 1818, 1819, and 1820, the poor rates were 18,000*l.*, 15,000*l.*, and 16,000*l.*, and in 1826, 11,000*l.*, in 1827, 13,000*l.*, and in 1828, 11,000*l.*, in 1829, 13,000*l.* ought not those to be taken as a proof of the trade being brisk when the rates were so low?—Provisions were much dearer in the former years; money would not go so far.

1164. Taking the latter years, there has not been any great variation?—No.

1165. You spoke of the distress; are you aware, or have you brought any statement showing the increased number of weavers in Coventry, between the period of 1821 and 1831?—I do not know the increased number of weavers from 1821 to 1831; but, from the best information we have been able to obtain, the number has diminished considerably in the last three or four years.

1166. You are not aware that the population has increased from 21,000 to 27,000 in Coventry?—I am aware that a great addition has been made to it.

1167. Is it not the rule in Coventry for the father to bring up his sons to the same trade as himself?—Generally it is; he has no other alternative; he cannot bring them up to any other trade.

1168. Do you mean to say that the number of weavers in the last year has decreased?—Yes, upon the whole I believe they are; there are fewer now than three years ago.

1169. Have you any criterion to go by in forming that opinion?—The number of weavers in Coventry is about 4,400, according to the statement obtained when they petitioned Parliament.

1170. In this year?—Yes.

1171. Do you know the number five or ten years back?—No, I am not aware of it.

1172. You

Benjamin Poole.

23 March,
1832.

1172. You cannot say whether it has increased or not?—I have no doubt that it increased for the former part of the last ten years, from 1819 to 1825, or 1826 or 1827.

1173. You have no account of what they were in 1826?—No.

1174. You are an engine weaver?—Yes.

1175. You have stated an account of the number of looms?—Yes.

1176. Were you engaged in making that inquiry?—No, I was not.

1177. What was the number taken?—Four thousand four hundred and sixty-one, I think, was the number.

1178. Are you able to state the average rate of wages paid in the year stated in the list you have handed in for single loom work and for engine loom work?—I cannot say for single hand work; I am unacquainted with that branch of the trade.

1179. But you can for engine loom work?—Yes.

1180. In giving in the rate of wages, is it to be understood you give it in as the wages a man can earn when employed?—Yes.

1181. In the course of the last year, how many weeks do you think the men have been unemployed?—It sometimes happens that the individuals in work at one time are out at another; but on the whole I should think, dividing the quantity among the whole number, that they had not more than seven months' employ in the year, full work.

1182. So that 12 s. per week is, when reduced by that scale, only 7 s. per week?—Yes; the whole sum distributed among the weavers would not amount to more than that.

1183. Do you mean the head of a family or each individual in the family?—I mean the weaver, and he has a family dependent upon him; if a man has five or six children, I do not mean to say that no one of them is able to afford him assistance to the amount of one or two shillings per week, that must depend upon circumstances; in my own case, I have five children, and the oldest is not eight years of age, and cannot earn any thing.

1184. Your five children do not produce anything?—Not a farthing.

1185. Have you got a list of the prices for the years 1816, 1819, 1824, 1826, and 1829?—Yes.

[The Witness produced the same, and they were delivered in.] Vide Appendix.

1186. In making a piece of gauze ribbon, you will probably consume five ounces of silk, and perhaps be paid 15 s. for making it?—Perhaps so.

1187. You may consume a pound of silk in making a piece of ribbon, for which you will not be paid more than 5 s. wages, is that the fact?—Yes.

1188. So that the gross consumption and weight of silk is no proof that the operative is beneficially employed?—No.

1189. Can you state the ordinary proportion of sarsnett and pad ribbons?—No, I am not aware of that; I have a statement here of certain articles taken at two periods, which will elucidate the question. A weaver employed, having full work on a twelve of twelve-penny sarsnetts at 2 s. 4 d. per piece in 1824, making four lengths in five weeks, paying 2 s. 6 d. a week to the filler, would earn 19 s. 11 d. per week. A weaver employed, and having full work on a six of twenty-four penny sarsnetts or lutestrings at 4 s. 1 d. per piece in 1832, having full work and making four lengths in six weeks, paying 2 s. 6 d. a week to the filler, and 1 s. a week loom hire, would earn 12 s. 8 d. a week. In the first case, that is in 1824, the weaver earns 19 s. 11 d., and works up 24 ounces of silk, and in the second he earns 12 s. 8 d. and works up 32 ounces of silk.

1190. Both those are plain articles?—Plain sarsnetts made by an engine-loom, twelve-penny sarsnett in 1824, was as common a work at that time as the twenty-four penny is at this time.

1191. A piece of gauze ribbon would weigh five ounces, and you would now not consider yourself over paid in procuring 15 s. for the making of that five ounces into a piece of ribbon?—Fifteen shillings per week is about the rate of wages in the gauze figure trade.

1192. Do you know the number of engine-looms employed in 1826?—I do not know; considerable pains have been taken to ascertain it, but in consequence of no statement having been taken at the time, we have not been able to ascertain it.

1193. You have stated, that there is at this present time the number of 4,461 engine-looms in Coventry?—Yes.

1194. Do you mean to say, that all those looms are at the present time employed?—By no means.

Benjamin Poole.

23 March,
1832.

1195. What number do you consider are out of employment at the present time?—According to the last statement taken, when our petition was sent in, and no accurate account has been taken since, according to the number then obtained, it was about 2,000 entirely without employment.

1196. Out of of the number you have stated?—Yes, out of the 4,461.

Edward Goode, called in; and Examined.

Edward Goode.

1197. YOU are engaged in the ribbon trade?—I am.

1198. In Coventry?—Yes.

1199. How long have you been so employed?—About 21 years.

1200. How many branches of the ribbon trade are there?—There are two, generally denominated the single hand loom and the engine loom; that is the one shuttle loom and the many shuttle loom, each embracing two parts, plain and fancy.

1201. To which of those branches do you belong?—The engine plain.

1202. Are there any persons besides weavers who are engaged in the plain branch of the ribbon trade?—Yes, there are warpers, winders and fillers.

1203. Do you know the number of those warpers, winders and fillers who are dependent upon the plain branch of the ribbon trade?—There are about 1,000 winders, 1,000 fillers and about 320 warpers.

1204. What is the state of those branches of the trade at present?—Unprecedentedly depressed; very much distressed indeed.

1205. Do you know the number of those various descriptions of persons who are consequently unemployed?—According to the most accurate census that can be taken, I believe the numbers to be 1,800 weavers, 450 fillers, 450 winders and, I think, about 160 warpers.

1206. In consequence of this want of employment, is there considerable distress at the present moment?—There is.

1207. In your opinion what is it that has produced this distress?—Want of employment and low wages.

1208. Has this depression been of long duration?—Yes, it has extended over the three past years.

1209. You have stated that low wages are one cause of this distress; what are the average earnings, in your branch of the trade, at the present time?—The most correct average that can be obtained, shows that the average earnings are 10 s. a week; there are some few men who can earn more under particular circumstances, but there are many who earn less; therefore I should say that 10 s. is the most correct average that can be stated.

1210. Can you state what has been the amount of the reduction of wages in the plain branch of the ribbon trade?—As near as I can ascertain, it is 30 per cent.

1211. Since when?—One thousand eight hundred and nineteen.

1212. Are the Committee right in understanding you to say, that you consider that there is a difference to their disadvantage of 30 per cent., comparing this period with 1819?—Yes, I might say from 1804, we have sustained a reduction of 30 per cent.

1213. Then during what space of time, according to your experience, did the wages continue steady?—From 1804 to 1812 there was one and the same price uniformly paid; in 1812 we had an extraordinary trade, and then there was a very extraordinary price given; and we had a higher price given. Upon the return to peace in 1815, there having been an influx of hands from disbanding the army, and the general depressed state of the country, things reverted back to their old channel; and there was a list of prices in 1816, which was little more than a copy of 1804; there have been periods between the making of the different lists, when different individuals of the manufacturers (for I am sorry to say there are some that are very ready to make reductions) have made encroachments upon the list; but when I speak from the list of prices, I mean the established list.

1214. Whatever price is fixed, whenever there is a depression, there will be a departure from it by the manufacturers; is not that the case?—Yes, in some cases.

1215. And when there is a very brisk trade it is departed from on the other side?—No.

1216. Was not that the case in 1812?—It was at the option of the manufacturers; it was not forced upon them.

1217. To what circumstances do you attribute these great reductions in the wages of the ribbon weavers of Coventry?—The importation of foreign manufactured ribbons, most undoubtedly; that is my opinion.

1218. Does

Edward Goode.

1218. Does this importation of foreign ribbons operate injuriously in any other respect besides reducing your wages?—It robs us of our labour.

1219. In what manner do you know, or how do you form your notion, of the quantity of foreign ribbons imported?—I am not able to state the quantity imported, but the first reduction of which we complain was made in 1824; just at the time the law was anticipated in 1826 comes another reduction; in 1829, when there was an alteration in the import duty, came these reductions, and no entreaty on our part has ever got us an advance.

1220. How do you account for the reduction in 1818; there was no import then?—It was only a partial departure; the Committee will find that in the evidence it is acknowledged that at that time all manner of prices were paid; the list of 1816 was one established rule, and though it was partially departed from, there was no uniform price paid till 1819.

1221. You do not agree with the last witness, that the distress began in 1815, and gradually increased down to 1818, when the prices were the lowest?—Yes; I agree it commenced in 1815, and extended over three or four years; and extended over the country at large; but at the time when low wages were paid in 1818, they were not paid by any general acknowledged scale, but all the reductions effected under this late system are regular adopted scales, that are acknowledged and paid, and every fresh succeeding scale comes lower and lower; that was not the case antecedent to 1826.

1222. Did you attribute the fall that took place in 1818, to importation also?—Certainly not.

1223. Did you attribute the fall in 1824 to importation?—Yes, in the prospective.

1224. In 1822, 1823 and 1824 they were depressed?—There was no reduced list, although there were partial deviations.

1225. You are employed upon plain ribbons?—Yes.

1226. Just state the kind of work which you make, and which you conceive to be met by importation from abroad?—I have, in my employment, two or three kinds of work; but the kind of work I have under my superintendence and care is not the kind imported.

1227. You are understood to be in the plain trade?—Yes.

1228. And you say the wages have gradually decreased; and you stated that it is importation that has decreased your wages; you are asked now to state the kind of articles brought in competition with your work?—In the first place, at the commencement of the legalizing system in 1826, a great many plain ribbons were imported that brought down our prices to a certain scale, beyond which the manufacturers could not give it if they sold at all. I admit, to the best of my knowledge, the importations in the plain articles have not been so great as in 1826, 1827 or 1828, or 1829, but the engine trade embraces two parts, the fancy and the plain, they are like twin sisters, the one is so connected with the other, the one cannot suffer without the other suffering too; the importation may take place on one particular article, and if that affects one part of the trade it is sure to affect the other.

1229. Your trade is affected by the importation of fancy goods?—Yes.

1230. And those hands who have been employed in fancy goods are now compelled to make plain goods?—Yes, in some instances.

1231. And they press upon those employed in making plain goods?—Yes; and if the foreigners did not import fancy articles, the scores of plain hands now out of employment would be employed in making fancy ribbons.

1232. How do you know that people would buy English fancy goods if there were no French imported?—I think it is fair to infer, if there was nobody to import them and they were wanted, we should supply them.

1233. Did you make figured gauzes before 1826?—Yes; they were making before that.

1234. Do you make them now?—They are made in Coventry.

1235. Do you believe there are more gauzes now made in Coventry than were made in 1824?—I do believe there is now making in Coventry more fancy goods; there are some articles that were making a few years back that are now obsolete.

1236. If there are more gauzes made now than were made in 1824, the trade has not decreased?—Not in the fancy branch in Coventry.

1237. What is your opinion as to the increase of hands in that branch; are there not more weavers now for that branch than in 1824?—Yes, unquestionably; if there is more work, there must be more hands to do it.

Edward Goode.

23 March,
1832.

1238. If there is more work how do you account for the distress?—The fashion has undergone a change; the fashion favours the fancy goods, the plain goods are not so much in demand; but if the fancy goods were not supplied from abroad, the plain hands would have that employment here.

1239. You mean that plain goods were much more used formerly?—Yes.

1240. You make now fancy goods as you used to do?—Yes.

1241. But those coming in from abroad have thrown the hands at Coventry out of employment?—Yes.

1242. Are not the fancy goods made by machinery?—Yes, the jacquard looms.

1243. Must not the nation that has the machinery most in perfection supply the most?—I am not aware that our machinery is inferior to the French.

1244. Are you not aware that the jacquard loom is superseded at St. Etienne?—I am not.

1245. You say that if the fancy goods were not used, the plain goods would come in?—Yes.

1246. Before, when plain goods were wanted, did you not find serious competition at Manchester and other places?—My firm conviction is, that the plain trade has declined in more places than it has grown up.

1247. Has the machinery, in the plain branch of the trade, declined in value since the importation?—Decidedly; looms that were worth 12 *l.* or 15 *l.* are knocked down at public auction for 2 *l.* and 3 *l.* a-piece.

1248. The number of fancy looms has increased greatly at Coventry?—Yes; there are more than 600, and in 1826 there were between 200 and 300.

1249. You think there would be more fancy work at Coventry if it was not interfered with by foreigners?—Twice the quantity.

1250. But at present the manufacturer does not choose to invest his capital in it?—Certainly not; it would be a ruinous speculation.

1251. Can you make as good ribbons in Coventry as at France?—I believe we can.

1252. Are you aware, whether Tables of Wages, such as exist in Coventry, are established at Manchester or Congleton, or any of those places?—I am not aware of that.

1253. Has it not been the anxious wish of the workmen to keep to the Tables as closely as possible?—Yes; although the Tables do not allow us a living price for ourselves, or for our families.

Lunæ, 26^o die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

David Smith, called in; and Examined.

David Smith.

26 March,
1832.

1254. WHAT are you?—A figured ribbon-weaver, from Coventry.

1255. In what department of the ribbon-trade do you operate yourself?—In the figure department.

1256. How long have you done so?—The greater part of eighteen years.

1257. How many belong to that department at Coventry?—From 650 to 700 Jacquard weavers.

1258. What is the present state of that department of the trade?—There is employment, but it is very uncertain and irregular; consequently, the operatives are very much distressed.

1259. What are the average earnings of a Jacquard loom weaver?—The average earnings, if in full employ, would be from fourteen to fifteen and sixteen shillings per week.

1260. Can you state how many weeks in the last year you think, generally, the Jacquard loom weavers were unemployed?—I should say, generally, from ten to fourteen weeks.

1261. Was there the same want of employment the year before?—No.

1262. Then you mean to say, that that branch of the business was worse during the last year than the preceding one?—Yes.

1263. Does the making of figured ribbons require more skill and attention than the making of plain ribbons?—Yes, on account of the extra machinery and harness that is required to make the figured ribbon.

1264. How many Jacquard weavers were there previously to the importation of foreign ribbons?—In 1823 there were five Jacquard looms, and in the early part of 1826 there were two hundred and nineteen.

1265. Has

*David Smith.*26 March,
1832.

1265. Has there been any increase in the last year?—There has been but very little increase for the last two years and a half.

1266. What is that owing to?—I conceive it is owing to the advantage that the foreigner has in our market; that is, that although the goods are in demand, they are supplied from other quarters than from our own manufactures.

1267. Can a figured weaver, under any circumstances, earn from 2*l.* to 3*l.* a week?—Decidedly not.

1268. What are the largest wages you ever knew a figured loom weaver earn?—I should say from 24*s.* to 28*s.*

1269. At what date was that?—In 1826.

1270. In what part of 1826?—The early part of 1826.

1271. Then you mean that the trade was better in the early part of 1826 than you have ever known it?—I should say, that the Jacquard trade might be as good at that time as at any other.

1272. Can you state what quantity of persons there were out of employment in 1831?—The articles were in demand, and I am not aware of any great number of Jacquard looms that were destitute of employment during that year.

1273. Do you know whether, in the year 1826, there were many Jacquard loom weavers out of employ?—No, I do not.

1274. Then in 1826, the 219 Jacquard looms were very generally employed, and in 1831, the 650?—The 219 were generally employed in 1826, and the articles being in demand in 1831 for the 650, the operatives had something to do; but in consequence of the constant variation of pattern, a great deal that they had to do was merely to alter for the exchange of pattern, which was tantamount to no employ to them.

1275. Were the Jacquard looms fully employed in 1827?—Partially.

1276. And in 1828?—In 1828 I think they were better employed than in 1827.

1277. In 1829?—Then they were worse off again.

1278. In 1830?—I should say 1830 was worse than 1829.

1279. In 1831?—That was worse still.

1280. You were understood to say that they were employed in 1831?—The employment was of the nature I stated, that the article was in demand; but the employment that the men had was principally to alter from one pattern to another.

1281. When was the first Jacquard loom introduced into Coventry?—In the year 1823.

1282. Before that time what machinery was used previously for making the same articles that are now made by the Jacquard looms?—There were no similar articles made.

1283. Do you know what was the number of looms in Coventry prior to 1823?—No.

1284. Did the men who in 1826 worked at the Jacquard looms, before that time work at another species of loom?—Yes.

1285. Did the introduction of the Jacquard looms cause the discontinuance of other machinery in Coventry?—The improved figure loom, which had been employed before the year 1823, still continued to be employed when the Jacquard looms were introduced, and in 1826, when there were 219 Jacquard looms employed.

1286. Is not the figured loom still in use?—I cannot answer whether there are any other figured looms in use now, except the single hand loom, not in the engine branch, other than the Jacquard loom.

1287. When the Jacquard machinery was introduced, was it applied to machinery before in use, or was the introduction of the Jacquard machinery, in fact, the introduction of an entirely new loom?—Of an entirely new machine.

1288. Can the Jacquard machine, such as was introduced in 1823, be applied to looms of the former construction?—Yes.

1289. In point of fact, was the improvement of the Jacquard applied to looms before in existence?—There were new looms made for the purpose of employing the Jacquard machine, and in very many instances since that, the Jacquard machine has been applied to plain looms; plain looms have been altered into Jacquard looms.

1290. That is to say, the Jacquard machine has been placed upon the loom?—Yes.

1291. Has not the Jacquard machine been applied both to the single hand and the engine loom for making patterns?—Yes.

1292. Then when you refer to the number of Jacquard looms, as you have stated increasing in the year 1826 to 219, and afterwards increasing at the present period

David Smith.

26 March,
1832.

to between six and seven hundred, do you mean that those were new machines that were constructed, or that the Jacquard machinery was applied to looms previously in existence?—Both ways.

1293. Since you have used the Jacquard machinery, has the old mode of figure weaving been abandoned?—I believe it has.

1294. Then it is merely a change?—Yes.

1295. Do you know whether any improvement has taken place in Coventry in the Jacquard loom since its first introduction?—I am not aware of any improvement.

1296. Are you aware whether any improvement has taken place at Congleton or Reading or Battersea, or any other places where fancy goods are made?—No.

1297. Are not the Jacquard looms included under the head of engine looms?—Yes.

1298. Do you know how many engine looms there were in 1826, as distinguished from hand looms?—No; all I know as to the numbers is, that in 1826 there existed 219 Jacquard looms, and that in 1831 the total number of engine looms, I think, was about 4,000 and upwards.

1299. As the Jacquard looms increased, did the employment in looms which had not the Jacquard machine decrease, in consequence of the application of the Jacquard machine being found to make goods of a superior quality?—Yes.

1300. You do not mean to say that there are more figured goods making now than there were in 1823 or 1826, but that it is merely another mode of making figured goods?—Exactly so.

1301. You were understood to say that the fancy trade has fallen off since 1826?—Yes.

1302. Is there less employment now for the weavers in fancy work than there was from 1824 to 1826?—There are less fancy goods made, but the hands are employed a great deal in altering patterns.

1303. Does that alteration of patterns pay as well as making goods?—No, we have nothing for altering patterns.

1304. When you say that the number of Jacquard looms increased from 200 to 600, is it to be inferred that the fancy work has increased to that amount?—Certainly not.

1305. Then, when you say that those looms increased from 200 to 600, you mean by that, that the work is transferred from those looms that were before employed in fancy work to those in the engines?—Yes; I mean to say that the men that operated upon the improvements from 1820 to 1823, now operate upon Jacquard looms.

1306. You were understood to say that there is rather a decrease of employment, and less wages?—Yes.

1307. And that a considerable part of the year you are out of employment?—Yes.

1308. Is there much distress in Coventry?—Yes.

1309. How do you account for that?—Because the articles that we can make are supplied from another source, and therefore, though the figured ribbon is in demand, the constant variation of fashion, in consequence of the introduction of foreign patterns, fills up a great deal of the operative's time, and that he really is not employed during that time in earning any thing for himself and his family.

1310. Why cannot you have new patterns, and make variations and lead the fashions?—We could have new patterns and we could make variations, but we could not lead the fashions, I apprehend, because there is a general feeling and a desire to know what patterns will come from abroad.

1311. Are the wages lessened in consequence of that; cannot the manufacturers afford to give as good wages in consequence of having the cream of the trade taken away from him?—Certainly not.

1312. Do you mean to say that the 650 jacquard looms now employed, are merely an exchange for the former looms?—There are some additional looms; the greater part of Jacquard looms in existence, are looms that have been altered from some other kind of loom, but there have been some new ones made.

1313. Are the 650 looms now employed in the Jacquard apparatus, in addition to the former employment afforded to the trade?—No.

1314. Do you mean to say that when those engines were increased from 200 to 600, it was merely an alteration in the mode of doing the work by a different engine, but not increasing the employment?—Yes; it did not increase the employment.

1315. When

*David Smith.*26 March,
1832.

1315. When those Jacquard looms were introduced, were the old looms gradually turned to these?—Yes.

1316. That increase from 200 to 600 is not an increase of the quantity of persons employed, but a change from one mode of making those goods to another?—Yes.

1317. You mean to say that the Jacquard apparatus makes fancy goods so much better than the old machine, that you use the Jacquard apparatus instead of the other?—It produces a different article.

1318. Does it produce a better article as well as a different one?—Not as to quality.

1319. Then why is it used?—Because the Jacquard loom will produce a longer and a more beautiful pattern.

1320. If it is longer and more beautiful, may not it be said to be better?—It is better in point of taste, but not as to quality.

1321. Are not the patterns that come from France, all made in the Jacquard loom?—I believe they are.

1322. Would it not be quite vain for you to produce a commodity that is unlike the French, and are you not therefore compelled to use the Jacquard loom?—Yes.

1323. What time does it take to change the pattern?—From two to five weeks, according to the article.

1324. What time does it take to set a pattern originally?—From a month to six weeks.

1325. What is the highest wages you have known any individual in the fancy work earn in any one week within the last two months?—I should say 23 s. in one week.

1326. You are sure that none have received 34 s.?—I have no knowledge of any such fact.

1327. Do you believe that there have been 100 instances in the last year of persons having earned 23 s. in a week?—No; the 23 s. is in one week when the loom is fully prepared.

1328. But during the preceding weeks, when he was setting the pattern in, he was earning nothing?—No.

1329. If you had employment for six weeks, could not you earn the same every week?—No; because it is not usual for us to have warps long enough to last us for regular weaving six weeks.

1330. Who sets the pattern for you?—We put the pattern in ourselves.

1331. What is the nature of the preparation, that prevents you from earning as much in one week as in another, if you have full employment?—The getting in fresh warps, and the altering the patterns.

1332. What time does getting in the warps take?—It takes sometimes a week, and sometimes a fortnight, to get a fresh set of warps, and put them in the loom.

1333. How long will they last?—When they are in, they can be wove for a month.

1334. Is not that the case with all kinds of work, that it requires time to prepare it?—Not so much time as that.

1335. Before the introduction of the Jacquard looms, did not you also take some time to prepare the warp, and put the work in readiness?—Yes.

1336. Is there any additional labour of that sort, in consequence of the application of the Jacquard machine?—Yes, there is a greater variety of stripes; there is additional labour to get the warps in, over and above the labour that was required to get in a figured warp upon the old plan.

1337. When you say 23 s. a week, you mean when the loom is fully at work?—I say in one week, when the loom is fully prepared, and the man has nothing to do but to weave from Monday morning till Saturday night.

1338. Must not all the time that is employed in the preparation of the work be a deduction from those wages?—Yes.

1339. In addition to the time you take in putting the work into the loom, you have stated that you occasionally suffer from the want of work altogether?—Yes.

1340. Are the Committee to understand that if you have a frequent change of patterns there is a great portion of your time lost to you?—Yes.

1341. What proportion does the time you lose in changing patterns bear to the time you are employed in making them?—In certain articles it would take as long to alter the pattern as it would to make 12 pieces of the article.

1342. How long does it take you to make 12 pieces after the pattern is prepared?—A month.

1343. Are there many articles that you so make that do in fact require a month?—There are.

David Smith.

26 March,
1832.

1344. What articles are they?—Twenty-four-penny figured gauzes, the broad satin figures, and damask figures.
1345. Those, of course, are in the fancy line?—All in the fancy line.
1346. You are speaking now of the best employment in your trade?—Yes.

Joseph Marston, called in; and Examined.

Joseph Marston.

1347. WHERE do you reside?—At Foleshill.
1348. What are you?—I am an operative, in the single hand, in the ribbon business.
1349. Are you overseer of Foleshill?—I am the guardian of the poor.
1350. How long have you been in the ribbon trade?—About 18 years.
1351. Are you an undertaker?—Yes.
1352. What do you mean by an undertaker?—I am the person that takes the silk from the manufacturer in the hank, and we have to wind it, to warp it, to find the harness and the machinery of all descriptions.
1353. What number of operatives are there in your parish?—There are 2,691 operatives; of whom 1,062 are employed, and 1,629 unemployed, according to the account we have taken through the parish, since the time of the distress, to find the exact number of people unemployed; that was in December last.
1354. How did you take that?—By going from door to door; that is the number of persons in the parish that are employed in the business, that is of weavers, winders and warpers, and all the persons employed in the business.
1355. When you say 2,691, do you mean that all those persons are or should be employed in the ribbon trade?—Yes.
1356. Do you count the women and children?—We count the women because they attend the business.
1357. Do you count the children who are too young to attend the business?—No; only those that are employed in the business.
1358. What is the state of that branch of the trade at this time?—Very bad indeed.
1359. Is not this the season when you are generally well employed?—Generally it has been; but the last two seasons, and more particularly the present, it has been so depressed as I never knew it at this season of the year.
1360. How long has your trade been so depressed?—It has been on the decline the last four years, but more particularly the last two years.
1361. What number of persons are there out of employment?—In December there were 1,629 destitute of any employment whatever.
1362. Were the others fully employed?—No, only partially; and I do not think they averaged two days' work a week through the winter season, for such was the state of the trade that those that had employment were worse off considerably than those that had parochial relief.
1363. What are the present average earnings in that branch of the ribbon trade?—Five and sixpence when at work; that I have ascertained from the rate of wages specifying the article, and then taking the average on it.
1364. When you say 5 s. 6 d., do you mean to say that those that were employed only two days in the week earn, in those two days, 5 s. 6 d.?—No, I take the week when fully employed.
1365. So that those who are employed only two days earn only one-third of 5 s. 6 d.?—Yes.
1366. Can you state how many days in a week they are employed now?—A great portion of them are out of employment now.
1367. Are they more employed now than they were in December?—There may be a little more employment, but it is so trifling that we have never perceived it to any extent.
1368. Do men, women and children earn this?—No; this is for men and women, operatives that are capable of doing any kind of work, not children.
1369. What were the average earnings prior to the making the lists in November last?—From 4 s. 3 d. to 3 s. 8 d.
1370. Is the distress very great among the weavers in your parish?—Very great.
1371. To what cause do you attribute that distress?—The introduction of foreign ribbons; I have positively seen French goods sold in Coventry for less than we formerly had for manufacturing them.
1372. What kind of goods do you allude to?—They were gauzes that I allude to, which we were pretty well paid for in 1824 and 1825 and 1826.

1373. Have

1373. Have the poor rates in your parish increased?—A great deal.

1374. To what amount?—I have the amount from the parish from the year 1821, which I received from the vestry-clerk.

Joseph Marston.

26 March,
1832.

[The Witness delivered in the same, which was read as follows:]

Parish of Foleshill, March 24th, 1832.

AN ACCOUNT of Monies actually paid to the Permanent and Casual Poor.

						£.	s.	d.

(signed)

J. Johnson,
Vestry Clerk.

(signed)

{ W^m Masser, Churchwarden.
Rich^d Richardson, Overseer.
Rich^d Owen, Guardian.

1375. Why was the list established in November last?—The prices varied so much that a part of the manufacturers did not think proper to carry on their business under the unsettled circumstances of the prices, and they were solicited, and the price was offered us.

1376. Do you consider that a fair remuneration for your labour?—By no means.

1377. Did you express that opinion?—Yes; but we were assured that the manufacturers, under the present depressed state of things, could not give us a better.

1378. Do you consider the evils you labour under, as single hand weavers, to be ascribed to the introduction of the jacquard engine?—By no means.

1379. Have you not improvements in the single hand engine, independent of the Jacquard engines?—Yes.

1380. Do you believe that they would be greatly increased if foreign ribbons were excluded?—Yes.

1381. Are there any descriptions of goods made in the single hand loom which cannot be made in the engine loom?—Certainly.

1382. Are they numerous?—They are an article that prevails very much in the present day, as far as the demand goes for them; it is a double shute satin, made with three shuttles; I have seen patterns with four colours at one time, and I never knew them attempted to be made in the engine loom.

1383. Can you state what the population of your parish was in 1821?—No, I cannot.

1384. Are you aware that the population of that parish has increased since 1821 from 4,900 to 6,900?—I know that there is an increase, but I do not know exactly to what amount.

1385. Have you had reason to think that it is very considerable?—Yes, I have.

1386. Was there any want of employment for the increase up to a certain period?—There was not up to the end of 1827.

1387. Then when you took the account there were 2,691 persons capable of working, and only 1,629 without employment, leaving a remainder of 1,062 who were employed?—Partially.

1388. Are you aware that that is a greater number than the whole population of 1821?—Very probably it is a greater population.

1389. Do you think that the increase of population has taken place since 1827, or between 1821 and 1827?—I do not know at what period, but it has been a regular increase for the last 15 or 16 years.

1390. Do you think it increased more from 1824 to 1827, than it has done from 1827 to this period?—It might have done so, I cannot tell.

1391. Were they employed in 1821?—Yes.

Joseph Marston.

26 March,
1832.

1392. Were the 1,062 well employed in 1831?—No, there was very partial employment.

1393. Do you recollect what was the cause of the distress that took place in 1818, or what proportion it bore to the present state of distress?—I recollect that we had a bad trade about two years after the disbanding of the army, a number of hands were thrown upon the trade, and I account for the depression of it by that circumstance, and partly by an article prevailing then, that each operative made a great length of.

1394. You mean to say, that the fashion of making different articles has varied?—Yes.

1395. Do you recollect whether, in the year 1818, there was any distress occasioned by the death of the Princess Charlotte, and the change of fashion in consequence?—We have had several depressions in consequence of deaths in the Royal Family; as that happened at that time, I believe that was part of the cause.

1396. Do you not recollect the cause of that distress to have been considered by the workmen to be the half-pay apprentices?—There never was much of that prevailed in the parish I have been speaking of.

1397. In what state was the trade in 1827?—In the former part of it I never witnessed a better; it gradually declined towards the latter part of it.

1398. In 1828 what kind of trade was it?—The trade was still worse, but not so bad as it has been since.

1399. If the poor-rates of that year were 964*l.* 12*s.* 10*d.*, whilst in 1820 and 1821 they were 1,561*l.* 12*s.* 1*d.* and 1,481*l.* 17*s.* 7*d.*, how do you account for that difference?—I had nothing to do with the accounts of the parish in those years.

1400. In 1829 how was the trade?—In 1829 it was bad.

1401. And yet are you aware that the poor-rates were only 1,083*l.* in that year, being as little as they have been, except in one year, for fifteen years before?—It might depend upon the management of the affairs of the parish.

1402. Do you remember that the poor, in the years 1828 and 1829, were paid less when out of employ, than they had been in the years 1826 and 1827?—Very probably they might, but not being in office, I cannot state.

1403. Can you state how many shillings in the pound was the rate in each year?—I can state to the present year; in the present year we shall not have more than 12*s.* in the pound, but I can account for this. About two years ago, so great was the distressed state of the parish, that the overseers of the poor applied to the House of Commons, and they obtained a local Act, by which they rated the proprietors of houses instead of the occupiers, so that our rate is now almost double what it was formerly, because they make almost every cottage of the parish pay; the owner is responsible for the payment.

1404. Do you mean by the word double, that the gross amount collected is double the amount that used to be collected, or that it extends over a greater number of persons?—It extends over a greater number of people; there are twice the number pay now that used to pay formerly.

1405. Within the last ten years, has there been any increase of houses in your parish?—Yes, there was a great quantity of newly-erected houses in 1825, 1826 and 1827; but we have had very few since.

1406. You say there have been a great many houses newly built; are there many uninhabited houses in that neighbourhood?—At the time the Census was taken of the parish, in the latter end of last year, there were upwards of 100.

1407. How many houses do you think have been built since the year 1827?—I should think not ten.

1408. In the year 1827, how many houses were uninhabited?—Perhaps not five.

1409. Have the allowances made to the poor not in the workhouse much increased?—There are a great number.

1410. Do you allow them as much individually as you used to do?—No.

1411. How much used you to allow?—I have heard of their having 2*s.* to 2*s.* 6*d.* a head; but in the present day, not more than 1*s.* 6*d.* is allowed to them.

1412. If you made the same allowance now that you had before done, would not the amount of your rates be much higher?—Undoubtedly.

1413. Then the increase in the amount of the rate is not in proportion to the increase of the number of persons?—No.

1414. Do you know how the weaving trade went on with the exception of casual depression, for any given period, from 1814?—No; in the year 1814 I left the trade for a time.

1415. Did it increase at that time?—No.

1416. Was

*Joseph Marston.*26 March,
1832.

1416. Was it not depressed from 1814 to 1818, in consequence of the revulsion from the war to peace?—Yes.

1417. From that time did it increase?—It increased generally up to that time.

1418. You are in the plain trade, do any of the other branches pay as well as they used to do?—By no means.

1419. Does the depression in the figured trade throw an additional depression upon you in the plain trade?—I have not worked in the plain trade, though I belong to it, I work in the fancy, and there is a general depression both in the fancy and plain articles.

1420. Is the reason why you are so depressed in wages in consequence of the depressed profits of the manufacturer?—I believe it is.

1421. What do you consider to be the cause?—I cannot attribute it to anything else but the introduction of goods that we were not accustomed to formerly.

1422. Do you imagine that if half a million of foreign goods were not introduced into this market, you would have more employment and better prices?—I have no doubt about it.

1423. If half a million of goods were not made by foreigners, and introduced here, do you think that you should have some of them to make?—Yes, I should indulge myself with that expectation.

1424. If half a million of goods were not imported in a year, would that circumstance lessen or increase the trade?—Increase it, undoubtedly.

1425. What proportion of work can an engine machine do compared with a single hand?—I am not prepared to answer many questions respecting the engine, for the depressed state of the trade, since the introduction of it, has prevented our having much to do with it.

1426. At one time you were actively employed; will you mention any one year when that was the case?—1826.

1427. What did you make in that year?—Brocade gauzes.

1428. Do you make any of them now?—I have not seen an article of the sort these two years, or upwards.

1429. Do you happen to know whether they are used?—There are plenty of them in use.

1430. Do you know where they are manufactured?—I do not, but I see them brought into this market manufactured.

1431. Do you know whether any of them are made in any other part of England?—I never heard that they were.

1432. Do you know the prices at which they are made?—I know what they were when I was employed upon them.

1433. Can they be made in an engine?—No, they can be made in a jacquard machine, but not in an engine loom.

1434. Then how is it made?—It is made by a jacquard or other machinery, with a single hand loom.

1435. Are they made in Coventry?—No; I have not heard of the article being made in Coventry.

1436. Do you know where they are made?—No; unless they are made in a foreign country.

1437. Suppose they made them cheaper in an engine loom than in the single hand, would not that account for a manufacturer employing persons to do it in the way in which he can get it cheapest done?—Yes, that is the cause.

1438. You were understood to ascribe it to the importation of French goods?—I was speaking of the gauzes; there is no doubt there is an increase in the engine looms.

1439. If you were a manufacturer, and could get your plain ribbons made by an engine for 1 s. 3 d. less than by the hand loom, would you not employ the engine?—Most likely.

1440. Can you not suppose that the manufacturers are adopting that mode, and therefore that the single hand weavers are less in demand?—It may in a small degree.

1441. Might not that account for the single hand loom weavers being so much distressed at the present time?—I cannot think so altogether.

1442. Before the Table of Wages of the 10th November 1831, were not the single hand weavers employed in making a variety of goods which have since ceased to be made by them?—No, I cannot speak to any thing positive as to that; I do not know that any thing has declined in the employment of the single hand branch, except the gauzes which have been lost.

Joseph Marston.

26 March,
1832.

1443. Is there any article in Coventry that the single hand loom and the engine can both make?—The sarsnetts more particularly than any thing else.

1444. Take thirty-penny lutestrings, the rate of which is put down by the November Table at 7s. 6d.; can that be made both in single hand and in engine looms?—Exactly so.

1445. If you were working the single hand loom, and another man was working the engine loom, how many could you make, and how many could he make?—I think the number of shuttles in an engine is about four, and that man would make two pieces; perhaps a single hand weaver would not make above a piece and a half.

1446. Then it would not be twice as much?—No, not quite.

1447. Do you think that the engine loom, in making plain sarsnett or lutestring ribbons, within the last six years, has materially affected the hand loom weaver?—I do not think it has materially, for the reason that there are rich articles made which the manufacturers always prefer putting in the single hand loom.

1448. With regard to the Table of Wages, were you a party to that?—I never was a party in establishing the list, or soliciting the manufacturers to establish a list.

1449. What was the rise that took place after that Table was agreed to?—We got an advance, I think, to 5s. 6d.; I believe we got that advance upon the lutestrings and satins and the satin figures.

1450. Of what width?—The widths prevailing in the satin figures are chiefly thirty-pennies.

1451. Have you made as many thirty-penny ribbons since that as you did before?—I have not found any decrease, but so far as there is any alteration, rather an increase.

1452. Your trade has been better since November 1831?—There has been more work in that one branch, being a prevailing article.

1453. In what other branch have you fallen off?—I cannot say that we have fallen off in any thing since December, but there has been little alteration in the satin figures.

1454. If the same things are made to the same amount, how do you account for the increase of the distress?—The longer it exists the worse it gets; we have so little employment that we can scarce perceive any amendment, and it is so partial that the trade is now in a very bad state indeed.

1455. What is the season of the year in which your trade is generally most fully employed?—This at the present day.

1456. Has there been so much improvement as there has been generally in former years at this present season?—No, by no means.

1457. Then if you are only stationary now, as compared with last December, you are in fact worse off than in former years?—Yes.

1458. Can you account for that?—I cannot account for it, for I can see the haberdasher's windows in this metropolis elegantly dressed with ribbons of a foreign manufacture, whereas before, I could have owned some of those patterns as made in my own neighbourhood.

1459. Have you any difficulty in distinguishing between the Foreign and the British made brocade gauzes and figured satins?—None; people that have been as long in the business as I have been can distinguish them perfectly.

1460. How do you distinguish them?—By the colour in a great measure.

1461. What was the object of the list made in November, was it not to raise the wages of the hand loom to an equality with the engine weaver?—It was to equalize the wages; and so unsettled was the trade before, that some of the manufacturers quite declined altogether finding any employment. The consequence was at last to have an understanding as to the rate of wages; the operatives thought it was in consequence of the unsettled state of the wages; so that an adjustment took place in November, and they have obtained that fair understanding of what we were to have for that portion of work that we might have to manufacture.

1462. Then was it your opinion that by this Table, which raised the wages, the manufacturer would be better able to pay them?—Certainly; they were upon a safer ground with reference to the goods manufactured for their spring stock; they were upon an equality with others.

1463. Can you really suppose that if the manufacturers were unable to give the wages which were low before November, they would be better able to give them by raising them according to those Tables?—In the face of a season like the present, we thought it a duty to ask them; but as to giving an answer whether they could better afford it or not, I can only say that they have willingly come forward and raised the wages a trifle.

1464. Since

*Joseph Marston.*26 March,
1832.

1464. Since these Tables were made which raised the wages, have those prices been kept to?—I have not heard of a deviation in one instance.

1465. Do you recollect former Tables being made in 1829 and 1826, and 1824?—Yes.

1466. Were the rates by those Tables generally fixed?—I never knew so much uniformity in a list as in the present one. The manufacturers and the operatives have had an understanding, and it gives a great deal of satisfaction on both sides.

1467. Now for the work that is done, do the single hand weavers and the engine weavers get nearly the same?—With a small distinction.

1468. To what amount may the difference be?—It may be from 1*s.* in the pound to 1*s.* 6*d.*

1469. You have stated the average of wages to be 5*s.* 6*d.*, do you mean the average wages of every person employed?—I mean a man when he is full employed as a regular man in the business.

1470. Have you heard of the resolution of November 1831, by which the masters agreed that they would give out no work for the single hand looms but by undertakers?—I have heard of it; but I had nothing to do with the deputation that waited upon the manufacturers.

1471. Did you not work under it?—I did.

1472. To what extent are you an undertaker?—I have about 10 people under me when I have full work.

1473. How many children do they employ under them?—Ten workmen would employ three or four children.

1474. Are you able to state the amount that is allowed you for winding, warping and superintending; what proportion of it is reserved for the undertaker?—We do not realize more than 6*d.* to 8*d.* upon a piece of satin, and in some cases, where the pattern is rich work, we do not get a farthing upon it; at the present rate of wages, for instance, upon rich pads, we do not get a farthing more than the price of winding, warping and paying the journeyhand.

1475. Suppose 50*s.* is allowed you by the master, do you mean that you would only get 3*s.* out of that?—Not more.

1476. Do you employ any apprentices?—Yes, I have one apprentice.

1477. What do you tax him to do a week?—I am sorry to say, latterly I could not tax my boy as I used to do, for want of employment; and when we have a bit of work, we are forced to work as much as we can, and to work longer than is lawful, because we are so long and so frequently without.

1478. Is there not a rule for apprentices generally?—I always had one till I was forced to deviate from it.

1479. Has it been the practice of the trade generally to tax the apprentices to earn 16*s.* a week?—No, by no means; and we generally set them a length. I could not boast, in the present day, of my apprentice earning me more than 5*s.* when employed, when I take the necessary expenses for winding, warping, and filling out; and then a great portion of the time he has no work to do.

1480. Do you mean to say, that no apprentices are taxed above 5*s.* 6*d.*?—They must be better off than I am to find employment, to get much more wages at the present day, although I work for a very respectable manufacturer, and upon as good work as any that the trade make.

1481. Is there any rule for taxing apprentices?—I never heard of any rule being permanent amongst them; where there are many undertakers in the different neighbourhoods, they may be employed upon different articles, one a lutestring weaver, and another a guaze weaver.

1482. What has been the rule that you yourself have followed formerly?—I have set my apprentice formerly to get me 9*s.* a week; that is, the boy in the latter part of his apprenticeship, when he is capable of working with a journeyman.

1483. In what year did you do that?—In the years 1826 and 1827; previous to that, I had not any thing to do with apprentices.

1484. In 1828 and 1829, what was the rate?—I should have been well satisfied if I had got 4*s.* a week paid through those years.

1485. Had you to keep that apprentice out of the 4*s.* a week?—Yes; and washing and lodging.

1486. When you taxed your apprentice at 9*s.*, in 1826, what could an able workman earn in the week?—I had then 14*s.* and 15*s.* earnings by a journeyman, a good workman; in some cases more.

1487. Is it in consequence of the want of work, or low wages?—It is the two things

Joseph Marston.

26 March,
1832.

things together; the one thing always accompanied the other in our market; if we are short of work, we are short in price also.

1488. Then are the Committee to understand, that the rate of wages made in November last, though it made a considerable rise, is not sufficient?—No, it is quite inadequate to keep a decent house, in the closest way possible.

1489. Do you know what wages are paid at Congleton and Manchester to weavers?—I know nothing about them whatever.

1490. Do you know what rate of wages is paid at Reading, or in any other part where silk is made?—No.

1491. Do you know the rate of wages of our cotton manufacturers, or any other manufacturers?—Nothing whatever.

1492. You have been asked whether engine looms would not perform more work; if they would perform more work, and you were generally to use them, would not that throw more persons out of employment?—Certainly it would, partially, under the present distressed state of trade.

1493. Would the importing of foreign goods assist you in that case?—Undoubtedly not.

1494. Did you ever know any persons who had any thing to leave behind them, or to support them in case of infirmities and old age, upon the wages you have mentioned?—Formerly.

1495. Could you do it now?—By no means.

1496. Have you any other prospect but the workhouse before you?—Nothing else; there is not one in a thousand that can keep their house.

1497. Has your reduction in wages, within a few years, been as much as one or two shillings a week?—A good deal more.

1498. In 1819, what did the single hand loom weaver earn?—There was as much as 11 s. 6d. got in that period.

1499. What is the price of making a twenty-penny lutestring?—I think it is 5 s. 6d. a piece.

1500. What does the piece weigh?—About six ounces.

1501. In 1827, you have said, there were only five houses in the parish unoccupied, and you say that now there are 100 houses unoccupied, with a population as large in 1827 as it is now?—The population might not be quite so large as it is, since some people have gone, through distress, to other parishes.

1502. Are there not men employed upon the roads in your parish?—We have fifty able-bodied men employed upon the roads, and they are paid out of an extra composition rate granted for that purpose. We have a separate rate called the Composition, for the use of the highways, and the proprietors of the houses pay that the same as the poor's rate.

1503. Is that stated in the return you have given in of the poor's rate?—It is not included in that return.

1504. How long have you adopted that system?—Within the last two years.

1505. Then, in point of fact, the whole amount of the money collected for the relief of the poor, is much greater than is stated in the return you have given in?—Yes, because we shall spend the composition rate in addition to the poor's rates; and I have got an account from the overseer which says, that 20 l. a week is paid at the present day for that purpose.

1506. Are the single hand weavers worse now than they were in 1818, when Samuel Makin stated in evidence, that "a single loom could only earn about 5 s. 6d. or thereabouts. It does not vary but a mere trifle one way or the other; perhaps some weeks they do not earn more than three or four shillings?"—I mean to say, that we are not so well off for employment now as we were then.

1507. Although the rate of wages may be 5 s. 6d. when you are employed, you mean to say, that you are not employed more than one-third of the week, and consequently you earn only 1 s. 10d.?—That is the case.

1508. Was there not a list of prices agreed to in 1816?—I have heard of such a thing.

1509. What description of silk do you use in your manufacture?—We always have it in a dyed state; but as to its name and its nature I am not conversant enough with it to answer that.

1510. How many years have you been in the habit of manufacturing the fine gauzes you have alluded to?—The first I recollect of them was about the year 1820.

1511. Have you any other observations to make to the Committee?—I wish to show

show to the Committee the difference in the nature of the work as accounting for the consumption of the silk.

Joseph Marston.

26 March,
1832.

[The Witness produced some samples of silk.]

1512. What article do you call this?—A rich belt or pad.
 1513. What is the weight of a piece of that?—Eighteen ounces.
 1514. What is the price paid for weaving it?—Nine shillings.
 1515. What do you call that ribbon? (*Another specimen being pointed out.*)—A gauze. That is a thirty-penny gauze figure.
 1516. What are you paid for weaving it?—Eighteen shillings.
 1517. What does it weigh?—About four ounces and a half.
 1518. Here is a gauze not so wide. (*Another specimen.*) What do you call this?—That is a satin gauze figure.
 1519. What are you paid for weaving this?—From 15s. to 16s.
 1520. What does it weigh?—About four and a half to five ounces.
 1521. Is that made in any engine?—No, those are all single hand goods.
 1522. Can that be made in an engine?—Yes.
 1523. Would you get the same price for making them in an engine as you get for making them in a single hand loom?—About the same.
 1524. Will you produce any one which cannot be made in an engine loom?—Here is a thirty-penny brook-edge gauze. (*pointing it out.*)
 1525. Why cannot you make this in an engine loom?—That is made with a shuttle, and a shuttle is a fixture; but that is forced to be shifted by the hand.
 1526. Do you mean to say that that cannot be made by the Jacquard?—It could be made by the Jacquard by a single hand.
 1527. Do you make any thing as large and as beautiful as that without the Jacquard?—That I have made without the Jacquard; I never was in possession of a Jacquard.
 1528. Does not the labour upon an ounce of silk cost as much as the labour upon a pound in some instances?—It does.

James Perkins, called in; and Examined.

James Perkins.

1529. WHAT are you?—A Jacquard engine loom weaver at Coventry.
 1530. How long have you been employed in using the Jacquard engine?—I have been in the figure trade nearly ten years.
 1531. When did you first use the Jacquard loom?—About two or three years ago.
 1532. Do you know whether the use of the Jacquard engine is to be considered as an addition to the fancy looms employed, or merely a change from one to the other?—Most decidedly only a change.
 1533. Are the other engines that you formerly used nearly abandoned, and the Jacquard engine substituted in its stead?—They are quite abandoned.
 1534. Do you know the number of looms used in 1822 or 1823?—No.
 1535. Are you aware how many of the former figured looms were superseded by the Jacquard looms?—I think a greater number than the number of Jacquard looms now in use.
 1536. Do you mean to say that the total number of looms employed in making fancy ribbons was as great formerly as the total number now employed of the Jacquard and the common looms?—No; I mean that there were more engine looms that made figures previous to the introduction of the Jacquard machine than there are Jacquard machine looms at work at this time.
 1537. Do you know how many Jacquard machines there are now at Coventry?—Between 650 and 700.
 1538. Do you know how many other figured looms there are at work now at Coventry?—I should not think there was one.
 1539. Do you then imagine that there were not as many as 700 looms employed before the year 1823?—I imagine there were more making figured ribbons, but I do not know how many.
 1540. Can the Jacquard apparatus be applied to the engine loom?—Yes.
 1541. Are you aware that in 1818 there were 3,000 engine looms at Coventry?—I am aware it was so stated.
 1542. How many are there now?—Four thousand four hundred was the last account.
 1543. And of that number there are 650 that have the Jacquard apparatus applied?—Yes.
 678.

James Perkins.

26 March,
1832.

1544. What is the total number of looms now employed in making fancy ribbons?—Between 650 and 700; the additional quantity to make up the 4,400 are employed in making plain ribbons.

1545. Then all the looms now at Coventry, making fancy ribbons, have the Jacquard apparatus applied to them?—Yes.

1546. Did you examine the new mill that was built for Mr. Woodhouse?—No.

1547. Do you know whether it was for applying the Jacquard apparatus?—I do not know; but I should not expect that it was; I am of opinion that it was to be applied to making of plain goods, but I did not see it at all.

1548. Have you ever seen the a-la-bar loom?—No.

1549. Have you ever been at Reading?—No.

1550. Have you ever been at Congleton to see the apparatus there?—No.

1551. Then you do not know anything of any other machinery but the engine loom and the Jacquard machine?—No.

1552. What proportion of work can you do upon an engine loom figured, in comparison with a single hand-loom?—I heard the last witness give his evidence, and I am decidedly of opinion that he gave a correct evidence in that respect.

1553. About one-fourth more?—Yes.

1554. What wages have you earned in the last year when at full work?—I should think the average earnings, if we had had full work, would have been from fourteen to sixteen shillings.

1555. In any one week what have you earned?—In one week we have perhaps earned 23s. or 24s., but we are not in the habit of having warps in a loom that will last us above four or five weeks.

1556. In 1829 were your wages better?—Yes, they were something better, and the alterations were not quite so frequent.

1557. Are you employed now principally in imitating French patterns, or in making patterns from what the manufacturers give you?—The manufacturers on all occasions give us the patterns.

1558. On paper or on silk?—The manufacturer provides drafts and card papers; that are used, and those are got ready for us, so that we have nothing to do with either the design or the pattern, those cards are prepared for us, and we put them in in the proper place, and they make the pattern.

1559. Is there a class of men at Coventry called designers?—There are a few, I know two or three.

1560. Are those employed by manufacturers to put on the figures?—Yes.

1561. Are you oftener employed to make new figures than you are to imitate French patterns?—In all cases they are new figures to us, we do not know whether they are French patterns or any other patterns.

1562. Have you that piece sent, or a card?—On all occasions cards.

1563. What time do you lose in getting the work into the loom?—About two weeks in six.

1564. You say that you earn fourteen shillings a week for those six weeks?—Yes.

1565. Were you idle for want of work any part of last year?—Yes.

1566. How many weeks in the year were you absolutely idle?—I should suppose nine or ten.

1567. Did you serve an apprenticeship?—Yes.

1568. How long?—Seven years.

1569. What were you taxed to do during the time you were an apprentice?—It varied according to the work. I have been taxed in the course of my apprenticeship to 16s. a week, but that was on quite a different nature of article from what we work on now; that was on a figured loom; it was satin figures, and they had not near the labour in them, because there was not the great quantity of work that we now use, and fewer shutes were then put in, consequently they were of a nature that we could earn more upon than we can at present.

1570. Do you make any of those articles now?—There are satin figures making, but of a different style and quality.

1571. What work are you engaged upon when at home?—On the Jacquard machine, in making satin figures, at present.

1572. Of what width?—Thirty-penny.

1573. Have you been long upon it?—About a year and a quarter; I have had four or five alterations of the pattern within that time.

1574. What quantity do you make in a width?—When I have no alteration, I generally make about four half lengths in the six weeks; in the six weeks I make about ten pieces.

1575. What

1575. What is the price paid for each piece?—Twelve shillings.
 1576. Then that is 20s. a week, at six weeks?—Yes; mine is a five-shuttle loom; but there are as many made in a four-shuttle loom.
 1577. Does that six weeks include the setting up of the pattern?—No, it does not include the setting up of the pattern; merely the getting in of the warps.
 1578. Do you mean to say, that when the loom is fitted up, that you are in the habit of earning 20s. a week?—Yes; but besides the time lost in getting in the warps, there are other losses in alterations, and so on.
 1579. Have you any thing to pay for shute-filling out of what you earn?—Yes, half a crown.

James Perkins.

26 March,
1832.*Mercurii, 28^o die Martii, 1832.*

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. William Jacombs, called in; and Examined.

1580. YOU reside in Nuneaton, and are a ribbon manufacturer?—Yes.
 1581. Have you got an account of the poor-rates in your parish?—I have here a statement of them, which I believe to be correct, and which I assisted myself in preparing from the parish books.

Mr.
William Jacombs.28 March,
1832.

[The Witness delivered in the same, which was read, as follows:]

GENERAL EXPENSES of the Parish of Nuneaton.

PERIOD.	COUNTY RATES.	N ^o of Poor Rates.	Workhouse Expenses.	N ^o of Persons relieved, besides those in the Workhouse.	Amount of MONEY Paid to, and in respect of the Poor.	TOTAL.
	£. s. d.		£. s. d.		£. s. d.	£. s. d.
From Lady-day 1818 to Lady-day 1819	192 - -	11 $\frac{1}{2}$	782 12 11 $\frac{1}{2}$	1,836	2,964 - -	3,938 12 11
To Lady-day 1820	235 16 8	12	732 12 7 $\frac{1}{2}$	1,912	3,224 9 5 $\frac{1}{2}$	4,192 18 9

— 1832	296 9 5 $\frac{1}{2}$	12	726 11 3	3,240	3,759 8 - $\frac{1}{2}$	4,782 8 9

OBSERVATIONS:

(1) 1819 & 1820.—During these years there was no Select Vestry. A tradesman had a salary of £.150 a-year to collect the levies and pay the poor; and very much of the parish money went into the shop, even before it was paid from the Workhouse, and many were most improperly relieved. In short, there was great mismanagement; for in 1820, 1,912 Paupers cost the parish £.3,224. 9. 5 $\frac{1}{2}$. or about 34s. 9d. per head; whereas in 1832, 3,240 Paupers were supported for £.3,759. 8. 0 $\frac{1}{2}$. or about £.1. 3. 2. per head, although in 1819 and 1820 the trade was very fair, and the prices tolerably good.

(2) In 1821, Select Vestry appointed for the parish of Nuneaton.

The Five years' expenses, before the importation of French ribbons was allowed is } £.11,821. 1. 9 $\frac{1}{2}$.

(3) The Five years' expenses, after the importation of French ribbons was allowed is } £.15,291. 1. 8.

In the year 1830, soup was given to about 2,500 poor inhabitants, four days each week, raised entirely from voluntary contributions.

In the present year, soup and bread has been given to at least 3,000 of the inhabitants, three days each week, from the middle of November to the present time, including many families who did not receive parochial relief; all raised by voluntary contributions.

There is much more accommodation in the Workhouse than in 1819 and 1820; and, in the present year, there has been at least one-third more Paupers supported in it than in the first-mentioned two years, although the expenses have been less.

At Lady-day 1831, the Overseer of the Poor has £.200 in hand, which makes the present expenditure £.4,982. 8. 9.

Mr.
William Jacobs.

28 March,
1832.

1582. Do you know how many persons there are in the parish of Nuneaton depending upon the ribbon trade for support?—Upwards of 6,000.

1583. How many looms are there?—There are upwards of 3,000 in the whole, besides winders and warpers.

1584. Can you state what number of those are single hand looms?—I cannot exactly say that, but the greater portion of them are single hand looms.

1585. How many looms are there?—There are about 3,000 looms.

1586. You said that there were 6,000 persons depending upon the ribbon trade, do you mean to say that there is that number of persons employed in the ribbon trade?—No; that includes children not able to work; children of weavers.

1587. But there are upwards of 4,000 persons actually employed?—Yes; if they could get it to do.

1588. Has there been any material reduction in wages since 1826?—Yes, very great. I myself paid from 2*l.* 10*s.* to 3*l.* 4*s.* for the manufacturing of sixteen ounces (a pound of silk) into ribbons; and now the price, for the same article and the same quantity of silk, is only from 20*s.* to 24*s.*

1589. Do you mean that that silk is consumed in the same description of work?—It is.

1590. Has machinery much depreciated in value?—Yes, very much; many looms have been sold under distress for rent, for less than one-fourth of the cost.

1591. What description of looms were those?—Various descriptions, single hand as well as engine looms.

1592. Do you think any looms have been sold under their value besides what had been sold under distress for rent?—Yes; I purchased jacquard engine looms myself, in May last, for 18*l.* each, which I should suppose cost from 40*l.* to 50*l.* each.

1593. When did they cost that?—If they were built in the year 1827 or 1828.

1594. Did you buy them of a weaver, or some one who was compelled to sell them?—No; I bought them of a ribbon manufacturer, Mr. James Jenkins, of Coventry.

1595. What do you suppose induced him to sell them?—He told me the reason was, because he was giving up the fancy trade, for he could not obtain any profit on fancy ribbons, and I bought them myself on speculation; under the impression, that some efficient relief would be given to the ribbon trade, and thereby we should be able to employ them to advantage.

1596. Have you used them yet?—We have, to a small extent.

1597. Did he make any remark to you, about his reasons for selling them?—He stated that the reason he was selling them was, that he was giving up the fancy trade; that he could get nothing upon that article.

1598. To what do you attribute the present distress?—To the introduction of French ribbons, decidedly.

1599. Do you think there was any improvement in the manufacture of ribbons previous to 1826?—Yes, very great.

1600. Do you think that that improvement would have continued to as great an extent, without the introduction of foreign ribbons, as it has with them?—Yes, certainly to a greater extent; but now there is no encouragement to improve; if we introduce ever so beautiful an article the French fashion is preferred, and our goods are considered as unsaleable and useless, if not exactly like theirs.

1601. Is not Mr. Jenkins disposing of his machines to you for so much less than they cost him, a proof that there is no great inducement to invest much money in machinery?—Yes.

1602. Can you not get the patterns of those articles that the French are making, and make them in time to bring them into the market as soon as they can?—No; the French take orders from patterns, but we have no means of knowing what those patterns are, till they are actually imported and presented for sale.

1603. Do you know any thing of the mode of buying ribbons in the French market, and are you aware whether the principal sales are made by persons coming here to exhibit the pattern, or whether, in fact, the English houses do not send over buyers to St. Etienne there to make the purchases?—I believe many of the English houses send over their buyers to St. Etienne for that purpose.

1604. Cannot you sell your new fancy ribbons before the French houses import theirs?—No; the buyers wait to know what the French patterns are before they will look at our new fancy ribbons; and if there should happen to be some trifling difference ours are considered unsaleable and useless.

1605. Was that the custom formerly?—Certainly not; we were enabled to make our

Mr.
William Jacobs.

28 March,
1832.

our own patterns from original designs, and when the season commenced to introduce them for sale, and we were able to lead the fashion.

1606. Did you on many occasions sell your goods before they were cut off the loom, from the patterns so made?—Generally so, prior to the introduction of French ribbons.

1607. That is, the practice with you was what it now is in France?—Exactly so.

1608. Then you think that the taste has changed here, that they prefer French ribbons to English ribbons?—Decidedly, be the price what it may.

1609. Then, of course, where the manufacturer executed his orders from patterns, he did it without loss or risk?—Yes.

1610. What would be the expense of putting to work a French pattern?—It depends upon the size and nature of the pattern; from 5*l.* to 8*l.* is the average. We have patterns at the present time making that have cost us from 12*l.* to 14*l.*, but that is an extraordinary large pattern; but I reckon that the average cost of those alterations on our Jacquard looms is from 12*l.* to 13*l.* per annum on each loom, for the mere changing of patterns, and the alterations necessary for such changes.

1611. Do you think ribbons are as much worn as they formerly were?—They are more generally worn, no doubt.

1612. Do you yourself know from observation and in fact, that ribbons are absolutely more worn upon bonnets than formerly?—Most assuredly they are, in my opinion.

1613. Where have you been in the habit of selling your goods?—From 1823, when we commenced business, to 1826, we had a very excellent connection among the town haberdashers, where we sold all the ribbons that we made; but at that time, when French ribbons were introduced, we felt convinced of the consequences that would follow, that they would be able to purchase French ribbons and we then turned our whole attention to seek a connection in the country.

1614. Did you send out a traveller?—We did, and also myself and my partner travelled to most of the towns in England where we did establish a connection, and for the first two years we could sell most of the goods we made; but in 1829 we found that French ribbons were so rapidly circulating through the country, that eventually we were completely shut out from both town and country connections.

1615. Then is the result of all this, that you are making very few fancy goods?—Very few, indeed.

1616. Do you not suppose that steam may be applied with advantage in the manufacture of fancy ribbons?—Certainly not; for fancy ribbons being of so fine a texture, and the complicated machinery requisite to make fancy ribbons being compressed into so small a space, it will always require the same personal attention as it would if the machine was propelled by manual power.

1617. You are aware that steam power is applied to the manufacture of ribbons in Manchester?—Yes, I have seen it; but they were only plain ribbons of a common sort, made from strong coarse silk.

1618. Have you any patterns to show to the Committee?—Yes, I have. (*The Witness produced the same.*)

1619. What is your object in showing these patterns?—I wish to make this remark, and to show the result of the introduction of French ribbon; some of these patterns were put into the express order of a certain house, from an original design, who promised to take all we made of the pattern, provided we would confine it to themselves; we did so, and put it in according to their order, and in the month of September we had a small assortment made ready to show them; but it happened so that the French had brought in their new ribbons before we showed ours (or about the same time), and there was a trifling difference in the style; the consequence was that they would not take our goods, because they were perfectly useless, the preference being given to the French fashions.

1620. When you say a trifling difference, do you mean that they were the same description of article, but varied in some degree?—Ours were figured bonnet ribbons; their's were two-coloured satin figures for bonnet ribbons.

1621. What do you call this?—This is a double figure upon ground with satin stripe.

1622. And yet they consider that trifling difference as fatal to that pattern?—They did; in consequence of which they would not take it, and we felt satisfied in our minds that others would buy it, as the pattern was generally admired; but, however, others made the same objection, and the consequence is that we have the

Mr.
William Jacobs.

28 March,
1832.

whole of the goods in our drawers, and should be glad to sell them considerably under cost price.

1623. Did you make a contract with that house?—We did not make a contract, because we did not know what price the ribbons would be.

1624. Did you make them at your own risk?—In a certain sense, but not altogether; we were told they would take the pattern, if we made it to their order.

1625. Is not the custom with the trade, that when parties say we will take the pattern, it is presumed that there will be a fair dealing between you, and the parties are considered bound to take that pattern?—Decidedly so.

1626. Then their refusal to take that pattern was a departure from the usual custom of your trade?—Certainly it was.

1627. Why did you not proceed to compel them to take the pattern?—Because at that time we felt sure that as the pattern was so much admired that we should sell it to others, and we did not wish to offend the house by taking legal proceedings.

1628. If a customer is whimsical and throws the patterns up, would it be prudent for you always to proceed to law?—Most assuredly not.

1629. Have you any other patterns to show?—I have some patterns of gauze ribbons to show the improvement we have made, and the money we paid for manufacturing a pound of silk into gauze ribbons in 1823 and 1824, and what we should pay at the present time if we made them.

1630. Do you now make any of those gauze ribbons?—None of them since 1828.

1631. Will you state what you paid prior to 1824, and what you should now pay if you made those ribbons?—As I said before, from 2*l.* 10*s.* to 3*l.* 4*s.* we paid in the year 1823 and 1824, and now if we were making the same article we should pay only from 20*s.* to 24*s.*

1632. Was there any material reduction in 1826?—There was.

1633. What rate per cent.?—I have not made that calculation; but I think a similar calculation has been made by others.

1634. Have you now abandoned the manufacture of gauze fancy ribbons?—Entirely, since 1828.

1635. Speaking of patterns, have you any artists that provide you patterns?—Yes, we have.

1636. Before the prohibition was removed, were you in the habit of imitating the French patterns?—Sometimes we were, not regularly; we could make our own, and they were generally approved of.

1637. Do you rely now entirely upon your own artists for your patterns?—Yes; for it is of no use to copy the French pattern, we should not have it in time, and we do not know the pattern they will bring until the goods are brought in.

1638. Do you never copy any French patterns?—We have done it, I am sorry to say, and lost seriously by them.

1639. Would they not sell, though they may not take the first of the market here?—They perhaps might sell at a loss of 30 or 40 per cent. which we have often done.

1640. You have stated, that there are 3,000 looms at Nuneaton, how many of those are Jacquard, and how many engine and how many hand looms?—I do not know how many are engine looms, nor how many are Jacquard looms.

1641. How did you get that amount?—It was a census taken in December.

1642. Was there no distinction made between the different kinds of looms?—There was not.

1643. Do you know what number of looms there were at Nuneaton in 1818?—I do not.

1644. Are you aware, that it is stated before this Committee, that there were 500 engine looms, and 1,000 single hand looms?—I am not.

1645. If that account was correct, has not the number of looms doubled in Nuneaton in that time?—I cannot say what it was since 1818, that was before I had any thing to do with the business on my own account.

1646. Whatever might be the number, were they all well employed?—They were.

1647. Up to what period were they well employed?—Up to 1828.

1648. Do you mean that there was no interval of bad trade between 1818 and 1828?—There might be some intervals of slack trade, but it was quite a temporary thing.

1649. To what period can you speak to your own knowledge?—Not further back than 1820.

1650. Were

Mr.
William Jacombs.
28 March,
1832.

1650. Were there no periods of bad trade between 1820 and 1828?—Most assuredly we had short intervals of slack trade; but we were employing our weavers pretty well, because we knew we should sell them in the next season; for instance, we made spring ribbons in the winter months.

1651. Was not 1827 a very good year?—Yes; it was partly owing to the French not being aware of what sort of a connection they were to fall into, and they were not prepared with the right sort of goods.

1652. In 1828, was not your trade very good?—It was not so good in 1828 as in 1827.

1653. In the spring of 1830, was not the trade at Nuneaton very brisk?—It was not very brisk, it was better than it was in 1831.

1654. Do you recollect how it was in the winter of 1830?—It was bad.

1655. In the spring of 1831 again, how was it?—Very bad, but better than this spring.

1656. And this year it is now worse than it has been since you recollect?—Much worse; here are some patterns that we made last spring, which we were in the full expectation of selling, but which unfortunately were superseded by the French gauzes; these are bonnet ribbons (*pointing out the same*); and the consequence was, that they were left on our hands unsold, and we have this spring sold them at 30 per cent. loss. In those goods there are at least sixteen ounces in the piece, and in former years we have made fancy ribbons such as we have sold with five to seven ounces each, but we have been driven out of that branch of the trade.

1657. Is that made from a pattern drawn by an artist of your own?—It is.

1658. You stated that you bought Jacquard looms in 1831 at a great depreciation of price, and to work them at Nuneaton?—Yes.

1659. Cannot you state how many Jacquard looms there are at Nuneaton?—I cannot.

1660. How many have you got?—From 45 to 50.

1661. Were those you bought of the best kind?—I know of no improvement upon the Jacquard machine, the Jacquard machine is the best kind for fancy ribbons.

1662. You mean that they were not sold for less money, as being inferior things?—Certainly not; they are the same sort that are made at the present time.

1663. Have you any knowledge of the fall that has taken place in the price of machinery generally, cotton and every other kind of machinery, within the last four years?—I am not acquainted with it.

1664. Do you know what would be the cost of such a machine at the present moment?—I should think that if we were to purchase the machine and the loom altogether from the manufacturer, it would be as much as from 28 to 32*l.*, including the mounting, &c.

1665. Have not the machines you bought been made since 1826?—I should think they were, but I cannot tell when they were made.

1666. You are understood to state that before 1826, before the introduction of French ribbons, great improvements had taken place in the quality of the ribbons of Coventry, but that none have taken place since?—I did not say that none have taken place since, but not to so great an extent as prior to 1826.

1667. But there were more improvements between 1820 and 1826 than between 1826 and this time?—Upon the article that we worked there was a greater improvement up to 1826 than since 1826, that was gauze ribbons.

1668. When were gauze ribbons first introduced?—I cannot say, we made them first in 1823.

1669. Were there any made from 1820?—I should think very likely there were.

1670. You stated that you paid a high price, might not that high price be owing to its being a new article in 1823?—I think others were paying quite as high as ourselves.

1671. Was it a new article in Coventry?—No; because I suppose it was made before 1820 in Coventry to some extent.

1672. What proportion of fancy and of plain goods did you make?—We have generally been entirely upon fancy goods.

1673. Do you continue that?—We continue making fancy goods, what we do make.

1674. What sort of persons are they that design the patterns?—They are persons that we call designers.

1675. Have you not understood that in France they employ a superior class of persons for that purpose?—I consider ours a superior class of persons.

1678.

1676. The

Mr.
William Jacombs.

28 March,
1832.

1676. The word artist would imply a person taught in some skill of drawing; is that the case with the persons employed at Coventry?—I cannot say how they get a knowledge of it, I only know they bring the patterns or designs to us.

1677. Is it not understood that the French have a class of people for that purpose, superior to the same persons generally employed in this country?—I never understood it.

1678. You have stated that ribbons are much more worn now than formerly; will you state what is the price now, and what was the price in 1824 and 1825, of a ribbon of the same quality?—I am not prepared to answer the question; I have not referred to our books to notice that.

1679. You have stated the great reduction in the price of labour; cannot you state what is the reduction in the price of the article?—There is a great reduction no doubt; we buy our silk much cheaper than we used, but I cannot state accurately to what extent.

1680. Cannot your recollection enable you to state the difference of price in any one article, between now and 1823?—I should say there was a considerable reduction, perhaps 30 per cent.

1681. When you prepare a number of fancy goods for the spring, ought you not to obtain a larger profit upon them, in order to cover the losses after they go out of fashion?—We certainly ought, and we expect it.

1682. Are not the spring goods that are sold after the fashion is gone by, sold at a very great loss?—We frequently sell them at less than half price.

1683. Upon many of those fancy goods, if a person in the trade was to cast his eye upon a new fancy article, could he tell the precise value of it within 10 per cent.?—I should think not.

1684. Are there not cases with respect to some of the light fancy articles, new things that have not been seen before, upon which a person in the trade would not know the value within 10 or 20 per cent.?—I should think so.

1685. If a ribbon were brought out in the first week in April, in a time of good trade, would it not probably sell for 60s.; whereas if you did not bring it out until the first week in May, it might probably not sell for 40s.?—Yes.

1686. Then the great loss you speak of is not a general depreciation upon the market article, but the general loss owing to those fluctuations, and having your goods thrown upon you in consequence of competition?—Just so.

1687. And that is a check to ingenuity, and prevents you from going to expense for new patterns?—Yes.

1688. Do the designers you speak of draw patterns?—They do.

1689. Are they clever ingenious men?—Yes.

1690. Is it their particular business?—It is; they follow it exclusively.

1691. Does not the fluctuation in the trade affect the designers very much; does not it disable you from employing them?—We do not profess to employ them; they prepare them on speculation, and offer them to us for sale.

1692. Does not it often happen that when the market is over-done, some particular individual that has good connections may do pretty well, when his neighbours are badly off?—It is very often the case.

1693. Then when you speak of the depression of trade, you speak from your general knowledge of the state of trade?—Yes; I apply it to all who are situated similarly with myself.

1694. When you bring out new things, and have to enter into competition with your neighbours who bring out a thing as good as yours, do not you run a race as to price?—Yes.

1695. And of course that does not help you much, to let the Frenchman in to compete with you?—I should say very little.

1696. Then the competition against you or any other individual may be both home competition and foreign competition?—Just so.

1697. You have stated that you found yourself shut out at every place; were you shut out by competition at home, or by competition abroad, or by the difference of price, or by difference of taste?—I stated that we were shut out from both town and country connection; when we went round our journies, we were invariably asked by our customers if we had French ribbons; "No; our's are British," was the answer; "Then we can do nothing with you," would be the answer our customers gave us.

1698. Did you ascertain whether the French colours were considered prettier or more

more varied, or what was the reason?—I cannot say the reason, only that there was a prejudice in favour of French goods.

1699. Have they not introduced into the French patterns generally a greater variety of colours?—There may have been instances where they have introduced a great variety of colours, but I think we have introduced quite as great a variety ourselves.

1700. Do you think your goods have been as varied in colour as the French?—I think so.

1701. Can you state at what comparative price you could bring goods to market, as compared with the French?—I cannot.

1702. Are you able to state the extent of competition in your line from manufacturers in other parts of England?—No, I do not know that.

1703. What do you reckon is the amount of labour paid on one hundred pounds worth of fancy goods?—I have not made any such calculation, and I am not able to answer it.

1704. Are you not able to state, when one hundred pounds worth of gauzes has been finished, how many pounds has been paid for labour?—I have not made that calculation.

1705. Take the card of gauzes you have produced; have you ever made the calculation as to how much any one article should cost you for material, and how much for labour?—I should say, that upon the first article here, the labour would have cost us as much as 75 per cent. at the period we made it, in 1823; but I am not prepared to answer that accurately.

1706. What is the article?—The twelve-penny gauzes.

1707. What would the labour now be upon the same article, if manufactured this year?—I cannot say exactly, because it depends upon the quantity of silk in each pattern, and we have not made them for the last four years.

1708. Taking that particular article, and suppose the same quantity of silk that was then put in was put in now?—I should say it would be about 50 per cent. upon that precise article; but I cannot give any accurate account, having never made the calculation, and would therefore rather decline answering such questions.

1709. Will the same proportion apply to any or all of those gauzes you have produced, or is there any great difference?—There is certainly a material difference, according to the pattern.

1710. Is there any one of those articles upon that card you are now making?—None; I have stated we have not made them for the last four years.

1711. Is that an article you are now making (*a sample being shown to the Witness*)?—We made that article last spring; it is a double figure, upon ground with satin stripe.

1712. Can you state to the Committee what proportion in the cost of that article the material would be?—About 43 or 44 per cent., I should suppose, upon a rough calculation.

1713. How much do you pay for actual labour upon that piece?—I cannot recollect that at the present time, because it is 12 months since we made it.

1714. Is that above or below the average rate of wages you would have to pay in the fancy work generally?—It is rather above the average.

1715. Could you state any average amount of labour upon that kind of ribbon; would it be as low as 25 per cent.?—I should think not, but I cannot state accurately.

1716. Did you find the objection to your goods depend upon the price at which you were able to offer them, or upon the peculiar patterns that your customers wanted?—Nothing but the pattern and style, or the fashion.

1717. Have you any means of knowing whether you can manufacture as cheap as the French, setting taste and fashion aside?—I should not suppose that we can.

1718. Have you ever made any calculation, or seen any calculation that enables you to judge?—None whatever.

1719. In point of fact, have you found that your difficulty in selling your goods has not been owing to the price, but owing to the style?—Owing to the style, on account of the difference of the pattern, though our ribbons are equally good and beautiful, in quality and pattern.

1720. Have not the profits of the manufacturer been much decreased of late years?—I should think they have.

1721. Do you consider that that decrease of profits has arisen from the competition of our own manufacturers, or from the competition of the French?—I consider that the competition of the French is the cause of the competition at home in a great measure.

Mr.
William Jacombs.

28 March,
1832.

Mr.
William Jacombs.

28 March,
1832.

1722. Is not the competition between English manufacturers the cause of the reduction of price?—When British manufacturers know they have a large stock on hand which are unsaleable, in consequence of the French goods being preferred to theirs they are compelled to sell them at a great loss.

1723. Would not that induce a smaller quantity to be made, after one or two trials?—A smaller quantity is made,

1724. If the looms that have been formerly employed in making gauze ribbons are no longer so employed, would they not endeavour to find employment in making heavier goods?—Certainly.

1725. And that, of course, would create a pressure upon the market, and a conflict between manufacturers, where no conflict had before existed?—Yes.

1726. Suppose the French were entirely out of the market, do you think the profits would be greater, with the competition of machinery now existing in England?—We certainly should not have so much competition to contend with, and we should have some encouragement to make ribbons from original designs.

1727. Are there not, at the present moment, many more weavers, and many more manufacturers, than can find employment?—There are certainly many more weavers than are employed.

1728. Do you think, that if the quantity of French goods that now enters this market were stopped, that would give employment to the English manufacturers and workmen?—It would certainly better our trade, if we were to make all the ribbons that are now worn.

1729. Are the Committee to understand from you, that it is not so much a matter of price as of fashion that you think the trade suffers under?—Certainly not so much of price as fashion.

1730. Have you any doubt in your mind, that if French ribbons were altogether excluded from the market, there would not be employment for all the looms?—I have no doubt that there would.

1731. Have you any doubt that smuggling would recommence if French goods were prohibited from coming in?—To no extent to injure us.

1732. Will you state what is your opinion with regard to the exclusion of French goods; would you increase the duty, or have a prohibition?—Nothing short of a prohibition would relieve us, in my opinion.

1733. You give that opinion deliberately, believing it to be a matter of taste, not a matter of price?—That is my opinion, and I have given that part of the subject a good deal of consideration.

1734. Do you conceive that an entire prohibition of the importation of foreign ribbons would raise the price of English ribbons?—If we had the material for the same price that we now have, certainly it would not raise it very much; because there is enough competition amongst us at home, independently of the French manufacturers, to keep the article from being at a very exorbitant price.

1735. Do you believe that there would be more general employment?—No doubt of it.

1736. Could such a prohibition raise the profits of the manufacturer?—Supposing that to be the case, no doubt every manufacturer of any taste would be able to make ribbons from superior designs, and to sell them at a profit.

1737. And the superior taste of that manufacturer would carry the market?—To a certain extent it would.

1738. What kind of silk do you use principally in your fancy articles, is it the Italian thrown or English thrown?—I should think about one-tenth of what we use is Italian thrown.

1739. Is that the case generally in Coventry?—I should think it is.

1740. Do you consider the thrown silk that comes from Piedmont, or the Italian silk that is thrown in England, best suited for your manufacture?—Some that is thrown in England is quite as well calculated for our trade as the foreign thrown.

1741. Is not, on the average, the best silk that is thrown in England, as serviceable for your manufacture as the Piedmont silk?—I have never used much of the Piedmont silk, therefore I cannot say much as to what that is calculated for; we have generally used the foreign thrown Italian silk, and the English thrown.

1742. Which do you prefer?—Certainly we find the English thrown as good as the Foreign in some instances, but it entirely depends upon the quality of the silk.

1743. Have you any means of judging, whether, if you had the silk at the same price as the manufacturer at Lyons has it, whether you could, as regards price, compete

Mr.
William Jacobs.

28 March,
1832.

compete with him?—Nothing will enable us to compete with the French manufacturer, in my opinion, because there is a prejudice in favour of the French fashions, let ours be ever so elegant.

1744. You speak of fancy articles?—I speak of fancy ribbons; I do not go into the plain trade.

1745. Do you think there is only one-tenth of the foreign thrown silk used in the fancy trade in Coventry?—I suppose upon the average there is not more than one-tenth.

1746. Do you mean one-tenth of all that is imported or one-tenth of all that is worked up?—I mean one-tenth of all we work up in the manufacturing of ribbons.

1747. Therefore, if the duty was taken off the Italian thrown silk, you would only be benefited to the extent of one-tenth of the material?—Certainly not.

1748. If goods are to be admitted on a duty, have you formed any opinion what would be a protecting duty for you?—No duty would be a protecting duty, in my opinion; because, as I before said, they will buy them at any price, the preference being given to the French fashion.

1749. You have been asked whether a lowness of price would not be introduced by a competition at home; if foreign goods were not admitted, would not you meet such competition on equal terms, without any prejudice?—Certainly.

1750. Is that the case now?—It is not the case now, on account of the prejudice in favour of the French goods.

1751. Are the Committee to understand, that your great complaint is, that the market is so overdone that there are so many more goods manufactured than there is a demand for, that you cannot find adequate profit or a due remuneration for labour?—Certainly it is.

1752. If you were able to manufacture as cheap as the French, or even cheaper, would not the throwing into the market an undue proportion of goods depress wages and lower profits?—Certainly.

1753. You have stated, that you began manufacturing in 1823; at that time had not the silk trade began to improve, and had been improving for some short time before?—It had.

1754. Was not that improvement mainly owing to the introduction of French patterns?—I am not aware of it.

1755. Is it not a fact, that when you went into the trade French patterns were fashionable?—I never saw any quantity of French ribbons worn at that time.

1756. Had not the style of ribbon changed a short time before that considerably?—Yes, decidedly; there was a great improvement from 1823 to 1826.

1757. But you never understood that that was owing to the importation of French patterns?—Certainly not.

1758. Have you not reason to suppose that there has been an increased consumption of ribbons altogether since you became a manufacturer?—Yes; I think there has been an increased consumption, the population has increased.

1759. Have they not become better?—They have been better no doubt, they have been broader and of a better quality.

1760. You have stated that you do not attribute the improvement in the trade in 1823 to French patterns, to what do you attribute it?—There was a spirit of improvement among the manufacturers at home.

1761. What occasioned that spirit?—I can only say it has always been the case in most fancy branches, there is a spirit of emulation amongst us, one trying to outvie another.

1762. Do you endeavour to get houses to engage your goods as they engage the French goods?—Yes; but we find very few willing to do it at present.

1763. Do not you consider that the profits of the manufacturers at any place, Leicester for example, are determined by the competition between the manufacturers generally at Leicester?—I do not know any thing of the Leicester trade.

1764. Do not you suppose that the profits of any trade are determined by competition amongst themselves?—No doubt competition amongst themselves affects their profits to a great extent.

1765. Is not that the general law?—It is a general rule certainly.

1766. Do not you imagine, that the profits of the manufacturers at Coventry must be equal to those of the manufacturers at Birmingham or Leicester?—No.

1767. Would not the capital go out of the ribbon manufacture into other branches of trade, if the profits were higher in other branches?—I think the ribbon manufacturers are very ill prepared to go into any other branch of business.

Mr.
William Jucombs.

28 March,
1832.

1768. If their capital is invested in machinery, and mills and looms, is it a very easy matter to remove that capital when it is depreciated about 75 per cent.?—No, it is very difficult.

1769. It has been stated in evidence, that prior to 1816 there were 219 Jacquard looms at Coventry, and that now there are between 650 and 700; do you know whether that is the case?—I dare say it is.

1770. If that be true, must not the capital invested in the purchase of this machinery have been introduced since 1826?—A part of it, not all; some of them have been purchased at a lower rate from other manufacturers.

1771. Do you happen to know whether the additional 450 that have been brought into use since the year 1826 were new looms, or whether the Jacquard principle was applied to old looms?—Generally the Jacquard machine applied to the old looms.

1772. Do you think there have been any additional Jacquard looms put up within the last few years?—Very few.

1773. Has there been any depreciation in value since the number was increased in 1826?—Very much.

1774. So that it is possible that the 200 looms that were put up in 1826 might be worth what the whole 600 are worth now?—Very likely.

1775. You stated, that you make use of the best Jacquard loom; is that the same description of engine that you used in 1823?—So far as the Jacquard applies, which is merely a part of the loom, it is the same.

1776. What rate of wages can a fancy weaver earn, upon the average, in full employment, in a single hand loom?—I should say, from seven to nine shillings per week, upon the best articles, with a Jacquard single loom.

1777. Upon what article could he earn that?—Thirty-penny figured satins.

1778. Do they get regular employ at those wages, or do they lose some time in preparing the work?—Certainly not; they lose a great time in preparing the work.

1779. How many yards would he make of that in a week?—He will make, on the average, three quarters of a piece, that is, 27 yards in a week.

1780. How much would a man, with a Jacquard machine applied to an engine loom, earn in making the same article?—It would vary from 14 to 16 shillings per week.

1781. How many yards would he make in that case?—Perhaps he would make a piece and a half, not more than that; he would make from 48 to 54 yards.

1782. Would it be equally as well made in either machine?—About the same; there are articles made in the single hand loom that cannot be made in the engine; I should say, that the goods we make ourselves, in the single hand loom, are preferable to the engine loom, in point of quality.

1783. What would that cost you for wages a yard?—I cannot say.

1784. At that rate, does not the engine make it cheaper?—Very little; we pay a man with the engine nearly the same price per piece as the single hand.

1785. You know there is a Table of Wages at Coventry; is that in use at Nuneaton also?—It is; we conform to that.

1786. Were you one of the committee that met to form that Table?—I met the Coventry committee upon that occasion.

1787. What was the object of those Tables; was it to equalize, as much as possible, the rate of wages by the single hand and the engine loom?—I apprehend the object was, for the respectable manufacturers to agree with each other all to pay the same price, because some were paying not more than half what the others were.

1788. Were you a party to the Table of Wages in 1829, did you work by that?—Yes.

1789. Before the Table of 1831, had you departed, or had many of the manufacturers departed, from that Table?—We did not, nor did any manufacturer in Nuneaton depart from that Table.

1790. Then the reduction of wages to the single hand loom had not taken place at Nuneaton?—Certainly not.

1791. But you are aware that it had taken place in other parts?—Yes.

1792. And the object of the Table was to put all on an equality?—It was to equalize the rate of wages.

1793. Do you know whether the same rate of wages is paid in any other part of the country where similar articles are made?—I am not aware that similar articles are made in any other part of the country; plain ribbons may be, to a certain extent, in other parts.

1794. Do

Mr.
William Jacombs.

28 March,
1832.

1794. Do you consider it beneficial to the manufacturer, that he should be obliged to pay the same rate of wages upon all occasions, whether the article is well finished or not?—The manufacturer is not compelled to receive any article from the weavers that is not well finished.

1795. Having fixed a certain amount for the thirty-penny and so on, is it not the fact, that you do not make any of those articles unless you pay the rate fixed by the Table?—We do not do it.

1796. Are there not workmen willing to work at a less rate than that which the Table fixes?—Yes; but I should suppose they might at once as well be receiving parochial relief.

1797. Are there not a large proportion idle?—There are.

1798. Would they rather remain idle than work below the Table?—They are not offered work below the Table, there is no inducement to the manufacturer to do it.

1799. Are the masters allowed to do it if they are willing?—They are not compelled to do any thing.

1800. Have they not signed an agreement that they would not do it?—There is no compulsion, but they agreed to that Table.

1801. Do you know whether there are instances of persons receiving a higher amount of parish relief than the amount paid to a man that is in work?—I have known that to be the case in many instances.

1802. Therefore a man would prefer working at less wages than the parish would allow him, in order to keep himself out of the parish relief if he could?—That spirit is manifested amongst the poor generally.

1803. And when they receive those wages, are they too high, and more than a man could fairly live upon?—I should fancy he must live very poorly to live upon those prices.

1804. Would there be any reason or any justice in trying to make a man work at a lower rate?—I think not.

1805. You have said that engine looms do more work than the others, and that they make the goods a little cheaper, are there any engine loom weavers out of employ?—A great many.

1806. Is not the warp entrusted to a weaver, valuable?—It is.

1807. Is not it necessary that he should have a decent room to put that warp into?—It is.

1808. And in cold weather to have a fire, as it will not work without warmth?—It will not.

1809. Must not he also pay for soap and candles?—Yes.

1810. What would you put down for rent, and coals and candles?—I should say at least from 3*s.* 3*d.* to 3*s.* 6*d.* a week.

1811. So that if a man earns 5*s.* 6*d.* a week, he would make but a miserable saving of it after all?—I should think he would.

1812. And with regard to Jacquard looms, which earn about 14*s.* a week when their warps are out, what time do they lose in getting fresh warps in and changing the pattern?—Getting fresh warps in alone, we generally take from 10 days to a fortnight.

1813. How often are those warps changed?—Every six weeks.

1814. What wages would you consider adequate, under the circumstances you have just stated, for a man's reasonable support, taking into account the rent you stated, and other expenses?—I should think they ought to earn at least from 2*s.* to 3*s.* a week more than they can earn, that would be at least 12*s.*

1815. With that rate of wages, do you consider that the price of the French fancy ribbons would be so very much cheaper than yours, that you would be unable to come into competition with them?—Certainly, we could not compete at such a price.

1816. Then if you were to pay an adequate amount of wages to the workmen, it would make it requisite to increase the price of your ribbons?—Certainly.

1817. Therefore a prohibition of the French ribbons would of course increase the price of the home made fancy ribbons?—Most assuredly, because under a prohibitory law, I should hope to sell the ribbon at some trifling profit.

1818. And you would hope to give the workmen rather a larger amount of wages?—Yes.

1819. If a man earned 3*s.* a week extra, which was distributed over 54 yards of a rich thirty-penny ribbon, what difference of price would it make to the consumer?—Very trifling, rather more than a halfpenny a yard.

Mr.
William Jacombs.

28 March,
1832.

1820. And you are speaking of a description of goods which are now sold generally at about 3s. a yard, and upon which the public will indulge their taste, if they even pay one shilling a yard more?—No doubt.

1821. Is the protecting duty sufficiently high to enable you to enter into competition with the French, as far as price is concerned?—In some few articles, but not in all; for example, in gauze ribbons we cannot; but I know it is not often the case that we can make ribbons as cheap, for they can live so much cheaper than we can.

1822. Were not the profits in 1827 and 1828 as good as they have been at any time?—They were certainly better in 1827 and 1828 than they now are (in 1827 particularly), but they were better still in 1824 and 1825.

1823. Are you not aware that there were great complaints of distress in Coventry in the Christmas of 1825?—I do not recollect that.

1824. Are the Committee to understand that by the Table of Wages, a man can only earn from 7s. to 9s. a week if fully employed upon a single hand loom?—Yes.

1825. Is it your opinion, that it would be better for a man to work even at a lower rate than to be altogether unemployed, and receive relief from the poor rates?—It might be better in a certain sense, as it would relieve the parish from some burthens, but even where they were working at a lower rate, they have been receiving parochial relief at the same time.

1826. Have any persons worked at a lower rate since that Table was made?—I believe not.

1827. Has the parish been relieved by that?—We have not had time to feel the effect of it.

1828. Has not the amount of the poor rates increased since that Table of Wages was made?—I think not.

1829. Do you conceive, that if the rate of wages was reduced, and by that means the price of ribbons increased, you would be enabled to give greater employment to your weavers?—Certainly not.

Mr. Cleophas Ratliff, called in; and Examined.

Mr.
Cleophas Ratliff.

1830. WHERE do you reside?—At Coventry.

1831. You are a ribbon manufacturer?—Yes.

1832. Have you been so for some years?—Since 1817.

1833. Can you state the quantity of silk dyed in Coventry in the years 1824, 1825, 1830 and 1831, being two years before the importation of foreign ribbons and the last two years?—Yes; in 1824, 413,693 pounds weight; in 1825, 448,165 pounds weight; in 1830, 537,335 pounds weight; and in 1831, 508,375 pounds weight.

1834. Were the same descriptions of ribbons made at Coventry in 1830 and 1831 as in 1824 and 1825?—Certainly not, as leading articles; the chief goods manufactured in 1824 or 1825 were gauze ribbons; the chief articles now made are bonnet ribbons and waistbands; I speak of the Coventry trade, they are given out from Coventry, but made in the adjacent villages.

1835. To what do you attribute the present distress of the ribbon trade?—The very great importation of French ribbons.

1836. Do you know the quantity of ribbons imported lately, and have you estimated the employment that the making of them would have given to the British manufacturers?—I can. In the Custom House returns for the quarter ending the 10th of October 1831, it stands thus: 252 lbs. weight of plain gauze, 10,913 lbs. weight of gauze ribbons; they are styled striped, figured or brocaded; I mention these collectively, because they are not separated; there are very few broad gauzes, and I deduct the 252 lbs. in the calculation for broad gauzes, this would leave 10,913 lbs. weight of ribbons, and produce, at four ounces to the piece or garniture, 43,652 pieces. I calculate the latter at 12s. the piece in the following way; that is, 9s. 3d. weaving and filling, 2s. 9d. winding, warping, clipping, draft, cards and loom mounting, will amount to the sum of 26,192l. quarterly, yearly 104,764l., or weekly 2,015l. If the above ribbons were made in Jacquard engine looms at a calculation of two pieces per week for a loom, they would require 1,680 looms, and employ 1,680 weavers, 420 fillers, 420 winders, 140 warpers, clippers, draftsmen and card-stampers, exclusive of designers, loom and harness makers, dyers and throwsters, the whole amount of employed population would be 2,660, if made in the most improved Jacquard engine loom. With the permission of the Committee

I will

I will read the importation of other descriptions of silk. The silk imported in the quarter ending the 10th October 1831, exclusive of gauzes, stands thus: 21,446lbs. weight of silk or satin plain, 5,189lbs. brocades, the whole amounting to 26,635lbs. I assume that half of them were ribbons, which would be 13,317lbs. I take them at 5,189lbs of brocaded, which at 10 ounces per piece will produce 8,302 pieces quarterly, and 8,128lbs. of plain satin at $6\frac{1}{2}$ ounces average to the piece, will produce 20,007 pieces. The brocaded will be 8,302 pieces quarterly, or 638 weekly. I make this calculation for the single hand loom, with the jacquard engine fixed upon it. Brocaded satin figures, at 20s. per piece to the undertaker, who pays 13s. 4d. per piece to the weaver, and retains 6s. 8d. himself for winding, warping, drafting, mounting cards, looms, harness, and being responsible for the work. A weaver upon this work, can only make half a piece per week, and earn 6s. 8d. per week. The number of pieces would have given employment to 1,277 weavers weekly, 410 undertakers, winders, warpers, draftsmen, mounters and card stampers; 20,007 pieces quarterly, 1,539 weekly of satins, which at an average of wages at 6s. 6d. per piece to the undertaker, would amount to 6,502l. quarterly, 500l. weekly. The undertaker pays the weaver 4s. 4d. per piece, and finds looms, harness, winding, warping, &c. &c. for the remaining 2s. 2d. The number of pieces would have given employment to 1,026 weavers weekly, 415 undertakers, winders and warpers, at $1\frac{1}{2}$ pieces to the weaver, who would earn 6s. 6d. per week.

1837. How do you obtain the account of plain satins?—It is merely assumption; I can take it in no other way; the brocaded parts are distinguished, they are called brocades, and I have no doubt that I have apportioned them correctly in that respect.

1838. Did you look at any former years when they used to be kept separately, in the Custom House Returns?—I cannot fancy that it would at all bear upon the question; because I think more plain satins are introduced into England at present than there ever were before.

1839. You stated, that a great quantity of gauze, brocade and satin ribbons had been imported, do you mean to say, that the English weavers could have made those articles?—Certainly; the same description of goods.

1840. Do you wish the Committee to understand that the English manufacturers can make as good ribbons as the French?—I think, with the same advantages, they can.

1841. And at as low a price?—Certainly not; if they were in the same relative situation they could, but not without; if they had the same labour, the same material, the same climate and the same means of existence throughout, but not otherwise. I was requested by a very ingenious manufacturer to submit to the Committee the samples he has sent to me, which are the production of his looms at the present moment, and as they are equal to what are coming from France of the best description, he is desirous of having them exhibited. With the permission of the Committee, I will read the remarks that the gentleman makes himself, respecting them; they are made by Mr. Henry Atkins, of Coventry:—he says, “These patterns are produced in the single hand loom; one loom cannot produce any more than half a piece per week, which costs 10s. making. The cost of putting one of these patterns to work will be 14l. and before I am remunerated for the expense, the French introduce something fresh and mine becomes unfashionable, and it will not answer my purpose to cultivate this trade:” this is matter of speculation.

1842. What is the price of those articles?—Two shillings a yard I believe; the French articles of a similar description have been sold in the shops at 3s., or even at 4s. 6d. a yard. He says, “these patterns are our own drawing and designing.”

1843. Do you consider that these are as good as any that the French can make?—As a matter of skill they are equal; as to matter of taste, I cannot say.

1844. Would the abolition of 3s. 6d. per lb. import duty upon foreign thrown silk, enable you more successfully to compete with the foreign manufacturer?—It is a question I can scarcely entertain for a moment; I do not conceive that there are any means short of a prohibition that would enable us to make goods at all.

1845. If you get your silk 3s. 6d. cheaper than you now pay for it, could you make your goods cheaper?—I have no hesitation in saying that we could.

1846. Do you conceive, that by reducing the duty 3s. 6d. upon foreign thrown silk, it would be sold 3s. 6d. per lb. less?—I do not conceive it would.

1847. Will you explain to the Committee the advantage that the French have in their satin ribbons?—I have examples of satin ribbons; two of French and two of

Mr.
Cleophas Ratliff.

28 March,
1832.

Mr.
Cleophas Ratliff.

28 March,
1832.

of English; they are corresponding widths, and I can state, that with reference to the quantity of silk worked into the English satin, compared with the foreign, there appears, on the average, to be $19\frac{1}{4}$ per cent. silk more used to make the same articles, and the effect of that I will leave the Committee to judge.

1848. Is the same kind of silk used, or is yours all Italian silk?—It is the produce of Italy; but the silk from which this is made is thrown in England.

1849. If you were shown some plain satin, English made, and some plain satin, French made, should you have any difficulty in ascertaining in a moment which were the foreign and which were the English manufacture?—Not the least in the world.

1850. Have you ever seen any that you found difficult to distinguish the one from the other?—Never, in the article of satin ribbons.

1851. Have you seen it in any other article?—I cannot precisely state that there might not be some difficulty, but I think I might venture to say that I have not.

1852. Could not you tell another manufacturer's goods from your own?—Not precisely; there would be some description of work I could tell in a moment, by the pattern, but in the plain article there would be hardly sufficient to distinguish; but I could readily distinguish between the French and the English.

1853. Does that arise from the nature of the silk?—I think chiefly.

1854. Is the French silk a superior silk to yours?—The French silk is superior to any other silk grown in the world, I have no doubt.

1855. Have the French any advantage over us in the manufacture of gauze silk?—Certainly, they have a very much superior article at a much lower price; the French Marabout hard, used in the gauze ribbons, would cost 22s. 3d. per pound, and English, for a very much worse material, would cost 32s.; that is to say, the French manufacturer gives 22s. 3d. per pound for the Marabout hard, for which we give 32s.

1856. You are now speaking of the material before it is manufactured, and you are speaking of the article which you consume in the manufacture of gauze ribbons, and which the French also consume?—Yes.

1857. How does that difference arise?—I cannot possibly say how it arises; I dare say there are a variety of causes conspiring. I am stating what is an absolute fact as to the price.

1858. Have they a great abundance of that silk?—As much as they can possibly require.

1859. How have you ascertained the French prices?—From the best authenticated information I ever received in my life: it was obtained by two gentlemen perfectly conversant with the trade in every respect. They were not manufacturers; they obtained those prices from three or four different channels on the same day, without any concert whatever, and they corresponded in every particular.

1860. Have the French a superior mode of dressing their ribbons?—They have.

1861. Will you state what proportion of this kind of gauze is made in Coventry?—I could not possibly state that; but I will endeavour to ascertain it.

1862. What per centage would that be in the price of the article?—Not being a gauze maker, I have it not in my power to state that.

1863. In point of fact, is not the gauze trade nearly abandoned at Coventry, on account of this very difficulty?—On account of this and other difficulties.

1864. Has the French manufacturer any advantage over you in the price of labour comparative, separately and collectively paid on the description of ribbons?—I will read the calculations upon one description of articles formed on the most accurate principles, which I have obtained from two persons, of the comparative prices of weaving in France and England; I will state, first, the prices paid at Saint Etienne for the French clipt figured gauzes made in the Jacquard looms; the price for sixteen-penny per piece at thirty-six yards, is 2s. 6d.; the price of twenty-penny is 3s.; the price of twenty-four-penny is 4s.; the price of thirty-penny is 5s. 6d.; the price of forty-penny is 7s. 9d. The weaver in France has only half this sum; the undertaker takes the other half for finding shop, looms and harness, the manufacturer finds draft, cards, winding and warping. I mention this particularly to show, that the undertaker, by receiving so large a portion of the amount paid, is enabled to invest his capital in the improved machinery of the day, which, in the case of England, the manufacturer is compelled to do. I will next state the prices paid in England for clipt figured gauzes, made in the Jacquard looms; the price of sixteen-penny per piece of thirty-six yards is 5s.; the price of twenty-penny is 6s. 6d.; the price of twenty-four penny is 8s. 6d.; the price of thirty-penny is 12s.; the price of forty-penny is 15s. This is the price actually paid to the weaver,

weaver, who does not find anything but quil winding or filling; the manufacturer finds looms, winding, warping, draft and cards; then there are other advantages which a manufacturer has in France; the clipping gauzes in France costs 6*d.* per piece; in England the clipping gauzes cost 1*s.* 6*d.* per piece, or 200 per cent. higher. In France the winding costs 1*s.* 3*d.* per pound, the English winding is 2*s.* per pound. The French silk, native produce of France, organzines, costs 29 francs or 24*s.* 2*d.* English, for the French pound of 17 ounces 10 drams, subject to 11 per cent. discount, which leaves the cost for the English pound of sixteen ounces 19*s.* 4*d.* In England Fossombrone organzine, the same size, and the nearest in quality we can arrive at, though it is still very far inferior, I take at 25*s.* per pound, it is from 24*s.* 6*d.* to 26*s.*, subject to a discount of 2½ per cent., which leaves the cost 24*s.* 4½*d.*

1865. Are those the prices now?—They were the prices in the last week in December; the general calculation upon all the articles, the expense of English weaving more than the French, is 108 per cent. average. I will state the particulars of the calculation upon which I have come to this result.

[The Witness delivered in the following Statement, which was read.]

COMPARATIVE PRICES of LABOUR in England and France.

PRICES for Weaving in France.	PRICES for Weaving in England.	GAUZES.
<i>d.</i> 16 per p ^s of 36 yards - 2/6	<i>d.</i> 16 per p ^s of 36 yards - 5/	100 per cent. more in England than France.
20 - - - - 3/	20 - - - - 6/6	116½ "
24 - - - - 4/	24 - - - - 8/6	112½ "
30 - - - - 5/6	30 - - - - 12/	118 "
40 - - - - 7/9	40 - - - - 15/	93½ "
		540½ Average, 108 p' c't.
Clipping Gauzes in France, 6 <i>d.</i> per p ^s .	Clipping Gauzes in England, 1/6 per p ^s .	200 per cent. higher in Eng- land than France.
Winding, in France, 1/3 per lb.	Winding in England, 2/ per lb.	60 per cent. higher in England than France.
French organzine, native produce, 19/4.	English organzine, 24/4½.	26 per cent. higher in England than France.
French Marabout, hard, 22/3.	English Marabout, 32/0.	44 per cent. higher in England than France.

It is fair to assume that a French gauze ribbon would be made with a much less quantity of material from the superiority of the silk, but we take the same weight in both cases for an example.

FRENCH.	ENGLISH.	
<i>s. d.</i>	<i>s. d.</i>	
1 p ^s of Gauze Ribbon,		
4 oz. silk, av. 1/3½ - 5 2	4 oz. silk, av. 1/9 - 7 -	} So that the English cost for the article will be 78½ per cent. more than the French.
Weaving - - - 4 3	Weaving - - - 9 3	
Winding - - - - 3½	Winding - - - 6	
Clipping - - - - 6	Clipping - - - 1 6	
10 2½	18 3	

In this calculation, no mention is made of the difference in cost to the English manufacturer, in making of looms, designing, draft drawing, card stamping, card making, mounting, dyeing and warping.

The French prices are given to a medium-man, who pays half to the weaver and retains the other half for finding looms, harness and shop; this enables him to invest a large sum in machinery.

Mr.
Cleophas Ratliff.

28 March,
1832.

1866. Have you any idea of the profit that the French manufacturer obtains upon his fancy goods?—When I know that the prices are often greater than the English, and when I see that the cost is $78\frac{1}{2}$ per cent. less, he must have an enormous profit, and I think they would be very silly not to have it when they always have so many orders for months beforehand.

1867. Must not they always have the advantage you have stated of being able to make as much with four ounces as the English manufacturer can with five ounces?—They must as long as they have the exclusive possession of that description of silk.

1868. You stated that the prices you have mentioned were the prices in last December, are they the same at present?—I have no doubt that they are the same, for I obtained the prices from another source yesterday, and they correspond precisely; I might add, that the French prices have advanced since 1825, and it may be fair to remark, that ours have been declining.

1869. You have shown that French manufacturers have a great advantage over you in the cost of silk and of labour, have they any other advantage over you?—A very decided one in the preference given to the articles they produce; they have a decided advantage in receiving orders many months before the goods are required; they manufacture upon a certain principle, without chance of loss.

1870. Is it not the custom in France, that manufacturers will make 600 or 700 garnitures of a pattern without any difficulty?—I believe it is.

1871. If you were making a rich fancy ribbon, what number of pieces would you think a fair speculation?—From 40 to 50 pieces would be the utmost extent I should make.

1872. If you had, as the Frenchman has, customers from America, from Germany, from Poland, from Russia, from England, and from his home market, might you not make a very much larger quantity, and divide it between those different countries, without selling the same pattern to more than one person in one country?—Yes; I have understood that it is a principle with the French manufacturer, when he has shown a pattern to an English house, not to sell that pattern to any other English house; but if he can obtain an order from the German, and from the Russian, and from the American especially, he does so, and thereby of course lessens the cost of putting in the pattern, by distributing it over a large quantity.

1873. Have you yourself been at Lyons and at Saint Etienne?—Not at Saint Etienne, I have been at Lyons.

1874. Did you enquire into the state of the trade, and did you examine the silk?—I went there in November 1824, with a view to ascertain what chance I should have in attempting to compete with that nation, and on my going there, I was introduced by a gentleman to many manufacturers; I saw the silk, I saw the nature of the principle and business altogether; and it quite determined me that I should have no real chance in prosecuting the trade at home.

1875. Do you think a reduction in the price of English goods would drive the French goods out of the market?—Certainly not; I do not think that any reduction of price in the world could do it.

Veneris, 30^o die Martii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR..

Mr. Cleophas Ratliff, called in; and further Examined.

Mr.
Cleophas Ratliff.

30 March,
1832.

1876. IN your former Evidence, you stated that you went to Lyons in 1824, and you had made up your mind in consequence of what you saw, not to pursue certain branches of the trade; what particular branches were they?—That branch of the trade that required a very expensive machinery to prosecute, that is, a newly introduced machinery; and I have not purchased a loom, or invested any capital in it since.

1877. Did you observe the quality of the silk at Lyons?—I did, and believe it is the best silk in the world.

1878. Have you ever seen any such in England?—Never; I had in company with me at that time, a throwster of considerable information, who had been so from his earliest years; he saw the silk in the warehouse of a manufacturer, and was immediately attracted by its beauty, and the attraction was so great that he could not

Mr.
Cleophas Ratliff,

30 March,
1832.

not resist it; and he went to examine it very injudiciously, because we were introduced as Americans into the warehouse, with a particular wish that we should not expose ourselves as Englishmen; he went and examined the silk, and untwisted it to examine the degree of throw upon it, as a throwster; and the man at the scale, with a quickness distinguishing a Frenchman, said that was a manufacturer "Un Fabricant," and of course we were very soon shown out, we were not allowed to see much more upon that occasion, but we had frequent opportunities afterwards from the gentleman using more prudence.

1879. You said that you made up your mind, in consequence of what you saw at Lyons, not to go to the expense of machinery; should you have gone to that expense if there had been a prohibition of French ribbons?—Unquestionably, to a very great extent; I have always had the means, but deemed it inexpedient to do so.

1880. Have not Jacquard looms been put up in considerable numbers in this country?—I believe they have, very much to the regret of the parties who have put them up.

1881. Do you know whether there has been any considerable number of jacquard looms put up within the last two or three years?—I believe not, I think a very small number.

1882. Was the silk which you stated you inspected in the manner you have described, accompanied by a throwster, native French silk, and consequently that sort of silk, the exportation of which is strictly prohibited from France?—Certainly, all silk is prohibited from France.

1883. Do you get this silk in spite of the prohibition?—Never.

1884. What description of silk do you manufacture?—Chiefly from Italian, on the organzine thrown in this country, from Italian raw.

1885. Where do you procure it from?—From a variety of sources, chiefly from the throwsters, or through the agency of brokers in London.

1886. Do you consider the Foreign thrown silk superior to English?—I think there are some Foreign thrown silks very superior indeed; but there is a description of silk thrown in this country, superior to any I have been able to obtain from Italy.

1887. In what does that superiority consist?—In the throw; there is a patent taken out by Courtauld and Taylor, which throw is superior to any foreign silk we procure.

1888. Is that superior British silk used in any particular goods?—It is used in the satin ribbons I exhibited the other day.

1889. Do they use in France any but the native thrown silk?—A very small proportion.

1890. Can you inform the Committee what quantity of Italian silk is used in French goods?—I cannot, but I should fancy a very small proportion.

1891. Do not the French, in making their plain goods, use Piedmont silk as the shute, in the same manner in which the English manufacturer uses the China?—I think not, they use their own trams and their own shutes.

1892. Are their own trams the produce of France, or the produce of Italy?—They may use some from Italy; but my opinion is, that the principal consumption of France is the native French, that is a part organzine and a part tram, and part marabout hard.

1893. Do you think if you had the French silk you could enter into competition with the French manufacturer?—Not with one advantage alone, that would be but one small component part of the advantages we should require.

1894. Then you think there is a superiority in the fashion as well as in the manufacture?—There is a prejudice in favour of the French; as to the superiority of the fashion, that is an ideal question.

1895. Might not that be obviated by employing better artists in England?—I think we can scarcely have better artists.

1896. Do you think that the superiority of the French fashion depends merely upon the quality of the French ribbons, or upon something extraneous, in the way in which they are made up?—I think it depends very much in the way in which they are introduced.

1897. For instance, if a cap were made in a particular way in France, will not the cap being made in that way in France, give to a ribbon an additional value, independent of its value if not so employed?—Unquestionably.

1898. Therefore, even if you could make a ribbon as beautiful and as cheap as the French, still that advantage which the French milliner has over our milliner in

Mr.
Cleophas Ratliff.

30 March,
1832.

setting the fashions to this country, would still give them an advantage, in point of fashion, which the quality of your ribbon would not enable you to compete with?—Certainly.

1899. Do you not think that an English sarsnett ribbon is superior to a French sarsnett ribbon?—There are very few French sarsnett ribbons come into this country, and very few made, in comparison with others; the Swiss manufacturers supersede the make of France in that.

1900. Is the English manufacture of sarsnett ribbon equal to the Swiss manufacture?—I think it is; but there is a neatness and a fineness derived from the power of putting in a certain quantity of labour at much less price; and, of course, from labour being cheap, they can give a great deal more labour than we have the power to do.

1901. Are you aware, whether those Swiss ribbons you speak of are prohibited from being sent into France?—I understood when I went to France first, in 1818, that they were prohibited under very severe laws.

1902. Do you understand whether they are prohibited now?—I do not know; I think the French Government would do anything to support their own trade; and I think if the French manufacturer wished to have them prohibited, for the sake of the trade, they would do it.

1903. Are you aware, whether the sarsnett made in Switzerland, is made with Swiss grown silk, or from Italian silk?—I think from Italian grown silk; I have not had an opportunity of ascertaining the relative prices between Switzerland and in England; but when I know that they take the trade from the French, I fancy that they labour at a much lower rate; and I should be very glad to have the means of knowing the relative prices of labour in Switzerland and in this country.

1904. Have you any way of suggesting to the Committee, the manner in which that can be obtained?—By sending over a person competent to obtain it.

1905. Do you imagine that much Swiss goods come here?—They have done till lately; I think they do, even now.

1906. Do you think the English weaver can exist upon the same amount of earnings as a French weaver?—Certainly not; the various disadvantages under which the English labourer has to contend, would take almost a volume to enumerate. A Frenchman can exist upon a much less quantity of food, and of course the expense of producing that is much less in France. The climate of England requires a more expensive description of sustenance; in fact, I could not give a better authority, upon this subject, than the celebrated work under the name of Dr. Lardner, who gives an excellent answer to that question.

1907. Is not the weather so warm in the neighbourhood of Lyons, that they are able to work without fires in the middle of December?—I think so; I recollect being there the latter end of November, and I could have borne my coat off in walking; there is a passage in Dr. Lardner, which so clearly illustrates this point, that, with the permission of the Committee, I will read it. Speaking of expense, he says, "But while the expense of living is higher in Great Britain, than it is in those countries whose political and financial circumstances place them in a less artificial state, the wages of labour ought to be, and will be, higher in something like an equal ratio. Greater comforts are needed by the English artizans, in consequence of the less favourable nature of our climate; and if, after taking all these circumstances into calculation, it is yet found that the labouring classes here are not all sunk so deeply into the abyss of poverty and wretchedness, as those of some neighbouring states may be, it will not thence be argued, that their situation is too favourable, and that the principle of buying in the cheapest market should, as is sometimes insisted on, be carried to so extreme a length, as would lower them to the same miserable level, and reduce them to the procurement of a bare subsistence." That is precisely my opinion.

1908. Are you aware that the French import, very largely, Piedmont silk?—I am not aware of it; I do not think they do.

1909. If it should appear that they do import to the extent of twenty millions of francs, in what way, in your opinion, would they use them?—If they import twenty millions, they must have an enormous trade, because the native produce is very extensive.

1910. What do you consider the best protection against smuggling ribbons?—Prohibition is the only protection.

1911. Do you consider that smuggling can be prevented, so long as foreign ribbons are allowed to be imported?—It is totally impossible; while foreign goods are

Mr.
Cleophas Ratliff.

30 March,
1832.

are legally imported, any quantity of goods can be smuggled and blended with them; and when once they are in the houses of the merchants that import them, they never can be separated and ascertained; and I think while they are admitted, although a certain rate per cent. may be paid to some respectable houses, I have no doubt there are so many channels through which they can pass them, that it is impossible to attempt a detection of them.

1912. Is it your opinion that smuggling ribbons could take place to any extent under prohibitory laws?—Quite impossible; I conceive, that under prohibitory laws there are so many points to contend with, a man without capital could not enter into the trade, and a man with capital would not have the hardihood to do it. I have no doubt there would be as many smugglers as candidates to bring them in, but I do not know who would receive them. Under the legal importation, a man can employ twenty or thirty servants; he exposes his goods for sale, and he facilitates the consumption of them in every way possible; whereas, under prohibitory laws, he must keep them in a garret, or a place unconnected with his own, and be at the mercy of his servants every hour.

1913. Is not he as much at the mercy of his servant now, if he is a smuggler?—I think not, I think he can avoid his servants knowing, in a degree, that he could not do if there were prohibitory laws.

1914. Can he do that if he is in a large way of business?—He might divide the confidence between them in a way he could not do under prohibitory laws.

1915. Do not you think that very large dealers might be buyers and sellers of smuggled goods, without being aware of the fact?—Unquestionably.

1916. So that if a warehouseman in London were to send to a Foreign house and buy goods, day after day, he would never know that those goods were smuggled, though every piece of them might be smuggled?—It would not be his business to inquire.

1917. Do you speak of all ribbons, when you talk of prohibition?—Every description of ribbon, plain as well as figured; such is the omnipotence of the French in making any thing fashionable, that if fancy goods were prohibited, the next year they might make plain goods fashionable, and produce a little variety of colour, that would injure the sale of all we had prepared.

1918. Have you any goods you wish to show to the Committee?—I observed in the house of a considerable importer, two descriptions of ribbons selling; the young man, the chief superintendant of the concern, was showing them to me without thinking it a matter of any consequence; and he said, now what a shame it is, here is a French ribbon I can sell currently with ease for 48 s. per piece, here is an English one of superior manufacture, and equally good taste, which I cannot sell for more than 36 s., and if I were to ask 38 s. for it, they would say I imposed upon them; but when I ask 48 s. for the French, they purchase it with avidity.

1919. Supposing a prohibition again took place upon the importation of French ribbons, do you suppose that persons would then be prevented from exposing them to public view?—Unquestionably they would; the French could only have a preference from its being entirely new, and different from what we were producing, and by that character and mark it would be known in a moment.

1920. Then you think the quality of the English ribbon is equal to the quality of the French?—It would not be the quality; but what I mean to say is, that if any different pattern were introduced from France, that would mark it in a moment as being French.

1921. Suppose they imitated and made a ribbon after your patterns?—They would then be in the same relative situation as we are now, they would have the dregs of the trade instead of the better part of it; if they were to imitate us, they would be so far behind the period when the goods would be required for sale, that they would be almost valueless.

1922. And if any delay took place in the delivery of those goods, there would of course be a serious loss sustained?—Yes.

1923. Supposing they made goods different from yours, in order to get the precedence in point of fashion, they would then be distinguished by the difference, whereas if they imitated you, they would be so far behind you in the market that they would give you that advantage over them which they at this moment possess over you?—Yes.

1924. Do you mean to say, that the Coventry people would be able to say that a particular pattern must be French, not being made at Coventry?—Yes.

1925. But if that particular pattern were made here to a small extent, as a blind,

Mr.
Cleophas Ratliff.

30 March,
1832.

would not that prevent you from being able to detect it in that manner?—I think if they were to make a small quantity of a certain description of ribbon here, and a large quantity abroad, the length of time it would take to get them in under smuggling would drive them past the season, so that the goods made in France, instead of being blended and sold immediately, would be jobbed off in any way they could.

1926. Is it not the case at the present moment, that a vessel with silks on board may come up to the Custom House, and if they have an opportunity of throwing them overboard at night they can do so; and if there is any fear of detection they can enter them for exportation, whereas under a prohibitory law there would be no opportunity of doing so; but if they were found, the goods might be seized and the vessel also?—The goods would be seized, and I believe the vessel also.

1927. Do you imagine there is less difficulty now, from the state of intercourse between France and this country, to the smuggler to bring goods here than there was during the period of the prohibitory law?—The facilities are greater, from a larger connection being established in the smuggling way; but I think they would return back to the original difficulty if the prohibitory laws were again re-enacted; but the intercourse is much greater certainly now, and therefore the facility is greater on that account.

1928. Do you know when goods are seized in a man's house, as prohibited articles, that it rests with a person to prove that he has paid the duty?—I think it does.

1929. Do you happen to know, that when they enter a man's house and make a large seizure of goods, if only a single piece is found that is contraband, that will justify his entering the house?—I should think it would; but I do not exactly know the law upon that subject.

1930. You mean to say, that if a quantity of goods came into this country from France, they could not be sold unless they were exhibited, and if they were not so sold, they would not interfere with you?—Yes.

1931. And that the difficulties of selling them would be very great; inasmuch as persons importing foreign manufactures would be afraid to exhibit those goods, and consequently they could not interfere with you?—Exactly so.

1932. Can you form any estimate of the proportion of ribbons sold in this town which are smuggled?—It is merely opinion; I have heard it estimated at two-thirds.

1933. Do you consider that any considerable proportion of smuggled ribbons is sent from this city to supply the country trade?—I have no doubt a very large quantity are; because I understand that in the remotest parts of England French goods are equally desired as in the most fashionable circles at the West end of the town.

1934. If there were a prohibition of French ribbons, would it not be advantageous to a great many individuals, who would then sell British goods at a higher price as smuggled?—I do not know whether they would attempt such a deception as that, it would not be necessary; I think the British goods would pass well enough on their own merits.

1935. Under a state of prohibition, would it not cost as much to introduce French goods into this country as it does now?—It would cost much more.

1936. In addition to that, must not the dealers in this country have a much larger profit to pay them for the risk?—No doubt.

1937. And that would, of course, enhance the price, and afford a greater protection to your trade?—No doubt it would.

1938. One of the evils of which you now complain, being that the French manufacturer receives a certain number of orders regularly, almost from the English market; do you think he would receive the same number of orders, if there were a state of prohibition, and if he, therefore, depended merely upon the smuggling sale?—I do not conceive that orders would be given under such circumstances; I conceive that the only species of smuggling that would take place, would be from the French depôts, of persons who order goods upon the same principle that we do now from St. Etienne.

1939. And you think that they would then make only for chance and speculation, whereas they now make upon a certainty, and that to a very large extent?—If they made at all, it would be in that way; but I do not think they would make upon chance and speculation.

1940. Is it your opinion, that there was much smuggling before 1826?—Very inconsiderable indeed.

1941. And that it is much larger now?—Yes.

1942. Is

Mr.
Cleophas Ratliff,

30 March,
1832.

1942. Is not that merely matter of opinion?—I do not think the last is merely matter of opinion; I think we have public documents which give us an idea that it is much greater than it was.

1943. If a warehouseman dealt in foreign silks to the extent of 100,000*l.* a year, would not he be obliged to keep a stock of at least 10,000*l.* in his house?—At least.

1944. Do you believe that, before the importation was allowed of foreign manufactured silks, any house ever had, at any one time, 5,000*l.* worth of foreign goods in their house?—I do not believe that any house ever had 5*l.* worth of foreign goods in their house; I think they kept them in other houses, in the most clandestine and secret way they could.

1945. You have mentioned the difference of price between an English ribbon and a French ribbon, of about the same quality; have not you reason to suppose that the profit upon both articles is the same?—Upon the English I know, from my own experience, that there is scarcely any profit; upon the other, there must be an enormous profit.

1946. The question refers to the dealer's profit in London?—No; the dealer gets from seven and a half to ten per cent. more upon the foreign article exhibited, than the English one; that was stated to me yesterday.

1947. With that difference, would not the English be cheaper than the French?—It would.

1948. Is not the result of your evidence, that the question between the English and the French ribbons is a question of fashion and not a question of price?—I think I have shown, that it is a question of price also; I think the calculation I gave the other day, showing that the expense of manufacturing in France is $78\frac{1}{3}$ per cent. less than in England, establishes, that it is a question of price; if you were to put on a duty of 40 per cent. upon the article, I calculate that the manufacturer in France could afford to take off from 32 to 40 per cent. and still have a much larger profit than the Englishman.

1949. Do you consider that there has been a great increase in the manufacture of Coventry?—There has been an increase in the manufacture of silk, but there are fewer pieces made.

1950. Can you take upon yourself to say, that there has been more distress in the five years since 1826, than there was in the five years before 1826?—I think there was more distress in the year 1831 than ever was known in Coventry before.

1951. The question refers to the five years before, taking into account the year 1818?—If I were asked whether there has been greater distress since 1826 than in the five years previous to it, I should say, yes.

1952. Has the manufacture increased or decreased since that time?—The manufacture in the number of pieces has decreased, in the consumption of silk it has increased.

1953. Do you mean to say that there are fewer looms and less work, although there may be more silk consumed, than there were in the five years before 1826?—Yes; I have no doubt much fewer looms.

1954. Notwithstanding the great increase of the population of Coventry since 1826, which appears by the returns, do you really think that there has been less work done at Coventry than there was during the preceding five years?—There has been less amount of wages paid, there is more silk consumed, but there has been less amount of work done.

1955. Are the Committee to understand that you attribute the diminution of work and the decrease of wages to the French competition alone, or to any other causes also?—To the French competition.

1956. Do you consider competition at home to have had any effect?—Competition at home has been caused by competition abroad, much larger quantities of goods have been brought in than can be sold, and of course that would increase the competition at home.

1957. Is there any thing peculiar in the competition in the silk trade as distinguished from the competition in the cotton or any other trade?—I know nothing of the cotton or any other trade; I have devoted all my attention to my own peculiar trade.

1958. You have stated that, in your opinion, no relief can be afforded unless a complete exclusion of French manufacture shall take place?—I think it impossible, and to that point sooner or later the Government of this country must come.

Mr.
Cleophas Ratliff.

30 March,
1832.

1959. Would you exclude all imports from abroad, or would you confine the exclusion to silk goods?—I would allow those things to be exported or imported, that the trade of the country can bear; I would allow the exuberance of those manufactures to be exported upon any branch that could bear it, but I would not subject any branch of trade to it that could not bear it.

1960. What do you mean by bearing it, do you mean with reference to the expenses of manufacture, or what do you mean?—I mean that if in this country we have the power of producing an article at a lower rate than the foreigner, we have the power to export that article, and it is fair to put it into competition, but if from a variety of circumstances we are unable to effect that competition, I think it unfair to compel us to it.

1961. Is it your opinion that we cannot obtain silk as cheap in England as the French can at Lyons?—We cannot, unless we could induce the French Government to allow it to come here, and not even then unless the duty is made sufficiently low.

1962. With regard to the cost of production, you stated that the average of the difference in the cost of production was 78 per cent.; from whom have you got that table of the French rates?—It is from the most respectable source I ever had a document in my life, and it was obtained by a gentleman adverse to the English silk trade, he had obtained it for a very different purpose from that to which it is now applied, and with the liberality which distinguishes him, in order to facilitate the ends of truth, he has given up that document, and I have had it corroborated by another authority equally respectable.

1963. Have you any objection to state from whom you obtained that document?—It has been given to me in confidence, and I must beg leave to ask permission before I can do it.

1964. Do you believe that this information was obtained with a view to this or any other inquiry?—Unquestionably not; but to satisfy the party of the correctness of his own views upon the subject.

1965. As you state that 78 per cent. is the average difference of wages between the English manufacturer and French, exclusive of the looms, design, warping, &c. can you state how much should be added for looms, design and warping, which you excluded upon the former occasion?—I thought I had gone far enough in showing so great a difference, but I will make an estimate of that, and it would make a considerable per centage in addition to the other; I do not say that it is 78 per cent. upon the wages alone, but upon the article when produced; upon the average rate of wages the difference would be 108 per cent., but it is 78 per cent. upon the article when produced.

1966. What would the average rate of wages more in England than in France be?—The average rate of wages more in England than in France would be 108 per cent.

1967. What would the average increased cost of material be?—There are many other things; although I have excluded a number, I have included winding, clipping and the cost of the silk. It is 26 per cent. upon the silk, 60 per cent. in winding, 44 per cent. upon another description of silk (marabout hard), and 200 per cent upon clipping.

1968. What proportion of Italian thrown silk that pays duty do you use in those articles?—My English calculation is upon an article that does not pay any duty at all, except a penny a pound.

1969. If there were a reduction of the duty on thrown silk, would that affect your calculation or affect your manufacture?—It would, to a trifling amount; but it would be a positive evil to a large population in this country without any commensurate good to us.

1970. Has any trouble been taken by you or by other manufacturers to lessen wages, as they appear to be so much higher in England than in France?—I think it is sufficiently manifest that we have.

1971. Has there not been a constant struggle between the manufacturers and the men, the one wishing to reduce and the other to keep up their amount?—It is natural that the weaver should endeavour to obtain all he can, and it is equally so that the manufacturer, if he is a fair man, should give all that is right.

1972. What has been the result of that state of things, has it been to keep wages higher in Coventry than in any other part of the country?—I cannot say as to that, but the wages in Coventry have not been too high.

1973. Do you think the present wages will admit of diminution, and still support the weaver?—I do not.

1974. Is

Mr.
Cleophas Ratliff.

30 March,
1832.

1974. Is not the price of provisions and house-rent, and every thing of that sort, higher at Coventry than in France?—Yes.

1975. Were you a party to any settlement of wages, either in 1819 or in 1821, or in 1826?—I do not recollect them; but I was in 1831.

1976. Have not you been generally one of the committee, settling those disputes between the masters and the men?—No.

1977. Have you not concurred in the arrangements that have been made?—In last November, when the list was established, I was one of the committee, and have been so since for the maintenance of it.

1978. Will you state what object you had in view at that meeting?—Prior to the establishment of the list, the wages given by some few houses in Coventry for working were at so low and ruinous a rate, that a man was in a worse situation than if he had received relief from the parish; the article of thirty-penny lutestring, which is now fixed at 7 s. 6 d. a piece, was then paid for at half-a-crown. Now a man, working from twelve to fourteen hours a day, could not earn half-a-crown a week upon that work. The object of establishing this list was not to establish a high list, but to establish one that could be maintained and paid, giving ample scope to anybody, that had the power to do so, to give a higher price.

1979. Do you mean to say, that if there had not been that meeting and that resolution, those prices would have been paid generally by the trade?—They were paid higher by many persons; but the object was to make the distribution of wages equal and fair.

1980. Do you think there is any thing to prevent the master and the men now from agreeing upon any rate they please?—Unquestionably not.

1981. Do you think it tends to lower wages by compelling a man to pay more than he otherwise might bargain for?—I think it equitable that a man should not be allowed to reduce his wages, by working at a rate below existence. It would be possible that in cases of severe distress, a weaver depending for his existence upon the work he receives from his warehouse, might offer to make it at a lower price, but a virtuous manufacturer ought to resist such a temptation.

1982. Is not the object of the manufacturer to make his wares as good as he can, and as cheap as he can?—Certainly.

1983. Do you think it consistent with the principles of trade, that any master should be dictated to, as to what he should pay, or how he should regulate his business?—I am not aware that any thing of the sort takes place.

1984. Is it not done by that Table?—So far from dictating, it was made by mutual agreement.

1985. Can any manufacturer depart from that Table without risk?—He could not do it in common justice and honesty; but there could no possible risk attend it, unless he was to get into disrepute with the manufacturers with whom he had agreed, nothing further could attend it.

1986. Has not it often taken place at Coventry, that men that have been anxious to reduce the rate of wages have been threatened, and had their property destroyed in consequence?—No; I do not recollect an instance.

1987. Do you recollect any trials in 1822?—No.

1988. Do you recollect the King against Kean and others, where twelve journey-men weavers were tried?—No.

1989. Do you recollect a person of the name of Carver?—No.

1990. Then you do not recollect the trial that took place in the King's Bench, of the King against Kean and others, for unlawful combinations?—I dare say it did take place, but I have no recollection of the circumstance.

1991. You were in business then?—Yes.

1992. Could such a transaction, which affected the whole of Coventry, take place without your knowing it?—Certainly not; I must have known it at the time, but not applying immediately to myself, it has not been impressed upon my memory.

1993. Do you happen to know, whether any regulation of the price of wages exists at St. Etienne or at Lyons?—Yes, there does; there is a positive rate of wages existing at St. Etienne, to which all the manufacturers agree.

1994. Do you mean to say, that the effect at Coventry, of making these Tables, is not to keep wages higher than they otherwise would be?—I think the Table is so regulated that it could not, by possibility, be brought to a lower scale of wages.

1995. Inasmuch as the wages were lower before the Table was made, is not the effect of such Tables, in point of fact, to increase the wages?—I have no doubt that

Mr.
Cleophas Ratliff.

30 March,
1832.

that they keep them at a higher price ; but when I have stated that a reduction from that list would render the people in a worse than pauperized state, I think it fair to assume that they ought not to go below it.

1996. Do not the persons that receive wages under that list, receive also a considerable amount from the poor's rate ?—Not when they are employed ; if they are employed they are not allowed relief of any description.

1997. Do you not conceive, that it is desirable not to reduce the wages so low as not to compel a man to use that haste in making his work by which he might injure the work ?—Certainly ; there would be no cheapness in it, although it would appear to be a reduction of wages, it would be nothing of the kind.

1998. Has it not a tendency to enable certain houses, who make inferior commodities, to sell those commodities nominally cheaper, but in fact dearer to the consumer ?—Certainly ; and very much injuring the trade.

1999. Speaking as an individual manufacturer, how can you suffer by paying your men lower wages ?—I do not suffer directly, but I do indirectly, because if I were to pay lower wages one week, another man would follow me immediately.

2000. If in any other part of the country lower wages are paid, and equally good work done, will not that individual have an advantage over you in the market ?—Certainly, if he can do so, but I dispute the possibility.

2001. Do you not think it best, that every master and man should be allowed to make what scale of wages they please ?—Up to a certain point.

2002. What point would you go to ?—To the bare existence of the weaver.

2003. Supposing you could manufacture goods, and get a bare living profit, paying 3 s. 6 d. wages for a certain piece, and that 4 s. 6 d. should be demanded from you for wages for that work according to that Table, would you go on manufacturing, or would you stop ?—If I could not sell at a profit, I would not go on manufacturing.

2004. In that case would not the workmen suffer greatly from a total want of work ?—The effect of it would be this, that those that took the work at 3 s. 6 d. would make goods of an inferior description, and supersede the use of better goods.

2005. Why should they be inferior ?—I assume that they would be inferior if men were not allowed an existence upon making them.

2006. Is not the rate of wages determined by the demand for his labour in the market ?—In a great measure.

2007. How then can you come to a conclusion, that any such regulation of the rate of wages, can do otherwise than to interfere with a fair scope of capital and labour ?—I would not allow of any interference beyond a certain point ; I think there is ample scope for a man paying above the list price, but no consideration in the world ought to allow him to go below it.

2008. Suppose a man is willing to work for 3 s. 6 d. rather than have no work, would you allow him to go to the poor rates rather than work for 3 s. 6 d. ?—I should not like him to go to the poor rate under any circumstances, but as it regards the interests of the trade, it would be better that he should, than to take wages below a certain point.

2009. Does not the rate of wages depend upon the number of individuals seeking work ?—Of course, if there is an exuberance of labour, there will be a depreciation of price ; if the contrary, the reverse would be the case.

2010. If there should be 2,000 workmen, and employment only for 1,000, do you mean that you would not divide the work, or allow any man to work for less than the fixed sum ?—No ; it is the custom with us to apportion it in the best way we can, and to give a certain amount to each man, and I think it is a very good principle.

2011. On every occasion, when there has been a Table of Wages at Coventry, has not the object been to make some manufacturer pay higher wages than he was willing to give ?—It would have been very proper that it should have been so, it was in the late case unquestionably.

2012. Is not that the intention of it in every case, or if not, why should it be made ?—The object is to make all payers pay as nearly equal as possible.

2013. Do you think it fair, that one person should dictate to another what he should pay, or how he should carry on his trade ?—Not upon a general principle.

2014. Do not that Table, and the resolutions go to that precise point ?—This Table and resolution goes to the point of allowing a man, if he is fully employed, to get a rate sufficient for his subsistence, and below that point he ought not to go.

2015. Is

Mr.
Cleophas Ratliff.

30 March,
1832.

2015. Is it your opinion, as you would not give below the rate fixed by this Table, that if the master is not able to do that, it is better to allow the party to go to the poor rate?—If the wages were as low as you can allow a man to exist upon, I would prefer any thing to going below that.

2016. There appears attached to these resolutions a list of 45 or 50 manufacturers. Do you not think it possible, that one of those manufacturers may possess more capital, and better machinery than others, and that he will have an advantage in his manufacture over a man who is obliged to raise money to a great disadvantage, and who has inferior machinery; and would you compel a man with those disadvantages to pay the same as the other?—I think they would be advantages derived from a very proper source; and it is an advantage that capital should always give to a man.

2017. If a man is to have the advantage of capital, should he not also have the advantage of judgment to determine the rates of wages he would pay, and to whom he should give his wages?—I think if he has not the one to accompany the other it will be of very little use to him.

2018. Does not this Table deprive a man of those advantages, because he is obliged to give the same sum to all?—Certainly not; and you will find no man of capital desirous of departing from such a principle as that. It is a voluntary act upon the part of every manufacturer to subscribe to that, and if he were to depart from it, it would have this effect, that if he were to pay a very low rate, a vast quantity of goods would be accumulated in the market at a low price.

2019. Do you not, by this scale, secure yourself against bad work?—You do.

2020. Supposing it to be a question between 4*s.* 6*d.* and 3*s.* 6*d.* a piece, do you believe that a reduction in the wages of 1*s.* a piece, would make any difference in the sale of that commodity to the consumer?—Certainly not; it might induce the warehouseman to buy it, and take it into stock, but the public would not benefit by it on that account.

2021. You think, that when from the severity of competition the wages of the workman have been reduced so low as to give him a bare subsistence, it is not advantageous either to him or to the public to go lower?—Certainly not.

2022. Supposing you were to go even lower than that, and to give a man an addition to his wages out of the poor's rate, would not the effect of it be to increase the quantity of goods in the market, and thereby to continue the depression?—If you were to keep men employed when you could not sell the goods, of course it would create an addition to the stock in the market.

2023. Does not it follow, that it would be better for the men not to work at all than to lower the wages?—As a matter of interest to the trade I have no doubt.

2024. Would not it be also more beneficial to the public?—That is another question, if you include, in considering the interests of the public, the burthens that necessarily arise from the poor rates.

2025. Would not the goods be thrown into the market at a loss?—At a loss to the manufacturer.

2026. Is not one of your great complaints, that too great a quantity of goods is thrown into the market?—It is a matter of complaint with us, that too great a quantity of foreign goods is thrown into the market.

2027. Have the profits of the manufacturers, and the wages of the weavers been lower or higher since 1826, than they were before?—As regards myself, I have no objection to state, that my profits have not been near so good, and I am sure the wages of the weavers have not: with respect to profit, it is not to be found now; we only know it in name.

2028. If the profits to the manufacturer are only in name, is the way of increasing them to give higher wages?—With respect to the competition at home, if you make upon the same terms as your neighbour, you can sell upon the same terms.

2029. If you have no profits now, do you think you would increase them by reducing the wages?—I think not; because the price of the goods of course will come down with it.

2030. When you say at home, do you mean the competition in Coventry, or in other parts of England?—We do not fear any competition in England; I should be happy to hear that the trade could be carried on profitably in any part of England.

2031. Is it not your opinion, that the price of raw silk should be left to find its own level in the market, without interference?—I think it will do so.

2032. Supposing the merchants of London were to unite together and say, "We will not sell silk under 25*s.*" when perhaps the price may be 23*s.*, do you think that

Mr.
Cleophas Ratliff.

30 March,
1832.

that would be injurious to the manufacturers?—I think it is what the manufacturers have often experienced, and of course it is an evil.

2033. Would not a combination of the men have the same effect as a combination of the merchants?—A combination of the men would be resisted immediately; it could have no possible effect against the general interests of the trade.

2034. Is there such a thing in existence as a combination of the men?—I think not.

2035. Is there not an agreement now existing to pay a certain rate of wages?—There is; but such an agreement would not be suffered to exist, nor would it be established upon any principle but an equitable one.

2036. Do you not think that wages ought to be left to find their level, according to the number seeking work and the capital to employ them, in the same manner as the price of silk or any other article?—They always do find the level; but our object in this is not to confine the rate of wages to that rate, but to prevent it going lower.

2037. Your object is to prevent any one who wishes to manufacture his goods cheaper, in order that he may sell more of them, from doing so?—That is the object of it; but it is the voluntary act of all.

2038. How can it be necessary to enter into an agreement of any kind, if it is voluntary?—Unless a general agreement took place of that kind, one manufacturer, perhaps, meaning well, as they all do, might, in ignorance, be paying a lower price than his neighbour, without being desirous of doing so.

2039. If a man out of employment comes to a manufacturer, and he can give him employment at half the rate of those Tables, should not he be allowed to do it?—I should be very sorry for the feeling that permitted him to do it; but, in fact, though this is an agreement, every man has the power of departing from it if he wishes.

2040. Do you know that every agreement, from 1816, downwards, has been departed from very soon after it has been made, by some one or other?—I think, in large communities there must be some black sheep; I can scarcely imagine that in a large community like Coventry, you will not find some few desirous of taking an advantage over their neighbours.

2041. It was stated to a former Committee of this House by Mr. Peter Gregory, that the Table of 1816, was not conformed to uniformly for a single week, and that very soon they departed from it altogether; do you know whether any of the other Tables have been more attended to than that of 1816?—From recollection I cannot state that; I am free to admit that they have been departed from in most cases.

2042. Is it probable, that if any manufacturer departed from that agreement, his goods would be worse in consequence?—I think they would be made worse.

2043. Do you recollect the following resolution which took place in 1819: “At a public meeting, resolved, That this meeting are firmly persuaded, that to the system of half pay apprenticeships may justly be ascribed the greater part of the distress which has been so long felt amongst the weavers, and that from henceforth they will denounce with their most public disapprobation and censure, all persons who shall hereafter take any apprentice under any other engagement.”—I dare say it might be so.

2044. Then no cause of complaint, arising from apprentices has, to your recollection, existed in Coventry?—As I have had nothing to do with them I cannot say, it is a question more for the weavers than the manufacturers.

2045. Have you at all visited other manufactories, where power has been applied to the manufacture of silk?—I never saw the power loom, as applied to silk, I have seen it applied to some other articles of very fine fabrics.

2046. Do you think that any advantage would be derived from the application of the power loom to the manufacture of silk?—I think it would be impossible to apply it with any effect; I will give an example with respect to sixteen-penny eight-leish satins; a loom necessary to put it in, for an engine loom, would be a ten shuttle loom; now it consists of a vast number of threads, introduced into a very small compass; the sixteen-penny satin made in one shuttle, would have 960 threads, and it would require a great deal of attention to keep those 960 threads in their proper place; whereas if it were put into an engine loom of ten shuttles, there would be 9,600 threads to superintend; and my opinion is, that as much manual labour would be required to superintend and keep in place 9,600 threads, and the man might propel the machine at the same time.

2047. Have you seen it applied?—No, I have not; but I draw my conclusions from

from the intricacy of the work that requires to be made ; I speak of the finer fabrics. I think perhaps in the courser fabrics it might be applied.

Mr.
Cleophas Ratliff.

30 March,
1832.

Mr. *Richard Saurey Cox*, called in ; and Examined.

Mr.
Richard S. Cox.

2048. WHAT is your trade, and where do you reside ?—I reside in Saint Paul's Churchyard, I am a ribbon manufacturer at Coventry.

2049. How long have you been a ribbon manufacturer ?—I have been in business on my own account about 20 years.

2050. What branch of the business does your house apply itself to particularly ?—To the gauze and finer fancy branches of the trade.

2051. Has your business undergone any change since the introduction of foreign goods ?—Certainly.

2052. In what respect ?—Inasmuch as we have lost a most respectable and very valuable connection were we used to vend those goods, there were five or six houses with which we did a vast deal of business, previous to the present laws ; there was one house that we did from six to eight thousand a year with entirely in the finer branches of goods, and our business is now nearly closed with that house ; there are five or six other houses which in the aggregate might make up 20,000 *l.* more, and our business has nearly gone with all those houses.

2053. What number of gauze looms had you in 1826 ?—In 1826, we had about 300 gauze looms.

2054. What number had you in 1831 ?—We had 19 looms.

2055. What number of looms and what number of persons do you suppose are employed upon the whole ?—When they are employed, when our business is active we have about 600 looms, and I suppose from 900 to 1,000 persons taking one and a half to each loom, we are not in activity at this moment, but there are that number of hands depending upon us.

2056. Did you only employ at the rate of one and a half to those 19 looms in 1831 ?—Those 19 looms are only a portion of the looms I employed, my total number of looms is 600.

2057. In 1831 had you the whole 600 employed ?—Partially, but there were only 19 then employed in making gauze ribbons.

2058. What is the decline of price at the present period as compared with 1824 ?—The average reduction according to my calculations in satins, are 33 per cent. that is one-third, and in lutestrings one-third, in figured and fancy goods they are reduced from 40 to 50 per cent., nearly one-half, and in gauzes the reduction is from 50 to 65 per cent.

2059. What do your plain engine weavers earn a week when employed ?—Eleven shillings and sixpence.

2060. What do your Jacquard weavers earn when employed ?—From 18 *s.* to 30 *s.* average 24 *s.*, play two weeks in six weeks, making 16 *s.*

2061. What number of jacquard looms have you ?—About 60.

2062. How many had you in 1824 ?—We had 30 in 1826, but I do not know how many we had in 1824, some few certainly.

2063. Are the Jacquard weavers constantly employed ?—No.

2064. Do they loose any time in putting in their work ?—Certainly.

2065. What proportion of time do they loose ?—My information is from my manufacturer at Coventry, I depend upon what he states to me, he says they are idle two weeks out of six, that is to say, the warps come down and must be renewed in the loom.

2066. That is to say, there is a necessary loss of time of two weeks in six to enable them to earn the sum you have mentioned in the other four weeks ?—Yes.

2067. Are there any other reductions to make from the man's earnings ?—There is the filling of the quills ; and I believe it is the custom with some masters to charge them something for the use of the loom, but we do not.

2068. Is it necessary that a person in a Jacquard loom should receive assistance ?—It is not necessary ; but of course if he receives assistance he will do more work, and it is not uncommon.

2069. Is not your average made upon the principle of a man that does receive assistance ?—Their assistance is very partial ; the wives come to pick the warps.

2070. When you say from 18 *s.* to 30 *s.* do you mean, that the man has nothing to pay for assistance in any shape, or that he is not assisted ?—I think that

Mr.
Richard S. Cox.

30 March,
1832.

assistance is not generally paid for; but that if a man has a wife or daughter, he takes them to help him.

2071. Have they assistance or have they not, in point of fact, to enable them to earn 16s. a week?—When I say 16s. a week and deducting 2s. for filling, I take it without assistance.

2072. In addition to this necessary loss of time, have any of your men been out of employment?—Yes, frequently; many of our looms have been out of employment for two months.

2073. Is there not some advantage in the manufacture, in the application of engine looms over the single hand looms, in the cost of production?—Yes; the master employing these engine looms puts himself in the situation of the undertaker, the intermediate man, and therefore he gets the profit which that undertaker would get; and I think that profit appears to range at from two and a half to five per cent. in favour of the master on the total cost.

2074. In the case of engine work, does the master supply the looms?—Yes, we do so; and I fancy it is the general custom.

2075. Is the master subject to the wear and tear of harness, and other expenses?—Yes.

2076. With respect to the Jacquard loom, do you conduct that also upon the journeywork system?—Yes.

2077. Can you state what is the expense of your Jacquard looms in the course of a year, for change of patterns?—For change of patterns, for remounting the looms and other necessary expenses, during the year 1827, our sixty Jacquard looms cost us 647*l.* 4*s.* 4*d.*

2078. Can you state the average per loom, per year?—It is about 12*l.* a loom.

2079. Do you consider the style and quality of your goods improved since the admission of French goods?—I do not consider the quality at all improved; with regard to the style, it is such a complete matter of taste and opinion, that I can scarcely answer, but I should say not; I think we made far more beautiful things from the year 1821 to 1825 than we have ever made since.

2080. Were those from French designs?—Partially so.

2081. Were any of those English designs?—Yes.

2082. Were the majority?—I do not know.

2083. Do you consider that any of the distress now complained of in Coventry and its vicinity is attributable to the introduction of French ribbons?—Yes; I naturally infer that to be the cause, from what I have said as to my own connection, and the manner in which it has been superseded by the French; when I state the extensive connection I had, not only in London but in various other places, Edinburgh and Dublin, and so on, and that they are now entirely served with French goods, I must infer, of course, that I am under a disadvantage from that cause.

2084. Then the duty on foreign fancy goods is no protection to your manufacture?—Certainly not.

2085. Do you consider that prohibition would protect it?—I conceive that if we had a prohibition, we should be pretty much in the same state that we were in when we had it before.

2086. Did you happen at that time to manufacture, for a celebrated fashionable house at the West end of London, any considerable quantity of these gauze or rich fancy ribbons?—Yes, very largely.

2087. Do you so manufacture now for them?—I scarcely make a piece for them, although I am upon the very best terms with the house, and have the honour of the friendship of it.

2088. Do you know whether that house is now supplied with French ribbons?—I am sure it is.

2089. If that house had sold as many French ribbons in 1824, or before the introduction of French ribbons, would you have supplied them with so many of your fancy articles?—Certainly not.

2090. Did you find your trade with them decline from the moment of the opening of the trade?—Not immediately, because the French were not in a precise situation to meet the demand of this market.

2091. Have you any objection to state the extent to which you manufactured for that house prior to the introduction of the French goods?—The amount was very similar to the amount I mentioned in the case of another house.

2092. Can you state the proportion of your present supply to that house, as compared with what it formerly was?—I think perhaps about one sixteenth.

2093. And

2093. And you supplied the house almost exclusively with rich fancy ribbons?—
Yes.

2094. Do you still do any work for them in gauzes?—Not in gauzes.

2095. To what cause do you attribute your disadvantage in competing with the French in gauze ribbons more particularly?—I should suppose that a very material cause must be the difference in the price of labour; and there is no question that there is a great difference in the price of silk also, because I have seen goods cleared from the Custom House; I have seen the invoice of the sellers of the goods, and I have seen every expense added to it, and fifty per cent. duty added to the cost, and the total came as near our cost price as may be.

2096. And yet you suppose the Frenchman obtains a profit before he sends these goods out of the country?—I do not know; a great many may come without profit, no doubt.

2097. Do you know any thing of the relative difference of wages between France and England?—Not of my own knowledge.

2098. Is the sale of French ribbons confined to London and other large towns?—No, they find their way every where, and more particularly in the large towns; it is not at all uncommon for my traveller to write to me from Edinburgh, or from Glasgow, that there are six or seven French agents in that city with loads of French goods, and of course his sales are superseded.

2099. What proportion of foreign organzine do you use in your manufacture, compared with the total quantity of silk consumed?—I have taken it out for eight years, and presuming it is half warp and half shute, we use one-tenth of foreign organzine.

2100. Do you speak of the total amount of silk consumed by you?—The total amount of silk which we use.

2101. Is there any difficulty in ascertaining whether fancy or figured goods are of foreign or home manufacture?—No, I should have no difficulty in ascertaining it.

2102. In the event of French goods being prohibited, you would have no hesitation in pronouncing?—I should be directed very materially by the patterns; I think we see every fancy pattern that comes into London, and if I was undecided in my opinion, I could in 24 hours know whether it was made in England or not.

2103. Do you know what is the proportion of the value of labour to the value of silk?—I have got it upon separate articles, I have taken ten pieces of different kinds; upon ten pieces of lutestring, beginning with sixteen-penny and ending with thirty penny, I make the value of the silk 128 s., and the labour I make 60 s. 3 d.; upon ten pieces of satins, I make the silk 132 s., and the labour 60 s.: I make the value of the silk of ten pieces of figured lutestrings 230 s., and the labour 132 s.; so that the value of the labour is 50 per cent. upon the lutestrings, 50 per cent. upon the satin, and 60 per cent. upon the figured lutestring; then as to striped gauzes, the silk is 62 s. 6 d. and the labour is 40 s. 2 d., that is 66 per cent.; then upon figured gauze ribbons, the value of the silk is 80 s., and the value of labour is 114 s. which is 145 per cent.

Lunæ, 2^o die Aprilis, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. Richard Saurey Cox, called in; and further Examined.

2104. WHAT do your single hand weavers earn per week when employed?—My manufacturer has written me a letter which I have received this morning, stating that on Saturday last, on taking an average of the 156 looms of the best works which are now making, and all fully employed, the average is 6 s. 9 d. per week.

2105. Is it to be assumed, that the alleged increase in the consumption of silk has proportionably benefited the labourer?—I conclude certainly not; because the distress has been greater since a larger quantity of silk has been consumed.

2106. That is, the silk is consumed in articles which absorb a greater quantity of the commodity, and there is less of labour expended?—Yes; in fact the loss of the gauze trade very much accounts for it, inasmuch as that those looms have been now filled with heavier goods.

2107. What is the cost of labour upon one pound of silk at the present time, compared with 1824, or any other succeeding year?—According to the average of our consumption of silk the payment for labour, beginning in 1824, was 38 s. per pound.

678.

0 4

2108. Was

Mr.
Richard S. Cox.

30 March,
1832.

Mr.
Richard S. Cox.

2 April,
1832.

Mr.
Richard S. Cox.

2 April,
1832.

2108. Was that the average you paid for all the silk you consumed?—Yes, when it was mixed with a larger portion of gauze ribbons; in 1825 it was 38s. a pound; in 1826, 31s.; in 1827, 30s.; in 1828, 30s.; in 1829, 23s.; in 1830, 20s.; in 1831, 19s.; and from August 1831 to February 1832, it was down to 15s.

2109. Is this the average upon all you make?—It is, upon all work of every kind.

2110. Are the same articles now worked by you that were in 1824?—No, we now make articles that take four times the silk for the same looms.

2111. The statement you have just given in, is the amount of money expended in labour upon a pound of silk, does that include the whole of the silk consumed by you in your manufactory?—Decidedly.

2112. Do you know what is the difference between the price of labour in France and England in the manufacture of ribbons?—Not to speak with certainty to it; but I have no doubt it is very considerable, because I have known when 50 per cent. duty is added to the French gauze ribbons, they are sold at about the same that our gauze ribbons cost us; therefore I infer that labour must be cheaper, and the silk as well.

2113. Are you able to give to your hands any thing like full employment?—Certainly not.

2114. Therefore, from the average of weekly earnings already stated, there will be a great deduction to be made in taking the average earnings of the men throughout the year?—Certainly. I will state some information I have received this morning from my agent at Coventry; he has taken out the amount of the earnings of 470 single hand weavers from the 1st of August to the 1st of February, and there appears paid to each hand at a loom 3s. 10d. per week. They certainly did not play half the time; but had they been fully employed I should suppose they would get from 5s. to 6s. per week. It should be remembered, that we pay rather a higher price for our fancy single hand goods than the generality of the trade, so that our weavers will average rather higher than others.

2115. Is that price higher than the list that has been referred to?—There is no list of prices for figured ribbons that I know of; there is a list of prices for the Jacquard figures, but I do not allude to those, they are undefined articles that no man can make up a list for.

2116. Do you mean to say, that those articles, for which there is no list, cannot be made in the Jacquard loom?—Yes; they could be made on the Jacquard engine; but when we can get those goods made for 4s. or 5s. a piece single hand, it would never answer to put those articles in the Jacquard loom, because the Jacquard machine is for things of a more complicated nature.

2117. Does not the list for Jacquard looms regulate the single hand looms?—No, I do not believe it does. The letter from my agent also states, that the average of 156 single hand looms, fully employed last week, was 6s. 9d. per loom.

2118. Are those fancy goods or plain ribbons?—It is possible that there may be some plain belt ribbons, but the majority of them are fancy ribbons.

2119. What is the highest and the lowest?—The highest is 9s. and the lowest is 3s. 6d.; upon the last day, I was asked what was the amount of the profit to the master upon giving out engine work instead of single hand work, and I stated that it was from two and a half to five per cent.; I have since written to Coventry, that I might be sure to be correct, and I find that the amount of the advantage derived by the master finding the silk, and taking the profit of the undertaker, is three and three-quarters per cent. on the cost; it is 10 per cent. on the labour.

2120. What does he do for that?—He winds and warps, and generally I should say, supplies the loom.

2121. What is your advantage in employing an undertaker instead of doing it yourself?—We very much lessen our own risk and trouble; upon the 156 looms I have mentioned, the silk is taken out by 22 undertakers.

2122. Do you mean to say that you prepare the work for any single hand looms?—No.

2123. Is there not a resolution in Coventry, that all the work to be done by the single hand looms should be done by undertakers?—I do not know that there is, but we never transacted the single hand work in any other way than through an undertaker.

2124. In the event of a return to the prohibition of French ribbons, do you think there would be any difficulty in ascertaining which were of English and which were of foreign manufacture?—I am certain not.

2125. Supposing

Mr.
Richard S. Cox.

2 April,
1832.

2125. Supposing they were of the same pattern?—I think that that could rarely occur, but if it did, I have no doubt I could ascertain it; if goods of any quantity came to supply this market, of course they would be very evident, and then our attention would be directed to the nature of the patterns, and I should detect it in a moment.

2126. Do you mean that you should know it from the quantity?—If I had an interest to serve in ascertaining it, I should know it as well by one piece as by a quantity, because I should immediately send down to the manufacturer to know if any such goods had been made.

2127. Supposing a manufacturer at Coventry made 100 pieces, and somebody else got 1,000 pieces made abroad, and they were brought into the market at the same time, do you think that the manufacturer would not be able to tell whether he had made 100 pieces of that pattern, or 1,100?—No doubt, if I were the person that made the smaller quantity, and found a larger quantity in the market, I should have no difficulty in ascertaining that there was a much larger quantity made than I had made, and I should direct my attention to ascertain where the rest was made.

2128. If you could not distinguish them, what remedy would you find?—I would leave that to the law.

2129. Can you suggest any means by which it could be done?—I should recur to the system we had before we had the present; I found no inconvenience then from smuggling.

2130. What was that system?—A prohibition.

2131. Supposing that to be done, and that an article were introduced from France in imitation of the English, how could you distinguish between them?—I should speak from my general impression; I do not mean to say that I could swear whether a piece of goods were French or English.

2132. Do you know what was the state of the law under the prohibitory system?—If they were seized, you must prove that they are English goods.

2133. Is not your trade chiefly a town trade?—Very much so.

2134. Suppose a manufacturer here for the purposes of fraud, was to make 100 gauzes here, and to import 1,000 of the same pattern, and that the goods were distributed over the country, should you have any means of ascertaining whether what you had heard of in the country was part of that 100 pieces, or might not the 1,000 pieces be distributed without it being discovered?—Such a thing might occur, but I do not think it would be often repeated, because the hazard would be so great.

2135. Have you ever heard of such a case under the former prohibitory law, as that ribbons or silks have been made here, and imitated in France, and distributed in this country, and any difficulties arise to ascertain it?—No.

2136. Did you ever hear of a seizure being made of ribbons, in which they could not ascertain at once whether they were of English or foreign manufacture?—Never.

2137. Under the prohibitory system, do you not apprehend there was much greater risk and hazard in smuggling than there is now?—Of course.

2138. Do you not know that when any article was seized, the officer would be justified in making a seizure if he could discover any proportion, however small, of smuggled goods, and that it would rest with the person to whom those goods belonged, to prove that they were of British manufacture?—That was the law.

2139. Would not that circumstance prevent houses of respectability in a large way ever having a large quantity of foreign goods in their possession?—I should think no house of respectable character would venture to have a large quantity.

2140. Do not you know that the goods smuggled before were generally in small quantities, and often by private families?—I know it by general repute, I never heard of any large importations.

2141. Is it not well known, that large houses in a considerable way did not keep large stocks of prohibited goods in their possession?—I never heard of their keeping any.

2142. Do not you know that there are people who import and smuggle largely, and supply the large houses with those goods?—I have so understood.

2143. Is not that generally understood with respect to most of the houses?—I think it is.

2144. Do you know that there are houses that have very large stocks of French goods on hand that do not appear to be importers to any amount?—Not having paid any attention to what amount they import I cannot speak to it.

2145. Looking at the state of the trade in general, do you believe that there could be a sufficient quantity and variety of goods manufactured at home to supply this

Mr.
Richard S. Cor.

2 April,
1832.

this market?—I am quite sure there could be, and it would be a most advantageous thing to this country, because it would take up a great deal of unemployed labour.

2146. Can you point out any possible equivalent that we can have by introducing a large quantity of foreign goods brought into competition with our own manufactures in the home market?—Certainly not, it only terminates in bad stock, and bad debts in our own country.

2147. Do not you know, that the consequence of having a continual glutted market with goods, subjects the manufacturer to great loss; and that he is often compelled to job his goods, which all tends to the injury of the fair trader?—Unquestionably; I know that to my sorrow; we have to job some thousands of pieces of fancy ribbons every year.

2148. What do you mean by the word job?—Selling them under prime cost.

2149. Do you mean to say, that those things are only jobbed when the fashion goes by?—Some of those, which are termed jobbed goods, never came into fashion; they are made for a certain season, but they do not happen to assimilate with those introduced by the French, and never are sold at all.

2150. Do not you know, that a large quantity of those goods are brought into the market, and in consequence of the market being over done, the manufacturer is obliged to sell them at an immense disadvantage?—In the case of our own house we have, I should say, as good an insight into what the French are likely to introduce as any house can have; but we frequently make mistakes, and after having made a large quantity of fancy goods we find that we have made them of a wrong colour or style, and we sell them at a loss.

2151. If that happens with your house, must it not operate in full as great a degree with the manufacturers of less capital?—I dare say it does.

2152. Are the Committee to understand, that in expectation of a demand in the spring you prepare goods, and that when the spring comes you find some other fashion takes place, and the goods are shut out?—Yes.

2153. Did not that happen before the opening of the trade?—No, we used to work to order before, because the people that now import French goods, instead of going to St. Etienne and Paris, used to come to my warehouse, and other warehouses, in October and November, and say, now we must arrange something for the spring, what have you got to show us; but now we are precluded from that advantage.

2154. You mean to say, that they prefer the foreign patterns to yours?—They buy them. I mean to say, that under the prohibitory law we used to receive orders, as the French do now, and that therefore they are precisely now in the advantageous situation that we were in before that was the case, because the large dealers in ribbons here go over regularly to St. Etienne and Lyons to order their goods in October and November for the next spring.

2155. Can you state, what proportion of the goods manufactured at Coventry, are made by order, and what are not made by order?—I have no idea; I should think that not one-hundredth part of what we make are ordered.

2156. You sometimes now do make goods to order?—We do.

2157. And you sometimes make them from French patterns, which are furnished you by the warehousemen?—Yes.

2158. When you used to make ribbons to order for those houses, did you make them from French patterns that they supplied you with, or did you furnish the patterns?—In both ways; I used to go over to Paris once or twice a year.

2159. The houses did not furnish you with the patterns, so as to lead you to suppose that they had any intention of importing a quantity of French ribbons to mix up with yours?—No; at the time I allude to, when they gave me the orders, they had no opportunity of having French ribbons, because the time I allude to was the months of October and November.

2160. In point of fact, would they have had any interest in bringing French goods in when they gave you that order, inasmuch as French goods would be dearer than yours?—I do not know whether they would be dearer, it depends upon what they paid for smuggling.

2161. When you find the houses you have been used to supply full of French goods, does not it put you under the power of those houses?—We dispose of our goods in the best manner we can, in other channels.

2162. Do you, in fact, sell your goods to the large houses?—Yes, we do sometimes. With the permission of the Committee, I will state a conversation at which I was present. Early in the month of December I had an interview with Lord Auckland,

Mr.
Richard S. Cox.

2 April,
1832.

Auckland, in company with Mr. Howell: in discussing different points about the silk trade, as to the relative quantity of French broad silks and English broad silks, of which the sales of his trade are composed, it was stated by Mr. Howell, with regard to broad silks, that 13-20ths were French and 7-20ths were English. My Lord Auckland said, "Then, Mr. Howell, how is the state of your ribbon trade?" Mr. Howell said, that English ribbons, as Mr. Cox knew to his cost, were perfectly out of the question with him: he said, "I told Lord Auckland that he had just been to Paris, having returned in the month of November, where he had had designs and patterns submitted to him of French ribbons, and he had ordered all his goods for the spring." I then asked Mr. Howell, "Supposing I had shown you, to prevent your journey to Paris, patterns and designs which you should have admitted were beautiful goods, would you have favoured me with your order in November to set my looms going, instead of going to Paris to order your goods?" he said, "Certainly not, it is impossible; because the fashion is not under my control; you know very well that every milliner, as well as ladies of rank, import the fashions, and that I could not sell any goods but what were in strict accordance to the French taste, and if I ordered goods of you, I might order things directly opposite to what the French introduce, and thereby, of course, not meet a sale for them."

2163. You stated, that broad silks were referred to in the conversation, and also the ribbon trade, did you understand Mr. Howell to speak generally?—With reference to the general ribbon trade, more particularly in the elegant and superior sort of ribbons, he said that the English ribbons were quite out of the question.

2164. Was there any other part of the ribbon trade to which that conversation referred also?—No other part.

2165. The Committee collect from what you said, that there are certain parts of the silk trade that you conceive it necessary to protect by prohibition, do you conceive that the whole of the silk trade requires that protection?—The fancy trade unquestionably does; I suppose that the plain trade might be protected by a certain duty, if that duty were collected.

2166. Do you believe that such a duty could be collected by the Government as would be a protection to the plain trade?—It is impossible for me to say what means they might take to prevent smuggling; and I think they might take much stronger means than have been taken at present.

2167. Suppose the cost of smuggling to be 25 per cent., could not a duty be collected to that amount?—Certainly.

2168. If, therefore, it should be manifest that the cost of manufacturing plain goods in other countries is not 25 per cent. less than ours, would they not be shut out by a duty to that amount?—Yes.

2169. Can you state the proportion of the quantity of silk you manufactured in 1825 or 1826, as compared with the quantity you manufactured in 1831?—I can state the proportion between 1824 and 1831; we have used more than double the amount of silk in 1831 than we used in 1824.

2170. Can you state the kind of goods you principally manufactured in 1824, and the changes that have taken place since then, and the proportion?—I think that in 1824, 1825, 1826 and 1827, we made pretty much the same quantity of gauze ribbons every year.

2171. Were you not the largest manufacturer of gauze ribbons?—I think there was a house or two that made a larger quantity, but not of the excellent quality we particularly directed our attention to.

2172. Can you state in 1824, what the proportion of the whole work of Coventry and its neighbourhood, the gauzes constituted?—I could not state it.

2173. Are there as many gauzes made now as there were then?—I should think very far short of it.

2174. Can you state the proportion that the gauzes now form to the whole manufacture?—No, it would be impossible.

2175. You stated that the gauzes predominated up to 1827, what change took place in 1828 and 1829?—We progressively discontinued making gauzes, we made less in 1828 and 1829 progressively, as the French seemed to import more.

2176. Do you confine your observations chiefly to gauzes?—To gauzes.

2177. Have you found them meet you in the plain satins also?—We never made much of plain satins, the French satins are certainly preferred in all the fashionable circles; I fancy there is no such thing as English satin used by the West-end milliners.

Mr.
Richard S. Cox.

2 April,
1832.

2178. Have not you known fashions produce great alteration, even before 1826?
—Yes.

2179. Have not you known articles entirely discontinued, and new articles introduced?—Certainly.

2180. Has the change been as great in any other article as what has taken place in the case of the gauzes?—Gauzes are still in fashion as much as ever.

2181. Might not the change of fashion in favour of the French have produced as great a change if the trade had not been open?—We do not lose the trade because the article is out of fashion, the quantity that is worn is immense, but the French have them to make instead of our having them to make.

2182. But the Coventry manufacture is out of fashion as compared with the French?—It is.

2183. Have not you known very considerable changes effected by fashion prior to the opening of the trade?—There is a change of fashion every season almost.

2184. Have not you known before 1826 individuals prepare patterns, and not succeed, when the season came, in selling them?—Yes, I have.

2185. How did you manage to get rid of the goods on those occasions, did you job them in some manner?—Certainly, but they were in small quantities in proportion to what we have to job now.

2186. What is your opinion with regard to the increase of silk ribbons generally in this country?—I should think ribbons were never more worn, I have seen a greater quantity of ribbon put upon an individual bonnet in 1826 and 1827 than now, but they are more universally worn about the country.

2187. Must not the speculations to provide for the season be in proportion to the increased demand?—I should think the speculation must be less when the market is large.

2188. Will not there be greater provision made for the market for the season?—Yes; but there would be less speculation attending it, it would be a natural provision for the trade when the trade was extended.

2189. Do you mean to say that fashion has not so much effect as it formerly had in the sale of ribbons?—I think it has more.

2190. If the market change according to the fashions, and there are more frequent changes of fashion, must not the speculations be more hazardous now than formerly?—Yes; but there is a large consuming part of the community that are not so much regulated by fashion.

2191. Are your observations, with respect to the risk run, confined to the higher branches of the business?—Yes.

2192. What proportion does that branch of trade bear to the whole trade in ribbons?—I should think it is one-third, because those higher branches of goods are sold in every principal city and large town in England, as well as in the Metropolis, and also in Ireland.

2193. Then your proposition of a prohibition would extend to that one-third of the trade which is of a superior kind?—My proposition would extend to all the goods; I do not see how you can draw a line to exclude a particular style of goods which is undefinable.

2194. You were understood to state, that the competition which you met with was in the higher branches, constituting about one-third of the whole ribbon trade; and that there were not such frequent changes of fashion in the other two-thirds of the trade, which goes among the mass of the community. Would you recommend, that the prohibition should extend also to those two-thirds of the trade, in which there are not those frequent changes of fashion?—I should recommend, that all French fancy ribbons, which at present supply this country, should be excluded, and that we should supply it ourselves.

2195. Then you would not recommend that prohibition because the French are cheaper than yours, but merely on account of the fashion?—Decidedly.

2196. In all fancy trades, does not a prudent man calculate upon the demand he is likely to have for his goods?—Yes.

2197. Does not a prudent man, in every branch of the trade, make the same calculation?—He ought to do.

2198. When you go to expense and trouble to produce new patterns to meet the spring trade, do you calculate upon the profit you get to enable you to make a sacrifice afterwards when the great bulk of the customers are to be supplied?—Yes; we endeavour to prepare for that sort of equalization which must take place occasionally.

2199. Is

Mr.
Richard S. Cox.

2 April,
1832.

2199. Is it not generally the case, that the advantage gained in the spring trade enables you to supply the great body of the people afterwards at a cheap rate?—We do not make any of our goods with that view. I think the lower classes of the people are supplied by persons in that particular line of trade; it does so happen, when we job our goods, that those goods may get into those channels, but we do not lay ourselves out for the supply of that description of trade.

2200. If there are at present a great many weavers out of employ, and they get very inadequate wages, can you point out any good end that can be answered by introducing foreign goods?—I know no good end certainly.

2201. Could you state what increase in the number of manufacturers, and the amount of capital there is now in the trade, as compared with what it was in 1826?—I cannot say, but I think there have been a number of them broke since 1826. I am not much acquainted with Coventry, but I know they broke by half a dozen at a time.

2202. Have there been more failures since the introduction of foreign goods than prior?—Certainly; my impression is, that there have been more failures in Coventry within the last three or four years than there were in the previous four years.

2203. From what you know of the state of trade generally, if the French goods were entirely shut out, do you think the competition of one English manufacturer with another, would not bring down the rates of profits as much as the other competition now does?—Any competition will bring down the profits; but when I hold in my hand a paper, stating at a moderate computation the number of pieces of French ribbons that have come into this country by one means or the other; and when I see that there have been 176,000 pieces of ribbons, I naturally infer that if we had had that quantity to make, that it would have taken up our great redundancy of labour, I do not think that we should have been in a state of competition.

2204. You admit that the use of ribbons has greatly increased; you admit also that the prices are much reduced, may not those two changes have led to the great consumption now which would not otherwise have taken place?—I may concede that in part, but we certainly could have made these 176,000 pieces in our looms, and they would have occupied 4,230 hands.

2205. Could you have persuaded the public to buy them if they had not been equally cheap and equally good?—I conceive the preference is owing to the taste, not the price.

2206. Do you conceive that the introduction of the French ribbons into England has had any material effect in compelling the British manufacturer to improve his article?—I think it has produced a great many worse goods than ever I saw made before; at least such is the fact, that there have been a larger quantity of inferior goods than I ever knew made.

2207. Have there not been also a quantity of superior goods than were ever made before?—I stated before, that we made more beautiful goods in the year 1822, 1823, 1824 and 1825, than we have ever made since, and I could mention other houses that did the same.

2208. It has been stated, that there has been a great increase in the use of ribbons; do you consider that that has been from the improved quality of the ribbon, or from the French fashion of using more ribbons?—I think we are very dependent upon the French fashion.

2209. Supposing that a fashion came from Paris, that French bonnets were trimmed with a very small quantity of ribbon, would not that have the effect of materially reducing the quantity of ribbons worn?—Certainly; I am afraid so.

[A pattern of fancy ribbon was shown to the Witness.]

2210. Before the French goods were introduced, could any thing like that be made in England?—It could not be made without a Jacquard.

2211. In consequence of the introduction of French patterns, have they not been much improved?—I do not call them an improvement; it is a change; and we are apt, in speaking of fashion, to think every change an improvement; but I mean to say, that in the years 1822, 1823, 1824 and 1825, we made far more beautiful goods in my opinion than what are made now.

2212. Is it not a fact, that there are more men of capital employed in the business now than formerly?—I think not.

2213. Are not the English goods cheaper than the French, supposing that the smuggler or the Custom House imposes 25 per cent. upon the importation?—I think it is very doubtful.

Mr.
Richard S. Cox.

2 April,
1832.

2214. Have you any doubt of it, except with respect to the gauzes?—Yes; I have heard it stated so by other manufacturers; that with regard to plain satins, the present duty is by no means a protection.

2215. If English goods are in reality cheaper than the French, when subject to that expense, would not [a competition here be more injurious than a competition with France?—I cannot conceive why it should be.

2216. The Committee have had two articles exhibited to them, the one English, the other French; the one at 36*s.* and the other at 48*s.*; now would not the English article, costing 36*s.* be a more formidable competitor than the French, at 48*s.*?—The English would produce them all at the same price, unless advantage might be given to those that have capital and skill.

2217. Would you rather have as an opponent a man whose article cost 48*s.* than one that cost 36*s.*?—I should not have him as an opponent at 48*s.*; because I think the people would buy the goods at 36*s.*

2218. Supposing that French goods were absolutely prohibited, and supposing the consumption of fancy goods to be the same as it now is, would not the speculations in England, on the part of manufacturers, be much larger than they now are?—I think they would, certainly; I think there would be a vast number of Jacquards set up, and a great deal of machinery.

2219. Would there not, at the end of the season, be a vast quantity of goods for sale in the way you have stated?—If the supply was greater than the demand, that must be the effect.

2220. Would not a man of good taste make a good profit upon his goods, while the people who did not possess good taste would have to dispose of their goods at a loss?—Unless there was a class of persons to buy those.

2221. Would not the quantity of goods jobbed be greater in that case than it is now?—I do not know that that would be the case.

2222. Supposing that those 176,000 pieces that now come from France were prohibited and thereby excluded, would not the increased demand, that would be created in this market, probably occasion more than 176,000 pieces to be made?—I think it is possible.

2223. Did you experience the ill effect of this competition, previous to 1826?—I am not aware that we did.

2224. Supposing such a competition to exist as has been referred to, and you were a loser by the rivalry of another manufacturer, still would it not be a British manufacturer who would be gaining by your loss?—Of course.

2225. At present, what you complain of is, that it is the foreign manufacturer that is gaining by your loss?—Unquestionably.

2226. And therefore in the case supposed, although the injury to the individual master might be as great as it is now, it is clear that the operative weaver must benefit?—Of course.

2227. Could the rate of wages be raised unless there was additional employment for all the persons now out of employment?—Wages always follow the demand.

2228. Would it not be the effect of such a competition as has been supposed, at least to keep up, if not to raise the wages of the operatives?—I think it is likely that it would; unless there were a great redundancy of goods produced, it would not lessen the wages.

2229. When you say that it would better the manufacturer, do you mean the weaver?—Yes.

2230. Do you know that the goods imported from France are paid for by British labour, although not by weavers?—I am not aware that it is the case; I do not know what British labour goes to France.

2231. How do you suppose the silk is paid for that is produced from France?—I know how a great deal of it is paid for, because there are bills drawn upon London and paid here.

2232. How is it paid for?—I do not know how it is paid for.

2233. What are those bills drawn for?—For a debt owing in this country.

2234. Are you aware that we can pay for them in no other way but by British labour?—I am sure we do pay the French in British labour, because the French receive a great deal of gold and bullion.

2235. Does not the jobbing of ribbons depend upon there being more in the market than is required?—If they were of a kind that are wanted, there might not be too many, but the jobs arise principally from their being goods unsuited to the market.

2236. Why

Mr.
Richard S. Cox.

2 April,
1832.

2236. Why do you not make those gauze ribbons now?—Because we have no chance in the market with French gauzes, they are produced cheaper in the market than ours are after paying 50 per cent. duty.

2237. Then it is not a mere question of taste alone?—No; when you come to mere coloured striped gauzes, it is an every day article.

2238. You stated that you have almost discontinued to manufacture gauze ribbons, do you not know that although you have declined in the manufacture of gauze ribbons, others have increased very much?—I do not know that, but it is possible.

2239. If the French can manufacture cheaper than we can, and pay a duty of 50 per cent., would any one manufacture gauzes in England?—I would not.

2240. If therefore persons are manufacturing gauzes, and increasing the manufacture of gauze ribbons, can it be true that the French are underselling them?—It may be true, but the fact is, that we make a good quality, and perhaps the question may allude to inferior gauzes that we could not sell.

2241. Have you seen any English gauze ribbons of such a description as you could neither make nor sell if you had made them?—Yes; and if they were generally made, they would ruin the trade.

2242. Does not every manufacturer make what he thinks he can sell best?—No doubt about it.

2243. Do you mean to say that nobody is to make any thing but the best of each article?—What I mean to say is, that if the ribbons made in this country were generally of that inferior quality, the French would soon supply the whole country, because the English would get so bad a character that nobody would buy the English at all.

2244. Will not the price of the article correspond with its quality?—It ought to do.

2245. May not those inferior kinds of goods suit the American, or a foreign market?—Yes.

2246. Do you mean to say, that it may not be equally advantageous to the country to manufacture that inferior class of goods for exportation?—Yes; but I am not aware that there is any exportation.

2247. Are you not aware that this low quality of ribbons have been exported lately?—Not in any quantity; I know that we have exported 500*l.* worth, and I think we received 240*l.* for them; but in what I said just now, I was speaking of the home trade; it had no reference to foreign trade.

2248. You have stated, that you used in 1831 double the quantity of silk that you used in 1824, what description of silk was it you used in this year?—It was Italian silk (Brussa) and China, and different kinds of silk.

2249. What was the proportion of Italian, and of the other kinds of silk?—I think the proportion of Italian would be about one-half.

2250. What proportion of the Italian was thrown in Italy, and what proportion was thrown in England?—One-fifth of the warp was thrown in Italy, one-tenth of the gross consumption of silk.

2251. Then about half of your whole warp is Italian thrown?—Half of the silk we consume is warp, and half of it shute; of the warp, one-fifth is foreign and four fifths is English thrown; it is therefore one-tenth of the whole, and one-fifth of the warp. The whole of the shute is British thrown; therefore nine-tenths of the whole is British thrown silk.

2252. What other descriptions of silk are used for warps in Coventry?—Of China silks, we use some which are thrown in England, China organzines no other warps.

2253. What are the principal sorts of shute used in Coventry?—China and Brussa.

2254. Is there any Bengal used?—Very little.

2255. Is there any Italian shute used?—Very little, if any.

2256. Then are the Committee to collect, that upon a very large proportion of the silk used at Coventry, that is, upon all the China, the Bengal and the Brussa silk, the duty upon foreign thrown silk can have no effect whatever, inasmuch as they pay none?—Certainly.

2257. Therefore it is paid upon one-tenth alone of the silk used in the making ribbons?—As far as our house is concerned.

2258. What is your opinion with regard to the comparative quality of the foreign thrown silk and the English thrown silk?—The best answer I can give is to refer to the preference we give to the English thrown; I believe in one of those years we did not use an ounce of foreign thrown silk, and never above one-tenth.

Mr.
Richard S. Cox.

2 April,
1832.

2259. Of the different sorts that are thrown in this country, which do you conceive to be the best?—The Italian is the superior silk; but we can get Chinese and Bengal as well thrown as the Italian; but then they are an inferior silk.

2260. Which is the next best?—It depends upon what purpose they are to be applied to; the China organzine is exceedingly good for the purpose for which it is appropriated, but the China is a coarser silk; the Brussa is never organzine; it is all single.

2261. For what particular purposes is the best thrown silk used?—For the finer purposes.

2262. Do you think it desirable for the silk manufacturers of Great Britain to encourage the throwing of Italian silk in this country?—Unquestionably.

2263. Do you like the British thrown Italian silk better than the Italian thrown?—Certainly.

2264. Why do you buy Italian thrown silk when the British is better?—We never do, unless it happens that we cannot, at the moment, meet with British thrown that we approve of.

2265. Do you mean to say, that there has been any difficulty in obtaining British thrown silk for your own manufacture?—We confine ourselves to particular kinds of silk certain persons throw, and if the market happened to be bare of that, instead of speculating in silks that we are not acquainted with, we may buy foreign thrown.

2266. Do you mean to say, that the Italian raw silk may be thrown better by some persons than by others?—Certainly.

2267. What is the superior throwing owing to, is it owing to superior machinery?—I do not know by what means the perfection is obtained, but I know what the perfections are that I require; in the first place the cleaning of the silk is a material thing, and the sizing of the silk is material.

2268. Has there been much improvement in the quality of British thrown silk since 1823 or 1824?—No; I think for the last 15 years there has been pretty much the same average consumption in favour of the British; I believe there has been some patent obtained for throwing organzine.

2269. Are you aware that the very quality of the silk as imported now is better than it was formerly?—No.

2270. Supposing any alteration of the law were to cause the throwing of silk to be abandoned in this country, what effect do you think that would have upon the silk manufacturers?—I should think we should be completely in the hands of the Italian silk throwster, and the effect of that I can only collect from the consideration, that every body that has a monopoly of the market makes the best of the market that he can.

2271. Are there any kinds of silk thrown out of England that are superior to the British thrown silk?—I think not; there is a peculiar silk, the Piedmont, which we have nothing to do with, which I believe has some qualities which rather oblige those parties who make particular articles, to give a preference to that silk; but we never use it, it is bought by velvet makers, I believe, and other persons.

2272. Do not you think, that if you were entirely dependent upon the Italian for thrown silks, they might very often send you an inferior quality?—They would send us what they liked, and I should think charge us what they liked.

2273. Do not they send what they like to you now?—Yes; and if we do not like it we do not buy it.

2274. Are not you obliged to buy the raw now?—Yes; but I think they would keep the raw at home if they could sell the thrown here.

2275. Is there not a particular kind of silk called marabout, that you use?—Yes.

2276. By whom is that silk thrown?—It is thrown by a great many houses.

2277. Is there a fair competition in the price of that?—Yes, I think there is now; there used not to be, but there is now.

2278. When did that competition begin?—Perhaps two or three years ago.

2279. Before that, used there not to be a considerable difference in the price of that, as compared with marabout abroad?—A greater difference than there is now, but I am sure that there is considerable difference now.

2280. Is there not a considerable improvement in the marabout silk?—No, I think it has retrograded very much.

2281. Do you know where the marabout silk, now used in the manufacture of gauzes, comes from?—It is fine Italian white gum silk.

2282. You mentioned that you exported a small quantity of ribbons, what percentage

Mr.
Richard S. Cox.

2 April,
1832.

centage did you find the drawback to amount to on the cost of those goods?—We frequently make small shipments to our home colonies; the drawback averages as nearly as possible five per cent. upon the invoice, and allowing that there is a profit upon the invoice, it is of course something more upon the cost.

2283. Do you think that in this country as much trouble is taken to employ superior artists in designing patterns as there is in France?—I am not sure whether there is quite so much trouble taken, we have not quite the encouragement, they have so many markets to manufacture for; the English market, the German market, the American market, the Polish market, and others.

2284. Would it not be worth the application of capital here, as well as in France, to have superior artists, seeing that fashion governs the sale?—We have very good artists here.

2285. Are not the French patterns admitted to be superior for beauty and variety of colours, to those here?—I think the French employ artists rather of a superior class to ours.

2286. How do you account for that?—Because they are compensated by the large sales they obtain.

2287. Of late years has there been any great increase of designers in this country as compared with what there was before?—Yes, certainly.

2288. Does that enable you to come nearer the French?—No; when we make any designs, it is not with a view of getting nearer the French, but it is to make the best of our own ideas.

2289. Has there not been, since you have manufactured at Coventry, very little of that invention, and very few artists of that class?—Very few.

2290. May not that in some degree have contributed to prevent your being equal to the French in fashion and style?—I think we are equal; I think no Frenchman in Paris can show a better set of patterns than those I have produced.

2291. Must not the principal source of encouragement to artists be from their having the run of the market with a new pattern for a considerable time?—Yes, as I stated.

2292. And have you not been excluded from that of late?—Decidedly.

2293. Can you give the Committee any idea of the average value per pound of the silk used at Coventry?—I think it is about 18*s.* undyed thrown silk, warp and shute altogether.

2294. You have been asked some questions as to the fashion prevailing at present with respect to ribbons, and it has been supposed that that fashion has been derived from it being a fashion to wear them in France. During the war in the years 1813 and 1814, when what are called the large pearl ribbons were worn, do not you think that ribbons were quite as much worn as now?—There were a greater number of yards of ribbon worn then, but they were not so wide or so heavy; I think there were as many pieces of ribbon used.

2295. Has not the Jacquard loom been introduced since the period you allude to?—I think the first we had was in 1824.

2296. Are you not aware that in the Jacquard loom 12 pieces of twelve-penny figured gauze ribbons can be made at one time.—Yes; I have no doubt that can be done; but we do not make any thing so narrow.

2297. In the description of ribbons worn at that time, would the Jacquard looms have been of any use to you?—Very little; the French did not use the Jacquard at that time.

2298. Can you now make many more pieces by the use of the engine loom, as compared with the single hand machine formerly?—The engines were very much used before. I do not conceive if you exclude the Jacquard, that the engine looms are very considerably increased.

2299. Are you aware to what extent engine looms have been increased; how many more pieces, and how much greater breadths can be made now than were made then?—The breadths were not required then; if they had been, they could have been as easily made then as they are now.

2300. Are you aware, that in the best constructed looms a weaver can make at once 24 pieces of twopenny or fourpenny?—Yes.

2301. Could they do that formerly?—Yes; I have seen thirty twopennies made in 1816.

2302. Are you aware that they have increased to the extent of 40?—No; I never knew more than 30, but they are more commonly 20.

2303. Before the introduction of the Jacquard loom, how many figured satin ribbons

Mr.
Richard S. Cor.

2 April,
1832.

ribbons could you make at once?—The Jacquard does not apply to quantity; it is only applicable to particular descriptions; because we could make as many figured ribbons twenty years ago as we can now in the Jacquard loom.

2304. What is the greatest number you can make with a Jacquard machine?—I suppose you might put up a dozen shuttles, but there is no particular advantage in it, because the man's attention is taken off to his warps, which are constantly breaking threads.

2305. Has the application of the Jacquard engine enabled you to make a greater number of warps in the common engine loom than before?—Certainly not; it is for nothing but peculiar patterns.

2306. You have stated that the duty upon foreign thrown silks applies only to a small proportion of the trade of Coventry, do you think that any relief would be afforded by reducing that duty?—No material relief; the relief would be no further than to the extent of its respective quantity upon the whole consumption.

2307. Supposing the duty were taken off Italian silk, which is now 3s. 6d. a pound, how much would that reduce the price of that silk to the manufacturer?—It would depend upon the price the Italian put upon it; there are generally some limits of prices, and therefore I do not take it that we should benefit more than one-half at all events.

2308. You mean that the Italian would get 1s. 9d. more for the silk than he now gets, and you would get it 1s. 9d. cheaper?—Yes.

2309. If the price were reduced to you 1s. 9d., would not that occasion an equal reduction in the English thrown Italian?—I do not know that; I should think the Italian would keep his raw silks at home and throw them himself.

2310. If you got the Italian 1s. 9d. cheaper, would you not get the English 1s. 9d. cheaper?—If we had it in the market; but I take it that we should be in the Italian's hands.

2311. Do you consider that the price of the English thrown silk depends upon the price of the Italian, or that the price of Italian depends upon the price of English?—I think that the price of English thrown always depends very much upon what the English throwster gives for the raw silks.

2312. If the thrown silk were entirely in the hands of the Italian, is not there the probability that he would increase his price, and probably to a greater extent than the duty now paid?—That is a matter of opinion; nothing would surprise me in that respect if we were in their hands.

2313. Might not it have the effect of throwing many of the throwsters here out of employment?—I should think so.

2314. Must not the price of Italian thrown silk depend upon the price of the Italian raw?—I think they are very frequently at variance; we can frequently buy Italian thrown silk cheaper than we can buy the Italian raw and throw it, and sometimes *vice versa*.

2315. Is not the price then dependent on the British thrown silk?—I think the Italian merchant, in selling his thrown silks, will not attempt to undersell the English silk throwster; he will get the best price he can.

2316. As he ought to have the same profit upon the Italian thrown as upon the Italian raw, how do you account for the difference of price between the Italian raw and the Italian thrown?—I do not know how to account for that; I believe there is a small duty put by the Italians upon the Italian raw silks.

2317. Are you not aware that there is a duty in Italy of 10d. upon raw, and of 5d. upon Italian thrown exported?—I was not aware that there was a duty of 5d. upon Italian thrown silk; I thought there was a bounty upon the thrown.

2318. To what do you attribute the difference of price which you stated to exist in the market occasionally, between raw and thrown Italian?—I fancy the scarcity of one or the other.

2319. Is it not the policy of the Italian government to encourage the exportation of their organzine silk, and to discourage the exportation of the raw?—Certainly it must be the policy of every state to send out the manufactured article instead of the raw.

2320. Did you ever manufacture broad silk goods?—Yes.

2321. When was that?—We manufactured broad silks from about the year 1814 to about 1827.

2322. What description of goods were they?—All fancy goods.

2323. How many looms did you employ?—From 60 to 100.

2324. Where was the manufacture carried on?—At Spitalfields.

2325. Have

Mr.
Richard S. Cox.

2 April,
1832.

2325. Have the answers you have given, respecting the ribbon branch, had any reference to broad silk?—Certainly not.

2326. What was the amount of wages you paid for those goods?—We paid from 60*l.* to 100*l.* a week, in proportion to the number of looms we had going; about a pound upon each loom.

2327. Have you discontinued to make those goods?—Yes, in 1827.

2328. For what reason?—We found our goods entirely superseded by the French fancy goods; I prepared to discontinue it in 1826.

2329. Do you consider that you were at all interfered with by Manchester, or any other branch of manufacture in England?—Certainly not.

2330. Did they, at that time, make that description of goods at Manchester?—No.

2331. Do they make that description of goods now?—No.

2332. When you say broad goods, what kind of goods do you mean?—A great many figured terries and figured velvets, and a variety of figured broad goods, figured satins and figured lutestrings.

2333. Are the goods you so made now imported from France?—Not of that kind; they change every season.

2334. In the shutes you used for those goods, did the gum remain, or was it boiled out?—Boiled out.

2335. That is to say, the public had not an artificial article?—No; they had twelve ounces instead of sixteen.

2336. Are not the articles that come from France, which superseded yours, made with the gum in?—Most of the French goods are made with the gum in.

2337. They therefore intrinsically are not so good as those you made at the time you speak of?—Certainly not.

2338. You are understood to say that they have been superseded by goods of a similar kind?—These kind of goods change almost every season.

2339. Is that the change of fashion and not of fabric?—Yes, of both.

2340. Is it not the fact, that the principal goods imported from France in that branch of the trade, are crapes?—I do not know, I have so lost sight of the broad silk trade, that I know very little about it.

2341. Are there not a great many other fancy articles imported from France besides crapes?—Yes, figured broad silks; and every season there is something constantly coming in new, and in very large quantities.

2342. Supposing there were a demand for figured broad silks, would they not probably be made at Manchester?—I should think not; the class I allude to are so dependent upon fashion, that the Manchester manufacturer would have no idea what goods to make, because they are only required at a particular season.

2343. Supposing the French goods were shut out by a prohibition, do not you suppose that those manufactures would take place at Manchester?—I think it is very likely.

2344. Have that description of goods ever been made at Manchester?—Never.

2345. Have you been in the habit of seeing the goods made at Manchester?—At that time I knew more about them than I do now, and at that time there was nothing of that kind made at Manchester.

2346. You were asked whether formerly the practice was not to manufacture goods without gum, do you not know that the practice of supleing is carried to a much greater extent than it was before?—Yes, it was unknown till the French taught us.

2347. To what extent will the dyers weight goods?—I cannot state; we never exceed the weight of the silk in our suples, we do it to the extent of fourteen and a half.

2348. Do the French do more than that?—I am told that the French do it to the extent of 20; I ought to state that the suple only applies to the shute.

2349. Has not the importation of French silks increased very much lately?—Yes.

2350. Do you happen to know that 30 cases were imported on Thursday last?—I am not aware.

2351. Is not this a time of year when the importation of the French takes place to a large extent?—It is.

2352. Were not the silk trade very anxious in a negociation that took place with the Board of Trade, to make regulations to prevent smuggling?—Certainly they were, they suggested means to prevent it by stamping, &c.

Mercurii, 4^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. Thomas Sawyer, called in; and Examined.

Mr.
Thomas Sawyer.

4 April,
1832.

2353. WHERE do you reside?—In Aldermanbury.

2354. What are you?—A ribbon manufacturer at Coventry.

2355. Do you employ any travellers to sell goods for you in the country?—Yes, I do.

2356. Do you find French ribbons to be in such demand in the country as to injure your own manufacture?—Very materially; there is scarcely a shop they go into, though the ground they go over is very extensive, but what they are opposed in every place by French goods; when they come to show their patterns, they are objected to, because they say they are not to our taste, we cannot buy them; in consequence of that, it has made me reduce my looms very considerably; I had for a long time a particular objection to dealing in any thing that was French, but I was persuaded by my travellers to get them, or that I should sell very few goods of the fancy kind, and at last I yielded to their desires; and recently I bought a large quantity of French ribbons, and I find that they sell in preference to my own; indeed I have ordered the whole of my looms almost to be taken down, except upon two articles which the French do not send us, those are some few black and white striped gauzes, and the rest I have discharged.

2357. Then you do not employ so many hands in the fancy trade as formerly?—I do not.

2358. Were you ever connected with machinery in the manufacture of ribbons?—Yes, unfortunately I was.

2359. When did you cease to be the owner of machinery?—At Christmas 1829; we had looms upon an improved principle, bar looms, and to them were attached the Jacquard; but I found it would not answer our purpose, we could not produce goods such as would sell; I made a proposition to my partner that I would rather get rid of them, to which he assented, and with that, I had other machinery which I was very desirous of getting rid of, and he took the whole, and we dissolved partnership, and I have rejoiced ever since that I got rid of them, and I have put up no machinery since.

2360. Did you sell your machinery to him at a sacrifice?—Yes, I did.

2361. Is he using that machinery now?—He has been using it hitherto, but to what good purpose I cannot say; all I know is, that he would be glad to get rid of it if he could, even at a sacrifice.

2362. In point of fact you have not found any benefit from the use of machinery?—I have not.

2363. Have you been in any other way connected with machinery?—In a throwing mill.

2364. Are you now a throwster?—I am not, I ceased to be a throwster at the same time that I gave up the looms, for the same cause that they were doing no good.

2365. Did you sell that at a sacrifice?—They all went in one lot.

2366. Did the person that took them succeed in benefiting himself?—I am afraid not, but I cannot speak positively as to that.

2367. Are you not an assignee under the estate of Thompson & Co. at Stratford-le-Bow?—Yes.

2368. Had they any machinery or mills?—I was co-trustee with Mr. Pearce, of the house of Halling, Pearce & Stone, and among the rest of the assets we had to pay the creditors, was a silk mill in most excellent condition; some of it I believe had not been used at all.

2369. Have you sold the mill property?—I have not sold it; I put it up to auction at one time to ascertain the value, and I think there was a bid of 1,000*l*.

2370. Did the offer include the machinery?—The whole of the premises altogether; it was a rental of 40*l*. a year, the whole in complete order, and it stands upon half an acre of ground altogether; and since that, I have repeatedly offered it for sale, and even no later than this morning I offered it for 600*l*. and I could not get it.

2371. Do

Mr.
Thomas Sawyer.

4 April,
1832.

2371. Do you know what it cost?—Six thousand four hundred pounds or six thousand five hundred pounds.

2372. When was it erected?—About 1824 or 1825.

2373. You have stated that you found your goods objected to on the ground of taste, was there any objection also on the ground of price?—I bought them at lower prices than what I manufactured for.

2374. Did you find the French goods you bought, cheaper than those you manufacture, or were they dearer?—In some instances they were cheaper.

2375. What particular kind of French goods did you buy?—Gauzes.

2376. What kind of gauzes?—Rich figured gauzes, such gauzes as I never made; I made the small figured gauzes.

2377. Therefore you found a taste for richer gauzes than you had been in the habit of making, and that therefore you could not sell yours?—Yes.

2378. What kind of goods had you been in the habit of making whilst you was a manufacturer, can you state what proportion of gauzes you made?—I cannot say that.

2379. Where was the a-la-bar mill you had?—At Coggeshall, in Essex.

2380. Did you reside there?—No, in London.

2381. Was it erected by a French artist?—Yes.

2382. Do you mean to say that you had a manufactory at Coventry, and another at Coggeshall?—Yes.

2383. Who superintended the manufactory at Coggeshall?—We had a Frenchman to assist the latter part of the time.

2384. What kind of goods did you make at Coggeshall?—We have attempted to make satins, but we did not succeed with them.

2385. How long did you make the attempt?—I cannot say exactly how long.

2386. Was the Frenchman that superintended it a partner in the business?—He was not.

2387. Had you no other superintendent than that Frenchman?—We had assistants, we looked upon him as the principal man to direct that part of the business.

2388. At Coventry, what machinery had you?—We had no machinery, it was given out to the weavers in common; when I say we had none, we had a few looms, but very trifling in comparison.

2389. Do you know whether it is a practice generally at Coventry for people to superintend their own machinery, or to employ others to do it?—I can speak as to our house for the last 16 or 17 years, it has been superintended by a servant; my former partner originally resided there, but when he died, it was superintended by a servant.

2390. Can you state what proportion of gauzes, and what proportion of plain goods, you made at Coventry?—No, I cannot.

2391. Do you know whether it is the practice at Manchester, and other places where machinery is used, for the parties interested to superintend the manufactory themselves, or employ agents?—I cannot answer that question.

2392. At any rate you did not superintend your own machinery?—I supplied it with silk, and that was all I did.

2393. If a manufacturer leaves the management of his business entirely to a servant, do you think any business is likely to succeed in England in that way now?—I know that it has succeeded.

2394. You mean formerly?—Yes.

2395. Was there as much competition formerly as there is now?—I have always found competition in the trade, and I do not know that there is any great difference; the greatest competitor we have as to fancy ribbons, is the foreigner.

2396. You do not consider that there is competition amongst the British?—Yes I do, and there always was such a competition as would keep down prices; I do not think it possible that a monopoly could be formed.

2397. What is the competition you fear from France?—The competition I fear is what I see, which is the French goods coming in whether they are smuggled or not; I consider that as long as they come in, my trade will be destroyed.

2398. Were you employed in figured gauzes?—Very trifling.

2399. Did your travellers state to you, that the French goods were preferred in consequence of superior patterns, or on what ground?—I cannot state that they stated precisely what it was, but the fact was, that they did not buy ours, but bought the French.

678.

Q 3

2400. Do

Mr.
Thomas Sayer.

4 April,
1832.

2400. Do you employ any artists for making new patterns?—Having no machinery of the Jacquard description, I did not think it was necessary.

2401. Have you never employed the Jacquard machine?—I employed the Jacquard machine while at Coggeshall, but I found it answer so badly that I was glad to get rid of it.

2402. What were the advantages you expected by substituting the a-la-bar loom for the engine looms?—I expected that we should produce them quicker and better, but we failed in that.

2403. Had you any evidence before, or have you been informed what had been the result of the trial of that loom anywhere else?—No, it was an experiment.

2404. Did you make this experiment without ascertaining what was the result of any prior experiment any where else?—Being given to understand that the Swiss use the same branch of machinery, I had a mind to attempt it.

2405. Had the person that superintended it ever been in Switzerland to see how that loom was employed?—I believe not.

2406. Was any person employed upon that loom in Coggeshall who had been in Switzerland to see it in operation?—I believe not.

2407. Who was the person that made it?—He was a Frenchman.

2408. Had he been in Switzerland?—I am not aware that he had.

2409. You stated that you parted with your machinery on that account, and that you found no advantage from any machinery?—Not there.

2410. Did you find advantage from machinery any where else?—Only from the common looms I employed in the neighbourhood of Coventry, and I have no other machinery but that.

2411. Is there not a great deal of very excellent work done by the hand looms?—A great deal.

2412. Was not your house connected with a very old house in the trade?—It was.

2413. Did not you use to do a great deal of country business?—Our business mainly depended on the country trade.

2414. When you used to pursue the country trade, yours being an established house, did you find that you could get a fair and ready sale for your goods?—Generally.

2415. When you say that the competition at home kept down prices, do you mean to say that it gave the public the security of having the articles on reasonable terms, or did you mean to say that it affected you so, that yours became a losing trade?—In order to keep up our trade we sold our goods lower.

2416. Do not you think that that sort of competition at home gives a fair security to the public?—Certainly.

2417. Without being injurious to the manufacturer?—I think the competition amongst ourselves is sufficiently great to keep the prices down.

2418. And at the same time to allow you a scope to get a fair profit?—Certainly.

2419. And when you sent your travellers about for orders, you found the introduction of foreign goods to interfere so as to obstruct your business?—Very greatly, so much so, that even last autumn I had manufactured a quantity of fancy goods, and I thought they were such things that I might fairly anticipate would be sold in the course of the autumn at a fair remunerating profit; I sold a portion of them, and the rest I have got lying by me now.

2420. Do not you conceive that there is a prejudice in favour of all foreign articles, particularly French, and that people are often guided more by fashion and caprice than price?—From the quantity that appears to be worn, it appears to me evidently so.

2421. If you could make goods here equally good and equally cheap, would not this prejudice still be very injurious to you?—It certainly would be injurious.

2422. Do you conceive also, that when the competition keeps down prices, the letting in a quantity of foreign goods also, and with this prejudice in favour of foreign goods, must be very detrimental?—I consider that where the supply exceeds the demand, we have not the least occasion for any foreign goods to be brought in; and I think our supply is equal to the demand.

2423. Will not too large a quantity thrown into the market, whether home goods or foreign goods, be injurious?—I conceive so.

2424. Do not you conceive that there could be more goods manufactured than there

Mr.
Thomas Sawyer.

4 April,
1832.

there could be possibly a demand for?—I know I could manufacture a great many more if I had a protection, and I believe that we could supply the whole demand.

2425. Have not the markets generally been overloaded for some time past?—I believe they have.

2426. Has not the fancy trade always been somewhat speculative; have not those who provide the best pattern been the most successful?—I consider it has always been somewhat speculative, but rendered ten times more so by the introduction of the French.

2427. Do you consider that the French can make better goods than we?—In certain fancy goods I think they can.

2428. In what does the superiority consist?—As far as my knowledge goes, I think the marabout that they use is better, and I think they have a greater encouragement for fancy than we have, and a greater protection than we have.

2429. Did you make any effort to rival them by means of artists to design patterns as they do in the French?—I had no opportunity of doing so.

2430. You say you now buy French goods, do you know what similar goods would cost to make them in this country?—I cannot say exactly, because I have not the machinery.

2431. Is the price such as to induce you not to make the attempt?—I dare not make the attempt.

2432. When the last reduction of duties took place, did not you understand that it was done to put a stop to the smuggling by coming down to the smuggler's price?—I understood that that was the intention.

2433. Has it had any such effect?—I cannot find that it has; I know nothing about smuggling, either direct or indirect, all that I know is, that goods are laid before me, and if I can purchase them, and make a profit upon them, I do so, and that is all I have to do with them.

2434. Have you ever seen the power loom at work?—I have; but it did not answer the purpose.

2435. You are now a manufacturer, making simple works in the old manner?—Yes.

2436. Do you use the Italian thrown silk or the English thrown silk?—I use both.

2437. Which do you consider the best?—That depends upon the purposes I require it for.

2438. Do you use a larger proportion of English thrown or foreign thrown?—The English thrown.

2439. Is not a large proportion of the silk used at Coventry, China, Bengal and Brussa?—Yes.

2440. Are those imported in a thrown state?—No.

2441. Has the duty on foreign thrown silk any effect whatever upon a larger proportion of the silk used at Coventry, namely, upon all the China, Brussa and Bengal?—It has no effect upon that.

2442. Do you think it desirable for the silk manufactory of Great Britain, to encourage the throwing of Italian silk in this country?—Yes, I do.

2443. You did not then reside in Coventry?—No.

2444. Have you looked accurately into the proportion of silk used there?—I have not minutely.

2445. In what way does the encouragement of the throwster here benefit the manufacturer?—I could not get Italian thrown that would answer for some purposes, and then I must resort to the British.

Mr. William Merry, called in; and Examined.

2446. YOU are of the firm of Merry & Brown?—Yes.

2447. Where do you reside?—At 26, Wood-street, Cheapside.

2448. Have you a manufactory at Coventry?—We have.

2449. Have you been extensively engaged in the fancy branch of the ribbon trade?—We have for fourteen years.

2450. Through what channel did you formerly dispose of your goods?—To the fashionable retailers at the West end of the Town and the City.

2451. Do they continue to deal with you as extensively as in former years?—No, they do not; we have entirely lost the retail trade, and I have taken three

Mr.
William Merry.

Mr.
William Merry.

4 April,
1832.

accounts out of our ledger to show the comparison from the year 1826 to the year 1831.

[The Witness delivered in the same, which was read as follows:]

No. 1.—RETAIL ACCOUNT.

1826.	1827.	1828.	1829.	1830.	1831.
£. s. d.	£. s. d.	£. s. d.	£. s. d.	£. s. d.	£. s. d.

No. 3.—WHOLESALE ACCOUNT.

1,244 12 -	755 17 -	247 17 -	137 16 -	7 18 -	4 6 -
------------	----------	----------	----------	--------	-------

2452. Are the houses from which those purchases are made still in existence?—They are.

2453. Are they in the habit of purchasing goods now to the same extent, although they do not purchase them of you?—Yes; and they have every disposition to purchase them of us.

2454. Have you reason to think, that the parties alluded to in that paper do now buy English manufactured ribbons from other parties?—Certainly not. I believe they are supplied by the French.

2455. Have the parties alluded to given you any reason for withdrawing their custom?—They have very frequently, when I called upon them for orders, said, they could not buy a piece of my goods for their demand was for French; and I know that at least nine-tenths of the stocks at the West end of the Town are French; I have looked through several of them, and I believe that to be the fact.

2456. You allude particularly to fancy French ribbons?—Yes; we are in the fancy trade entirely.

2457. Have you particularly directed your attention to the improved machinery?—We have.

2458. At what time prior to the introduction of French goods?—In the year 1820 we began to make our improved looms; in fact we contested a patent; an action was brought against us for introducing a new invention, which was brought forward by a man named Thomson. The plaintiff proceeded against a Mr. Goddard, and afterwards against us, and he was nonsuited.

2459. What description of ribbons were there made in 1826?—We were making gauzes in 1825 and 1826.

2460. Were they rich cut gauzes?—Yes.

2461. Do you continue to make them?—No; we have not a loom going.

2462. For what reason did you discontinue the making of those ribbons?—We found the French interfere so much with us, that we were obliged to abandon them altogether; we could not get material to make them as good as the French.

2463. When you say, that you could not get material so good as the French, do you mean as to quality?—As to quality.

2464. Do you know any thing of the price in France?—No.

2465. Have you any reason to think, from the price at which the French ribbons come here, that they must produce the commodity at a lower price than you do?—I have.

2466. What do you now make?—We make lutestring ribbons.

2467. Do the French interfere with you in that branch?—Yes; because they introduce gauzes, which are more fashionable at the West end of the Town, and the moment their goods are introduced our goods are laid aside.

2468. Have you sustained any loss from that circumstance?—I have.

2469. When did you first use the Jacquard engine?—In February 1825. It made

Mr.
William Merry.

4 April,
1832.

made the figures much larger, and in fact it cut to a thread, which was very superior work to that made before by the old description of looms.

2470. Do you happen to know when the Jacquard loom was first introduced into England?—I think it was introduced in the year 1820 by a Mr. Wilson; he obtained a patent for the engine in this country.

2471. You have stated that the Jacquard loom enabled you to make figures of a larger size, was that the only advantage?—Yes; and cutting the figures finer.

2472. Could you make handsome goods before that time?—Yes.

2473. You have shown patterns of lutestring figured ribbons to the Committee, when did you make those patterns?—In the spring of 1831.

2474. Did they afford you a profit?—They did in the spring, and in consequence of our being successful in the spring we were induced to continue making those goods in the autumn; we have now seventy looms going, and the expenses of the alterations are so considerable that it would not answer our purposes to do so, we went on making the same patterns in autumn colours; and those goods we were compelled, in consequence of the French introducing satin figures, to job off at ruinous prices; and at the end of the year, instead of gaining money by our trade we were considerable losers.

2475. And you think that if those French goods had not been introduced you would have sold those goods at a profit?—Yes.

2476. Did you sustain a serious loss?—A very serious loss.

2477. How much per cent. do you think you lost by them?—Forty-five per cent.

2478. What prevented your immediately altering your looms and making satin figures?—The expense of the alteration is too considerable; we consider that the looms will cost from 10*l.* to 12*l.* annually; if we were to go to the expense of altering every season it would entirely destroy the profit, and we are obliged to give up the trade.

2479. Do you mean to say that you intend to discontinue the manufacture?—We are going to dissolve partnership, and to break up our establishment entirely.

2480. Have you not found any sale this spring?—Yes; we were equally fortunate this season, but I am sorry to say that we shall be compelled to stop every loom by the 1st of May.

2481. To whom have you sold those ribbons which you have made for this spring?—We have sold them to warehousemen in town.

2482. Do you know what they do with them?—They sell them to the country houses chiefly.

2483. Does what you have said apply to the plain lutestring as well as to the figured?—No, we confine ourselves entirely to the fancy trade, and principally to the Jacquard machinery.

2484. The ribbons you have made this spring you have sold to the large wholesale houses; do you think it likely that you could have sold them to the houses at the West end of the Town if the French goods had not been introduced?—Certainly.

2485. Do not your connection admire them, and think them very pretty?—Yes, they do; in fact we have been very fortunate in making our patterns.

2486. Therefore when you speak of breaking your establishment up, it is not in consequence of having failed this spring, but in the apprehension of your failing hereafter?—It is in consequence of having failed these last three years, although we have succeeded in the spring, at the end of the year we have lost money.

2487. Is not the preparation of fancy goods confined to the spring, and do not prudent manufacturers generally stop in May?—Not with machinery like ours, they do with single hand goods.

2488. Is it not the fact that manufacturers do prepare in May for the autumn?—Not quite so early as May. To show the trouble and expense we are obliged to go to in producing the patterns, I will show a draft of a Jacquard pattern before it is made [*producing the same.*]

2489. How many cards are applied to this pattern?—Eight hundred and sixteen cards. The draft writing and stamping of this pattern cost 10*l.*

2490. Have you been in France to see how the figures are got up there?—I have been to France, but I never saw a loom put up there.

2491. Are not the French put to the same expense?—Yes, but they get positive orders for the goods which we do not, they provide patterns and show them to the buyers, and they generally get orders upon those patterns.

678.

R

2492. Cannot

Mr.
William Merry.

4 April,
1832.

2492. Cannot you show patterns to the buyers also?—We have tried it, but we did not succeed.

2493. Do you fail in taste?—I think not, when we have sold all our goods, although made on speculation.

2494. Is it on account of price then that you fail?—No.

2495. What do you consider to be the difference in price between the French and yours?—I do not think price has any thing to do with the fancy articles.

2496. Will you state what is the reason why the French is preferred in your opinion?—I think prejudice in a great measure, for I do maintain that if we had prohibition we could make as good goods in this country as the French can. I think if we had encouragement by protection, the manufacturers in this country are disposed to go to every expense they can to produce quite as good goods as the French.

2497. What do you mean by the word protection?—I mean prohibition; we have invested a great deal of money in machinery; we have been going on the last three years at considerable loss, so much so that we are now going to give up the trade.

2498. Do you find that the French have more beautiful patterns than you have, or that they change them oftener than you do?—I do not think they change them so often, they have a foreign market, and they continue their patterns much longer than we do.

2499. Do you know any thing of what foreign markets they have?—I believe they send their goods to the American market, but I am not acquainted with those things.

2500. If your goods are equally good, why should you not get hold of the American market as well as they?—I have tried the American market and other markets, and we have goods out now at several places, but we do not get 10 s. in the pound from our foreign trade.

2501. Have the Americans also had some prejudice in favour of the French?—I cannot say.

2502. Do not you believe that the French goods can be sold in America cheaper than yours?—I do believe the satins are much cheaper.

2503. Do not you require a 30 per cent. duty as a protection in this country?—Certainly.

2504. Then the answers you have given have reference to a duty of 35 or 40 per cent. being added to the French articles when brought here?—Yes; but I do not think that price is an object, it is the fashion.

2505. After paying the duty on the French goods, such as you manufacture, are they dearer or cheaper than yours?—I think they are higher in price.

2506. What is the duty upon French figured satins?—I believe it is 15 s. per pound weight.

2507. Do you know what it is per cent.?—About 16 or 20 per cent.

2508. Do you find that you can make them at as low a price as the Frenchman, when he pays a duty of 20 per cent.?—No; we require more than 20 per cent.

2509. Are you undersold by the French in this market?—I cannot say; the French are not introducing the article similar to ours.

2510. Comparing French lustrings with similar goods made by yourself, which were the cheapest after the duty had been paid?—I think ours have been as low, but we could get no profit by them.

2511. Are they not in fact lower than the French?—In some instances they are, and in some not.

2512. For what would you sell a similar article to that?—[*A French pattern being shown to the Witness.*]—I could not say, unless I knew the weight of it; this would require at least a 1200 engine to be placed upon the loom.

2513. Do you believe that that is as good as you make them in England?—No, it is not so good.

2514. Therefore if they should be lower in price, that would be no surprising matter?—No.

2515. What is the value marked upon it?—Fifty-nine shillings and five-pence.

2516. What is the duty upon it?—Ten shillings.

2517. What do you suppose would be the price of a similar article to that, if made by you at Coventry?—I do not know.

2518. Could not you make a better article for less than 50 s.?—Not to get a living profit by it.

2519. Are

Mr.
William Merry.

4 April,
1832.

2519. Are not these better?—[*Some patterns being shown to the Witness.*]—They are.

2520. Could not you sell them for 50s.?—Yes, they are sold for less than that; if we could employ our looms through the year it would answer our purpose very well; but on account of the continued change of patterns that is required, this price does not give us a remunerating return for our labour.

2521. Are then the English cheaper than the French?—Yes; but the French are too wise to send in things of this sort; they send in gauzes that supersede our manufacture.

2522. Could not you in point of fact manufacture goods cheaper than the French, when the duty has been paid on French goods?—Those heavy goods; but if they are not fashionable, where is the use of manufacturing them.

2523. Taking goods of the same quality, are not the English goods cheaper than the French?—Those lustrings are cheaper than the French.

2524. Looking at those two goods before you, French and English, which are the cheapest after the duty is paid upon the French?—I consider the English the cheapest.

2525. You said you could not get marabout from France; supposing that silk could be obtained, could you make your articles as cheap and as well as the French?—No; we labour under very great disadvantages, our price of labour is much greater, although it is reduced to the lowest ebb that it is possible to be reduced.

2526. What is the proportion of labour in the manufacture of your gauzes, and what is the proportion of silk?—I cannot say, we have not made a piece of gauze this four years.

2527. If you had not the French fashions to interfere with you, could not you advantageously employ machinery which now you cannot employ?—We could, certainly.

2528. You mean to say that there is so much prejudice in point of fashion in favour of French goods, that whenever they come into this market they lead the fashions, and supersede the English even if better?—They do.

2529. Is not one advantage the French have, that they receive orders for the goods?—I believe they do.

2530. When those goods are ordered, and the houses have those stocks in hand, must not that prejudice you in the sale of your goods, and also in your profits?—Certainly.

2531. Does not every man engaged in the fancy trade look for an extra profit in the spring, in order to enable him to sustain a depreciation of price afterwards?—Yes.

2532. You are understood to say, that in consequence of this competition you are not able to do that?—We are not.

2533. You have been asked about exportation, have not the French the raw material themselves?—They have.

2534. If this country were to enter into competition with France in the export trade to America and other places, would it not naturally induce the French to lower their commodity, and would they not always have the means of superseding ours?—I believe they would.

2535. Would not the effect be, that they would lower the prices both of the raw material and other things?—Yes.

2536. Is there not always a natural prejudice amongst foreigners in favour of that particular country, which has the reputation of excelling in an article?—Generally there is.

2537. The French having the advantage of having received orders, do they not avoid a great deal of that risk that you are liable to?—They do.

2538. And when they have set their looms, cannot they do a great deal more work without being at the expense of changing the pattern?—Certainly, they can do it at less expense than we can.

2539. If the working of your looms would pay you, would not you do it immediately?—Yes; we have tried it for the last three years, and we have been unfortunate.

2540. Was not one of the reasons urged against prohibition in 1826, the prevention of smuggling?—Yes.

2541. Do you think the present system has answered that purpose, or has smuggling increased?—I believe that smuggling has increased very much since the duties were lowered.

Mr.
William Merry.

4 April,
1832.

2542. Another reason stated for the admission of French goods was, that it would expand our commerce; that it would open fresh channels, and give us a large import trade; has it had that effect?—Quite the reverse.

2543. It was stated in 1826, that the admission of French goods would have the effect, in less than six months, of raising the price of the wages of all the persons concerned in the silk trade 25 per cent.; has that been the case?—Wages have been very much depressed since 1826. I will state the money we have been paying for labour. In the years 1823, 1824 and 1825 we paid for labour 40,714 *l.*; the average, yearly, was 13,571 *l.* 6*s.* 8*d.*; the weekly payments, 261 *l.* for those three years. In 1829, 1830 and 1831, the payments were 20,411 *l.* 6*s.* 2*d.*; the average yearly payments were 6,803 *l.* 15*s.* and the weekly payments, 131 *l.*

2544. Was that always upon the same description of work?—Yes; in fancy goods principally.

2545. You have stated, that before the admission of French goods, you sold goods to a large extent to some of the fashionable houses in London, but that since that time those houses have almost entirely ceased to deal with you; are you on good terms with those houses, and are they willing to transact business with you if they could do it?—They are.

2546. Have they given you any reason why they could not do their former business with you?—Yes; they have told me, that the prejudice is so much in favour of French goods that they cannot buy my goods.

2547. Has there been any want of exertion, on your part, to employ designers and produce good patterns?—Not at all. I think we are now producing very good patterns at home.

2548. If there was proper encouragement, could you produce as many novelties, and employ as many designers as they do in France?—Yes; if we had prohibition, we should have encouragement.

2549. Was your business upon the increase before this measure passed?—Yes; progressively increasing.

2550. Do you imagine it would have continued to increase?—I have no doubt at all it would.

2551. Do you think now if there was a prohibition, you could have carried on your own concern profitably?—I have no doubt of it.

2552. Can you point out any new channel for the sale of goods than this admission of French goods has opened?—Not for the ribbon manufacture of this country; we have given it all to the French, and our people are now in a state of destitution.

2553. Is there sufficient capacity in this country to supply any quantity that might be required?—I think so.

2554. Then the favourite maxim, that wherever you displace labour it can be employed more profitably, does not hold in this place?—Certainly not.

2555. Has it not been thrown into the workhouse and upon the roads?—Yes, thrown into the workhouse.

2556. If there are manufacturers sufficient and labourers sufficient to supply any demand that may occur, must it not be very injurious to let in a quantity of foreign labour in competition with it?—Certainly it is.

2557. Have you any doubt that that is the cause of the present distress in the trade?—I am certain it is the cause; ribbons never were so fashionable as they are at the present moment.

2558. Are not silks generally used by ladies, as well as in waistcoats, and furniture, and a variety of articles?—They are.

2559. You have stated that the French have the material for the manufacture, do you know what proportion of silk the French import from Italy?—I do not.

2560. What opportunity have you had of knowing that there is considerable smuggling now?—From common report.

2561. Has any particular instance come to your knowledge in which you have known whether goods that have been imported have paid duty or been smuggled?—No; but I believe from the quantity of goods entered at the Custom House returns, and from the quantity of goods I see in every shop that I used to supply, that they must come through other channels than the regular channels.

2562. You have stated that the distress is very great at the present moment, have they not a fixed rate of wages, below which none of them will work at Coventry?—They have a regular list.

2563. Do you abide by that list?—Yes.

2564. Do

Mr.
William Merry.

4 April,
1832.

2564. Do you approve of a man remaining idle rather than working below that list?—Yes; I do not approve of any one running down the weavers to such a low price that they are obliged to apply to the parish.

2565. Of those who are now on the poor rates distressed, could any of them obtain work at a lower rate if there was no table of wages?—At the present moment I do not think they could be employed by the trade, not even at a lower rate of wages.

2566. You have stated that it would be difficult for you to continue your business in consequence of the great expense you are at more than the French?—In consequence of the great expense we are at in producing those patterns, we cannot go on.

2567. Can you state to the Committee any estimate of the amount you pay for material, the amount for labour, and the amount for machinery?—The annual expense of 70 looms that we now employ would be 700 *l.* a year.

2568. What value of goods will that turn out?—Seventy looms would not make more than 100 pieces a week, but they are not always employed, there is some time taken up in changing the patterns. The cottage pattern I have shown would take a man a month to prepare.

[Some patterns were shown to the Witness.]

2569. In a pattern of that description, can you state what the value of the material would be, and what would be the expense of the labour?—I think the labour is about one-third of the value.

2570. Does that include the dyeing?—No.

2571. What do you call the article now before you?—It is a forty-penny lute-string.

2572. What are the wages for making that article?—I think it is 14 *s.* a piece.

2573. How many pieces would a man make in a month?—He would make four lengths, that is, eight pieces in six weeks.

2574. What time does he lose in putting in those eight pieces?—Every warp that he makes he has to twist in his warps, which will take him at least a week to do; it would take him six weeks to work and put in his warps; I have taken the average of six of our weavers, and the earnings are 17 *s.* 11 $\frac{1}{2}$ *d.* a week, taking the whole year, and they have 2 *s.* or 2 *s.* 6 *d.* to pay for filling, out of that; but the men employed upon that work are the best artisans, and very stout men.

2575. Are there any other kinds that you pay more for?—Those are the only kinds of goods we make at present.

2576. Do you mean that that is the average, supposing them to work on one pattern only for six weeks, and to change the pattern every six weeks?—No, he does not change it every six weeks; if the pattern suits a single loom, he may change the pattern in half an hour, but there is a certain preparation necessary for that; we have other artisans employed in draft-drawing, stamping and reeding, and all that to prepare for the looms.

2577. Does the average you have stated apply to the case of the pattern being changed once in six weeks?—No; it is when the men are fully employed upon the loom.

2578. What may be the average number of pieces you make of a good pattern?—If we think it a good pattern we make 100, if it is not a good one we only make 40 or 50; sometimes, we do not make more than eight pieces.

2579. How many pieces of figured ribbons does a man with a Jacquard loom make at once?—These broad forty-penny ribbons are made in four shuttle looms; the thirty-penny are fours, fives and sixes, and the twenty-four are sixes. The sixteen-penny are tens and twelves.

2580. What are the respective quantities that a man can make, working in a single hand loom, with a Jacquard figure applied, and working at an engine loom?—It depends upon the pattern.

2581. Take the same pattern in each case?—He would make a piece and a half in the engine, and a piece in the single hand loom.

2582. What description of goods does that apply to?—I am speaking of forty-penny.

2583. How many of that forty-penny can he make in a engine loom at once?—Four.

2584. And he can only make one in a single hand loom?—Yes.

2585. How much more work can a man do making four pieces in an engine loom above what he can do making one in the single hand loom?—Half a piece.

678.

R 3

2586. How

Mr.
William Merry.

4 April,
1832.

2586. How much could he make of the twelve-penny in the engine loom, and how much in the single hand loom?—There are very few twelve-pennies made in the single hand loom, it would not answer the purpose.

2587. Do you consider the work turned out of the Jacquard looms equal to that in the single hand, or better?—The single hand looms cannot make those patterns unless they apply the Jacquard engine to the loom.

2588. Supposing they apply the Jacquard machine to the single hand loom, which is best?—The expense would be very considerable to apply the Jacquard engine to the single hand loom, and I think the engine would beat it.

2589. Generally speaking, is it your opinion, that the engine loom to which the Jacquard engine is applied, can do the work better than where the engine is applied to the single hand loom?—No; I think they can make very superior work in the single hand loom if they have an engine large enough; because a man in a single hand loom has not so much silk to attend to as in the Jacquard loom.

2590. Have you ever made any plain satins?—We have made them but we found it a bad trade, and gave them up; we have not made any for the last four or five years.

2591. You were understood to say, that the French receive orders for goods, and therefore have an advantage over you; do the English manufacturers never receive orders?—Very seldom indeed.

2592. Have they never received orders?—I mean to say that they do not at the present moment. I showed an English buyer those patterns, and he said they were very good things, but he could not order them; but he would see them when they were made, and therefore we were compelled to make a quantity of them, and take the risk ourselves.

2593. Did you use to receive orders before 1826?—We used to receive orders then, frequently.

2594. Do you never receive orders now?—Scarcely ever till we have produced the goods; we take the risk entirely upon ourselves.

2595. Will you undertake to say, that the practice differs now very materially from what it was before 1826, in respect to orders?—Yes, very materially, though there may be orders given now sometimes.

2596. Are you acquainted with the saw loom?—I never heard the term before.

2597. Have you ever been at Battersea?—I have seen the bar looms at Battersea.

2598. Have you ever been at Reading?—No.

2599. Do you know what machinery is used there?—I believe there are no ribbons made there except galloons and doubles.

2600. You have stated, that you manufactured gauzes formerly, but that you do not make them now; are not other people making gauzes although you are not?—I believe they are, but in a very small proportion to what they were making in 1824, 1825, and in 1826. I believe there are not more than two or three houses now, and at that time I should think there were a dozen making them.

2601. Have you any doubt that the parties who are making gauzes are obtaining profits?—I do not know what profits they are making.

2602. When you make gauzes what price do you pay for your marabout?—I cannot state that, but I can ascertain.

2603. Is not the price of marabout very much reduced?—Very much reduced.

2604. You have stated, that as far as regards price, the English lutestrings are cheaper than the French?—Those heavy goods are cheaper, and if it was not for the prejudice I think they would be sold; but we have absolutely lost the trade, although we are producing as good things as any in the trade.

2605. Have you any doubt that as many fancy goods have been made since 1826 at Coventry, as there were made in the same number of years before?—There were more made in 1826 than there were before; they were getting very fashionable indeed, and there was a great demand for fancy ribbons in 1826.

2606. In the five years since 1826, have not more fancy goods been made at Coventry than were made in the previous five years?—No; before 1826 they were of a different description; narrower goods; and there was not so much silk consumed on that account.

2607. Speaking of value, has not there been a greater value of ribbons made in the last five years than in the three years before?—Yes; because the goods have been made much richer than they were in 1821, 1822 and 1823.

2608. Is

Mr.
William Merry.

4 April,
1832.

2608. Is not the general fashion of the country people to wear a more expensive ribbon?—Yes.

2609. Has the increase of the value of ribbons, made since 1826, been chiefly in respect of the material?—Much more in respect of the silk than of the labour.

2610. Do you mean, that fewer men have been employed since 1826 than in the last five years before?—No; I should think there have been more employed, but at less wages.

2611. Have they been as constantly employed?—No.

2612. You stated, that wages at Coventry were very low; did you mean to apply that to gauze ribbons?—No, I do not know any thing about gauze ribbons; I was only speaking of our own trade; we have not made a piece of gauze for the last four years.

2613. Are not the principal part of the ribbons imported from France, gauze ribbons?—They are.

2614. You have been asked as to the price of silk in France; are you aware that the French import silk from Italy?—I believe they do.

2615. Must not the price there be the same as it is here, having both markets open?—I do not know any thing about that.

2616. Would not the same quality of silk bear the same price at Manchester and at Coventry?—Yes.

2617. Must it not be the same at Lyons and at Coventry?—I think the charges of carriage, and so on, would be less in France than they are here; but not having been there, I cannot speak of what is done in France.

2618. What is your opinion as to the effect of the introduction of French silk goods into this country, with reference to the improvement of our own manufactures in consequence?—I think we were improving our own manufactures before the introduction of French silks.

2619. Has there been a corresponding improvement since that period?—We have been gradually improving our machinery from 1825 to the present time.

2620. Are you now making better goods this year than you ever made before?—I think we made as good last year.

2621. Were the goods you made last year and the present better than you ever made before?—The men have got more used to the work, and they now make them very good.

2622. Before the introduction of the Jacquard machine, were there not by the hand looms as good goods manufactured as there are now?—Quite as good.

2623. Then does this improvement in the quality extend further than to the introduction of other machinery?—That is all; it enables us to make the patterns much larger.

2624. Is the machinery materially improved since 1826?—No, we are using the same machinery as we were in 1825; but the men are more used to it, and they are better able to manage it.

2625. You have stated the wages earned by a man in full work; are there not often interruptions for the want of work, and so on?—Very frequently.

2626. Do they work over hours?—No, about 12 hours a day.

2627. Must not the persons that earn those wages be skilful superior men?—Yes, they are the best weavers.

2628. Are there a great number of them that can obtain such wages as that?—No, there are not 700 Jacquard engines in the town.

2629. When you stated the average earnings of six of your men, after making the necessary deductions, to be at 15*s.* 11*d.* per week, do you mean to say that they earn 15*s.* 11*d.* per week upon the average of the whole year?—Yes; those men have been employed the whole year.

2630. Previous to 1820 or 1821, when those improvements began, did you not make an inferior article, chiefly called lays?—Yes.

2631. Have you any doubt that but for the introduction of French goods, which took place soon after 1821, by smuggling and bringing our patterns from France, the English trade would not have been in the state that it now is?—There was sufficient emulation among the manufacturers in Coventry to improve, and we were progressively improving.

2632. Did not the improvement depend mainly upon copying the French style?—Not altogether; we of course copied our patterns from the best source we could.

Mr.
William Merry.

4 April,
1832.

2633. Did you not find the French patterns to be the best source?—They have been the most fashionable here; but we have not followed them altogether.

2634. Was it not the case, that after the peace the English manufacturers had an opportunity of going over to France and bringing with them patterns, so as to enable them to improve their manufactures quite as much during the existence of the prohibition as they have been able to do since?—Quite as much; I went over myself in 1819 and obtained patterns.

2635. And did not the Treasury allow the patterns to be imported through the Custom House?—Yes.

2636. Consequently there was every facility for improving by means of French patterns during the prohibition as much as there is now?—Yes.

Mr. George Stephens, called in; and Examined.

Mr.
George Stephens.

2637. WHERE do you reside?—I belong to the house of Halling & Company, in Cockspur-street.

2638. Have you lived with them for some time?—I have been in their London house for about five years; I have been in their service 15 years.

2639. Do you know any thing of the proportions that French and English ribbons bear to each other in the purchases of that house, for any considerable number of years?—I cannot speak from any reference we have made to our books further back than the present year, from the 1st of January to the present time; in the purchases of this year, the proportion the French have borne to the English has been 400 per cent.; when I buy 100*l.* worth of French fancy ribbons, I buy but 25*l.* of English fancy ribbons.

2640. Do you think the proportion has greatly increased in the last six months?—Not very much.

2641. Have you any idea of what the proportions were in the year 1826, the first year of allowed importation?—I should think the proportion of the English over the French would not be above 35 to 40 per cent.

2642. Do you sell any English fancy ribbons?—We sell very few English fancy ribbons; the proportion the English gauze ribbons bear to the French is not five per cent.

2643. Do you consider that the price of the commodity is an object with your customers?—Not altogether.

2644. Do you not sometimes sell English goods very cheap?—Yes.

2645. Generally speaking, do you find that a rich and expensive commodity will be bought by some persons at any price?—Yes.

2646. Do you find a disposition on the part of the public to follow the great leading houses in point of fashion?—Yes.

2647. Perhaps you consider yourselves one of the leading houses?—We are not the leading house for fashions in London.

2648. Are you employed in selling yourself?—I am a buyer, I do not sell in the shop.

2649. If you are not a seller, how do you know that the ladies prefer French to English ribbons?—By the daily report of the young men that sell them; I have a report every night of what will sell and what will not sell.

2650. Do they ever make any particular remarks to you?—They have said that the sale of English ribbons declines daily, that they have no chance of selling them now.

2651. Do you conceive that the preference of the French arises from any particular beauty in the French?—I think in gauzes it does.

2652. Do you mean that if you produce two articles of equal goodness in beauty and quality, the French will be preferred?—In gauzes we have not lately seen any thing so good in the English as the French, but in lustring a lady will generally ask the young man whether it is English or French.

2653. Do you make many purchases of English ribbons?—Very few.

2654. As you have been 15 years in this business, have you any knowledge of the quantity of French goods that were sold before they allowed importation?—I recollect in 1823, 1824 and 1825, I was then engaged in selling goods in Bristol, and we used then occasionally to receive boxes of goods that were smuggled; those goods were always such as had been taken from private individuals, and had been seized and stamped at the Custom House, and sold there at public sale, exported and brought into England again at other places.

2655. Did

Mr.
George Stephens.

4 April,
1832.

2655. Did you sell any quantity of them?—Not any quantity of them; and I do not think that one haberdasher in 500 sold any.

2656. You say that they were seized from private individuals, have you any doubt that they were intended as a matter of trade?—Yes; I do not believe that they were, because they were in such detached pieces.

2657. You have stated that you sold very few French goods; had you any opportunity of getting them?—I think we could always get them if we wrote for them.

2658. Could you get them immediately?—Not immediately.

2659. What was the proportion of French goods in your stock?—We never kept any by us.

2660. Had you not then great difficulty in selling them?—Great difficulty, great fear and great trouble; they were never kept on the premises, and they were mostly sold within a few days from the time we heard of their being in the city.

2661. Do you think that where you sold 50 l. of English you sold 5 l. of French?—No, we did not sell two and a half per cent. of French.

2662. How did you get the French goods when you wanted them?—If we wrote for some things, "over the left" as it was termed, we could have them in a fortnight or three weeks.

2663. Did you write to London or to France?—To London.

2664. Did you write to the house of Halling & Company, or to some other house?—Not to Halling's house.

2665. When you procured them, was it generally for some customer that wanted them?—We never wrote for them, unless we were sure that we could get persons to purchase them.

2666. Do you believe that the house of Halling & Company in London sold any?—I only know that a young man was discharged for having a piece of bandanna in his possession; I do not believe they sold any.

2667. Could you yourself tell French from English goods?—Yes, I could tell them.

2668. Could you tell now?—I cannot tell from a pattern, I can tell from a lot of goods.

2669. Have you seen much improvement in English fancy goods since 1826?—Not any in gauzes, and very little in lustrings.

2670. Is it merely a change of fashion?—Merely a change of fashion, scarcely any improvement.

2671. Do you consider that there was as much beauty in the patterns manufactured at home as in those procured from abroad?—In lustrings.

2672. Did the French gauzes come in in 1830 and 1831 very cheap?—There has not been, for the last four years, any great difference in the price of gauzes, but the trade always suffers from what are called "jobs," which come in after the beginning of the season; after they have been picked in Paris, they come in at about one-third of the price, that is a practice which quite interrupts the regular trade; I have brought with me some patterns of goods of the description.

[The Witness produced some patterns.]

2673. Are those goods that have come over to England after they have stood the day of the fashion at Paris, and which, upon coming here, have interfered with the same kind of goods you had previously ordered?—Such is the case, the Paris houses always get a greater profit on new goods than any house in London; they can sell about one-third of a parcel of goods at an immense profit, and then rather than sell the other part in Paris, they will send it over here.

2674. Is not there a good deal of that done in England?—There is very little of it now.

2675. Did you observe that in 1830 or 1831, that kind of goods became cheaper than they were before?—Just after the French Revolution there were a great many, but not on any other particular occasion.

2676. Are you in the habit of going to Paris?—I go occasionally.

2677. Do you not know that after the Revolution, and during the year 1831, there was a great glut of those goods in France?—Not more in France than in London; there were a great many in London after the Revolution, and that was in consequence of a want of confidence in the minds of the St. Etienne manufacturers, in the stability of the Paris houses.

2678. Have you any reason to know what difference there was in the prices of

678.

s

the

Mr.
George Stephens.

4 April,
1832.

the same articles in 1831, and in the preceding year before the Revolution?—
I cannot tell.

2679. Was there not a very considerable reduction?—Yes, very considerable, I think.

2680. Are you acquainted with the export of those articles to other countries?—
I have heard from French manufacturers, that they have a trade with Spain, Portugal, Italy, Germany, and all the countries of Europe.

2681. Do you know whether their trade with the North of Europe was not much interrupted in 1831?—I do not know; but I have heard that they sent a great quantity to London immediately after the Revolution, in order to obtain the money for them more readily.

2682. Do you find goods dearer this year than last?—No, not at all.

2683. Then the prices have not been raised since, although they were lowered then in consequence of the state of alarm?—No; the goods that came in consequence of the alarm were jobs. Those which they had orders for came regularly.

2684. When were you in Paris last?—In July and August last year.

2685. Did you find the French goods in great quantities there?—No; there were not a great many goods in Paris then.

2686. Do you know how they are now?—I have been told by a gentleman who left Paris on Sunday morning, that the goods are scarce: the report of the cholera morbus has, however, had such an effect upon the holders of goods, that they would sell without a profit.

2687. Do you go to St. Etienne to purchase?—No.

2688. Do you usually give your orders in the spring or in autumn?—Generally in the beginning of January for the spring goods, and about July for winter goods.

2689. Did you give orders last January?—Yes; for goods which will be here in the course of this month.

2690. Did you give any orders for English goods?—Not any worth notice.

2691. Did you formerly give orders for English goods?—Yes; during the prohibition, if they brought patterns to us.

2692. Did they bring patterns to you then?—Yes.

2693. Do they bring patterns now?—They do not bring patterns now; it would be a foolish speculation in manufacturers to lay out money for patterns.

2694. If they did bring the patterns, would you give an order?—We should not.

2695. Why not?—We must wait till we see what the French bring over; indeed I have suffered lately, for ordering two patterns to be made from the French patterns, because I found that the fashions had been changed, and I shall be obliged to sell them at a loss.

2696. Are you not subject to the same chance of loss in the case of French goods?—No; because we can sell them as French goods, and our customers will accept them as new goods.

2697. Do not the fashions often succeed each other quickly in Paris?—Yes.

2698. Then you are obliged to get rid of your stock as quickly as possible?—Yes.

2699. Under the prohibition, did the English fashions follow the French so much as they do now?—They did not.

2700. Were you in London before 1826?—I was, for one year.

2701. Had you any experience of the state of things except as to that year?—No, except that we had the first fancy trade in Bristol.

2702. Was it the custom for the manufacturers to go to country towns?—Yes; we saw patterns of ribbons as regularly as patterns of muslins or anything else, we generally saw the patterns a month before the goods were made.

2703. You say that the English people prefer French goods because they are French; do not you believe that in this country a large quantity of goods are sold as French which were never made in France?—I do not think that such is now the case.

2704. Is there not a great temptation to offer English goods as French?—I cannot see that there is any temptation.

2705. Are not the English lutestrings cheaper than the French after paying the duty?—In the sort of articles which do not require much labour upon them, but I think not the figured lutestrings of the best quality, such as we sell.

2706. What are their respective prices?—The English do not always make lutestrings so good as those we sell of the French, they do not make ribbons so good as these of the French [*producing some patterns.*]

2707. Cannot

Mr.
George Stephens.

4 April,
1832.

2707. Cannot they make as good?—I only know one person that attempted it last winter, and he told me that he lost 50*l.* by it, but if an English manufacturer got a French pattern and imitated it, he could make it cheaper than the French.

2708. Do you believe it ever happens that when purchasers who wish to patronize British manufactures ask for English goods, the French are sold to them as English?—I think that does often happen.

2709. Do you apprehend that if there were equal ingenuity and equal cleverness in the formation of patterns, and equal perfection in the quality of the goods made in England, that even in that case the French article would not have the preference?—It would have the preference.

2710. Have you any idea as to the extent of smuggling of late?—There was a little smuggling before 1826, but I know since that time it has been very extensive.

2711. Has it been gradually increasing from that time to this?—I think it has.

2712. Can you state from your own knowledge that it has been carried on to a very great extent?—I know as a buyer that large houses in the city of London have been in the habit of smuggling goods, indeed nearly all they sold; there are scarcely any bounds to the amount of goods they smuggle.

2713. Have you not frequent occasion to know when you are buying a large quantity of goods in the city of London, that those goods have been smuggled?—I know that smuggling has not ceased, but that it still exists to a great extent.

2714. Are there not very large houses in the city of London who do not smuggle them directly themselves, but who do it through an agent, who insures the safe delivery of the goods to them?—That is the way it is generally done, that is not the way in which it was done in the Old Change.

2715. Do you know that goods to a very large amount were smuggled previous to this discovery of Leaf's?—To a very large amount.

2716. Was not it notorious in the trade, as a matter of conversation, that goods were invoiced, and that duplicates were made up, and that they were regularly, to a most extensive degree, smuggled in?—Yes; it is well known to persons in the trade, and not only was it known that they did smuggle goods but the rate they did it at.

2717. Can you state what was the rate?—It was generally 18 per cent.

2718. Did that include freightage and every thing?—Yes.

2719. Are you aware what the insurance was for smuggled goods before the prohibition was removed?—My observation never enabled me to know that smugglers would have insured them at any rate at that time.

2720. Is it not generally very notorious in the trade, who are the houses that smuggle?—Amongst buyers it is pretty well understood which are the houses that smuggle, and those that do not.

2721. Do they make any secret of it in telling you confidently that the goods have been smuggled?—They do not make any secret to persons that they know would discover it without.

2722. Do not the goods bought in this way bear a large proportion of the business?—They do.

2723. Does the smuggling apply to any particular part of the silk manufacture more than any other?—I think it does to gauze ribbons more than any thing else.

2724. Do you happen to know, that before foreign goods were admitted here, there was considerable risk in this respect; that if a single piece of smuggled goods was found upon a man's premises, the officer would be justified in making a seizure of the stock, and you had no remedy against him?—I believe he was justified in seizing all the stock upon the premises.

2725. Do you know that when a person's goods were seized it rested with him to prove that the goods were not smuggled?—I believe that was the law.

2726. You keep a great many men in your house?—Yes.

2727. Would it not be too hazardous for you, under those circumstances, to have a quantity of prohibited goods brought into your house?—My employers would not risk an article.

2728. Are there not very few scruples of that sort now among the trade generally, but they think the goods are safe when they are once deposited?—That is the principle generally acted upon, certainly.

2729. Do you apprehend, that there is a sufficient quantity of goods of home manufacture to supply this market, and a sufficient display of ingenuity and excellence

Mr.
George Stephens.

4 April,
1832.

lence of quality without the introduction of any foreign goods?—There would be quite enough.

2730. When the English manufacturers have to make goods upon speculation, which are to meet in the market the goods ordered from France, is it likely that they should be inclined to go to the expense for looms and machinery and proper wages?—I think there is not any encouragement now to lay any money out with a view of producing novelties, and we should not buy them if they were to produce them.

2731. In the spring trade is it not the case, that after you have got the cream you must make a reduction?—That is the case, without the fancy trade can command the taste of the consumer it is not profitable.

2732. Then, generally speaking, with the ordinary competition, that has happened; is not a man enabled to make adequate sacrifices upon what remains, without it being attended with that ruin that it now is?—Before the prohibition was removed good profits were got by fancy goods.

2733. Do not you find that the market is always over done with goods?—About the middle of the season it is always over done.

2734. Have you not known, formerly, that a person in the fancy trade has been obliged to look about him, and to order before hand, in order to secure a good selection of goods?—Yes.

2735. Is that the case now?—Not with English goods.

2736. Must not the market, being constantly glutted, tend to depress the prices?—It does, and I will show these patterns as a proof of that; we have jobs of French ribbons, we likewise buy a few English ribbons; but the jobs of the French ribbons prevent the sale of the English goods.

2737. You have stated that the French, having a home trade and an export trade, they take care, when they have goods that they want to job off at a lower price, not to job them in their home market?—Such is the general principle in Paris; for instance, I was in Paris in July last, I then could have bought goods from French houses, who rather than make a sacrifice in their own trade, they would sell them to me 10 per cent lower than they would sell them in Paris.

2738. But that was upon the condition that they must go out of their own market?—Yes.

2739. When those goods are brought over here, in addition to all the disadvantages that the English manufacturers labour under, must not it be a serious injury to them?—It is the entire ruin of the English fancy ribbon maker.

2740. Looking to the retail trade in general, do not you think that this glut of goods and this inundation of foreign goods, tend to the injury and the ruin of a great body of the retailers?—A very great many.

2741. Do not you attribute a great many of the failures and the compositions to that circumstance?—Yes, I do.

2742. Do you happen to know, that if there is a manufacturer who has six or eight, or 10,000 *l.* worth of goods, and if he is under acceptances or in any way pinched in his circumstances, that there are houses in London where he can immediately go, and by a reduction of 20 or 25 per cent. send those goods into the market?—In one hour.

2743. Then what becomes of the great body of retailers that have been giving 25 or 30 per cent. more?—They must suffer from it.

2744. Have there not been an immense number of compositions among traders generally in this business?—A great many.

2745. Is not the embarrassment very much increased by the overstock in the market, and the introduction of foreign goods to interfere with our own?—It is very much increased by it.

2746. Do you know any new channel of trade that the introduction of French goods has opened to us?—I do not know any.

2747. Do you know any new employment that it has furnished for the weavers thrown out of work by it?—I do not.

2748. Suppose the case of some ribbons manufactured at Lyons, which shall cost the manufacturers there 30*s.*; they are consigned to Paris, and a large profit made upon a considerable quantity of them, and the remainder of them jobbed to an English house at 20*s.*; those goods may be introduced here by smuggling at 20 per cent.; may it not therefore happen that those goods would cost in London 24*s.*, which actually cost at Lyons 30*s.*?—Yes; every season that is the case.

2749. Is

Mr.
George Stephens.

4 April,
1832.

2749. Is it not impossible, under such a state of things, that the English manufacturer can exist?—It is.

2750. If the duty were paid upon such goods, would not it amount to 60 or 70 per cent.?—I have known cases where it would amount to cent. per cent.

2751. Within the last few years, have not a great many of the little manufacturers been induced to withdraw from business?—A great many; when I first took the department I now hold, our ribbon account was with 30 houses, it is now reduced to as few as 12; and I imagine that six out of the 30 have failed; the others have gone out of the business; the little manufacturers are quite broken up.

2752. When silks are ordered from French houses in the regular way, is not the duty generally paid upon all that come at the commencement of the season?—Yes.

2753. Are not goods in a similar style sent to Paris, many of which are jobbed, as in the case of the ribbons?—Yes; I have seen goods come in at 2 s. 6 d. the ell, such as we had paid four francs seventy-five centimes for, at the beginning of the season.

2754. So that you have had them in the month of February at about 4 s. 9 d. and 5 s.; and then they have come here in June at 2 s. or 3 s.?—Yes, at half the original price.

2755. Is not that very destructive to the English manufacturer?—Yes.

2756. Do you believe that such a case is of common occurrence?—It happens every season.

2757. Although your house is in a very large way, and you sell a great many French goods, it appears by a paper before the Committee, that your house is at the bottom of the list of the great importers?—It is very likely, for we buy a great many French goods in London.

2758. Can you buy them cheaper in London than you can import them?—Much cheaper.

2759. You have stated that the greatest smuggling transaction which has been known to have occurred of late years, has been carried on, as you conceive, by introducing the foreign article at a rate of no more than 18 per cent. into this town, such being the case, do you conceive that if the duty on the foreign articles were lowered to 20 per cent., smuggling would or would not still be carried on?—It would be carried on in some things, many goods would still be smuggled.

2760. Would prohibition lessen smuggling in your opinion?—It would lessen smuggling; with what I call proper prohibition I think smuggling could be stopped.

2761. What is the duty paid upon French gauze ribbons?—Nominally, it is 30 per cent., but it is actually from 20 to 45 per cent.

2762. What do you suppose would be a sufficient reduction of duty to prevent smuggling in that article?—If the duties could be levied according to the value of the article, I would say 15 per cent. would be low enough to prevent smuggling.

2763. Do you know any thing of a recent case of smuggling which has not come before the public, of goods being illegally introduced?—I have seen smuggled goods within the last week.

2764. What description of goods were they?—Gauze ribbons.

2765. Do you know what rate of insurance was paid upon them?—I believe it was a little more than 18 per cent.; it was under 20 per cent.; I bought part of those ribbons, and I have a couple of pieces of them here [*producing the same.*]

2766. Did the 18 per cent. include all charges of carriage?—No, I think all was included in 20 per cent. The importer told me that in the month of January he had 5,000 pieces of nines and sixteens at Calais, and he should have them over as occasion required; that he had 5,000 pieces of about ten patterns, about 500 pieces of a pattern, and I believe about 100 pieces of each pattern, came into the Custom House, and all the rest “over the left” as they call it.

2767. Do you know that that amount included insurance in case of seizure?—It did.

2768. Do you make any difference as to the different kinds of silks, or do you mean the answer you have given to apply to gauzes?—I have spoken only of gauzes; I have not answered any question as to silks generally.

2769. Are you sure that in the 18 or 20 per cent. there was any sum included for insurance in case of seizure?—It included every thing; the owner ran the risk of seizure after landing.

2770. When you speak of 18 per cent. being paid to the smuggler, you mean 18

Mr.
George Stephens.

4 April,
1832.

per cent. ad valorem upon the goods?—Yes; he insures that they should be safely landed for 18 per cent.

2771. Did the owner only run the risk from the place of landing to his own house?—Exactly so.

2772. Are you in the habit of going to Paris to purchase goods for the house you belong to?—I have been only once in the last fall.

2773. Have you understood that any persons who may have gone there before you, have had offers made to them at Paris to deliver the goods at Charing Cross, at a certain rate of charge?—I am not aware that they have, but offers were made to me at last fall.

2774. Are there not companies that insure goods regularly?—Yes.

2775. Was it the agent of a company of that kind that applied to you?—No, it was the seller of the goods; he offered to sell me those goods for francs in Paris, or to deliver them in our house in London for shillings, that is to say, if the article he offered me was 25 francs, he offered to deliver them in London for 25s.

2776. Did you understand that if the goods were not delivered at your house in London, you were not to pay for them?—Not a farthing.

2777. And therefore the difference between francs and shillings included the insurance in that case?—Yes.

2778. What goods were those?—Ribbons, and broad silks likewise.

2779. What was the duty you had to pay upon them?—If the ribbons had come through the house they would have been about 9s. or 10s. a garniture, that is about 50 per cent.

2780. Do not you know that persons sometimes enter French goods at considerably less than the value?—I believe that often occurs; I have seen goods sold in London which from their condition I believe came in through the Custom House, for I have seen enough of ribbons to enable me to distinguish generally those that are smuggled from goods that come through the Custom House, and I believe that ribbons come in paying under 15 per cent., upon which we should pay 30 per cent. or more than that.

2781. How do you account for that difference?—They must be entered under their value, or else they are never weighed, or something of that sort.

2782. Why should a person receive 20 per cent. for smuggling them in, when they can get them through the Custom House at 15 per cent.?—That must be accidental at the Custom House.

2783. Do you mean that it depends upon the officers at the Custom House?—I do not wish to charge the officers at the Custom House with neglect of duty, but I believe that goods sometimes come cheaper than they do at others.

2784. Is not the duty levied by weight?—They can be weighed or valued as the officer pleases, but I imagine they are never really weighed at all; I believe they are taken by valuation.

2785. Do you believe that inaccuracies take place at the Custom House with respect to weight?—That is my impression.

2786. Can you suggest any means of preventing that inequality in levying the duty?—The only means would be, for a person always to be present in whom confidence would be placed who would be a judge of the goods.

2787. Could any man tell the value of those fine fancy goods to 10 or 15 per cent.?—It can only be done by getting patterns from Paris at the approach of each season.

2788. You alluded just now to a transaction in which the party had smuggled a quantity of goods into London, and you were asked whether the 18 per cent. paid to the smuggler included the insurance?—I believe it included the insurance up to the time of landing the goods.

2789. Is it not understood that it is the custom of persons that smuggle goods in Paris, to order them to be delivered at some particular place in London?—I believe it is the custom.

2790. And therefore when you speak of their being delivered at London, you mean delivered at that particular place?—Yes.

2791. Are you able to distinguish out of that 18 per cent. how much would be the premium of the smuggler?—I cannot say that.

2792. Is not the freight included in the 18 or 20 per cent.?—Every expense is included.

2793. Supposing the duty were lowered considerably, might it not still be worth the

the smuggler's while to continue his trade, though of course with a great reduction of profit?—I think he would still continue.

2794. In the goods smuggled by the house of Leaf & Company, were there not other goods besides gauzes smuggled?—Yes.

2795. And at the rate you have stated of 18 per cent.?—Yes; in stating that rate I cannot say that that was what it really cost them; but I can only say that that was the understanding in the trade, that they imported them at that rate.

2796. Have you had an opportunity of knowing the rate at which plain goods were smuggled?—I believe that plain goods were smuggled; I heard a smuggler offer within a short time, to do silks generally at 15 per cent. in piece, ribbons at 20 per cent., and lace at 10 per cent.

2797. Did you ever ask about gloves?—I do not think gloves are smuggled.

2798. Do you know from your intercourse at Paris, and with buyers of those articles, that there is much smuggling in gloves?—I do not think there is.

2799. Do you know many that buy gloves?—Yes, I do.

2800. Did it often come to your knowledge in conversation, that any great quantity was smuggled?—I have asked the question repeatedly, and I have never been led to believe that gloves are smuggled.

2801. Do you import gloves?—We do.

2802. Do French goods admit of much profit?—There is a profit.

2803. How much is the wholesale profit?—About five per cent.

2804. Do you get larger profits upon French goods than upon the English?—Yes, larger profits.

2805. Then you have no particular interest to wish for the exclusion of the French?—I have not; but it would not surprise me if the large haberdashers of London generally were to petition for the continuance of the present system, knowing that their returns are greatly increased by admitting foreign goods.

2806. As it is not the ordinary description of houses that can be going over selecting that description of goods abroad, does not it throw a great monopoly into few hands?—It does.

2807. Does that necessarily lead to a monopoly in the home market?—I think it does; it has increased the returns of large houses more than it has increased the returns of small houses.

2808. Must not that increase tend to lessen other channels?—No doubt it does.

2809. Do you mean to say, that there are now, in that trade, houses of great capital who monopolize the market?—I do.

2810. Do not those houses compete with each other in the home market?—They do.

2811. Will not that be sufficient to prevent a monopoly?—It would prevent such a monopoly as would injure the public.

2812. Have they any thing in common to concert about the prices?—No, they have not.

2813. Then must not each be desirous to get as much business as he can?—Yes.

2814. Will not that competition bring down the profits to a reasonable rate?—Yes, in certain articles; but it does not answer the purpose of all houses to import the richer kind of goods.

2815. Does not the extent of business regulate the degree of profit at which it can be carried on?—Yes.

2816. Cannot a great capitalist buy the goods upon better terms than a small capitalist?—Yes.

2817. Is not that the case in the trade with England as well as with France?—Yes.

2818. You have stated, that there have frequently been jobs of French goods; are there not as many goods jobbed belonging to English manufacturers as French?—Not in proportion to the capital employed in the trade.

2819. What proportion of the silk trade of your house consists of the fine and figured gauzes?—I suppose the broad gauzes amount to about 20 or 30 per cent.; the English gauze ribbons, in proportion to the French, only amount to about five or six per cent.

2820. Can you state what proportion of your plain goods are French, and what proportion English?—I could not answer that.

2821. You have stated that many of the small retail dealers have, of late years

Mr.
George Stephens.

4 April,
1832.

Mr.
George Stephens.

4 April,
1832.

been greatly injured, has the business of large houses extended of late?—Very considerably.

2822. Are there not greater facilities now in the supply to the retail dealers, in comparison with what they were before?—No, I do not think it. I imagine that the retail houses would have bought of large houses before the prohibition was removed.

2823. Do you suppose that there are fewer retail dealers now than there were?—No; but I suppose they have not increased in number so much as the large houses have increased the amount of their returns.

2824. Has not the consumption of ribbons very much increased?—Yes.

2825. You have stated, that the present low jobs have been very ruinous to the dealers; have not the prices in this country very much decreased?—They have.

2826. Have not the consumers benefited very much?—I do not think they have benefited by it.

2827. Then who gets the profit?—I do not know that any body has got it.

2828. If the consumers buy them cheaper must not they have the advantage?—I think they have been injured by some means to more than that amount.

2829. If the wages of a labourer are reduced from 10s. a week to 8s. so that a lady who goes to Court will have that part of her dress for 8s. instead of giving 10s. will not she be benefited?—She will be benefited in the purchase of the article.

2830. Then if there be any description of people benefited, it will be those fashionable people who buy those dresses so much cheaper?—That is the class that benefit most.

2831. Then that benefit of the reduction of wages, and the reduction of profits goes to them?—Yes.

2832. As you are a buyer, do you not happen to know many instances, where, if a small buyer was to go with his ready money in his hands, he could not buy the goods as cheap by five per cent. as some of the large houses?—I know it is the case.

2833. Do you not know that there are agents in London selling for the manufacturers, who, if fifty persons were to go to them with 50l. each, they would not sell to them, unless they paid five per cent. more than what they charged the large houses?—I know it is the case.

2834. Are the retailers generally, or the public at large, better served than when there was a more open competition?—They are not better served now.

2835. Do you mean to say that the manufacturers will refuse to sell to the small houses at the same price at which they supply the large houses?—They would rather serve large houses.

2836. Do you mean at cash prices, or on credit account?—On credit accounts.

2837. Do not you consider that that arises from the difference in the risk of being paid by a small house or by a large capitalist?—I have seen instances where small houses have been refused that have offered to pay cash.

2838. Was there plenty of the article on sale?—They went to a large house with a view of having it cheap, but they could have got it perhaps at another place.

2839. How do you account for a man that carries on business refusing to deal with one man unless he pays five per cent. more than another?—Because it is better to have a few good customers than a great many little ones.

2840. Do not you know that there is another reason, that if they were to sell those goods to the small house at the same price that they did to the large customer, they would offend the large customer?—I believe that is often the case; I believe that instances of that occur daily.

2841. Do you not know it to be the fact, that there are houses where goods come from the manufacturers, and where persons go with the money in their hands, but they cannot buy those goods without giving five per cent. more than they sell them to the large houses, on account of the fear of giving offence to those houses?—Such things occur almost daily.

2842. Your house is one of the largest houses at the West end of the Town; do you buy goods five per cent. cheaper than your neighbours?—Not in all instances five per cent., but generally we have an advantage.

2843. Is not your business, being larger than that of your neighbours, owing to your serving the public better?—I do not know that we serve the public better, it is supposed we do it.

2844. Why

2844. Why do people come to you in preference to other houses, if they cannot buy the goods cheaper?—Because they can always see a great variety.

2845. Have you within the last fortnight seen any cases of silk handkerchiefs smuggled from France?—No, not silk handkerchiefs.

Mr.
George Stephens.

4 April,
1832.

Veneris, 6^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. William Merry, called in; and further Examined.

2846. IN all your answers on a former day, when speaking of the value of English and French ribbons, you speak of your cost price and the selling price of the French, but you know not what profit may have been obtained by the French?—Yes, just so.

Mr.
William Merry.

2847. Your answers refer chiefly to two patterns which were exhibited?—Yes.

2848. One of them, an English pattern, was manufactured by yourself?—It was.

2849. You sold that at 48s. 6d.?—Yes.

2850. As to the other pattern which was exhibited, at what price was that?—It was marked 59s. 9d.

2851. Your answers apply to those two patterns?—Those goods were sold under particular circumstances, and I think that I ought not to be referred to as regards those goods; the answer I have given to the question just put is, that I cannot tell what the French manufacture cost; my idea is that they cost much less, and that their profit is much larger than ours; but I am not a manufacturer, only a seller, and I do not know what would be the cost of the French pattern, because I do not know what machinery it would require to make it.

2852. You have been asked some questions respecting gauze ribbons, have you any information to which you think any importance or value may be attached?—The wages in Coventry are lower than they were in 1825, which affects the other fancy articles; I applied my answer to the weavers being starving, to the single handed weaving especially; I was asked on a former day, whether there had been a corresponding improvement since the year 1825; I wish to correct my evidence, by saying there has not been any improvement in machinery, but that the men have been better able to attend to the work, but the machinery is the same as it was in 1825; the men being more used to machinery, are making better goods.

2853. Do you know whether the machinery has been employed abroad?—I do not know.

Mr. George Stephens, called in; and further Examined.

2854. YOU stated on a former day that you have lived with your present employers 15 years, five years of that time in London?—Yes.

Mr.
George Stephens.

2855. So that you came to London in the beginning of 1827?—I was in London before that time; if I said five years, I was wrong; I came up to London in the spring of either 1825 or 1826, I think 1826, it was before the prohibitions were removed.

2856. The prohibition was removed in 1826?—Yes.

2857. Consequently the only knowledge you have of the existence of smuggling during the prohibitory system, was what you knew at Bristol?—That is all, except that which I have learned from persons engaged in it in London before the prohibitions were removed.

2858. Had those from whom you learned that, themselves carried on any of those smuggling transactions?—I had part of the information I possessed from an individual who saw the goods at the only house that smuggled at that time in London, he saw all the smuggled goods which came through that house.

2859. Do you believe that there was only one house smuggled before 1826?—I mean to say that only one house used to import to any extent, to sell goods.

2860. That is your opinion?—That is the result of the information I have obtained.

2861. The goods you were in the habit of purchasing at Bristol, had been, as you understood,

Mr.
George Stephens.

6 April,
1832.

understood, bought at Custom House sales here for exportation, and subsequently smuggled into this country?—They had.

2862. If they could smuggle in those goods they could have smuggled in any other goods which had not been purchased at Custom House sales, could not they?—No they could not; those goods were always damaged more or less, and it would have injured new goods 50 per cent.; I should think so from the damage new goods would have received if they had been subjected to the same treatment.

2863. To what do you allude when you speak of the treatment of the goods?—They had been exposed to wet, and bore evident marks of having been injured by sea water.

2864. Did they bear the appearance of having been put into an improper place, pressed and injured by being squeezed into a bag, or a lady's trunk, or under her petticoat?—Yes, they always had a damaged appearance.

3865. Did this arise from the bringing them in on the first occasion?—Partly, and partly on the second.

2866. They were smuggled in the second time, at some other place?—Yes.

2867. Might not they have smuggled in other goods?—Not in the same way. I think that the damage arose generally in the second time of smuggling.

2868. Do you mean the smuggling of those goods took place prior to the year 1826?—Yes; and I understand that they were shipped to Calais, and brought back again.

2869. You are aware there are two premiums on smuggling at present; one by which the party receives a certain sum of money on delivering the goods in London, and that if he does not deliver them he does not obtain his payment, but if they are lost the loss falls upon the importers here: and in the other case, the party engages to deliver them, and in the event of their being lost, to pay their value?—I am aware there are two such systems existing.

2870. When you speak of an offer to smuggle at 20 per cent. made to you at Paris, which of the modes did you understand that person alluded to?—The latter; that is, that I should not pay for the goods if I did not receive them safely in London.

2871. When you speak of 18 per cent., which you understood had been paid in London, to which of the modes did you allude?—The latter; that is, that the smuggler would be at the loss, if they were not delivered safely, and not the importer.

2872. Were they to be delivered in London, in either case?—Yes; in both cases.

2873. When you spoke of 15 per cent. what did you refer to?—I do not recollect speaking of 15 per cent.

2874. You said a person had very recently offered to smuggle at 15 per cent.?—That was silk goods only.

2875. In relation to those rates of 20 and 18 per cent., which you have stated as payable for smuggling, do you mean to say, they were paid on the same goods or goods of a different quality, and what kinds were they?—The circumstance I spoke of, as occurring in London, was on gauze ribbons only; that which passed at Paris, was on gauze ribbons and fancy silks.

2876. Do you state that 15 per cent. was, to your knowledge, paid?—No; I stated that a smuggler offered to do goods at 15 per cent.; those were silk goods.

2877. You understood that to include the insurance?—Yes.

2878. How much extra is paid as the insurance in case of loss?—In this case of the offer, nothing extra would be paid.

2879. How much of that 15 per cent. do you suppose was intended for insurance?—I cannot say.

2880. Do you know what is paid for freightage of French goods from Paris, regularly passed through the Custom House?—It is almost impossible to answer; they pay by weight.

2881. As to the extent of smuggling at present, do you mean to state, that the first of every fashion of goods are often smuggled, or that they come in paying the duty; that smuggling is principally in the jobs, after the fashion is over?—I think fashionable articles, when new, pay the duty; that bulks and jobs come smuggled.

2882. Do you mean that the bulk of the goods imported are jobs?—Yes.

2883. You

Mr.
George Stephens.

6 April,
1832.

2883. You think more of that class of goods are smuggled than of the new goods?—Yes.

2884. You stated, that in the case of some new goods, amounting in number to 5,000 pieces, only 500 paid the duty?—Yes.

2885. They were not jobs?—They were not.

2886. What reason have you for thinking then that new goods should not be smuggled?—I spoke of the very fashionable, and the newest goods.

2887. Those goods, you understood, were kept in stock at Calais?—Yes; kept in warehouses there.

2888. And they would be smuggled in as the demand required?—Yes.

2889. Do you know, absolutely, that they were at Calais; they might be at Havre?—That is possible; but I believe they were at Calais.

2890. You produced two pieces of ribbon, of which you stated 5,000 pieces were at Calais, that those had paid the duty, and you believe the others would be brought over, while those which had paid the duty were a blind; can you state whether those 5,000 have been smuggled?—I said that they were at Calais in January; they are not now there; they have all come to London.

2891. You think that the small portion which came first is the only part which has paid the duty?—Yes.

2892. Are those fashionable goods, or otherwise?—They are not first-rate fashionable goods; they are low-priced goods, but new.

2893. With respect to those who have been in the practice of smuggling, are you able to state what would be the lowest rate of duty which would put an end to their speculations?—I think that if the duty were fixed at 15 per cent. the smuggling would go down to 10 per cent.

2894. Do you mean for silk goods generally, or only for gauzes?—For silk goods generally.

2895. Do you mean to say there is so much competition, even among smugglers, that you think they would run that risk for 10 per cent.?—Yes.

2896. Do you think that would cover insurance also?—Yes; if no other precautions were taken than now exist, to prevent smuggling.

2897. What other precautions should you suggest to prevent it?—Nothing short of prohibition.

2898. Do you not believe if that prohibition took place smuggling would be still continued?—Yes; if some precautions were not taken which have never yet existed.

2899. What are those precautions which have never yet existed?—I would offer 1,000*l.* to any person who would give information where smuggled goods were to be found, and I would fine the holders of those goods 1,000*l.*

2900. Would you fine the wearer of those goods?—No, I do not think that would be a just thing; the wearer may buy them without knowing they are French.

2901. May not a merchant be in possession of goods without knowing whether they are French?—No, I think not.

2902. You think there is no possibility of mistaking the French for English manufacture?—Not by a person accustomed to buy goods.

2903. Do you apply that to all French goods?—I think all but plain gros de Naples.

2904. You think that it is not possible for the English manufacturer to imitate the French so as to prevent you or any person acquainted with the business knowing it?—In all but plain goods.

2905. If you bought goods at a manufacturer's house, that would be a fair presumption that they were made in England?—Yes.

2906. If you got them of a warehouseman you would look at them more circumspectly?—Certainly.

2907. If you saw the goods at a warehouseman's house, you would feel it your duty to examine them more minutely?—Certainly.

2908. Have you known of any considerable purchase, where a French manufacturer has offered to deliver them without any expense to the purchaser?—Not by manufacturers, but I know of the merchants having made that offer; I have seen a gentleman who left Paris not more than four days since, who having bought a small parcel at a house for four or five thousand francs, an offer was made him that if he would increase it to twelve or fourteen thousand francs, the goods should be delivered in London without any commission or duty.

Mr.
George Stephens.

6 April,
1832.

2909. Was the seller a manufacturer?—He was not.
2910. Was it a shopkeeper or a warehouseman?—A warehouseman.
2911. Were those job goods or first fashion goods?—First fashion goods.
2912. Was that done with a view to raise money through the distress of the parties?—No; with a view to sell goods.
2913. They must have been responsible persons to make such an engagement?—Certainly they were.
2914. How long were you in Paris?—I was there two months.
2915. What was your object in staying there?—I went with the view of buying goods and of establishing myself in Paris, if I thought there was any probability of our being able to sell English goods to the French people.
2916. Had you a pretty good introduction to persons in Paris connected with trade?—Yes, in my own station in life, I had the best possible introduction; I knew eight young men who had lived in our house, who are in commercial houses there.
2917. Had you a free access and introduction to the first houses in consequence?—Yes, to all houses in business.
2918. Did you avail yourself of those circumstances, and make every possible inquiry as to the nature of the trade carried on there?—Yes, I made every possible inquiry, it occupied two-thirds of my time; I went with a view to establish myself as a seller of English goods, thinking the French would open their ports to our trade.
2919. If you had seen a probability of the introduction of English goods, you would have settled there?—Yes, in connection with a Frenchman who had left our house shortly before, and who went with the same object.
2920. You stated on a former day, that the shops here are crowded with French goods, that you see them in all directions?—Almost every shop contains French goods.
2921. Did you look much at the shops in Paris, and if so, did you find any English manufactures?—Yes; I found a few common worsted stuffs, such as we had been selling here at sixpence a yard, and a few printed Bandanna handkerchiefs.
2922. You did not see any English silks selling in the shops?—Never any English silks.
2923. Did you see any English silks besides Bandannas exposed for sale in the shops?—I do not think I saw a single piece.
2924. Did you see exposed in the different shops in Paris, a great many English goods manufactured of other sorts?—No, I did not.
2925. Had you any conversation with Frenchmen upon the subject, of the reason why they would not admit our goods?—I had much conversation on that subject, in company with the Frenchman to whom I have referred, with all classes, with the consumer, the retail dealer, the wholesale dealer, the manufacturer, and with a member of the Chamber of Deputies; and the result was, that it was in vain to wait with such expectation, we found that there are three interests in the Chamber of Deputies; the one the iron, the other the cotton, the other the silk, that the iron and cotton united were too strong for the silk; and that France would rather lose our custom for silk goods than take our iron and cotton goods.
2926. What made you so very particular to avail yourself of this information; was it because you had a distinct object in view, to settle there if you could find it to be for your interest?—Yes.
2927. Did you see any English goods of a mixed quality there, a mixture of silk and worsted?—I think in one shop I saw the article called Norwich crape, a mixture of silk and cotton, a low priced article of about 1 s. a yard.
2928. Did you see any printed cottons and chintzes?—Not in shops.
2929. Do you imagine that the French, on their fine sorts of goods which come over here, get large profits?—Yes, I have no doubt of that; I am satisfied that is the case.
2930. Printed cottons and chintzes are prohibited in France, are they not?—I believe they are.
2931. Are you aware of any of those goods being smuggled into France?—In single lengths I know they are for ladies' wear, but not in large quantities.
2932. Taking into consideration that the French have the silk there, and that labour is lower, and the high profits they get, do you believe that if the English goods were reduced 20 per cent. in price, the French would not reduce theirs also?—I think

Mr.
George Stephens.

6 April,
1832.

—I think the fashionable houses would reduce the prices of their goods in order to sell them.

2933. That would be their profit?—Yes, that must be their profit.

2934. You think that if the English goods were reduced 20 per cent. the French would still find it answer their purpose to reduce their goods, and come in competition?—In some goods it would answer perhaps.

2935. Do you not think that would occasion a reduction in the raw material?—I cannot go so far into the manufacturing part of it as that.

2936. Do you know any thing about the profits got by the manufacturers or dealers in France?—I only know from hearing manufacturers and dealers speak.

2937. Did the manufacturers and dealers say they had very large profits?—I have heard manufacturers of St. Etienne and Lyons say, that they would never undertake it without getting something by it.

2938. What amount?—From 7½ to 10 per cent.

2939. Did you ever hear any particular one of them say that themselves?—No, I cannot say that I have.

2940. Is it not the practice, when new goods come from Lyons to the warehousemen at Paris, for them to show invoices, to have bills, and to allow the advantage, as they would call it, of allowing the customer to take the goods net, from which they have obtained a discount of 14 per cent.?—Yes, often with a commission of two per cent. in addition to the 14.

2941. Is 14 per cent. the discount allowed upon ribbons at St. Etienne to the buyer in Paris?—On some fancy ribbons; I do not know that it is on all ribbons.

2942. What is the lowest you have known?—I have known it down to eight.

2943. You mean that you were asked 16 per cent. profit upon those goods?—I do not mean that it was to myself, but I have heard buyers say that that was the case.

2944. You being the buyer in the house you have spoken of, and having been at Paris for the distinct object you state, and having been in intercourse with so many Frenchmen there who have been in commercial houses, do you speak with confidence from the information you have gained from those channels?—Where I have spoken I have spoken with confidence; but when I am asked about such things as goods sold at the invoice price, I should say with a commission over that of two per cent.

2945. When you state this, is it entirely from hearsay, or is it from the information you derived from those particular sources through the connection of these young men, and those commercial houses in which you place confidence?—It is from the persons so situated in Paris in whom I can place confidence.

2946. And from what you have generally heard and understood, you have no doubt that the commissioners, on their new fashionable goods, obtain very large profits?—I have no doubt of it.

2947. Your house is not the only house which does business to a large extent there, is it?—It is not.

2948. The Committee could obtain the same information you think from other houses?—I think so.

2949. Do you think the trimmings the ladies wear in their bonnets are supplied cheaper to them than if they were made in England?—No, they are not.

2950. What description of ribbons do they use now?—Gauzes principally.

2951. Does the supply of gauze ribbons this year, from France, exceed that of former years?—I think it will when they all arrive.

2952. The French fashions have not all arrived yet?—No.

2953. Do you think the large wholesale houses have been increasing their stocks of French goods of late?—Yes, they have, and likewise their returns on French goods; I know an instance in the city of London where, in 1828, a house made a return of a million and a half, and that they sold only 100,000 pounds worth of French goods; in 1831 the returns were 1,200,000 *l.* and the French goods sold in that year were 200,000 *l.*

2954. That you know from your own knowledge?—I was not in the house, but I had it from a person who lives in the house and knows it well.

2955. Whence do you conceive this increase has arisen?—It has arisen from the fashions having gone into the country, which did not happen immediately on the ports being opened; the English country ladies will not wear them till they become pretty well known; they did not in 1827 and 1828 use so many fashionable goods as they now do.

678.

T 3

2956. When

Mr.
George Stephens.

6 April,
1832.

2956. When you speak of a certain description of goods, are there any other French articles besides silk to which a great preference is given?—There are other kinds of French goods; I have put patterns into my pocket of two other articles Côte Palè and printed muslins of French manufacture. [*The Witness produced them.*]

2957. Is there any particular beauty in the colour of French goods, which makes them preferred to British, or is it only because they are French?—It is because they are French goods, some of the patterns I have produced are very ugly.

2958. Are you able to discover on what the preference depends?—It is because these French goods are not comeatable by vulgar people.

2959. Because they are scarce?—Yes.

2960. Because they are high priced and rare?—Yes.

2961. It is not because of the colour or the quality?—No, the colours are generally very ugly.

2962. Do you not then think, if they were prohibited altogether, the articles would become scarcer, and therefore in fact be more in general demand?—That would be the case unless there were some further measures against smuggling.

2963. You stated, on a former day, that the respectable men would not keep them in their houses if there was a prohibition, on account of the danger of smuggling?—Yes.

2964. You stated that the house you were in before 1825, sold the articles which had been smuggled?—Yes, which had the Custom House mark upon them, but not publicly.

2965. They were sold by the young men?—Yes.

2966. Messrs. Halling discharged a young man because he had a piece of Bandanna, did they not?—Yes, they did.

2967. Would there be any danger of having those goods introduced to any great extent?—If the Government would give a reward to the informer, it would be almost impossible to do it.

2968. Is it your opinion that the respectable persons who buy goods of the description you have just produced, would be content with the English if they did not see these?—Yes, I think they would be, with the best English goods.

2969. You have been asked as to 200,000*l.* returned by a certain house in French goods, do you mean to say that consisted of silks?—Silks, gloves, ribbons and a few things of this kind.

2970. Do you think there was any material portion of the sum in these cotton goods?—No, a very small portion.

2971. You have been asked as to the rates of bringing goods from Paris which come first into the French market, they are of higher value than afterwards?—Yes.

2972. So that it may be worth a Frenchman's while to smuggle at 10 per cent. though afterwards he may require 20, in order to realize the same profit to himself upon the transaction?—Yes.

2973. You said they had paid a duty at the Custom House frequently in consequence either of the neglect or ignorance of the officer, considerably under the per centage intended by law to be levied?—The duty stated on ribbons in particular.

2974. Do you suppose they do not weigh the goods at the Custom House, or that any connivance exists between the importer and the officer?—I cannot say that connivance exists, but the facts came before me which prove that a duty of 30 per cent. has not been levied in all instances.

2975. Are the French now producing any particular colours which are fashionable?—Yes, I have brought samples of two or three, all of which are very ugly, [*producing them.*]

2976. You suppose it to be the intention of the law that 30 per cent. should be levied, do you mean that 18 per cent. only is levied?—As low as 10 per cent. has been paid.

2977. Can you account for that?—I cannot.

2978. Do you suppose the officers actually weigh the goods?—They can value them or weigh them.

2979. Do the officers generally take them at the *ad valorem* duty?—I cannot state whether they actually do, they may do which they please, I believe.

2980. Have you seen goods which ought to have paid 30 per cent. which did not pay above ten?—I have.

2981. Do

Mr.
George Stephens.

6 April,
1832.

2981. Do you know whether those were taken at the *ad valorem* duty, or weighed?
—I cannot say.

2982. Do these goods, samples of which you have just produced, sell currently now?—They do.

2983. If these were made in England, do you believe that ladies would buy them?—I think not, they are very ugly.

2984. With reference to the goods on which you state 30 per cent. ought to have been paid, and on which only 10 per cent. was paid, is it your belief that they actually passed through the Custom House?—I cannot swear that they passed through the Custom House, but their condition induces me to believe that they did.

2985. Can you state how it is that you suppose they had paid only 10 per cent.?—That I can tell from what the goods would be worth in France and what they would be worth here, by adding the duty.

2986. You mean to say those goods you are alluding to, if they had been weighed, and if they had paid the duty according to the Table of 1829, would have paid 30 per cent. duty?—They should have paid that duty.

2987. And that if they had been regularly weighed they would have paid that?
—Yes.

2988. Do you mean to impute any fraud on the Custom House?—No.

2989. You think it is done by a trick upon them?—Yes.

2990. Are they always weighed?—They are not.

2991. Do they take them on an *ad valorem* duty?—Sometimes they do.

2992. Do they ever take the duty on the word of the importer?—I cannot say.

2993. Have you ever cleared any goods at the Custom House?—I have been there when they have been cleared by our agent, they generally put them into scales and weigh them.

2994. Did you ever see them pass goods without putting them into the scales?
—No.

2995. Of what particular kind of goods are you speaking?—Gauze ribbons.

2996. Are they not also weighed at the Custom House?—I do not know that they are always weighed.

2997. You stated that you formerly purchased of thirty houses in the ribbon trade, and that you purchase now of about six?—Of about twelve I believe.

2998. At what time are you speaking when you state that you bought of thirty?
—The accounts were existing when I took the department I now hold; it was in the beginning of 1827.

2999. Do you mean to say that your house bought of thirty?—They had accounts opened with thirty Coventry houses.

3000. Were they in the habit of going to Coventry?—No.

3001. You bought of houses having establishments in London?—Yes.

3002. You now purchase of only twelve?—No more.

3003. Were they all manufacturers?—Not all of them.

3004. Do you buy the larger proportion of your goods of manufacturers, or of warehousemen?—Of manufacturers.

3005. Do you buy a larger proportion of manufacturers now than formerly, or a less proportion?—I think the same proportion.

3006. The custom is to buy of manufacturers more than formerly?—Yes, with us generally.

3007. Is it not the fact that a considerable number of the larger manufacturers have no establishments in London?—I am not aware of that.

3008. You spoke of having purchased goods at four francs in Paris, and at the end of the season at much less in London; you were then speaking of broad silks?
—Yes, figured silks.

3009. Those who smuggle have an advantage over those who do not?—Yes, I think they have.

3010. All who do not smuggle, therefore, have an interest in putting down smuggling?—I think they have an interest in doing so.

3011. Supposing that in consequence of the prohibition increased smuggling took place, all those in the habit of smuggling are interested in the prohibition?—Yes, unless there are further means to prevent smuggling.

3012. Do you believe that if we were to return to a state of prohibition there would be any smuggling at all?—I think that means might be taken to prevent smuggling altogether.

3013. Do you think if any increased means were taken, that persons would

Mr.
George Stephens.

6 April,
1832.

engage in smuggling, the parties being subjected to the old law?—I think that smuggling would then exist.

3014. Do you think it would exist to the extent of one-tenth of the quantity now sold in this country?—Not an hundredth part.

3015. You were asked as to buying French silks at four francs in Paris, and afterwards buying them at less; you stated that you bought them at first at Paris at five francs, and afterwards at a less price there?—That they were offered in Paris.

3016. You were asked as to your buying from 30, and afterwards 12, Coventry houses; your purchases of English ribbons have greatly declined?—They have.

3017. Whether you buy of 30 or of 12 is of no consequence, but the quantity has declined?—Yes, it has, very greatly.

3018. Were there not a great many houses five years ago which were commission houses, agents for manufacturers, and some of them manufacturers?—Yes, there were then a great many of such persons.

3019. Those were the sort of houses that you meant when you stated that they had disappeared?—Yes.

3020. You think the prevailing system has annihilated a great part of those houses?—It has eaten them up.

3021. Are you aware whether any smuggling exists coastwise, whether any ships coming to an English port, with a certain quantity of silks entered on their papers do not on board take goods from ships at sea of much greater value, without increasing the number of their packages?—I cannot say.

Mr. Vernon Royle, called in; and Examined.

Mr.
Vernon Royle.

3022. WHAT are you?—I am a silk throwster and a manufacturer at Manchester.

3023. Are you a mill-owner?—I am.

3024. To what extent?—If I include the weavers and winders, and their children, as well as the throwsters and their children, who receive employment and bread from my mills, I think the number may be taken from four to five thousand persons.

3025. When were your throwing mills erected?—My first throwing mill was built in 1819 or 1820.

3026. Was not that the first mill erected in Manchester?—Another was building in the same year, but mine I think was finished first.

3027. What increase was there in mills between the years 1819 and 1823?—I think there was no increase.

3028. How many mills were there in 1823?—There were two erected in 1819 or 1820; there might have been one or two more before 1823; I know what mills are now there, but I cannot fix the dates of their erection.

3029. Between 1823 and the present time, what increase has taken place in the number of mills?—There are now twelve which may be called Manchester mills, one in the parish of Ashton, and another in the parish of Eccles, but belonging to parties living in the town.

3030. It is usual to estimate the size of the mills by the power of steam engine; what is the power employed in those mills at the present time?—The power is 342 horse power, but that requires a very considerable qualification; if I was to say the Manchester mills were driven by 342 horse power, that would give an idea that they were all in full operation, which is not the case; two were completed only last autumn, and are now filling with machinery, and in the course of perhaps this year or the middle of the next the whole of the horse power will be at work, and all the engines will be loaded.

3031. What is the number of horse power out of the 342 not at work?—I cannot tell; one is a very large mill, I think it will require 60 horse power.

3032. Of the 342, how many horse power are now working?—It is impossible to say; I should think about two-thirds; that is, one-third are now running without a load, or have not begun to work. It has been said in the House of Commons, that the Manchester people were working their silk mills with steam engines of 342 horse power, but it is not so.

3033. Can you form any estimate of the probable quantity of thrown silk which those mills would produce in the course of a year?—I have an opinion as to what the

the horse power is capable of doing, but I do not think I am justified in stating that opinion, for I have not sufficient facts to enable me to state it accurately.

3034. Are those all throwing mills?—They are for throwing and manufacturing silk.

3035. When were the first weaving mills introduced?—I cannot tell when Mr. William Harter first began weaving, perhaps seven years ago.

3036. Of those 12 mills, how many are throwing, how many weaving, and how many both?—They are all throwing silk; that is, two-thirds of the 342 horse power are employed in throwing silk.

3037. What do you conceive to be the value of those 12 mills, with their machinery?—The value I am enabled to come at in this way; when I retired from the manufacturing part of the business, two young men, who had been my servants, succeeded for one of my mills, and became my tenants; and for the purpose of finding the rent the machinery was valued; the mill-work was valued, and the buildings and land were valued by professional men; and considering the mill and its machinery as good as others in the town, if I include the value of the land on which they stand, the value of the whole 12 is much more than 200,000*l.*; they have cost considerably more.

3038. You state, that the first mill for throwing silk in Manchester was erected in 1819; do you know how many looms were employed in Manchester at that time, in weaving articles in silk and in mixed articles of silk and other articles?—I think, in 1819, there were not 50 all silk or broad silk weavers in Manchester.

3039. How many for mixed goods?—I think about 1,000.

3040. Do you know how many are so employed now?—It must be mere matter of opinion; the fact can be ascertained only by going from house to house; it has been stated in the House of Commons that there are 15,000, but I think that is above the number.

3041. Are you a manufacturer?—I manufacture by steam looms; I am becoming a manufacturer.

3042. On what authority has the statement as to the number of silk looms being 15,000, been made?—I cannot say.

3043. What, in your belief, is the number?—I believe there are about 12,000.

3044. Do you mean for silk, or for silk and mixed together?—For the whole.

3045. Are you able to divide those?—No, I am not.

3046. Have the goodness to state in what year the increase of the mills took place, how many in each year, so far as you are able to state it?—There were two built last year. 1831.

3047. How many in 1830?—I think there were none in 1830.

3048. How many in 1829?—I cannot say when they came into work; one or more mills were built in the prosperity year, the year 1825.

3049. Were any built in 1826?—I cannot say when each mill came into work.

3050. Can you tell how many before, and how many since 1826?—I cannot tell with any certainty at the present moment.

3051. Will you give a progressive statement of the silk manufacture in Manchester, from the period of its introduction in 1819 to the last year?—I cannot mark the progress of every year.

3052. Can you state whether it has increased?—Certainly it has increased.

3053. Cannot you describe the state of the silk trade in previous years?—No, we have had depressions in the silk trade; but when the silk trade has been depressed in Lancashire, it has been from a general cause.

3054. Has it been in a variable state from July 1830?—I believe it has been more unsteady than at any previous time.

3055. Do you mean that it laboured under depression?—The depression was exceedingly severe from November 1831 to the middle of January 1832; the circulation of the Bank of England in January last was only sixteen millions and a half, and that was the time we suffered the most.

3056. Was it in a state of depression or in a state of activity from 1830 up to this time last year?—I think in the beginning of 1831 we had a fair and reasonable demand, as much so as we could expect under the circumstances of the country, but the prices were gradually sinking from June till Christmas; I think about Christmas 1831 the pressure was at the worst.

3057. What in your opinion was the cause of that depression?—I think there are various causes which may be mentioned; I think for one thing, the Yorkshire manufacturers made an article called Merino Cloth, which perhaps interfered with silks;

Mr.
Vernon Royle.

6 April,
1832.

silks; and from the continued varying of the standard of value by the Bank of England, the pressure was general, it was on the cotton trade as well as on the silk trade.

3058. Would not the state of the currency affect all trades alike?—Yes.

3059. What effect do you think taking off the duty on cotton prints had upon the silk trade?—I think it had an effect certainly; I think that it affected the trade during the summer of the last year.

3060. In what way do you think it affected the trade?—I think that from the noise made about cheap prints made people buy them; there was in fact a demand for prints, which may have injured the silk trade in some degree.

3061. What is the state of the silk trade at Manchester at the present moment?—The silk trade at the present time I think would be in a very fair state of demand if this Committee had never been called together, and at this present time I think the demand as good as we can reasonably expect under the circumstances of the country; I have no doubt that the circulation of the Bank of England is now twenty-one or twenty-two millions.

3062. You think that the appointment of this Committee has injured the trade?—I think it has; I think that the shopkeepers are afraid of buying silks, lest they should be cheaper.

3063. Are the demands for home trade or foreign consumption?—I know nothing of the foreign trade; the silk trade is chiefly home trade.

3064. On what sort of silks are the mills in Lancashire working?—Bengal silks, China silks, Italian silks, and generally as other mills in the North are.

3065. What is the proportion in your own mills, of the Italian and other silks you throw?—We do not throw one-tenth of Bengal silk, nine-tenths may be Italian, and one-tenth Bengal and China.

3066. Do you throw it on commission, or is it all your own?—It is all our own, with very trifling exceptions.

3067. Do the regulations under which the silk trade is now proceeding, in your opinion, require any alteration?—If I am asked my opinion, or only as to the drawback, I should say, No.

3068. Is it your opinion that prohibition would be beneficial to the silk trade?—I have never found fault with the present regulations; if prohibition is given, I will never find fault with it certainly.

3069. It will do you no injury?—Certainly not.

3070. Do you think it will do Manchester any benefit?—I would rather avoid the question.

3071. Do you think that prohibition would benefit the cheaper branches of the silk trade in Manchester?—I think it might, perhaps.

3072. Do you feel much competition in Manchester?—Yes; such as is felt elsewhere.

3073. Are you not desirous of being freed from restrictions as a manufacturer, rather than have more put upon you?—I cannot answer that question exactly, I have but a choice of evils; I have said that the present regulations satisfy me.

3074. As a throwster?—Yes.

3075. As a throwster, you think the present protecting duties sufficient?—I would not ask for more, though I think other men may have a different opinion, and that their opinion is entitled to as much attention as mine is.

3076. What, in your opinion, is the real amount of duty now paid on foreign thrown silk?—Raw silk coming from the Austrian States and from Lombardy, pays twice as much as thrown silk; I think the duty at present paid on thrown silk is about 2*s.* 10*d.* a pound English, the sale of the debenture may be 2*d.* or 3*d.*; the people in Lombardy protect their throwsters by taxing raw silk going out of the country.

3077. If the duty paid on Foreign thrown silk were discontinued, what in your opinion would be the consequence to the English throwster?—I think it would ruin a great many of them, particularly those in remote places; for we find as the import duty has decreased, the import of thrown silk has increased, and in the face too of a falling market, for 1831 was a falling market from first to last, or nearly so; I think the Italian mills are capable of throwing off double what they do at present; I have been in many of them.

3078. What has been the difference in point of quantity?—In 1831, the quantity of thrown silk imported was 514,000 pounds; in 1830, it was 437,000 pounds.

3079. Do you think this would be partial or would it be an entire destruction

to

Mr.
Vernon Royle.

6 April,
1832.

to the British throwster?—Indeed I can hardly say; my opinion is, that I might perhaps survive the wreck, but I think that very few others could.

3080. Do you mean if the duty was wholly taken off?—Yes.

3081. Have the mills which you think would be affected, as good machinery as yours?—I do not know anything of the machinery of any mills but my own.

3082. Are you not able to state, whether their machinery is on a better principle than yours?—No, for I have never seen them.

3083. Then how do you think that they would be more affected than you?—Because I think that throwsters, in large towns, would become manufacturers, and would convert their mills to manufacturing purposes as well as for throwing.

3084. Confining your answer to throwing, do you think, supposing the duty were removed, you would continue to throw Italian silk?—Yes, possibly; but not to sell to manufacturers. I will beg to read an extract from a letter from my partner on this subject. “March 26th. This morning Mr. ———, who is a customer of ours, bought four bales of beautiful foreign tram at 19s. 6d. from Mr. ———, for raws; to make such tram they ask 18s. How is it?” Then he says lower down: “To day we commenced working a short time, in winding and cleaning, (four days and a half per week).” We cannot make fine tram at 19s. 6d.; we cannot make tram so cheap as was bought of the foreigners on this occasion.

3085. Are the Committee to understand there is only that difference between the raw and the thrown?—Yes.

3086. Can you suppose such a price will continue; do you think the manufacturers of Piedmont charge only 1s. for throwing it?—No, I do not suppose that; nor can I explain why such a circumstance takes place.

3087. Do you not conceive this is an exception to the general rule?—Yes, I think it is; but it is important to this inquiry to know, that tram may have been brought to England when prices were much better; the merchant here may have written out to his correspondent there, that things were mending, that discounts were in plenty, and before it comes here the Bank has changed its policy, has contracted its issues, and it must be sold for whatever it will fetch; it is one of those anomalies which will happen in all places, it is brought here when the Bank of England is filling the country with notes, and is sold when she has withdrawn them.

3088. You do not think you could throw silk so as to supply manufacturers with it?—It would not answer our purpose to throw silk to sell, we should be obliged to manufacture it ourselves on the premises if we are to exist, that would be the only way in which we could do so.

3089. You have stated, that if the duty was taken altogether off Foreign thrown silk, that many throwsters would be ruined; but you think you yourself could live through it?—Yes, by becoming a manufacturer.

3090. Would not that answer apply to most of the manufacturers now at Manchester?—I apprehend it would.

3091. Then they would survive it as well as yourself?—I think they would.

3092. Do you consider that you throw silk as well as the Italians?—Yes.

3093. In case the duty on foreign thrown silk were taken off, do you consider that the purchaser of thrown silk here, or the Italian throwster, would gain the difference; would the whole charge be still made upon you to the amount of the duty paid?—I think the profit would be increased to the Italian throwster, certainly; I think the Italian throwster would gain the greatest part.

3094. The manufacturers in this country, in your opinion, would gain a very small part of it?—I think so.

3095. Supposing you were to throw entirely for your own consumption, to which branch of the trade should you direct your efforts?—We should direct our efforts to that branch which has the least fancy about it, to the manufacturing of plain goods.

3096. Are you aware, that other countries are supplied with thrown silk besides England?—Yes, I am.

3097. What would regulate the price of the silk, would the small quantity sent to England, or the large quantity sent to the rest of Europe?—I do not know, it depends so much on circumstances. England, for a time, might be a very good market, and a good deal would come in, then when we were supplied it would go elsewhere.

3098. You mean to say, that it would not come to England unless they could sell it at a profit?—I will relate a conversation with a gentleman of the name of

Mr.
Vernon Royle.

6 April,
1832.

Steiner, at Bergamo. He said, that sending silk to England was perfect gambling, for that they never knew what they should get for it at all. Sometimes they had a profit of 15 per cent.; sometimes they lost 15 per cent. That when they sent silk to the Rhine, or to Vienna, or St. Petersburg, they could always tell to five per cent. what they should get; but when they sent to England they never knew what they should get; sometimes they got a large profit, and sometimes they lost a great deal. He inquired how the matter was, and it was explained, viz. by the increase and decrease of Bank of England notes.

3099. Do you not suppose a great number of the speculators in England, speculating in that trade, produce that?—Yes, certainly.

3100. You think it would not continue as long as the trade was going on increasing?—I think, that with regard to the importation of the thrown silk it is a matter of great consequence. I am hardly competent to give an opinion as to the power of the Italian mills; but they can do more perhaps by one-half than they do; their water falls are tremendous, and they have no factory time Bills there to rule them and lop off one day in six.

3101. You consider that any such regulation is against you?—Decidedly so; one day in the week from our productive industry would totally ruin us.

3102. If the variation of the price of silk, which is stated to exist in England, is owing to speculation or competition, is the silk trade this year in a more healthy state than it was any year since 1826, as far as men of capital are now in it?—I think there is not much alteration in that respect, it is much as usual.

3103. If the same speculation exists here, you think the same uncertainty will continue?—We know from whence men are able to speculate, viz. from the excessive issues of the Bank of England.

3104. You conceive that supposing the duty were removed, the quantity of thrown silk imported would of necessity be abundant?—I think so.

3105. And that the greater number of those persons now employed in it would be ruined?—Yes, they would be driven to the parish and to poor houses.

3106. What do you conceive to be the proportion between the fixed property of the throwster, and the fixed property of the manufacturer?—The difference is so great that I can hardly state it; the manufacturer begins trade with his outlay, with his silk and his bobbins, and his reeds and harness, &c. &c.; and I apprehend if a man has 1,000 weavers in Spitalfields, his fixed capital in those materials will be perhaps two or three hundred pounds. I apprehend that the worst silk mill is worth more as old materials than all the reeds and harness in Spitalfields.

3107. The business of the throwster depends upon the manufacturer notwithstanding?—Yes.

3108. You mean that there is a greater quantity of capital in the mills of the throwsters?—Yes.

3109. You have stated the Manchester mills to be of the value of more than 200,000 *l.*; do you know how many operatives they employ?—I can tell how many they will employ when they are all in full operation; they will employ 5,850 operatives who would tend the frames; besides these are to be added the mechanics, &c. &c.

3110. Have you made a calculation, supposing the building of a mill cost 4,000 *l.*, how much of that has been paid for taxes on materials?—I have not a calculation by which I could show how much money was expended in labour, and how much in materials; but if a mill cost 4,000 *l.*, I think it may safely be said that 1,000 *l.* has been paid to the King for taxes. The bricks are taxed at 5*s.* 10*d.* the 1,000; the timber is taxed 100 per cent.; the glass 500 per cent.

3111. Then of course if your trade was destroyed, you would naturally look for compensation?—Certainly; if the silk throwster is to be stripped of his protection for the public good, I think he is entitled to compensation; for a reasonable compensation is that which every man has a right to expect, inasmuch as he sees nearly all trades protected; the cotton spinner is protected, the corn grower is protected, the wool grower is protected.

3112. Do you think the present protection given to the silk throwster is equivalent to that given to the cotton spinner?—I think it is nearly the same; the cotton spinner has a protecting duty of 10 per cent., and 3½ *d.* for every square yard of printed cotton in addition.

3113. Are you aware of the protection the French give to their throwsters?—They will not allow the raw silk to be exported at all; and they tax thrown silk coming from Piedmont about 10½ *d.* on every pound English.

3114. Organzine pays 10 *d.* per pound?—Yes.

3115. The

Mr.
Vernon Royter

6 April,
1832.

3115. The duty on importation being 2s. 10d.?—Yes.

3116. What do you think would be the effect on the British silk manufacturer, supposing the throwster was destroyed?—He would require a protecting duty against foreign manufactured goods, as heretofore.

3117. Can you give any rule by which a protecting duty might be imposed?—I really cannot; if I knew what the issues of the Bank would be for the next two years, I could give a rule, but I cannot without that.

3118. Can you explain how it is, that the importation of raw silk has increased so considerably, whilst the importation of thrown silk has increased only in a trifling degree?—I attribute it to the decrease of protecting duty; the last two years there has been more thrown silk imported than in the two former years; and I attribute that to the reduction of the protecting duty; till that time it was really a protecting duty, it enabled the mill-owner to increase his mills, and to make a tolerable living.

3119. The quantity of raw silk has considerably increased?—Yes, and the English throwsters have thrown it into different articles.

3120. There has been a complaint in the country that the throwster has been in a state of distress?—That is very true, and the throwsters have been branded as being very imprudent men.

3121. Can you give an explanation of the alleged distress; has it arisen from an increase of raw produce, without a corresponding increase in the manufacture?—I can only say for myself, I have never complained of distress, it is true we are obliged to reduce our wages when severe pressure has been upon us.

3122. It appears from a letter you have just read, that your mills are not in full employment?—In consequence of this Committee, we trim our vessel, not knowing how the storm may come upon us.

3123. You made no complaint to the Board of Trade?—No; I wrote a letter to the Board of Trade, which I will explain, there is no complaint of distress in that, the word "distress" I believe is not in it.

3124. Do the master throwsters and manufacturers in Manchester, in conjunction with the operatives, form lists such as are formed at Coventry so as to prevent wages being reduced unreasonably low?—Never.

3125. Have such lists been formed at Macclesfield?—I am not aware that lists have been formed there, but there is a society of masters there, and they have a secretary, and they meet to tell of their experience, and the circumstances of their trade, and so on.

3126. What, in your opinion, are the effects of such lists upon the operatives in Macclesfield?—If there are such lists at Macclesfield, I should think that they are more calculated to keep wages down than any thing else, that the more jealous the masters are of each other the better for those whom they employ.

3127. You have visited the silk mills of Italy, and you have had an opportunity therefore of observing the machinery, and the power there is of working mills?—I have.

3128. Do you know what is the difference between the wages paid in the Italian and the English mills?—The wages in Italy I think are about one-third of the wages we pay in England, or thereabouts; of course the wages are governed by the demand for the silk, or whatever the article may be, they rise and fall with the demand.

3129. Are you able to calculate the rate of wages, in proportion to the want of silk?—I am not able to answer that question, in passing through a silk mill we hear what such a person has per week.

3130. Have you any means of knowing what those persons do?—They are all paid by the day.

3131. Have you any means of stating to the Committee what may be the difference of labour in those mills as compared with the manual labour in English mills?—I think that it is about the same; I am not aware of any great difference, the Piedmontese are extremely intelligent, and are like English people.

3132. Are you aware that English machinery of the most approved principle has been sent from England into Lombardy?—It has.

3133. Can you state the circumstances under which that machinery was sent from England into Lombardy?—A silk throwster came to Manchester in, I think, the year 1830, he had no letter of introduction to me, but called upon me; I was civil to him, having been received very politely by his countrymen; his object in coming to England was to obtain machinery of the best description; he brought a correct

Mr.
Vernon Royle.

6 April,
1832.

plan of his mill, and came prepared to purchase machinery; he purchased several frames of the first description, which were sent to Lombardy. I am not prepared to say that the Government gave him permission to export them, but he did export them, and they are now there; he was frequently at my office.

3134. Have you any reason to suppose that the Italians keep the best raws to be thrown at home?—The large throwsters in Italy reel a great deal of silk for themselves; they buy the cocoons, but they do not reel all they use, they are very careful to buy the best; I do not mean to say that all the best remains there; but they reel with great care that which they work in their own mills.

3135. Have you information that there is a system carried on in that country of selecting the best silk for their own use?—No; the merchants of England are very desirous to obtain silk on consignment, and promise the Italian growers that they will get them good prices; the silk is brought here certainly, and they get, when it comes, what they can.

3136. Have you ever petitioned the Board of Trade, or Parliament, to export your own machinery?—I applied to Mr. Huskisson, a few years ago, in consequence of the alterations continually making, not being disposed to endure much of it, I applied for permission to carry my machine out of the country, but it was not attended to.

3137. How many years ago was that?—About five or six years ago.

3138. Was it since the year 1826?—Mr. Huskisson was at our mill the year before he died; that would be, I should think, 1827.

3139. Have you ever since made application to the Government relative to the state of the silk trade?—A gentleman from Macclesfield, came to my house on a Sunday, and was anxious for me to join in a petition, describing the trade there to be in the greatest distress, but I would not do so.

3140. At what period was this?—In January 1832, it was the first Sunday in the year. I said we have part of our mill not employed. This gentleman said to me, whenever we talk of a depression of trade, they say at the Board of Trade the trade is all gone to Manchester. I said I will state the simple fact, that we have part of our machinery not employed; I have no objection to state it, if it is wished, to Mr. Poulett Thomson, for I want to have a fling at him, for encouraging Hobhouse in his Bill, and Sadler's Bill, and so I wrote a letter which will speak for itself.

3141. Have you any objection to that letter being read?—No, not the least; it was a private letter to Mr. Poulett Thomson, but I wish it should be read; it has gone too far, too much has been said about it for me not to wish to have it read now.

3142. It appears that you addressed a private letter to the Vice President of the Board of Trade in January last; did that letter contain any intimation that you considered it might be a desirable provision to introduce into some law, to allow manufacturers to quit this country, carrying with them their machinery and their labourers?—Looking at Mr. Hobhouse's Bill, and Mr. Sadler's, I asked, in effect, for permission to go away from such oppression, and such unreasonable enactments.

3143. Had you made a similar application to Mr. Huskisson?—Yes, some years before that; that was not by letter.

3144. Has it appeared to you, having given your attention to subjects connected with the manufacture in which you are engaged, that other countries in Europe protect their own manufacturers, and more particularly those who lay out large sums of money in mills and buildings, and fixed property, to a degree not offered to manufacturers in this country?—I think that they do protect the manufacturers to a much greater degree; the reason is this, that when a man builds a mill, it is considered a real or national property, and an addition to the means of employing the poor in the kingdom or country; a manufacturer merely may take his capital and walk away to Paris or elsewhere, but when he has built a mill, he is almost always obliged to stay with it, and so promote the welfare of his poorer neighbours; this is considered of great consequence in all countries, and it is of great importance; if a man, for example, builds a mill of the value of 100 £., and that employs five people, to each of those he supplies 20 £. worth of tools; he lends to them 20 £. worth of tools to work with, and that is the reason why property of that description is considered deserving of protection; it is proposed now to strip the English throwster of his protecting duty. I think that as almost every other trade is protected, the cotton trade, and the agriculturist, and almost every other, the silk throwster

throwster then ought to be protected also, or to have a fair compensation made to him for his loss.

3145. You are understood to say, that in Manchester laws introduced for the regulation of work in factories tends, in your opinion, considerably to embarrass the manufacturers?—Yes; and to injure the operatives grievously.

3146. Have the goodness to explain in what respect you conceive such laws have an injurious tendency?—The silk trade hitherto has not been under such laws; but from the strength of the party who support Mr. Sadler's Bill, I have no doubt it will come under the law; and if the Bill passes into a law, as it stands now, the silk throwster, who now obtains from his mill 600 lbs. weight of silk per week, will only obtain 500 lbs. and the operatives will lose, out of their wages, one shilling in six; and looking at the Bill, as it now stands, the mill owner or manufacturer is delivered over, bound hand and foot, to the common informer and to the law-making justice.

3147. Have you ever been to the Board of Trade for advice or information respecting your trade?—Yes; I have once, and only once.

3148. Did you obtain the advice you were in need of?—Certainly most imperfectly.

3149. At what period was that?—At the beginning of last year. I went there for advice and instruction, as I was entitled to do, knowing that the gentlemen there are very well paid for their attendance; but in place of having instruction there, I had to give instruction, and particularly as to an Act of Parliament.

3150. Do you conceive that the prosperity of the silk manufacture, in any certain year, is shown by the importation of thrown silk in that same year?—Not by any means; when it is thought necessary to explain to the country how the silk trade is going on, they say the trade must be in prosperity, because the importation is so large, the manufacturer must have been busy: such is not the fact; for if it happens, as in 1831, that the issues of the Bank are 20 or more millions for three months, there is for that time a great importation, but it may remain over in the London Docks for many months, or until there is another or a greater issue of notes; therefore the quantity coming in, in one year, is no proof that it is manufactured in that year.

3151. In the present state of the law, from the ease with which the English machinery is obtained by foreigners, do you conceive it possible for this country to retain for any considerable period, any superiority in respect of its machinery?—Not for one day.

3152. How long is it since our silk machinery was superior to the French?—I do not know that it is superior even now.

3153. You have stated that the best machinery was sent out in 1830; do you mean for throwing?—Yes.

3154. How long is it since our throwing machinery was superior to the Italian?—I do not know that it is superior at all; the English frames are superior in form; they are superior, being in cast iron, and they are more durable; but the Italian machinery does the work quite as well.

3155. The Committee are to understand that it is more durable?—Yes; and stands in less compass.

3156. Is it cheaper?—No, I think not.

3157. Do you then think the Italians would want it dearer?—The form is the principal thing; but machinery made mostly of wood would last a great many years.

3158. Are the Committee to understand that the machinery used in England is equal, taking the form and duration together, to that used in Italy?—Certainly.

3159. Have you any means of judging whether it is equal to that used in France?—I think it is much the same.

3160. Do you think that either the Italian or the French have any advantage over you in throwing?—No, I think not.

3161. But you think they have in wages?—Yes.

3162. Can you give an estimate of the expense of throwing in England?—No, I cannot.

3163. Is it 4s.?—I must decline answering any questions respecting my own business.

3164. You state that the wages in Italy are much lower?—I think only about one-third, but they vary of course.

Mr
Vernon Royle.

6 April,
1832.

3165. Do you mean the wages of per day, or what they turn out of hand?—They are employed by the day.

3166. Have you any means of judging what the charge per pound weight is in Italy?—I have not.

3167. Is it not probable that a man may have in Italy 1s. a day, and an Englishman 3s., and yet the Englishman's labour be cheaper than the Italian's?—Yes, it may be; but it is not so in Piedmont, they understand very well what they do there, they understand the division of labour as well as we do.

3168. How do you know it was a third?—Because I asked work people in the mills one or more, of what they earned, and I know how many spindles they tended.

3169. What were the hours?—The hours were more than ours.

3170. Can you state the expense upon a pound of silk?—When I see a machine at work, and see how many spindles or places an operative tends, I know what difference there is between the price of labour in England and in Italy.

3171. Can you not then state the expense per lb.?—It depends so much on circumstances, one shall employ ten men at 3s. a day, another shall employ the same number at 4s. yet these latter shall be less productive than the former.

3172. As you have given a decided opinion, was that opinion formed on learning the result, or merely on casual observation in going through the mills?—In the mills in Italy I have seen as much order, as much application of industry and ingenuity, as much looking after the work, as in England; the Piedmontese are well known for their application and industry.

3173. Having seen all that, did you ever hear what was the charge per lb. for throwing?—That depends upon the sort of silk, and the quality of silk; fine or coarse silk will make a difference.

3174. Take the average?—I cannot give the average; I think if I had a mill in Piedmont, and you had mine in Manchester, I could ruin you in a few years.

3175. You have been asked about a private letter, do you mean with reference to that private letter that the Committee should understand that the constant change in the law, which regulates the silk trade, and the rights of interference with the application of that labour, are the principal grounds of the complaint stated in your letter?—Yes, they are.

3176. Do you not consider that all interference of that kind must be detrimental to British manufacture?—Yes, I do certainly.

3177. That is the sole ground on which you state you would rather leave the country than remain in it, subject to such restrictions and changes?—Yes, I would rather do it even at my age; I would rather leave the country than be subject to Mr. Sadler's Bill.

3178. Do you not consider it of essential necessity to the silk trade, whether applicable to the throwsters or weavers, that the rate of duty should be settled once for all?—I do.

3179. You have been asked, if the duty on the import of Italian thrown silk were taken off, what the consequence would be, and you were understood to say, that a great increase in the import of foreign thrown silk would take place?—I think so.

3180. Are you aware that in 1824 the duty on thrown silk was 14s. 8d. up to the 25th of March in that year?—I have no memorandum of the amount, but the duty upon raw silk was then 5s. 6d. per lb.

3181. Are you aware that on the average of ten years prior to that, the quantity never exceeded 400,000 lbs. weight?—Yes, it may be so.

3182. Are you aware that the duty was reduced to 7s. 6d., and in 1825 to 5s.?—Yes, I am.

3183. Are you aware in the year 1826 there was only 289,000 lbs. weight, and in the year 1829 only 172,000 lbs. weight; and if so, how do you reconcile the fact that from the time the heavy duty was taken off, there was less thrown silk imported than while the duty was 14s. 6d., with the opinion you have given?—My opinion is, that the duty down to 5s. was really a protecting duty. Some manufacturers thought that foreign thrown would answer the purpose best, and they would have it; probably our throwsters are not so competent; it is only within the last few years that the English thrown silk has been as good as the foreign thrown.

3184. Are you aware that since the year 1765 up to the year 1831, the quantity of Italian thrown silk, on the average of any number of years, has never exceeded 10,000 lbs. weight?—It may be so.

3185. In

Mr.
Vernon Royle.

6 April,
1832.

3185. In 1765 there were 363,000 lbs. imported; in the years 1829, 1830 and 1831, the last year, only 374,000 lbs.—I cannot state the quantities.

3186. You have stated, that if the duty was taken off altogether, which is 2*s.* 8*d.* we should be overwhelmed with foreign silk; how can you expect an increase to take place now, if it has not increased, when the duty has so far decreased?—The English throwster at the time spoken of, I think, did not pretend to throw Italian silk into organzine; I am old enough to know when they would not throw Italian raw silk if they could help it. Until now, the duty was a protecting duty; the 7*s.* 6*d.* and 5*s.* kept the distance greater between the English and Foreign throwster. I have said, that I think the Italian mills are capable of throwing twice as much as they do at present, from their immense water-falls, and from being allowed to work night and day, as they may think proper.

3187. If you take the average of any five years, for the last fifty years, does not that prove that the quantity of Italian thrown silk entered for home consumption has undergone little change?—The importation of a particular year is no guide; those circumstances take place from various causes which I cannot explain; such as fashions, and various circumstances. The last two years, when the duty was reduced to 3*s.* 6*d.*, there was a higher import than in any two former years; and if the duty was taken off altogether, the quantity would increase still more.

3188. Can you state what were the prices of Italian thrown silk in the English market in each of the last five years?—I cannot.

3189. Do you know whether it has been cheaper the last two years than in preceding years?—I have no memorandum at all of the prices; prices are governed by the issues of the Bank of England.

3190. What have you paid for Italian thrown silk in 1827 and 1828?—I have no memorandum.

3191. Or in 1829 and 1830?—I have no memorandum; I can only say, that silks are rather improving in value now.

3192. Can you say whether it was cheaper the last two years than the three preceding years?—I cannot speak to that without memorandum.

3193. Are you able to state the price of organzine in the last five years?—It is lower now than five years ago.

3194. Must not the price of thrown silk, whether Italian or English, depend on the general price of silk in the market?—There are anomalies; sometimes thrown silks are scarce, sometimes they are abundant; sometimes looking at the price of raw in the English market, and foreign thrown in the English market, it would appear that the foreign throwster has thrown his silk for less than nothing.

3195. May not that affect the quantity of Italian thrown silk?—There are so many circumstances, I cannot answer to that.

3196. But you are clearly of opinion, that if the duty was taken off, that would increase the quantity which comes in?—Yes.

3197. From what you know of Italian thrown silk and English thrown silk, which do you think the best article; can you throw as well in England as they do in Italy?—I never felt satisfied with what I did myself; I always thought any body could do it better, or as well.

3198. You were asked before, whether you could not make it as well as the Italians, and you said, Yes?—Yes, I think we can; we ought, certainly.

3199. You have stated, that you were very well satisfied with things as they are; that, individually, you sought no change?—Just so, speaking of the regulations.

3200. That may happen with one individual, and not apply generally?—It may not apply generally; I apply it to myself.

3201. Is there not something peculiar in the Manchester trade, do not they make the lower description of articles and mixed goods, which consume a quantity of silk, with a view to effect large sales, and to meet a great and extended consumption without attempting to guide or influence the fashions?—I do not know; when I was a manufacturer we endeavoured to make such patterns as we thought would sell.

3202. Formerly a great many white dresses of plain muslin were worn by ladies, they are not worn now?—That may be so.

3203. Has not a great change taken place by the manufacturing of different kinds of articles, and persons now turning again more to the silk trade than formerly?—If I am asked how it is that the silk trade has increased so much, I can explain it; probably the silk trade of Manchester has increased mostly towards Bolton in Lancashire; formerly they wove in that part of the country fustians by hand, now those fustians are mostly woven in mills and by power, consequently the weavers who

Mr.
Vernon Royle.

6 April,
1832.

worked them have been seeking other employment, and the weaving silk has been of the last importance to them; they would have been very greatly distressed but for that; the manufacturers have found weavers ready to take work at very reasonable terms, and they are very easily led to make such goods as the manufacturer wants; the silk trade being better for them than the cotton.

3204. A good deal of the Bengal and China silk is used at Manchester, is it not; is there not a good deal of waste also?—Yes; there is a good deal spun and made into handkerchiefs.

3205. There has been 40,000*l.* drawback paid the last year?—I am glad that that circumstance is mentioned, because the Committee must have some knowledge of that circumstance.

3206. Has not that been one reason why the Manchester people have fared rather better than their neighbours, being encouraged by this drawback?—It may be so, and I beg to state that the drawback which applies to spun silk requires revision.

3207. How is the drawback regulated?—The waste silk which is bought from 2*s.* 10*d.* to 3*s.* 6*d.* a pound is spun into thread, manufactured into goods, and receives a drawback of 3*s.* 6*d.* a pound, the original cost of the materials not being so much as the drawback; so in mixed goods one ounce of silk may be so mixed as to receive twice its value in drawback; and that was the complaint I made to Mr. Huskisson the last time I saw him, and he promised that he would look into it.

3208. Is not a large part of the goods made at Manchester similar to and equal in quality to the Spitalfields, and not exported?—Certainly; I should think three-fourths at least.

3209. Are they equal in quality?—If I was a manufacturer I should never be easy if I thought any man could make better goods than I did at the same prices, and I believe that spirit generally prevails.

3210. How long were you a manufacturer?—Up to 1826.

3211. In what respect does the drawback require revision?—It is the same on a material which costs 3*s.* as on a material which costs 20*s.*; an ounce of silk of the value of 1*s.* 3*d.* may be made up with cotton, the silk may be worth only 1*s.* 4*d.*, and it shall receive a drawback of 2*s.* 4*d.*, that is what I mentioned to Mr. Huskisson.

3212. Is it not the fact, that those debentures are bought at very low prices, and that they get a drawback which is intended to promote the shipping trade, an allowance to the extent of 3*s.* 6*d.* a pound on the silk bought at the low rate you have spoken of?—Yes; my motive for mentioning this circumstance is, that I wish the silk trade to be put on such a basis that no party should hereafter complain.

3213. Are you aware that the regulations of drawback require that the silk goods shall be worth 14*s.* a pound?—Yes; but we know how declarations are made at the Custom House. I can contemplate cases where a debenture of 3*s.* 6*d.* may be worth 4*s.*, then the English throwster would have a bounty against him.

3214. How would you propose that the drawback should be applied to those circumstances?—That is a matter which requires great consideration.

3215. Notwithstanding you have got a tolerable trade in Manchester, and a demand for those things, could you manufacture more goods if you had a demand for them?—We could manufacture a great deal more if we had a demand; they could manufacture much more certainly.

3216. Some of those perhaps are exporters and participate in the bounty?—I think not.

3217. Have you any means of knowing the fact at this moment that there is a great deal of depression of the trade; a great deal of want of employment among the labouring classes in the districts carrying on the silk trade?—I have no doubt there is or has been a great deal of distress in Macclesfield and elsewhere, and we feel it in degree in Manchester, and perhaps from the same causes; but we do not complain of it so much; we bear our sufferings with more patience perhaps.

3218. If there was a prejudice in favour of certain goods introduced against your's, that would affect you?—We should meet the pressure by making as good goods and as handsome goods as we could, and overcome it if possible.

3219. You have been asked respecting the quantity of raw silk brought in different years, formerly there was very little silk consumed in proportion to what has been consumed the last 15 or 20 years; are you not aware that some of the fluctuations in the quantities of thrown silk imported have arisen from a determination on the part of some of the throwsters to make an effort to prevent its introduction;

Mr.
Vernon Royle.

6 April,
1832.

duction; that they have lowered their prices and wages to meet the competition?—We never think about that; we buy our raw silk as low as we can, and look after our mill as well as we can.

3220. Do you think the Macclesfield and Congleton manufacturers have not reduced their profits to meet the competition?—I wish we had an Act of Parliament to give us regular profits; I wish we could always make a profit.

3221. At this moment are you working at a profit?—Yes.

3222. What has been the effect upon the silk trade in Manchester of the changes which have taken place in the law?—The silk trade have nothing to thank the Government for; for the duty on raw silk was kept on till we were pointed at by every government in Europe; they took it off at last, and there has been in consequence a great increase of trade. If the regulations which have been called Mr. Huskisson's Regulations, had not been carried into effect, we should have had no silk trade to talk of; they became necessary.

3223. Do you refer to the duty of 5s. 6d. on the raw material?—I mean the regulations generally.

3224. Has the trade in Manchester generally been a prosperous trade?—Yes, it has generally.

3225. Do you call to mind many failures among those connected with it in Manchester?—Not many, only one or two; there have been very few failures in that trade.

3226. Do you think there would have been any complaints from Manchester unless they had been instigated from other quarters?—I think that some gentlemen in the room would answer that question better than I can; I think they would not have complained unless they had been stimulated to it.

3227. You have no particular complaint to make of the state of your own trade?—No.

3228. You can sell all you make, and as fast as you make it?—That is rather too far; I have no complaint to make; that should be a sufficient answer.

3229. You are now extending your work, are you not?—Yes; but then we are all imprudent men in Lancashire, that has been stated in the House of Commons; I am sure if I am increasing my throwing machinery now I am an imprudent man, and looking to Mr. Sadler's Bill, and other Bills.

3230. Is the distress in Manchester greater than it has ever been before?—My neighbours have said nothing about distress in their petition, nor have I said anything about it.

3231. Do you think that the distress in the silk trade in Manchester is greater than it has been previously?—I have said nothing of distress at this moment.

3232. Do you consider the silk trade in Manchester to be in a distressed state?—I think it is not; I feel no distress, and my neighbours say nothing about it in their petition; and if there was distress I think that they would say so.

3233. Did you not complain of the trade being unsteady since July 1830?—I did.

3234. You said that was owing to their being only sixteen millions and a half Bank notes in circulation?—No; if I am asked what I mean by saying the trade is now more unsteady, I say, that since July 1830 the exchange has been often unfavourable to this country, that the circulation of the Bank of England since May the 1st, 1830, has diminished gradually to January the 7th last, it has gone on decreasing all the while, until it was then 16½ millions; but I have no doubt that the circulation is now more than 21 millions, and that it will remain so some months, till July or August perhaps.

3235. Do you found that opinion on this document?—Yes.

[The Witness delivered in the following Account.]

Mr.
Vernon Royle.

6 April,
1832.

ACCOUNT of all PROMISSORY NOTES and POST BILLS of the Governor and Company of the Bank of *England* in Circulation at the close of the Business on Saturday in every Week, from the 10th of April 1830 to the 7th of January 1832.

1830 :		£.	s.	d.	1831 :		£.	s.	d.

A true Extract from two Parliamentary Papers, dated respectively Bank of England, August 4th, 1831, and February 7th, 1832, and signed respectively,

William Smee,

Chief Accountant.

3236. Did you not say there was a great deal of depression in the autumn of 1831?—Yes.

3237. By what was that caused, was it by the contraction of the Bank circulation?—I think so, and that affected the cotton trade as well.

3238. You speak of Manchester?—Yes, of course.

3239. Are not wages lower in Manchester than you have ever before known them in the silk trade?—I think they are, and I think they have been so since Christmas.

3240. Are not the wages in the silk trade regulated in some degree by the wages paid in the cotton trade?—Yes, there is a good deal of influence in that respect; we cannot depress our wages below a certain point, or the operatives will go to the cotton mills.

3241. If the rate of wages is lower, then the earnings of the people are in the same proportion lower?—The operative silk hands are mostly paid by the week.

3242. Your observation is applied to throwing?—Yes.

3243. Are you able to state whether the wages of weaving silk are not affected by the wages in the cotton trade?—No doubt; the wages in November and January were as low as at any time; but I believe they have since advanced somewhat.

3244. Was there the same depression in other trades?—Yes, certainly; but the amount of poor's rate for the last six years shows the condition of the operatives.

[The Witness delivered in the following Paper:]

POOR'S RATES for the Township of Manchester.

RATE on the RENTS.		£.	s.	d.
5s. in the Pound	Collected from 25th March 1826 to 25th March 1827	59,216	16	8
5s. - ditto -	Ditto - - 25th March 1827 to 25th March 1828	70,159	-	5½
4s. - ditto -	Ditto - - 25th March 1828 to 25th March 1829	55,704	6	6
4s. - ditto -	Ditto - - 25th March 1829 to 25th March 1830	52,247	16	4½

Manchester Town's Office, }
March 14th, 1832.

Geo. Single.

To Mr. Vernon Royle.

3245. Do you attribute the depression to the introduction of French manufactures?—My acquaintance with the French goods is so confined I am not prepared to give an answer upon that, it is merely my opinion that the French goods have not interfered with the Manchester goods.

3246. They have not interfered with the goods you have made at Manchester?—No, I think not.

3247. Do not the wages of weaving the silk goods depend upon the wages paid to persons engaged in weaving cotton?—If a particular description of cotton goods is in demand, a weaver can turn from silk to cotton and then by that means get a better price, and they do so; silk is the more clean and comfortable work, and they all prefer it, and it is better paid generally.

3248. Is it usual, when there is a want of employment in the silk trade, for the same hands to work in the cotton trade?—Yes, when driven to extremities they do so.

3249. The wages paid are very much the same?—Yes, sometimes there is not silk work to be had, then the men will take the other.

678.

x 3

3250. You

Mr.
Vernon Royle.

6 April,
1832.

Mr.
Vernon Royle.

6 April,
1832.

3250. You stated that the wages in Italy in throwing are one-third of those paid in Manchester?—Yes.

3251. What is the value of the plat, supposing a mill in England which would let for 500*l.* a year, what would be the rent for that in Italy?—I cannot state that.

3252. You think that they do their work as well and as expeditiously as those in England?—Yes, as well.

3253. So that in point of fact, as far as the operative workmen are concerned, they could do as much for 100*l.* as you can do for 300*l.* at Manchester?—Yes, I think so.

3254. Are you aware of a Memorial that was sent from Manchester to the Board of Trade in the month of January last, about the time when you addressed your letter to the Vice-President of the Board of Trade?—Yes, I am.

3255. Perhaps you will know the names of the gentlemen if they are read to you?—Yes, of course I shall.

3256. Was there the name of Messrs. Broadbents?—Yes.

3257. That is a house of considerable eminence, is it not?—A very respectable house.

3258. Rothwell & Molineaux?—I know them by name.

3259. J. & J. Occleston, Kay & Co., Longworth & Co., William Walker, J. & G. Smith, Benjamin Williams, Harrop, Taylor & Co., Bindlosses & Preston, do you think that those gentlemen, or any of them, could be instigated to put their names to any memorial which they did not honourably and conscientiously approve of?—That is a very trying question indeed, it is calling upon me to place a mark upon them as long as they live; I must beg to decline answering that question.

3260. Have you seen the Memorial referred to?—I saw a copy of it at the house of the honourable Member for Lancashire. I never knew of it till then.

3261. Is that now shown to you the Memorial?—It is.

[The same was delivered in and read, as follows:]

“To the Right Honourable The Lords Commissioners for Trade and Plantations.

“Your Lordships,

“It having been represented at your Board, that the throwing trade of Macclesfield and elsewhere has come from those places to Manchester, we, the Undersigned, some principal mill owners of Manchester, beg to remove this erroneous impression: our throwing mills have been unprofitable, and we have, ever since the reduction of duty, 1829, considered their cost a total loss of the capital used in their erection; and beg to add, that the silk trade at Manchester, and its vicinity, is in a very depressed and ruinous state; that we cannot make goods at a price at which they can be exported, but that an increase of debenture might ultimately enable us to do so; without some effectual relief of this kind we are convinced a great part of the silk trade must speedily be abandoned, and the hands thrown out of employment; already at Middleton, and elsewhere, they are chiefly supported by private subscription.

“We have the honour to be, your Lordships’ obedient servants,

“Broadbents.	William Walker.
Rothwell & Molineaux.	J. & G. Smith.
J. & J. Occleston.	Benjamin Williams.
Kay & Co.	Harrop, Taylor & Co.
Longworth & Co.	Bindlosses & Preston.”

3262. Have those same individuals since signed a Petition, which was presented on the 26th March to the House of Commons, expressing different sentiments?—It seems so.

[The

[*The Petition was read, as follows :*]

Mr,
Vernon Royle.

6 April,
1832.

" To the Honourable The Commons of the United Kingdom of Great Britain and Ireland in Parliament assembled.

" THE humble Petition of the several persons whose names are hereunto subscribed, being Silk Manufacturers and Throwsters in Manchester, in the County of Lancaster:

" Showeth,

" THAT your Petitioners are deeply interested in the result of an inquiry into the Silk Trade which has lately been instituted, and is now carrying on by Your Honourable House :

" That Your Petitioners humbly beg leave to express their opinion, that it is inexpedient to alter the laws which now exist relative to the Silk Trade.

" Your Petitioners therefore humbly entreat Your Honourable House, that the said laws, relative to the Silk Trade, may be allowed to continue as now in force.

" And Your Petitioners will ever pray, &c.

" Henry & Edward Tootal.

Morley & Bindloss.

Bosley, Smith & Bosley.

Barker, Lyddall & Co.

Longworth & Co.

Thomas Cole & Co.

Louis Schwabe.

Wentworth & Proctor.

Molineaux, Rothwell & Co.

Bindlosses & Preston."

3263. Your letter, addressed to the Vice-President of the Board of Trade, does not appear from the Minutes; but some questions have been put to you, in eliciting some portions of the letter, which will appear upon the Minutes; have you any objection to state, whether there appeared in this letter a Statement to this effect:—" I have heard that it has been stated to the Board of Trade, that the " severe distress, under which the silk trade of Macclesfield is labouring, arises in " consequence of a transfer of a part of that trade to Manchester, and that the silk " trade of Manchester is in comparative prosperity; I respectfully beg leave to state " my belief that such is not the fact; for in the silk throwing establishments in this " place, of which I am the principal proprietor, we have more than 10,000 spindles " totally unemployed since August last: this fact, at all events, will show rather, " that our throwing mills at Manchester are in as bad condition as any at Maccles- " field?"—Certainly, that was the fact at the time; but there is no statement made of the cause of that depression. The word distress is never used in the letter; that letter was written entirely to oblige a gentleman of great learning and great discretion, and but for his application (on a Sunday too) that letter would never have been written at all; that letter was written entirely with a view to having a fling at Mr. Thomson for not opposing the time Bills. I told the gentleman I would make a complaint to that effect, and that only; and that I would say nothing as to the cause of the spindles being unemployed, which indeed were unemployed for prudential considerations merely; and although they seem a considerable number, yet they are but a small portion of the whole.

Lunæ, 9^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. Vernon Royle, called in; and further Examined.

3264. ARE you a manufacturer now?—I am by power looms.

3265. You disposed of one of your manufactories to two persons formerly in your employment?—I did.

3266. You have stated that there are at Manchester 12,000 looms on silk and silk mixed goods, can you give the Committee an opinion how many of those looms

678.

x 4

are

Mr.
Vernon Royle.

9 April,
1832.

Mr.
Vernon Royle.

9 April,
1832.

are employed on all silk?—I should think perhaps two-thirds, but that is merely an opinion.

3267. You have stated that there were not above fifty looms engaged in the weaving broad silk in Manchester in 1819?—Yes, broad silks for garments.

3268. Are you aware that in 1796 there was a List agreed upon in Manchester for regulating the prices for weaving silks, signed by fifteen manufacturers?—It might be so, but after that almost all the silk trade went to Macclesfield.

3269. You have stated, that had not Mr. Huskisson brought about a change of system, there would have been no trade to quarrel about?—Just so.

3270. Do you mean by that, to express an opinion that the silk trade was not prosperous and increasing before that change?—I do not mean to say that, but I say that the trade could not have borne the duty of 5s. 6d. a lb. on raw silk much longer.

3271. Your statement applied to the raw silk, not to the admission of silk goods, when you state that it had regularly increased up to 1824, though burthened with heavy duties?—I think it had increased, and was increasing slowly.

3272. Do you think the raw silk being freed from that duty of 5s. 6d. in 1824, had the prohibition of foreign silk been continued, the prosperity of the silk trade would not have continued also?—I am hardly able to answer that question, it involves so many principles, and requires so much consideration as to the full effect of prohibition and its consequences; it is true it had prospered, I think in spite of the regulations.

3273. You do not think that the prosperity of the silk trade has been promoted by the admission of silk goods?—That is a very nice point; I think the competition raised in the minds of our manufacturers by having excellent patterns, and having excellent colours, and improved qualities, and figures shown to them, has not done any harm, I think it has rather done them good.

3274. Is not the employment of people in the silk manufacture a very clean and a healthful occupation?—I have a certificate of a medical man who inspected one of my mills or works in 1831, one of the ablest physicians in Europe, his certificate was given after an examination of the mills; he describes the nature of the employment, the temperature, the hours of employment, and the general appearance of the hands or operatives.

3275. You are giving in evidence a copy of the certificate of Dr. Carbutt?—I am.

[The same was delivered in and read, as follows:]

“ Manchester, 7th April 1831.

“ I have this day made a general examination of the silk mill of Messrs. Royle & Crompton, in Great Bridgewater-street, Manchester, and found the work-people, whether adults or children, to have a very healthy appearance indeed, quite as much so as could be expected in persons whose employment is not entirely in the country. Many of the children whom I questioned have been in the business three or four years, and have a healthy cheerful aspect, with a sufficient alertness of manner. The temperature I found to range from 60° to 70° of Fahrenheit, which I do not consider too high for health. The labour appears very light and easy, and the hours I found from inquiry are, for the women and girls 63½ per week, and for the men and boys 68½ per week, which period is certainly not too long.

Edward Carbutt, M.D.

Physician to the Manchester Infirmary and Dispensary,
Fever Wards, &c. &c.

3276. You have stated that you visited the silk mills in Italy, and you found that the wages there were but one-third of the amount in England?—Thereabout.

3277. You have stated that the price of labour in the silk mills in Italy is very much cheaper than in England, that the mills of Italy are capable of turning off twice their present quantity, and that the Italians take every improvement in machinery from England which is introduced here; have the goodness to state what chance, under these circumstances, you think the throwster of Italian silk in England would have provided the duty on Italian thrown silk were taken off?—I have answered that question on a former day, that if a person had my mill in Manchester, and the best machinery that money would purchase, and I had a mill on one of the streams in Piedmont, that being called to sell at my prices, I would ruin the person carrying on the concern at Manchester in a very few years.

3278. You mean to say that an English throwster would have no chance against an Italian?—That is my opinion.

3279. If

Mr.
Vernon Royle.

9 April,
1832.

3279. If a greater reduction of duty on foreign thrown silk were to take place, would it not very much diminish, if it did not destroy, the value of mill property in this country?—My opinion is that it would do so.

3280. Do you contend for further reduction?—Certainly not; it would be attended with great loss to every one, and increase the poor's rates most seriously.

3281. Do you think you shall be able to survive the storm by adding the business of a manufacturer to that of a throwster?—I have stated that I think I could, by manufacturing upon the most economical principle, by manufacturing inside our own buildings.

3282. That manufacture you would apply by power?—Chiefly.

3283. Do you think of making fancy goods by power?—I think it is very possible; greater improvements have been made in my time than that would be.

3284. You are understood to have stated, that there is a power equal to 342 horses in the silk mills at Manchester, that one-third is out of work, and one-third is not now loaded?—No; that one-third has not yet begun to work, two mills were built only last year, one is a very large mill, and not yet come into work.

3285. How many of them are at work?—Two-thirds of them are now at work.

3286. Do you mean in full work?—Yes.

3287. Can you give the Committee the particulars on which your estimate is founded?—I hardly can; the two mills which have not begun to work will be 75 horse power; one mill is not loaded to the full extent it will bear, I believe I am pretty correct in saying, that one-third is not employed.

3288. You furnished to Mr. Hume of the Custom House an account?—I did.

3289. Will you have the goodness to state, whether this is nearly a correct statement of what is now at work, Longworth's at work six?—I cannot give a nearer statement than I have given.

3290. You say if the duty were taken from the foreign thrown silk you should begin manufacturing to save you from loss. If your trade as a throwster had become unprofitable by the competition of the foreign throwster, would it not be more for your advantage as a manufacturer, to buy the cheap silk of the foreign throwster, rather than to throw silk at a dearer rate at your own mill?—I would rather not answer that question; if I am pressed upon the subject I must answer it; but I may be exposing my intentions or my views of trade.

3291. How do you account for it that there are only two-thirds of your power at Manchester at work when the importation of raw silk is so large, and the machinery is situate at a place where the manufacture of silk is in so prosperous a state?—Two of the mills have not yet begun to work, because they are not completed.

3292. You think they will be set to work?—Certainly in as short a time as possible.

3293. Is not a considerable quantity of silk thrown at your mill afterwards worked up by manufacturers at Coventry and Spitalfields?—I believe it is.

3294. You were understood to state at your last examination that the persons employed to work up the silk produced at your mill were from four to five thousand?—No; I said that if you reckoned the throwsters and their children, the weavers and winders and their children who weave the silk thrown at our mills, our mills furnish employment and bread to nearly 5,000 people.

3295. Are you to be understood, that the persons dependent on your mill with their whole families constitute from four to five thousand?—I said with the children who depend for their bread upon their parents, many of them, though fed from the mill, are too young to work.

3296. You are understood to say, that the families of persons you employ who may be considered dependent upon that employment, amount to about 4,000?—Yes.

3297. Do you believe that any of those persons, constituting those families, are employed in any other mills than yours?—No; that our mills furnish employment and bread for that number.

3298. You mean to say, that the families at present employed in your mill and the persons employed in the mill together, make an aggregate of 5,000?—Yes; those who are employed and fed.

3299. Your mill finds bread for so many persons?—Yes.

3300. Those persons are not employed elsewhere?—Certainly not.

3301. Does that number include the weavers?—Yes.

3302. Do you include in those the weavers employed in Manchester, or the

Mr.
Vernon Royle.

9 April,
1832.

weavers whom the silk employs where that is elsewhere, in Coventry, and so on?—When it goes elsewhere also.

3303. How many persons in Manchester are dependent upon your mills?—I think about 3,000 in Manchester and the neighbourhood; throwsters about 1,400, and weavers and their children, and winders, about the same number.

3304. Are those persons employed by you?—They are employed by my tenants and myself.

3305. Where are the remainder of the four or five thousand resident?—Most of them in Manchester, but some in Coventry and Spitalfields.

3306. You have stated, that in 1827 you applied for permission to remove your machinery and the works out of the kingdom, and you have also stated, that you were influenced in making a similar application in January last, to the Vice President of the Board of Trade, by the desire to escape from such laws as were proposed by Mr. Sadler; what was your reason for wishing to remove from this country at the former period?—It regarded the continual change of the protecting duty, and shifting policy of those that had the direction of the silk trade; and we were threatened then with being stripped of the duty, as we are at present.

3307. You have also stated, that you considered you were really protected then?—It was a fair and a better protecting duty than now.

3308. You approved of the change made in 1824, when the duties were reduced?—Yes; the duty on raw silk.

3309. Do you know of any change in 1827?—I do not know that there was at that time; I said, you had better pass an Act of Parliament to allow us to go away; that was the only remark I made at the time.

3310. There being no change in 1827, why did you wish to remove?—Because I anticipated the stripping of the throwster and the manufacturer together.

3311. You approved of the reduction of duty, but you did not approve of the admission of French silks?—I approved of the reduction of duty on raw silk, but I disapproved of the protecting duty on thrown silk being taken off manufactured goods.

3312. You would not like the whole duty being taken off from the foreign silk?—I disapproved of it being taken off; it was spoken of, and a sort of notice was given by Mr. Grant at the time, to that effect.

3313. You apprehended that the whole of the duty on foreign thrown silk would be taken off?—I did; and I was inclined to keep it on then, as I am now.

3314. Are you aware of the amount paid by Government in the shape of debentures, on the export of English manufactured silk?—Not of my own knowledge.

3315. Do you know whether any part of any debenture is received by the people of Manchester?—I think a considerable part is received by them; I am not prepared to say how much.

3316. Do you know for what goods they receive that debenture?—I think mostly for mixed goods, and goods made from what we call spun silk, an article of silk made from waste silk.

3317. What is the first cost of that waste silk?—It depends upon the quality of it; it would range from 2s. 6d. to 3s. 6d., or it may be rather more, for any thing I can tell; I do not know what we obtained for the last we sold.

3318. Do you think that any considerable quantity, Gros de Naples or silks not made from spun silk, is exported from Manchester, and receives any amount of the drawback?—I am not aware how much.

3319. Do you think there is a considerable quantity?—I think there is not a considerable quantity.

3320. Are you aware that there are some goods sold to houses in London and elsewhere, for exportation, in consequence of those debentures which they have?—I am not aware that they are sold particularly to London.

3321. You have stated that the goods exported, on which bounty is paid, are principally mixed goods?—I think so.

3322. Do any of the Lombardy silks enter into those goods?—I think not; but to a very limited degree indeed, if at all.

3323. Is it your opinion, that that silk on which the debenture is paid, has never paid any duty in England?—Except one penny a pound.

3324. Are you able to state what effect the withdrawing that bounty would have upon that trade?—I am not aware that waste silk is spun anywhere but in England; if it is, it can be but an inconsiderable quantity.

3325. What

Mr.
Vernon Royle.

9 April,
1832.

3325. What effect would the withdrawing that bounty have upon that kind of trade which is carried on by the debentures?—I think it would regulate it in such a way as may be required. The debenture, at present, is more in amount than the original cost of the raw material, which could never be the intention of the legislature.

3326. Would it put an end to that trade or not?—I think it would alter the character of it; it might possibly derange it for a little time only.

3327. Are the Committee to understand that the Lombardy silk, which pays a 3*s.* 6*d.* duty on importation, is not worked up in goods exported to receive the bounty?—I do not think that it is.

3328. You have stated, that if the duty was taken off the import, the throwster's interest would be very much injured?—I think so.

3329. What effect would it have upon the weavers if they could buy their silk 3*s.* 6*d.* a pound cheaper, would not that rather improve the condition of the weaver?—Of course it would, if they could indeed have the material less by about 2*s.* 8*d.* a pound.

3330. Of your knowledge, have the silk weavers generally at Manchester, or in that neighbourhood, been slack of work?—There was a considerable scarcity during the latter part of last year, up to about the second week in January, I think it then began to revive considerably.

3331. Are not you aware, that there was a pressure on the muslin trade last year as well as the silk?—Certainly there was, and the cotton spinning as well.

3332. Is it within your knowledge, that at Bolton, and different places up to Manchester, a great many people who had been employed in the cotton trade were actually employed in the silk trade in the course of last year?—Certainly there were a great number of people in the neighbourhood of Bolton got employment in the silk trade last year.

3333. When the cotton trade was slack?—Yes; or when the silk was better than the cotton trade.

3334. You think you are correct in stating, that the workmen in cotton and silk change from hand to hand, as the work may be better or worse?—Certainly.

3335. Is it your opinion that the work in silk and cotton will have a tendency to equalize?—Certainly.

3336. Is that more the case now than it formerly was?—No, I do not think it is; many cannot turn their hands to both, but many can.

3337. What per centage on the price of silk imported would 3*s.* 6*d.* be?—That depends upon the quality of the silk; there is silk from 10*s.* to 20*s.*

3338. Take the bulk of Italian silk?—I suppose about 10 per cent.

3339. What is the price of thrown Lombardy now?—That depends on the quality; there are various qualities and prices.

3340. What is the range?—Five or six shillings a pound, I suppose.

3341. Does the price now exceed 24*s.*?—I think very seldom.

3342. What proportion is 3*s.* 6*d.* to the price?—The duty is not exactly 3*s.* 6*d.* but about 2*s.* 10*d.* deducting the debenture.

3343. Will not it be 10 per cent.?—Rather more.

3344. Do you not think it a matter of importance to any trade to be supplied with the raw material 10 per cent. cheaper?—It is certainly a matter of consideration, it depends on circumstances altogether; it may or may not.

3345. Can there be an hesitation in your mind, that if you are a manufacturer, and are making plain or fancy silks, if you can get the material 10 to 15 per cent. cheaper, you can bring them to market cheaper?—Certainly; if I can buy the material cheaper, I can make my goods cheaper.

3346. Can you state where the imported raw silk is principally used?—It is used in various parts of the Kingdom; in Spitalfields, in Coventry and Manchester also.

3347. Have you any means of knowing what proportion is used in Manchester?—No; but a small proportion comparatively.

3348. If the weavers of Spitalfields and of Coventry are subject to an additional tax of from 10 to 15 per cent. on the material they use, would you not consider that a great hardship compared with other manufacturers of silk?—No; I should not, because if the weaver is benefited by the 10 per cent. the throwster is paid out of the parishes where the throwing mills are situated, and that which is gained in one way is lost in another.

3349. Supposing the throwing to be in Manchester and its neighbourhood, and the

Mr.
Vernon Royle.

9 April,
1832.

the weaving to be in London and Coventry, can you have a doubt that the weaving in both those places must be injured by that tax?—If I am asked, whether a man can make cheaper silks from silk at 20s. than 21s. of course he does; but the question is as to the extent of good to be done to the whole of the silk trade.

3350. Can you have a doubt that the effect of keeping the 3s. 6d. on thrown silk is injurious to the weaver?—If I am asked, whether taking off the duty from thrown silk will do good to the Spitalfields weaver, I should say it would not.

3351. Have not the Spitalfields weavers considerable competition from Manchester in different sorts of work?—Perhaps they have; they would certainly have more trade if there was no Manchester at all.

3352. If, in Spitalfields, they consume an article taxed at 3s. 6d. do you not think that they manufacture under a disadvantage to that amount?—Yes; but the consideration does not exactly rest upon that; the interest of the whole trade must be looked at, and if the throwster is stripped of his duty he will be compelled to be a manufacturer, and so increase the competition with Spitalfields. In the abstract, the weaver might make the goods cheaper if there was no duty, and if really he could be served at 2s. 10d. per lb. less than at present.

3353. The Spitalfields weaver and the Coventry weaver pay from 10 to 15 per cent. more for the raw material than they would do if the duty was off?—I do not know that exactly; thrown silks are sold very often in England, without reference at all to the cost.

3354. Are you able to explain why Italian silk should be thrown here, without reference to prime cost?—I will give my opinion why it is so: when the Bank makes her issues, very abundant supplies are brought here, in expectation of finding a good market; but they are often sold when she has withdrawn those issues, and, in consequence, at a loss.

3355. Speaking of trade, during the period of five or six years, you cannot expect the Italian merchant to send silk here to sell it at a loss?—The Italian merchant is often induced to send it, hoping for a profit but getting none.

3356. If the duty is kept up to favour the throwing, it is kept up at an expense to the weaver?—I am not prepared to say that it is, for the considerations I have mentioned before must be looked to, with a view to that; viz. whether it would be a real gain to sacrifice the throwster for the sake of giving the weaver a trifling reduction in the cost of his raw material; the weaver cannot exist for a moment without a protecting duty against foreign goods, even if the throwster was destroyed.

3357. Have you not expressed an opinion, that a bounty should be paid only on that silk on which duty has been paid?—No, I have said no such thing; but I mean to say that the drawback should be in some proportion to the cost of the raw material, and should never exceed the cost of the raw material. I complain that the drawback is greater than the cost of the raw material; if the drawback of 3s. 6d. is paid upon silk of the value of 12s. per lb., then the drawback upon silk of the value of 3s. 6d. per lb. should be less in proportion.

3358. If the drawback on the debentures received, as you state, is exclusively on goods in which no Italian or French silk are worked up, is not this a direct bonus on the use of Bengal and China raw silk?—Certainly it is a bounty; the duty received is given back as a bounty on the silk of our own colonies, and it was so intended, as well as to extinguish the duty upon thrown silk gradually; as the export trade increased, the duty upon thrown silk would decrease; that was the intention of those who made the present regulations under which the silk trade is proceeding.

3359. You were asked, on a former day, whether other countries do not protect their throwsters, what protection is given to the French against the Italian throwster?—Four francs on a kilogram; the duty on thrown silk going into France from Italy is about 10½d. the English pound.

3360. Are the Committee to understand, that whilst the French Government afford only the protection of 10½d. to their throwsters, you would think it right to afford the English throwster 2s. 10d.?—Certainly I would.

3361. On what ground would you give that preference?—Because there is that difference in the cost of living in this country and in France.

3362. That is three times?—I think a man may live in France on one-third of the sum he can live in England.

3363. Is not silk more dependent on machinery than on labour?—No, certainly not;

Mr.
Vernon Royle.

9 April,
1832.

not; silk is a thread made to our hands, of course the silk has less work upon it than upon cotton, there is less scope for the application of machinery.

3364. If the French weaver can obtain his silk, with only a duty of $10\frac{1}{2}d.$ a lb., do you think it fair to the English weaver that he should pay $34d.$ per lb.?—The English weaver has greater reason to complain of the corn laws; and the French Government will not allow silk grown in France, the best silk when thrown, to be exported, and the French silk grower is obliged to take such price as the French manufacturer will give him.

3365. Are you aware what proportion the foreign Italian silk, made into fabrics, bears, as compared with the produce of France?—No, I have no information upon that subject.

3366. The question does not apply to the exportation of raw silk, but to the working up of thrown silk in France; in that view do you not think it unjust to the English weaver to be placed on disadvantageous terms as compared with the French weaver?—I do not think he is placed on disadvantageous terms.

3367. Do not the same expenses of wages apply to the weaver here as to the throwster?—Yes; the same charges of taxes, and so on.

3368. If the English weaver has the disadvantage of increased price for his food, do you think it fair he should have also the disadvantage of paying three times more for his silk than the foreigner does?—I deny that he does, for the French silk throwster is obliged to sell his silk to the French manufacturer; it is not allowed to be exported at all, he is obliged to take such price as he can get; they import but a small proportion.

3369. That is principally Piedmontese silk?—Yes.

3370. You think it right that the French weaver should get his Piedmontese silk at $10\frac{1}{2}d.$ per lb., while the English weaver pays $34d.$?—That is not exactly the fact, because the raw silk is thrown into organzine in England, often at a very low price indeed.

3371. The question is, whether you think it fair to the weaver of England, that he should pay three times as much duty on the raw silk he uses as the French do?—That depends on other considerations.

3372. You mean to say that it is fair?—I do, that it is fair he should pay a higher price.

3373. State why the English weaver should pay three times as much duty on the silk to manufacture goods likely to come into competition with the foreigner's goods?—I do not think he does pay three times as much.

3374. Is not $34d.$ three times $10\frac{1}{2}d.$?—The interest of the whole silk trade must be taken together; the silk going into France from Italy forms but a very small proportion.

3375. Suppose an English weaver to work up an cwt. of Italian thrown silk, on which he has paid $34d.$ duty, and the French weaver to work up an cwt. of the same silk on which he has paid only $10\frac{1}{2}d.$ duty, is it not unfair to the English weaver to be placed in that situation?—If the English weaver were supplied only with thrown silk from Italy, something might be said upon that subject, but that is not so.

3376. Allowing the English weaver to be supplied partly from English thrown silk, what reason would you give?—I cannot answer that question, because it is one which involves so many considerations; it is not in my power to answer it; there is the interest of the throwster to be considered, his taxed bread corn, the benefit his property is of to the country, the interest of the weaver; it is the business of a statesmen to look at these matters, and say what had best be done for the whole trade.

3377. Suppose you were a weaver, and that you had to manufacture an cwt. of Italian silk?—I say the whole question must be looked at by a statesman, and settled, whether it shall be the interest of the whole community that the trade shall be so dealt with.

3378. Has not the French weaver, working 100 lbs. weight of Italian silk, upon which he has paid a duty only of $10\frac{1}{2}d.$ an advantage over an English weaver working the same quantity of the same article, he paying $34d.$?—I have answered that by saying, that in the abstract they may make cheaper goods paying $10\frac{1}{2}d.$ than $34d.$

3379. The last question you have been asked, has been, whether the French weaver, subject to so much less duty upon the silk, has not had an advantage over the English weaver, must not that depend upon the market where they carried their
678. manufactured

Mr.
Vernon Royle.

9 April,
1832.

manufactured goods, and the sort of competition they have to encounter?—Yes, it does depend upon that; if the markets are protected and regulated by the laws, of course that would make a difference to the manufacturer.

3380. You have said that depends upon circumstances, is not one of those circumstances very material, that the French bring their manufactured goods into the home market while we are precluded from it?—That is an important consideration no doubt.

3381. If we had to go into that market and they were shut out from ours, that would make a great difference, would it not?—Perhaps it might, but the smuggler does business very cheaply.

3382. If we had to meet them in the London market it would be necessary we should meet them on equal terms?—I may say, abstractedly, yes; but the matter requires so much consideration I cannot answer decisively.

3383. Do they meet the English weavers on equal terms when they are allowed to bring their goods here and we are not allowed to send ours there?—I cannot say any thing to that.

3384. Suppose the English and French weavers desire to sell their goods in America, would you, as an English manufacturer, not consider it hard that you should pay 3*d.* per pound duty on silk, while the French weaver only pays 10½*d.*, if you two have to come in competition in the American market?—Abstractedly I should; but the fact is not exactly so I think.

3385. Are you aware that the Americans purchase silk from France?—Yes, I believe they do; but more from China.

3386. Is there any reason, other than difference of price, why the English cannot meet the French manufacturer in the American market?—Yes, there may be plenty of other considerations besides that; the Americans can tax the goods of one country and give a bounty upon those of another.

3387. You are understood to say, that as far as it goes, the 3*s.* 6*d.* being taken off, would of course be a relief to the manufacturer; but that you think it necessary, as you have before stated, that the whole question should be considered, as it is not a question whether one branch of the trade should be destroyed or not, but the question of the whole trade?—Yes; that is what I said over and over again.

3388. Taking it in one general view, you think such a protection is necessary?—I do, because if the throwster was unprotected the weaver or manufacturer could not exist a single day without a protecting duty upon foreign goods.

3389. Do you in the price you charge for your thrown silk, consider in any way the profits the manufacturer in Spitalfields is to have on his work?—Never; nor does he consider mine.

3390. Do not the throwster and the manufacturer each carry on their trade with reference to their own profit?—Certainly.

3391. Have you fully considered this with reference to its bearing on the weaving and the throwing trade?—Very cursorily, I am not a statesman.

3392. Does the price of the Italian thrown silk regulate the price of the English, or do you think that the price of the English thrown silk regulates that of the Italian?—I think the price of the Italian thrown silk regulates the English.

3393. Do you think that the competition between the English throwsters has a greater effect in fixing the price, than the competition of the Italian throwster with the English?—I think that the English throwster who throws Italian silk, has a competition with the Italian throwster more than with the English throwster.

3394. Have you paid any attention to the relative prices of the raw and thrown Italian in the market?—I have.

3395. Have you not often found the difference between the two prices will not afford any profit to the Italian throwster?—Sometimes the prices are such as would make it appear at first sight that the Italian throwster has thrown his silk for less than nothing.

3396. Do you think, speaking as a tradesman, that the throwster in Italy would continue to work for nothing, that he will continue to send his Italian silk here thrown if he cannot get a better price here for it?—Not always, it depends upon circumstances.

3397. Do you not draw a conclusion from that, that the price depends upon the throwsters in England?—In some degree it does; the price of raws in England enter into the consideration.

3398. Do you think the Italian throwsters get much larger profits than the English, or less?—I cannot tell what may be their profits.

3399. Has

Mr.
Vernon Royle.

9 April,
1832.

3399. Has not the French manufacturer a great advantage from the exclusive use of the native grown silk?—Certainly, the French grower is dependent upon the home market only.

3400. So that if France should continue to increase her growth of silk, there is no saying to what extent of advantage the French manufacturer may not be benefited?—Certainly.

3401. Will he be in a situation to undersell the rest of the world?—Certainly; as the grower would have no other market, he can only get the best price he can in the home market.

3402. Do you know the relative price of Italian and French silk?—I do not.

3403. Can you say there will be that advantage if it be dearer?—It was assumed that the quantity would be increased, and that the silk would be consigned to France only.

3404. It is the fact, that French silk of native growth is not permitted to be exported?—It is, I have always so understood.

3405. Is silk, the produce of France, lower than other silk?—I have no means of knowing that.

3406. If the French grower has no other consumer for the commodity than the home manufacturer, he must always submit to take such a price as he can obtain for his silk?—Yes.

3407. Are you able to say whether the prices at which it is sold are lower than that of Italian silk or not?—I cannot answer that question.

3408. Is the principle of manufacture at Manchester similar to that of Spitalfields?—I think not exactly similar.

3409. In what do they differ?—In Spitalfields they make a larger quantity of more valuable goods than they make at Manchester.

3410. Is not the Manchester manufacture altogether of a coarser kind than that of Spitalfields?—Not altogether.

3411. Is it in a great measure confined to Bengal silk?—No.

3412. What proportion of Bengal silk, in comparison with Italian, is used there?—That is a difficult question to answer.

3413. Do they work figured goods?—Yes.

3414. Have you any idea how many looms they have?—No, but I know they have a good many.

3415. Do you believe there are 1,000 looms there?—I know there are a very considerable number.

3416. Are you aware there are some manufacturers of silk damask in Manchester?—Yes.

3417. Are you aware that they have succeeded in providing an article which has been preferred to that of Spitalfields, for the furnishing of Windsor Palace?—I have heard that fact.

3418. They use Italian silk?—Yes, for the best qualities of course; if they wish to make an article as good as can be made, it will be of Italian silk.

3419. Do you consider the protection given to the English throwster equivalent to that given to the French?—I am not prepared to answer that question exactly.

3420. Do you think that it would be an advantage to the British weaver to be entirely dependent upon the Italian throwster?—Certainly not.

3421. You are understood to have stated that you are adding to your machinery and extending your mills, is that the case?—Yes, we are completing our mill.

3422. You are doing that in expectation of carrying on an increased trade with advantage?—We intended to complete our mill, a mill will not pay unless it is filled with machinery; we had prepared frames or skeletons for the purpose, and we are finishing them off; we have nearly done all our machinery.

3423. Does that embrace the weaving?—No, I refer to the throwing.

3424. Are you not extending your works for weaving?—Yes, we are.

3425. Notwithstanding the bad times?—Yes.

3426. It appears that the name of Longworth & Company is signed to the Memorial put in on a former day, is that the same as appears to the petition from Manchester?—Yes.

3427. Are the names of Broadbent & Company, Rothwell & Molyneaux, and Occleston, the same on the two?—They are; there are some other names added to the petition.

3428. Are you aware what was the state of distress existing in January last,

678.

Y 4

when

Mr.
Vernon Royle.

9 April,
1832.

when the Memorial was presented?—I think the trade at that time was exceedingly depressed.

3429. More so than at present?—Yes.

3430. Had you thoughts of abandoning your works at that time?—Certainly not.

3431. The Memorial states that it would be necessary to abandon the works?—I did not sign the Memorial.

3432. Had you to do with either?—No.

3433. Have you commenced weaving?—Yes.

3434. How many weavers have you at work?—I decline answering that question.

3435. Supposing the duty upon thrown silks to be taken off, must not that be followed by the reduction of wages?—Yes, certainly; the throwster would endeavour to meet the difficulties, and the first thing he would do would be to reduce the wages as low as he could.

3436. Are the people in a situation to bear further reduction?—I think not.

3437. Should you have gone on increasing your machinery if you had supposed that the 3*s.* 6*d.* duty on the throwster was about to be removed?—Certainly not; not one spindle more would be set up.

3438. The Committee understand there are some observations you wish to make with reference to certain questions put to you, upon a letter referred to in your examination?—I have; when I was requested to sign the petition to the House of Commons, describing the distress of the silk trade, I said to the gentleman, I will do no such thing; I cannot perceive that there is the slightest reason for the complaints which are made by the silk trade, and I cannot see that the Government can relieve the silk trade by any thing they can do, and such are my opinions at this moment; to oblige the gentleman, I wrote that letter, and I did so referring to the Factory Time Bills, and not intending to make any complaint against the regulations under which the silk trade was proceeding.

Mr. Thomas Brockwell, called in; and Examined.

Mr.
Thomas Brockwell.

3439. ARE you concerned in the silk trade?—I am.

3440. In what manner?—As a silk broker.

3441. How long have you been a broker?—Between four and five years.

3442. Is your experience grounded on so short a period?—No.

3443. Where do you reside?—In Bishopsgate churchyard; we have also a house in Manchester, my partner resides there, we carry on business as brokers in both places.

3444. Do you import?—No.

3445. How many years have you applied yourself to the knowledge of silk, and been concerned in that trade?—Between fifteen and sixteen years.

3446. Have you been in London all that time?—No, nine years of the time in Italy.

3447. Were you a silk broker in Italy?—No.

3448. What were you in Italy?—A silk merchant.

3449. In what part of Italy?—Established at Genoa, in the King of Sardinia's dominions.

3450. Were you residing in Italy during the high duty of 14*s.* 8*d.* a pound?—Yes; during the last six or seven years of its existence, with the exception of two or three visits to England of a few months duration at each period.

3451. What was the price of throwing fine organzine in Italy at that time?—Upon the average 3*s.* a pound, exclusive of waste.

3452. What is the price now in Italy for the same thing?—Upon the average 2*s.* 6*d.* a pound, exclusive of waste also.

3453. What! no greater difference in the price of throwing organzine in Italy, when the duty was 14*s.* 8*d.* a pound, than when it was only 3*s.* 6*d.* a pound?—No.

3454. Does not the price of silk in England regulate the price of silk in Italy?—No.

3455. Why not?—Because England is not her largest customer.

3456. Who are her largest customers?—Germany, and her own people.

3457. Is not France a large customer?—To the King of Sardinia, France is the largest customer.

3458. What is the quantity of silk produced in Italy?—I estimate the quantity produced in all Italy, including Piedmont, at seven millions of English pounds.

3459. In

Mr.
Thomas Brockwell.

9 April,
1832.

3459. In what year?—It averages for a variety of years, taking an estimate of the product of the whole States.

3460. What proportion of that quantity is thrown in Italy?—I estimate the quantity thrown at five millions and a half pounds.

3461. The one million and a half pounds remains over in raw silk?—Yes.

3462. England then is her largest customer for raw silk?—Hitherto she has been.

3463. What do you mean by saying hitherto?—Because I find the importation of raw silk diminishing.

3464. You allude to Italian raw silk?—Most assuredly, I am at this time referring to no other kinds of raw silk than those which are produced in Italy.

3465. Can you state when you have observed Italian raw silk diminishing in the amount of imports?—I find in 1830 the importation was 4,558 bales, and in the year 1831, 3,784 bales.

3466. You do not mean to infer, by comparison of the two last years, that the importation of Italian raw silk will show a decrease, compared with two or three preceding years?—The fact is so, the average for the three preceding years was 4,945 bales, and the average for the two last years 4,171 bales.

3467. How do you obtain those numbers?—They are obtained by the importations through the Custom House, and deliveries into the respective merchants' warehouses, and then journalized; the government documents are in pounds weight, comprising the great mass of raw silk, and it is next to impossible to legislate for the English throwster by mere reference to the great mass of raw silk coming from all countries; for our own information and government, we journalize the Italian from the other sorts of raw silk.

3468. Are you not aware that there are separate heads, first raw silk, and then waste silk, in the public accounts?—Yes; but the raw silk should be journalized into the different denominations of raw silk, and not having a public document of that kind, I am under the necessity of framing my own.

3469. It appears, then, that Italian raw silk is evidently going lower in the scale of imports into this country; can you state the imports from Italy of thrown silk?—I find the importation of thrown silk to have augmented considerably within the last year, the quantity amounting to 2,780 bales, whereas in the year before, 1830, the quantity did not exceed 1,776 bales.

3470. Taking the average of 1830 and 1831, how will that compare with the average of 1827 to 1829 as concerns thrown silk?—The average of 1827 to 1829 I find to be 1,682 bales, and the average of 1830 and 1831 resulting 2,278 bales, there is an increased importation evident by comparison, amounting to 35 per cent.

3471. You say that Italy throws five millions and a half pounds of silk, are you of opinion she could throw the remaining million and a half of raw silk?—Yes, I am of that opinion.

3472. Would such a circumstance as a further reduction in the duties on thrown silk move Italy to throw more silk, thereby reducing the present surplus which you estimate she retains in raw silk?—I have a great opinion of the capabilities of Italy to throw silk, and I consider she is gradually gaining ground over England with the present duties, and so soon as the competition amongst the throwsters in this country is abated by the ruin of some few more, the trade would become more conspicuously in the hands of the Italian.

3473. Why so?—Because the remainder who desire to work at some profit, and having already reduced labour to its lowest suffering point, would not go on to the inevitable destruction of the remaining part of their property.

3474. Are you of opinion, that as the throws increase, the raws will decrease in the amount of their importations into Italy?—Yes, I am of that opinion.

3475. On what reasoning do you establish that opinion?—I take the surplus quantity of raw at one million and a half, and I divide it into the exports to England, France and Switzerland; to England I portion 1,250,000 lbs., to France and Switzerland the remaining 250,000 lbs.: I now divide the thrown silk to its respective channels; to Vienna and her own (Italian) people, 2,000,000; to Germany and Switzerland, and the North of Europe, 2,000,000; and to France and England, one million and a half; the portion to France 1,050,000 lbs. to 1,100,000 lbs., and the portion to England 400,000 or 450,000 lbs.: I then arrive at this conclusion, that the question turns upon taking away from the 1,250,000 lbs. of raw to add to the 400,000 or 450,000 lbs. of thrown, presuming the other customers of Italy to go on in their wonted manner.

678.

Z

3476. Do

Mr.
Thomas Brockwell.

9 April,
1832.

3476. Do you portion off to England according to the importation, or according to the consumption of thrown silk?—According to the consumption.

3477. What was the consumption last year of foreign thrown silk?—Of organzine 428,745 lbs., and of tram 90,770 lbs.

3478. When you speak of the year, when do you commence it?—The 1st of January to the 31st of December of any year of which I speak.

3479. What was the consumption of the year before?—Of organzine 412,295 lbs., and of tram 35,909 lbs.

3480. What was the consumption for the year 1829?—Of organzine 165,416 lbs., and of tram 11,419 lbs.

3481. What was it for 1828?—Of organzine 350,790 lbs., and of tram 15,379 lbs.

3482. There seems particularly a large increase in the consumption of foreign tram in England?—There is.

3483. Was it not generally believed, and very confidently stated, that the reduction of the duty on foreign tram to 2s. a pound, would not affect the throwing of Italian tram in England?—I have heard such opinions, but I never found there was any foundation for them.

3484. Is it your opinion the increased importation, and consequently consumption of foreign thrown trams in England, has taken place upon the reduced duty of 2s. a pound?—I am perfectly of the opinion that the duty of 2s. per pound is not sufficiently high to enable the English throwster to buy the raws, and get his throwing cost for them, in competition with the Italian.

3485. What are the prices for throwing Italian silk in England?—We now hear of very low prices.

3486. What are the low prices you hear of?—Three shillings and nine-pence a pound for fine Italian organzine, and two shillings and sixpence a pound for fine Italian tram, exclusive of waste.

3487. Do you think those prices can be reduced any lower?—I apprehend that they are ruinous prices already, but that question I consider can be better answered from Manchester, Macclesfield, Congleton, Derby, and the West of England, where throwsters reside.

3488. Why cannot you answer it?—Because I am not a throwster, and can judge only from the results.

3489. What results do you speak of?—That the throwsters, when they want silk, make the best bargain they can to take it, to throw at any price to keep their mill going, until I hear that the mill is closed, or that the man is ruined.

3490. How many throwsters have failed lately?—The year just expired was a direful period, and many of them failed.

3491. How many?—It is impossible to say how many; we hear, as brokers, of mercantile failures, but there are a variety of compositions that never come to our knowledge: if it is an object to have a list, perhaps I can obtain one.

3492. Did manufacturers fail last year as well as throwsters?—Yes, they generally fail together.

3493. How is that?—The throwster's ruin is progressive, so is the manufacturer's; depreciation upon the thrown silk causes depreciation on manufactured silk goods.

3494. You are of opinion, that it is the interest of the manufacturer that the throwster shall gain instead of lose?—Unquestionably I am of that opinion, and for this reason, that the manufacturer's thrown silk then does not depreciate in value during the progress of its manufacture.

3495. There is a class of manufacturers anxious to have foreign thrown silk without the duty?—I believe there is, but in my opinion they would be the first to suffer from the destruction of the English throwster.

3496. They conceive it will turn to their individual advantage?—I am not of that opinion; I rather think they would find their error, as others have already, who fancied the same thing in 1829.

3497. Do this class of manufacturers form a large proportion of the invested interests of the silk trade?—Certainly not, I conceive they have very small invested interests in the silk trade.

3498. Who have the invested interests?—The manufacturer who is a throwster, and the throwster or mill-owner, who in many instances is not a manufacturer.

3499. You are of opinion, that the silk trade in this country must die away or flourish as the throwster be protected by such a rate of duties on thrown silk as will produce

produce a large importation of Italian and the finer kinds of raw silk?—I am decidedly of that opinion.

Mr.
Thomas Brockwell.

3500. Do you consider a large importation of Italian, and the finer kinds of raw silk, as indispensable to the silk trade at Manchester as elsewhere?—Quite as indispensable.

9 April,
1832.

3501. Is there any mode which, in your judgment, might be beneficially adopted towards the silk trade, short of a positive law of prohibition?—Should a positive law of prohibition be inadmissible, I am of opinion that a system, differing from that now in force, may be advantageously adopted towards the silk trade.

3502. What is that system?—To regulate the importation upon thrown silk, and to regulate the importation of silk manufactured goods upon a remodelled scale of duties, with a clause respecting those countries concerned in the production of the raw material.

3503. How should you propose to regulate the importation of thrown silk?—By a duty of 5s. per lb. on organzine, and 3s. per lb. on tram, imported from all countries producing and exporting raw silk.

3504. How should you propose to regulate the importation of foreign manufactured silk goods?—By sufficient rates of duty, and those duties most rigidly enforced, and by the prohibition of imports from all countries producing and not exporting raw silk.

3505. In point of fact it would come to this, that if France would not allow you to have her raw and thrown silk, you would not have her manufactured silk goods?—Just so.

3506. You would compel her, either to supply this country with the raw and thrown silk of native growth, or we should cease to import French manufactured goods, and that by her own act?—Decidedly so; because the importation of manufactured silk goods, being conditional on the import of raw silk, France would either export her raw silk, or abandon her trade to England in silk goods.

3507. You would think that fair?—Yes; if they determined to export their raws, the manufacturers of England generally, and Coventry in particular, would have fairer competition; and should France determine to keep her raw silk, I should think it but fair that she should also keep her manufactured silk goods.

3508. Do you think that would tend to equalize the prices of raw and thrown silk?—Unquestionably it would to a very much greater degree than at present.

3509. As matters now stand, the French grower has but one customer; that is to say, the home manufacturer?—Just so; it is the greatest security for the manufacturer in this country that the price of the raw material should be equalized, and at present it is not so.

3510. If the French manufacturer has influence enough with the French Government to prevent the export of their own raw and thrown silk, you think he ought to be punished by not being allowed to send his goods to this country?—Certainly.

3511. In your former answer do you refer to the manufacturer of silk goods?—I consider all the interests as connected, and that one cannot exist for any long period without the other.

3512. Do you mean by manufacturer the manufacturer of silk goods, or the manufacturer of raw into thrown silk?—Both of them would be advantaged.

3513. Do you refer to the operative weaver?—He would be advantaged when his master was advantaged.

3514. If the French manufactured silk goods were not imported into this country, that would be by the prohibitory laws of France, and not by the prohibitory laws of England?—Certainly.

3515. The same reasoning would apply to the thrown silk of Piedmont?—Most unquestionably it would, so long as the King of Sardinia prohibited the exportation of his raw silk.

3516. With respect to the exportation trade in silk manufactures, it is not desirable for the country it should be encouraged?—Very desirable in my opinion, for so much exported not only allows of so much more labour, but tends to uphold the price of labour upon the remainder.

3517. The additional import duty of 1 s. 6d. per lb. on organzine, and 1 s. per lb. upon tram, would be given in drawback upon the exportation of silk manufacture, and serve two good purposes, aid the throwster, and advantage the export trade?—The effect would be precisely as stated, by the trade working in that manner, and the throwing and weaving population would be the earliest to experience their proportion of its benefits.

678.

z 2

3518. You

Mr.
Thomas Brockwell.

9 April,
1832.

3518. You say if France would allow the exportation of her raw material you would admit her manufactured goods, have you taken into consideration the difference of the price of labour in France in the manufacture of their goods?—I think that is a question which would afterwards have to be adjusted by the legislature in conjunction with the manufacturer for his protection.

3519. You are of opinion that at present there is a difference existing beyond the mere difference of labour?—Unquestionably.

3520. Do you believe that silk is cheaper in France than in Italy?—I will endeavour to explain how these countries work: as France does not allow of the exportation of her raw material, of course the manufacturer of silk goods, according to the price which he obtains for his goods, legislates on two sides, with the grower on one side, and with the weaver on the other; but this country being under the necessity of buying its raw silk from the Italian (the Hibernian Company not having succeeded), has no other resource than the levying of its losses upon the artisan or weaver.

3521. What do you mean by the French manufacturer legislating?—He directs his loss to two parties, one towards the grower and the other towards the artisan.

3522. Does he throw his losses on these two parties or one?—He endeavours to do his best, and divides them accordingly, and in any case he has two parties to divide them with, whereof in England there is but one.

3523. Suppose he gains, does he divide that equally?—That is another question, I suppose that is not usual.

3524. If the French manufacturer were to buy from the grower of silk at 24 francs per lb., and he should not succeed in making a profit upon his goods from any external opposition, he would take care, next year, to give a lower price, and to that lower price the grower of French silk must submit?—Unquestionably, having no other customer.

3525. If it is not the case, that the difference in labour is to be counterbalanced by some regulation, would it not give France an advantage of the export trade in the foreign market?—My feeling is, that the point of labour becomes a question between the legislature and the manufacturers; and the duties should be established according to the price of labour between the two countries; my views go no further than to equalize, as near as practicable, the price of the raw material in all the manufacturing markets of the world.

3526. Are there not various qualities of Italian thrown silk in Piedmont?—Not so great a variety in Piedmont as in the other parts of Italy.

3527. Has the manufacture in Piedmont improved or deteriorated of late?—I should think the manufacture of Piedmont was always the best, as it throws particularly for France; and France being particular in her thrown silk, I should say, taking the mass of thrown silk exported from Italy, the Piedmont silk is the best.

3528. Do they manufacture silk as well now as they did formerly?—Unquestionably; *i. e.* throwing of silk.

3529. To what countries are the best qualities sent from Piedmont?—To France.

3530. Do you mean to say, that the best quality of Piedmont silk is not sent to England?—In a small proportion.

3531. Taking the proportion of 400,000 to 450,000, do they bear the same proportions?—I should think the proportion of Piedmont silk coming to England out of 400,000 or 450,000 thrown, might be one-sixth, one-eighth or one-tenth, then I should divide that proportion of one-sixth, one-eighth or one-tenth, to one-quarter for the best kind, the other three quarters being of a very ambiguous sort; the quantity as well as the quality varying at times in different years.

3532. Does France receive a greater proportion of fine than we do?—Certainly, in the whole she must, because Piedmont produces a very large quantity of fine silk, and so small a proportion comes here. France being her largest customer, she must receive the remainder.

3533. Can you state what have been the prices of the raw and thrown Italian silks in this market for the last few years?—I think I can. I have an account where the variations of the year are made into an average for that particular year.

3534. State the prices of 1831 of the raw and thrown?—To understand this it is necessary to state, that I have taken the best kinds of raw silk that come from Milan, and that I have not put Piedmont into the calculation. The account I have made bears more upon the English throwster's question; the throws being of the best

best kinds thrown at Milan, and of 20 to 26 deniers, and the raws being of the best kinds usually sent upon consignment and sold in London. In 1831 the raws were 17s. 4d. per lb., and the thrown 23s. 3½d. per lb. averaged for that year.

3535. What were they in 1830?—17s. 6d. and 24s. 6d.

3536. What were they in 1829?—18s. 3½d. and 26s. 9½d.

3537. What were they in 1828?—Raw 21s. 11½d. and the thrown 29s. 9½d.

3538. What were they in 1827?—21s. 2½d. for the raws, and 29s. 1½d. for the thrown.

3539. Will you state the preceding years?—In 1826, 20s. 3d. for the raw, and 28s. 3¼d. for the thrown; in 1825, 22s. 11¼d. for the raw, and 36s. 10d. for the thrown; in 1824, 20s. 7¼d. for the raw, and 33s. 7d. for the thrown; in 1823, 26s. 9¼d. for the raw, and 40s. 4¼d. for the thrown; in 1822, 30s. 4d. for the raw, and 47s. 2¼d. for the thrown; in 1821, 28s. 6¼d. for the raw, and 44s. 11½d. for the thrown; in 1820, 27s. 2¼d. for the raw, and 41s. 7½d. for the thrown; in 1819, 36s. 0½d. for the raw, and 52s. 7¼d. for the thrown.

[The Witness delivered in the Statement, which was read as follows:]

1831	17 11¼	15 5	2 6¼

3540. It appears from that statement, that whereas in 1819 the Italian grower had 6s. 10½d., his difference between the raw and the thrown, now he has only 2s. 6½d. ?—Just so.

3541. How do you account for that?—In 1819 the silk trade in this country was in comparative infancy, it was shortly after the war, during which the Continent was closed,

Mr.
Thomas Brockwell.

9 April,
1832.

Mr.
Thomas Brockwell.

9 April,
1832.

closed, and the profits are very much reduced since; I mean to say that he gained money in that year; that the Italian throwster was very well satisfied with the prices in 1819.

3542. Do you think that the low price of Italian thrown silk has produced the low price of English thrown silk, or that the price of English thrown silk determines the price of Italian thrown silk?—The low price of Italian thrown silk acts upon the price of the British thrown silk.

3543. You do not think the price of English thrown silks acts upon the price of Italian thrown silk?—Certainly not.

3544. Can you suppose that the prices of 1830, the difference between 17s. 4d. and 23s. 3d. can continue in this country, and allow any profit to the throwster?—Yes, certainly.

3545. You consider that the 2s. 6d. will be sufficient?—Yes, he is satisfied with it.

3546. Then that difference may be expected to continue?—With the local advantages the Italian has, I question whether he could not continue this trade even with a greater reduction.

3547. Do you state that 3s. was formerly the price of throwing and 2s. 6d. now?—Yes.

3548. And that the throwing in England is now 3s. 9d. for fine organzine, and 2s. 6d. for tram?—Yes.

3549. The difference you make between the expense of throwing fine organzine in England and Italy, is 1s. 3d.?—The 2s. 6d. in Italy is a remunerating price, now I very much doubt whether 3s. 9d. or 4s. is a remunerating price to the throwster here, the 3s. 9d. is the price of depression, and 2s. 6d. in Italy is a price which satisfies the Italian.

3550. How do you know that?—I certainly know that the Italian is perfectly satisfied with 2s. 6d., and I know that the Englishman is not satisfied with 3s. 9d.; the British throwsters take the silk at any price to keep their mills going till they are ruined, whereas we have an increasing supply of Italian thrown silk to this country going on all the time.

3551. Then does the importation of foreign thrown silk reduce the price in the English market?—Unquestionably.

3552. Do you conceive that the prices the Italian silk has sold for in those years, has been a remunerating price to the Italian?—The Italian stands on a much better ground than the throwster in this country, because he has the raw material, and has an opportunity of selecting it for his mills; and although he may as a matter of calculation appear to lose sixpence or a shilling or even two shillings a lb. on the price of his thrown silk, yet from his power of selecting the raw on the spot, his local advantages are so great, that in effect he may be a gainer, and regulates himself accordingly; whereas at the same time the English throwster has to sell his thrown silk at a lower price to compete with the foreigner, and is obliged to give a higher price for the raw silk.

3553. If the Italian raw silk is 17s. 6d. in Italy, the thrown will be 20s., 2s. 6d. being added?—Yes.

3554. Do you consider, that the Italian will throw his silk if he cannot obtain that 2s. 6d., will he not prefer sending the raw here to throwing it there?—No, I do not think he would.

3555. You think he would rather lose the advantage for the purpose of throwing it, than send the raw here?—That is not the way in which the trade works.

3556. Do the Italians retain their silk for sale at home, or consign it to England and other places for sale?—The greatest trade in Italy for silk is, perhaps, the execution of orders for France and Germany, the trade with England is chiefly on consignment, consequently by being chiefly on consignment, and the parties in Italy taking advances upon those consignments, in nine instances out of ten they regulate the price and limit the price.

3557. Does not your observation apply to thrown only?—To both.

3558. How can the German market affect the raw?—The proportion of raw silk is now diminishing in consequence of the increase of thrown silk, and as we find the one increase the other will diminish.

3559. The competition of Germany cannot affect the quantity of raw sent here?—Yes, it does, because they require a large quantity of thrown silk; in effect, acting against the throwsters in this country by lessening the supplies of raw.

3560. Have you not said, that the prices of raw silk will rise in this country as compared

compared with thrown?—From scarcity, and not from profit upon buying and throwing them in England.

3561. Will not that bring, instead of the present quantity, a larger quantity to London, where the highest price will be given for the raw?—It may or it may not.

3562. If raw will produce a higher price in England than in Italy, will it not find its market here?—It may for the instant, but I have my doubts whether the price of raw silk can be maintained against a customer who is losing his money upon the thrown; that customer for the raw silk being positively dwindling by degrees in consequence of the competition with the foreigner.

3563. What is the capability of Italy to increase the cultivation of silk?—I do not reckon upon its capability to increase much, therefore I reduce the point to its present surplus, being about a million and a half; and as thrown silk increases in amount of importation into this country, the raws necessarily will be diminished.

3564. Do you mean, that the capability of Italy to increase the raw material is limited, while the capability of increasing the thrown is greater?—Decidedly so.

3565. And in that way you think the quantity of thrown silk may be increased to this country considerably if the duty was taken off?—Decidedly.

3566. Does the increased quantity of tram, which you have stated to have been produced of late years, arise from an increased quantity of tram in Italy, or does it arise from the tram manufactured in Italy not having found a market elsewhere, and been sent to England?—The tram imported into England is principally prepared for this market, and displaces so much raw silk, and goes towards the establishment of my argument, that it reduces the quantity of raw. I am sure that is the way the trade between Italy and England is now working, and to the prejudice of the English throwster.

3567. Is there a great increase in the importation of China silk?—A very large increase of late compared with former years.

Mercurii, 11^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. Thomas Brockwell, called in; and further Examined.

3568. IF the British throwster will throw silk at a less price than the Italian, must not that affect the price of Italian thrown silk in the British market?—It may affect it in a slight degree, but the large importations from Italy would shortly overwhelm the English throwster, and replace the Italian in his permanent state in the English market.

3569. Do you mean a large increased import of the raw or the thrown?—I mean of thrown silk.

3570. Do you contemplate that an increase can possibly take place of thrown silk from Italy, when there is no remunerating price for the thrown, the British underselling him here?—In appearance, by calculation, of the price perhaps there may be no remunerating price, or no profit; but the local advantages of the Italian are sufficient to keep the Italian in perfect hold of this market, with the duty of 3s. 6d. per lb.

3571. Do you think it possible, under any circumstances, that the British throwster can undersell the Italian throwster without producing absolute ruin to the business of the British throwster?—Certainly not.

3572. Will you state what are the advantages which the Italian possesses in throwing, over the English, which will enable him to undersell the British throwster?—I am to understand that to refer to local advantages, reeling his own silk, selecting the best kinds of others reeling for his own mills, assorting silk at the time of purchasing, and putting aside all which does not precisely correspond with the sample, in size as well as goodness, or making a second price for the objectionable part, less waste, and the raw silk retaining a quality upon it, advantageous to the price when thrown, a more intrinsic article when in organzine or tram, more uniform in size; more valuable to an intelligent manufacturer, because the thread has not been overstrained by speed; all those are advantages of no small importance in skilful hands; the Austrian government too lends him their aid, so far as to cede to him

him 5*d.* per lb. below the duty charged upon the raw silk exported to other countries, the raw silk paying 10*d.* a pound, and the thrown 5*d.*

3573. Are not the raw and the thrown sold separately and distinctly from each other, and is there not a regular price for the raw in this country as well as in Italy?—Certainly there is; there is a difference of price, a man if he wishes to buy raw silk, makes his bargain in buying raw silk; if he wishes thrown he makes his bargain in buying thrown.

3574. Has not the British throwster the same advantage of buying raw silk as the foreign throwster?—Certainly not; if he was to reside in Italy he would have the same local advantages, but as he cannot bring those local advantages into England, he cannot have them.

3575. Does not a merchant who imports, endeavour to assort in equal qualities?—He is the man who sells it, it is a different thing for the man selling to assort, and the man buying to assort.

3576. Has not the British throwster an opportunity of buying equally good raw silk with the Italian throwster?—No.

3577. Why?—The Italian has all those advantages around him which the British throwster has not, or any one engaged in the silk trade residing in England, compared with any one in the silk trade residing in Italy.

3578. Is raw silk sent to this country on consignment by the Italian merchants chiefly, or purchased there by the British merchant on his own account to send here?—The trade in England is considered an agent's trade, but I believe there are parties here who buy silk in Italy, and import it into this country for sale.

3579. Do you ever buy?—No, never; we are brokers only.

3580. Do you know of any merchants who do?—I have seen a gentleman in this Committee who has imported raw silk.

3581. Is the major part of the raw silk consigned to England on commission, or purchased by merchants on their own account?—I am not able to tell; I think there is a great deal on joint account, a great deal of consignment, a great deal on their own account; brokers are not acquainted with those circumstances.

3582. Would the silk merchant in Italy sell to the British merchant either by consignment or otherwise, wherever he can get the best price?—I am not able to tell you.

3583. Can you have any doubt of it?—Yes, I have very many doubts upon this subject.

3584. Can you doubt whether a man will sell where he can get the best price?—I have many doubts upon the subject, because although high prices may have been quoted to Italy from England, the Italian may apprehend a disappointment.

3585. Do the bales of silk imported into this country always contain the same quality of silk throughout the whole bale?—No, very rarely.

3586. Is it necessary to assort the silk after it is imported?—The bales which come into this country contain a mixture which the trade are accustomed to see, and to pass over, which an Italian throwster would not think of doing, and that is one of the advantages an Italian has in buying silk, and assorting it; that is one of the disadvantages of the English throwster being obliged to buy in this country, and one of the advantages which the Italian has of being able to select his raw silk at home.

3587. You mean to say that the Italian has an obvious advantage in the selection of the silks the best suited for his purpose?—Unquestionably; and every man who has resided in Italy, and has had any experience of the subject, knows it to be the case.

3588. You mean to say the inferior qualities are sent to this country after he has made his selection?—In nine instances out of ten.

3589. Are not many sorts of silk worked with less waste than others?—In respect of waste, there is a very great local advantage to the Italian, and I have placed that as one, perhaps I have not placed it so conspicuously as it might be placed; it perhaps might arrive in some instances to a very apparent difference in favour of the Italian.

3590. The Italian, in his selection, pays a particular attention to the taking such silks as are not subject to great waste?—Of course.

3591. And that gives him the advantage?—That gives him a great advantage; I should consider the present duty of 3*s.* 6*d.* per lb. about an equivalent to the local advantages I have enumerated.

3592. There are some silks sent here on consignment, are there not?—Yes.

3593. You

3593. You say sometimes they are sent on joint account?—Yes.

3594. You mean that the person consigning, and the merchant here, divide the profit?—Yes, they divide the profit or share the loss; sole account is the man in Italy sending it here on consignment, or the party whom I have referred to, importing it on his own account.

Mr.
Thomas Brockwell.

11 April,
1832.

3595. Do you consider that we get from Italy any great proportion of their best quality silks?—No, a very small proportion from the throwing districts.

3596. Taking the whole import from Italy into this country, do you consider that a great proportion is of inferior quality as far as regards Italian silks?—Of inferior quality; the Italian naturally reserves until the last period of the year, until the new reeling begins, his best silk, not knowing but he may have demands for it for the various markets of the Continent, in thrown.

3597. What effect would the reduction of duty on thrown silk have upon the price of Italian raw silk?—It would advance the price of raw silk in this market.

3598. Would it diminish the quantity?—Decidedly, it would diminish the quantity, one thing bearing on the other.

3599. Do you mean to say that if the price of raw silk in England should rise higher in proportion to what it now is, the supply would be decreased?—If the duty upon thrown silks remained the same as it is now, it depends upon the protection given to the throwster.

3600. Supposing the duty taken off, and the price of raw silk to increase, would the supply notwithstanding that, decrease?—It would be destroyed; the Italians would have the whole of the throwing trade in their own hands, if the duty on thrown silk were reduced; but little would be here, and that would unquestionably be very dear.

3601. What is the average difference between the same quality of Italian silk, raw and thrown; take the quality of Bergamo?—We are not accustomed to see in England the best qualities of Bergamo, and we are accustomed to see the best qualities of thrown.

3602. Are you able to state what is the average difference between the same quality of Italian raw silk and thrown?—We can buy in this country a raw silk at 17s. 6d. per pound; the cost of throwing that silk I have stated to be 3s. 9d. a pound.

3603. The question applies not to the component parts, but to the price at which they are selling in this market?—This being regulated by the quantity of raw and the quantity of thrown, we now find that raw silks of the most accredited throwing districts of Italy are very scarce, whereas the thrown silk from the same districts is not so scarce, consequently the prices do not bear the relative proportion; to illustrate this, I will state, that to-day a man must give 18s. per pound for a good pound weight of Italian raw silk, and a throwster would be obliged to give that price; but he might go into a merchant's warehouse, and buy a better article in organzine foreign thrown for 22s. 3d. or 22s. 6d., which shall have paid the duty of 3s. 6d. a pound.

3604. You have stated that the best silk is worked up into organzine, in Italy?—Yes a proportion, not the whole.

3605. And that, generally speaking, the worst raw is sent here?—Yes, decidedly.

3606. You mean to say that the difference between the best Italian thrown in this country, and the indifferent raw silks which come from Italy, is only 4s. 3d. or 4s. 6d. per lb.?—That would be the exact difference to-day.

3607. Out of that 22s. 3d., what has been paid for duty?—Three shillings and sixpence.

3608. Then the difference between the price of the thrown, and the duty taken off, is exactly nine-pence?—Yes.

3609. Do you consider that the nine-pence can pay the throwster in Italy?—In this way it pays him; as I stated in a preceding answer, that I consider the present duty of 3s. 6d. per pound, about an equivalent for the local advantages of the Italian over the English throwster; consequently the Italian having all those local advantages, which I believe I have explained, he may in appearance lose nine-pence per pound by those comparative prices, and continue his trade and be satisfied.

3610. Is it not more probable that the Italian throwster in that case suffers?—No; I should not think he suffers, because he sends us his raw.

3611. Do you mean to say that the Italian throwster will continue to send to this country thrown silk, and sell it here at only nine-pence more than the raw silk?—I think it very likely, having in hand all those local advantages.

Mr.
Thomas Brockwell.

11 April,
1832.

3612. Do you mean to say that he generally sells for only nine-pence a pound more?—No, I am only stating that which is the case this very day.

3613. Is that the rule, or the exception?—It is the exception, for I have given averages which show a different result.

3614. Do you mean to say that Italian silks generally are or will be exported to this country, with that difference of nine-pence only?—No.

3615. You have stated that large quantities of the seven millions of thrown are sent to Germany, France, and other countries, are you able to state the relative difference of price between the same quality of silk in France and here?—No, I am not able to state the prices comparatively between foreign countries.

3616. Are the Committee to understand that thrown silk, of the same quality, is sent to England, as to Germany and other places?—I should think that Germany takes a proportion of the same kind of silk which comes into this country, and every country consumes partially a different style of thrown silk.

3617. Are you able to state the difference of price between thrown and raw silks in France?—No, I am not.

3618. You do not know whether the proportion which you have now stated to prevail here holds at this moment in any part of the Continent?—I do not.

3619. How do you explain the opinion you have given, that if the duty is taken off organzine, the raw will decrease, and the thrown will be increased?—I find that in 1824 and 1825 the importations of raw silk averaged 6,286 bales, and thrown silk averaged 2,491 bales; in 1827 and 1828, the averaged importation of raws was 5,872 bales, and of thrown 2,092 bales; in 1830 and 1831, the averaged importations of raw were 4,171 bales, and of thrown 2,278 bales, which show, that in 1824 and 1825, the proportion between raw and thrown was 152 per cent. more raws than thrown; in 1827 and 1828, 180 per cent. more raws than thrown; and in 1830 and 1831, only 85 per cent. more raws than thrown.

3620. Is not the weight of a bale of silk more now than it was in the year 1824?—It might be in some instances a little more now than formerly.

3621. Do you not know how much it is?—I do not believe anybody can tell.

3622. Do they vary?—They vary in some degree, but on reference, the bale for any one year will bear an equal reference to the bale or bales for other years; it will not make a difference of five per cent. in the weight.

3623. Does the weight of the bale the same year apply in an equal degree to the thrown and to the raw?—No, I do not know that it does; but I will explain my position by figures, in pounds weight, which will perhaps put aside anything like the inquiry of the weight of a bale.

3624. Will you state what was the proportion of raw to thrown in 1826?—My object has been to put aside those years in which the changes of the duty have taken place, considering that a fairer way to arrive at the information.

3625. Do you not consider that it would be fairer to take a larger average for the importations?—I think it would be unfair to mix up those years in which the changes in the duty were made. In the year 1826, there were imported of Italian raw, 1,590 bales; and 849 bales of thrown.

3626. What per centage is that?—I will give, if it is wished, the amount in pounds weight.

3627. Will you state what are the comparative importation and consumption of foreign thrown silk in the respective years, averaged for the 14s. 8d. duty, the 5s. duty, and the 3s. 6d. duty?—I will begin at the year 1819, and end with the year 1823; the average importation for those five years is 368,000 lbs. weight, and the average consumption is 350,000 lbs. weight during the 14s. 8d. duty.

3628. Can you state the amount in 1825, when the 7s. 6d. duty prevailed?—The year 1825, which was the year of 7s. 6d. duty, the importation was 777,529 lbs. and the consumption was 559,642 lbs., showing, immediately that the duty was reduced from 14s. 8d. to 7s. 6d., how the Italian increased his exportation to this country even by that reduction.

3629. It appears by the returns, that in the year 1826, when the duty was changed to 5s. the amount imported was 177,405 lbs. consumed 289,325; will you state what were the quantities in the succeeding years?—The average importation for the two years 1827 and 1828, was 486,310 lbs., and the consumption 420,000 lbs., that was during the 5s. per pound duty.

3630. It appears that in 1829, when the duty of 3s. 6d. commenced, the quantity imported was 211,179 lbs., consumed 172,239 lbs., will you state the amount in 1830 and 1831?—In 1830 and 1831, when the duty was working effectually, the

the average importation amounts to 522,000 lbs. of thrown, and the consumption to 475,400 lbs., showing in the result, that during the 14s. 8d. duty, the consumption of thrown silk was about 350,000 lbs. per year, during the 5s. duty, 420,000 lbs. per year, and during the 3s. 6d. duty, 475,000 lbs. a year.

3631. If you take the years 1825, 1826 and 1827, and the years 1829, 1830 and 1831, are not the averages nearly the same?—I have not taken it that way, conceiving that not the way of reasoning on the duties, those being years of change.

3632. Knowing the great changes which have taken place in the silk trade, do you think you should take any one year?—No.

3633. Would it not be better to take five years?—If there had been five years where they had been working on the same duty, I should say so, but that is not the case.

3634. If it should appear that there is very little more consumed in the three years at the 3s. 6d. duty than there was in the three years at the 7s. 6d. duty, how will you support your opinion, that if the duty was taken off, the quantity would increase?—I think my opinion is sufficiently supported, even by seeing what I see every day; I produce these figures to reason with men who do not see what I see.

3635. You were understood to put these figures forward as facts?—Yes, and I put them forward to show how the trade is working between Italy and England.

3636. Do you found the opinion you have given, that if the duty were taken off, the quantity would increase upon those quantities of imports and consumptions you have given?—They are founded on these facts of imports, connected with the daily experience I have had in the silk trade in Italy and in England, one thing confirming another.

3637. You have spoken of the advantages of Italy in throwing, have you visited the mills there?—I have seen many mills in Italy.

3638. Are they like the Derby mills, or like the Manchester mills?—I do not understand mills or machinery, I think there will be some persons better able to give opinions upon them; I have been connected with the silk trade, and can give mercantile opinions, but I had rather not give an opinion on mills and machinery.

3639. You have entered into the advantages which the Italian has in Italy, is that from inspection?—I have been interested in the reeling of silk very frequently.

3640. Have you never examined mills?—I have seen many mills; but not being a man of mechanical genius, I had rather not go into questions of the comparative excellence of mills in one country and another.

3641. Are the mills in Italy better for throwing than the new mills in England?—My opinion is, that we can throw silk in this country as well as in any country in the world; I can judge of thrown silk when I see it, and I have seen as good thrown silk in this country as I have ever seen in Piedmont.

3642. Are the mills better?—I repeat, that I am not able to give an opinion on the different construction of mills, but one thing I am convinced of, that the English mill can produce an organzine silk as good as I have ever seen an organzine silk of Italy.

2643. You come to the opinion, that the throwsters would be entirely ruined here by importations of thrown silk, if the duty was reduced?—Certainly, they would.

3644. If they can throw better in England, might they not throw cheaper also?—I maintain that they can throw as well if you give them the silk, but that must be produced as cheap to them, and be remunerative, which is the very question we are at issue upon.

3645. Can the labour in this country be reduced as low as in Italy?—I should think not, they cannot live so cheaply in this country.

3646. Do you know for what tram can be thrown in England, exclusive of waste?—I have stated 2s. 6d. a pound, and I understand that is not a remunerating price to the throwster here; but I repeat, that questions of price will be better answered by throwsters; I find that the throwsters are ruining themselves upon these prices, the Italian is getting forward.

3647. How can you form an opinion which will throw the silk cheapest if you do not know what they cost?—I stated that the Italian was satisfied with half a crown a pound, and the English was not satisfied with 3s. 9d. per lb. for fine organzine.

3648. Are you aware that tram is thrown here for 2s.?—I cannot say I know that; throwsters will take throwing at any price to keep their mills going, but

Mr.
Thomas Brockwell.

11 April,
1832.

Mr.
Thomas Brockwell.

11 April,
1832.

I must disbelieve many men to suppose that others make it worth their while to take tram at 2s. a pound.

3649. If tram can be thrown here from 1s. 8d. to 2s. per lb. do you consider it necessary to continue the present duty which you say ought to be continued or rather increased?—I do not believe tram can be thrown at 1s. 8d. to 2s. per lb.

3650. In reference to an answer you gave to a former question, that tram cannot be thrown in England at 2s. with a remuneration to the throwster, is it your opinion that a duty of 3s. should be laid on to protect him?—Decidedly so, to equalize the advantages which I conceive the Italian throwster has, and which I enumerated in a former part of my evidence; I see the English throwster ruined by taking the prices they are taking. I was not aware that tram was taken at 2s. a pound; this is a lower price than I have known it reduced to.

3651. Is the opinion you have now given, that the British throwster cannot come into competition with the Italian, founded on your having seen a great many English throwsters ruined?—Having heard of their ruin.

3652. Do you found it upon that alone?—No; I state that the local advantages of the Italian constitute every thing; I give my opinion founded on an experience of eight or nine years in Italy, and I am not aware that there is any man in England who has had so many opportunities of knowing the various bearings of the subject.

3653. Do not you know that labour is lower in Italy than here?—Of course it is, 2s. 6d. per lb. being the price which compensates the Italian for organzine, and 3s. 9d. not being the price which compensates the English throwster.

3654. You are understood to have said, that you think the Italian can throw the silk cheaper in consequence of the local advantages which he possesses, and among those local advantages you say labour is one?—No; I have never mentioned labour in those local advantages. I consider, and I repeat, that 3s. 6d. per lb., which is the present duty on organzine, may be esteemed or regarded as about an equivalent to those local advantages; and if I was to suggest the additional duty to be placed upon thrown silk, it is just that difference between the present 2s. 6d. per lb., and at what the British throwster can afford to throw his silk. I should then put the 3s. 6d. per lb. (present duty) by the side of the local advantages possessed by the Italian, which I have enumerated, and which I conscientiously think equal to 3s. 6d. per lb., and adding to this 3s. 6d. the difference of cost of throwing between the two countries, I should fix that as the future duty. Its being otherwise accounts for the Italian carrying on trade in this country apparently losing, but really gaining.

3655. You have given your opinion, that 3s. 9d. would give a profit to the English throwster in this country?—No; I say that 2s. 6d. a lb. compensates the Italian throwster, and 3s. 9d. per lb. does not compensate the English throwster.

3656. What do you think would compensate the English throwster?—I conscientiously think he would have a difficulty to contend against 5s. per lb. for organzine, and 3s. per lb. for tram in the very fine sizes of Italian silk which comes from abroad, and would find, at times, that 5s. per lb. would not be a sufficient protection for him.

3657. Do you mean the old mills at Derby or the new mills, such as have been erected by Mr. Grant and Mr. Royle?—I apply to the best machinery in the country; I think it would be very unfair to tax any manufacture to give protection to very bad machinery.

3658. Have you ever had put into your hand a statement by any of the mill owners what are their expenses of throwing?—I have seen a statement which shows that a good raw silk, and an inferior raw silk, or a middling sort of raw silk, shall make a difference of 9d. or a 1s. per lb. in the throwing of it.

3659. Which of the raw silks do you apply your observations to as most beneficial for the English throwster?—I am supposing 5s. per lb. duty would produce a larger importation of raw silk, which importation of raw silk should be of a better kind, and the throwster would find his benefit in having excellent raw silk.

3660. You have stated that the price of silk gives a difference of only 4s. 3d.; how do you reconcile the fact, that the English throwster should buy raw silk at 18s. and expend 5s. upon it, how would the prices then correspond, at what would he then be able to sell it?—Those are questions formed on the incongruities trade which perpetually occur.

3661. Is

Mr.
Thomas Brockwell.

11 April,
1832.

3661. Is not the Fossebrone silk, which comes to this country, of very good quality?—Yes, it is.

3662. Is the whole of that sent to England?—The greater part of it is sent to England.

3663. Some comes in the thrown state, does it not?—No.

3664. If the duty on thrown silk were taken off, do you think that would continue to be sent?—Fossebrone, at present, having no throwing mills, and having been accustomed for so many years to send her raw silk to this country, I have no doubt that will be the last raw silk which we should find retained in Italy; but as it is decidedly good silk, the Italians, by having a greater trade in thrown silk would direct themselves into this market during the fairs of Sinigaglia, and procure it for their throwing mills, consequently that would tend ultimately to deprive this country of that supply of raw silk (small as it is) which at present comes to England.

3665. That is peculiarly valuable, is it not?—It is rendered so in this country because it is our habit, but the Piedmontese prefer their own, and so do I.

3666. When it is thrown in this country is it not considered superior to the Piedmontese organzine?—I think it is for various purposes. Fossebrone silk will take a peculiar white in the dye, which renders it valuable, but I think it is more from that peculiarity than from the intrinsic value, for the Piedmont raw silk is very much more even and more intrinsically valuable, in my estimation, than any other silk.

3667. Still in general estimation it has a peculiarity which renders it valuable?—Yes; trade having formed itself upon that particular silk, not having the Piedmontese raw silks in this country; but it is my opinion if we had a large supply of Piedmontese raw silk here, Fossebrone would fall considerably in the scale of value.

3668. Is it not your opinion that the importation of thrown silk would have materially increased at the different periods of the reductions of duty, had it not been for the circumstance, that such importation has been checked by ruinous reduction on the part of the English throwster, both as to his charge for throwing and in the wages of the persons employed?—I think there is no question that when the English throwster is so pressed as he has been in those particular years it has been destruction to him, and the Italian has kept a little back in his supplies, but then he comes forth again with overwhelming quantities, and I am convinced in my own mind, that he is pursuing a profitable trade, though he appears by figures to be losing money.

3669. Is it your opinion that the importation has been checked by distress amounting almost to ruin at those particular periods?—Yes.

3670. Do you conceive there would be a very extensive increase to the importation of Italian thrown silks?—Very great.

3671. You say that the importation of raw silk has been checked at particular periods by the state of the British throwster; do you mean by that that the price of thrown silk has been reduced in this market by the competition of the English throwster?—At certain times I have no doubt the ruin of the English throwsters have had the effect of showing that the Italian had much better abstain for a few months from supplies of either raw or thrown.

3672. The question does not apply to ruin, but to the prices at which thrown silk could be supplied by the British throwster at those periods?—A competition, founded upon equalization of price, I am perfectly persuaded the Italian will never fly from, but it is a competition of desperation which he certainly at times will allow to go on for a certain period of months, and keep his raw and his throws, and it will appear in a small year of importation, the raw and the thrown will be proportionate.

3673. Was it not therefore the competition in price by the British throwster that prevented the increase of import of Italian thrown?—At various times I have no doubt it is so.

3674. Do you not know that at particular times the English throwster, in order to keep his mills going and employ his men, has so reduced his prices and the wages of those men, that it has had the effect of preventing the importation of foreign thrown silk?—Such causes I have observed to produce such effects.

3675. That accounts probably for the small importations of silk at particular periods?—There is no doubt of that.

3676. During the last ten years has the quality of raw silk from Italy improved?

Mr.
Thomas Brockwell.

11 April,
1832.

improved?—I have been about four years a broker in England, and I rarely see Italian raw silk which pleases me, although I see the greater part of the importations into the country, but in the preceding seven years I was in Italy, and very frequently sent from Italy at those times the best raw silk.

3677. Has the raw silk lately been better than what was formerly imported?—Certainly not, from throwing districts.

3678. From Italy generally?—No, from Fossembrone perhaps, and from Naples also, some little improvement has taken place.

3679. In what has that improvement been?—A more even silk generally, but silk of these districts forms a small proportion of the great mass of raw silk. I think Trent and Friuli also have improved their reeling of silk.

3680. Are you aware whether the expense of throwing good silk is greater than of inferior silk?—I think I have answered that question by stating that I have seen accounts of a throwing mill where the price has been perhaps nearly 1s. a pound in favour of good over indifferent sorts of raw silk.

3681. Can you state the average pecuniary earnings of operatives in Italy?—No; but I know that the throwster, taking it in a mercantile view, is compensated with 2s. 6d. a pound, and continues the trade.

3682. You consider the Italian as invariably keeping the best silk at home for his own throwing?—Yes.

3683. Is not another advantage that the new silk winds better?—No doubt; and that forms a part of the local advantages belonging to the item of less waste.

3684. If the duty were taken off foreign thrown silk, do you mean that in this market there will be less or more difference between the price of raw and the price of thrown, than there is now after deducting the duty now paid on the thrown silk?—I should think that the thrown silk, if the duty was taken off, would be quite or nearly the price it now is, the raw silk would rise the difference, and there would eventually be about that difference between the raw and the thrown determined upon by the Italian.

3685. Supposing the price of raw silk to be now 17s. a pound, and thrown silk of the same sort 23s. 6d., if the duty of 3s. 6d. were to be repealed, the latter ought to be sold at 20s.; but will it be sold for more than that, or may it not happen that the thrown silk will still sell for 23s. 6d. though the 3s. 6d. duty may have been repealed?—I think I have already answered that question.

3686. That is what you mean when you say that raw silk will rise, the Italian getting nearly all the advantage of that repeal?—There is no question about that in my mind.

3687. Do you conceive that the throwster, and his operatives, are now at the lowest point in respect of the remuneration of wages?—I think the distress we perceive and hear of in all the throwing districts, is quite enough to answer that question.

3688. In case of a greater reduction of duty, would not the importation of thrown silk greatly increase, and the destruction of the English throwster, and the distress of his work people, be consequently completed?—I am of opinion, that if the duty on raw silk is taken off, the largest mills and the greatest capital in the country will be taken out of the trade.

3689. Which, in your opinion, is the most likely way to obtain a large supply of the best Italian raw silk for the use of the English mills, by taking off the duty on thrown silk, or by leaving a considerable duty thereon?—By increasing the present duties.

3690. Has there been a great increase in the importation of China and Turkey silk?—Turkey silk has greatly increased in the amount of imports into this country; for instance, preceding the reduction of the duties, the average for the last five years, namely, 1819 to 1823, was only 955 bales, increased in the average of 1824 to 1826 to 1,492 bales, and since going on at the average rate of 2,500 bales; as concerns China silk, the average from 1827 to 1829 exceeds the average from 1824 to 1826 by 48 per cent., and the average of the two last years, 1830 and 1831, exceeds the preceding average by another 25 per cent.

3691. Has there been so great an increase upon the import from Bengal?—Not so great.

3692. Taking the Bengal, Turkey and China together, there has been a great increase?—Yes.

3693. Is that likely to continue?—Putting aside Bengal, I should think so; there are no throwing mills in those countries; though we see those amounts placed

en masse, as raw silk coming into this country, and without journalizing the Italian silk, from this great mass of raw silk, the country generally is inclined to believe that so long as the amount of importation is large, the British throwster must be doing well.

3694. There has been a great increase of waste silk, has there not?—There has been a very large increase of Italian waste silk.

3695. Has there been within the last six months?—No.

3696. How are the China, and Turkey, and waste silk generally applied; on what description of articles?—That would be more a question for the manufacturer; I do not feel myself competent to say how the various descriptions of silk are applied beyond this, that I think the very large importations of China silk, which have given rise to a large manufacture at Manchester, certainly create a great necessity for a large importation of the best kinds of Italian raw silk to work up with that China silk, and that I apprehend, unless the throwster is protected by the rate of duties to introduce into this country a large supply of the best raw silks of Italy, the manufactures of Manchester will experience in a very few months a very serious inconvenience, because that manufacture is founded principally upon China silk from which they make organzine, and to work up which they require the best kinds of Italian raw silk, to throw by their own mills, into tram.

3697. You think that has given rise to a great part of the goods manufactured at Manchester?—I consider that the trade at Manchester is a new trade that has taken its foundation upon China and other silks.

3698. The use of coarser silks will require the finer to be mixed in certain proportions?—That is my opinion.

3699. They are greatly aided in the manufacture at Manchester by having the bounty of 3*s.* 6*d.*, are they not?—Of course the trade at Manchester is very materially formed for an export trade, and the debenture is a very valuable consideration for them; indeed without the debenture there would be no export trade.

3700. They use a great deal of waste silk there, do they not?—I believe they do.

3701. Do you know the price per pound when manufactured?—No, I do not; the application of waste silk, to manufacture in this country, has increased in a very great degree since the debenture has been attached to thrown silk.

3702. If the raw waste is bought at 3*s.* 6*d.* or 4*s.* per lb. and it receives a bounty by reason of this debenture, that must give a very preponderating advantage?—Without the debenture no export trade could have existed to any extent in this country; a drawback must have been given in form of debenture, or there must have been a fund for the purpose.

3703. Mr. Hume, of the Custom House, having stated that there can be no trade without that, you concur in that opinion?—Yes, decidedly.

3704. Do you buy debentures for a house in Manchester, who export?—We buy some for Manchester; but our largest purchases of debentures are for houses not Manchester houses.

3705. There are shipping houses in town who buy those debentures, and they order the goods from Manchester to export, in order to receive the drawback?—Yes; supposing an agent has a thousand weight of debentures from the Custom House here, he lodges those debentures, and he opens a credit, similar to a banking credit, at the Custom House at any out-port, and in making the sale of goods he gives an order to pass those goods through those respective Custom Houses, and to debit them with so much weight on his account, he having deposited so many debentures.

3706. From whence does the waste silk come principally?—From the throwing districts of Italy.

3707. Is there any from Turkey?—No, there is a different kind of waste; there may be knubs and cocoons, and so on; but throwing waste comes from the throwing countries.

3708. What are the kinds of waste which are imported?—There is waste in reeling silk, there is waste from the bur and the husk, and all kinds of waste; but that which I consider referred to, as having established a branch of manufacture, is the throwing waste.

3709. When was that first introduced into this country?—It has always come into this country ever since I can remember; but it was on a very high duty at one period. I think duty was paid last year on 700,000 weight of waste. In 1828 the waste was 238,088 lbs. In 1829 it was 163,465 lbs. In 1830 it was 490,980 lbs., and in 1831 it was 705,330 lbs.

678.

A a 4

3710. What

Mr.
Thomas Brockwell.

11 April,
1832.

Mr.
Thomas Brockwell.

11 April,
1832.

3710. What was it in 1819?—Seventy-seven thousand eight hundred lbs.

3711. Do not you think the principal inducement to go into that trade is the opportunity of obtaining the debentures?—If there is any branch of manufacture where the material is a cheap one, and there is a large drawback upon it, there is no doubt but that manufacture will rise upon such a protection.

3712. Did not the imports of foreign thrown silk greatly increase in the years 1830 and 1831, after the duty had been reduced from 5s. to 3s. 6d. in 1829?—Certainly; and if the duty remains as it is, the Italian having hold of the throwing trade, will become more and more conspicuous.

3713. Are you not aware, that the peculiar state of the Continent, in the last two years, has thrown a larger quantity of that silk into England than would otherwise have come?—The peculiar state of the Continent may at one time have had that effect; but it has righted itself, and the consumption of silk has gone on in the interim, and, at the present time, the market is very bare of Italian silk, it having been consumed.

3714. During the last two years has not the price been very low?—Very low.

3715. Are you not aware, that the state of Europe, from disease and otherwise, has taken off a less quantity than usual, and that a larger quantity has come here in consequence?—No, I do not think so; for though at the period we had a large quantity, the manufacturers on the Continent are going on consuming, and the trade in England is now at a loss for good Italian raw silk at a moderate price.

3716. The duty was first reduced in 1824, was it not, from 14s. 8d. to 7s. 6d., that was not immediately followed by a large importation, but it was in 1826, when the Italian had time to prepare his consignment?—No; in 1825 there was a large importation from Italy.

3717. The Italian is not in a situation always to avail himself of reduction within a month?—No; if the duty was wholly taken off, the stock of silk is so small in Italy there could not be a large supply for several months, but then it would come.

3718. Do you mean to say that Italy is barer of silk now than usual?—Yes.

3719. How long has that been the case?—It is becoming less every week now, until they have a fresh supply from their new Raccoltà.

3720. What was their stock last year?—I am not able to say.

3721. Was not it a very large stock?—No, I think not above the average.

3722. Notwithstanding the state of Europe the last two years, the stock of silk in Italy is now lower than usual?—I understand it is very low at present.

Mercurii, 18^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. *Lamech Swift*, called in; and Examined.

Mr.
Lamech Swift.

18 April,
1832.

3723. YOU are a silk throwster?—I am.

3724. Where do you carry on your business?—At Milverton, in the county of Somerset, and at Church Stanton, in the county of Devon.

3725. How many years have you been engaged in the throwing of silk?—Upwards of thirty years; my father was a silk throwster and brought me up in his own business.

3726. In what part of England?—At Derby; my father occupied the mill erected by Sir Thomas Lombe, which was the first mill built in England for throwing organzine; Sir Thomas brought from Italy the models for the machinery for which he had at first a patent, and afterwards a sum of 14,000*l.* was voted him by Parliament, so anxious was the government of that day to render the silk manufacture of England independent of Italy for thrown silk, which seems to me a much wiser policy than that pursued by the present government, whose wish seems to be to destroy that throwing trade which so much pains had been taken to introduce, and to make us again dependent on Italy for Italian thrown silk.

3727. How long have you occupied your present mills?—I entered upon the mill at Milverton in 1819, and upon that at Church Stanton in 1822.

3728. Did you build the mills?—I did not; the one at Milverton was already fitted up with machinery, which I took from parties in London, the other at Church Stanton

Stanton had been a clothing factory, and I adapted it to the silk throwing; but it has never been thoroughly completed with machinery, because, before I had time to complete it, the operation of 1824 alarmed me, and I ceased putting in machinery, so that it has never been fully set going to the present hour.

3729. Your mills are entirely worked by water?—Entirely.

3730. Is the machinery in your mills on the most improved principles?—I have been gradually improving my machinery since 1822, and I consider it now as good as any in the kingdom. I have had some from Manchester upon the principle of machinery used in the throwing mills there, but I consider it to be no improvement at all, and decidedly prefer my own; I am quite sure that Manchester has no superiority in this branch of the trade over the West of England, and that I can throw silk quite as cheap as any body at Manchester can; and I beg leave to add, that silk is now frequently sent into the West of England from Manchester to be thrown for the use of the Manchester manufacturer.

3731. What description of silk is sent from Manchester to be thrown?—I believe mostly Italian, but as I have not thrown any myself for Manchester, I cannot speak with so much certainty.

3732. Any China?—I am not aware; as I have not thrown any for Manchester myself, I cannot say what they receive, but I know that silk comes from Manchester to the West of England to be thrown.

3733. To what mills does it come?—To some mills within three or four miles of me, some comes I know to Taunton and to the neighbourhood of Taunton, Mr. Jones of Taunton I know has received some from Manchester.

3734. In what year?—Within the last twelve months.

3735. Do you throw silk on your own account, or for other persons?—Not on my own account; I receive raw silk from manufacturers in London, Coventry and other places, and throw it for them; I certainly have tried the working of silk on my own account, and have suffered most severely from it, and have therefore discontinued it.

3736. What description of silk do you chiefly throw?—Chiefly fine Italian silks, I throw them into organzine and into tram, the proportions of each vary according to circumstances.

3737. Do you throw any Bengal or China?—I throw a little occasionally, my connection is with that class of manufacturers, who chiefly use Italian silks.

3738. Were your mills fully employed previous to 1826?—They were; I at that time employed about 300 hands, and had about 5,500 spindles constantly at work.

3739. Are they fully employed at present?—No, by no means, more than half of the spindles have been standing for the last twelve months, and for two months of that time I had not one of them at work, and during the last twelve months I have been able to employ only about sixty hands, and those occasionally have been limited to three and four days a week.

3740. To what do you attribute the difference between the present and the former state of your trade?—To the low prices of thrown silk in this market, occasioned by the reduction of the duty on foreign thrown organzine from 5s. to 3s. 6d. and on foreign thrown tram from 3s. to 2s. which took place in 1829, and to the great influx also of foreign silk goods.

3741. Are the prices charged for throwing much lower now than they were?—Yes, considerably, especially since the last reduction in 1829, and are such as by no means remunerate the throwster.

3742. Have you lost by continuing to carry on your business, and employ your hands?—Yes, I have very seriously lost.

3743. What is the average of the wages you pay your hands?—I cannot speak positively to that point, but I think it is between 2s. 6d. and 2s. 9d., I have them from 15d. to 5s., and I think it does average from 2s. 6d. to 2s. 9d. per week of six days.

3744. Persons of what age?—I have them from eight or nine years of age upwards, till they get married and leave me.

3745. They are chiefly females?—Entirely so.

3746. That is the average when they are in full work, at the common labour of six days to the week?—Yes.

3747. What used those wages to be?—We had then a greater proportion of higher priced hands than we have at the present moment, and therefore the average
678. B b would

Mr
Lamech Swift.

18 April,
1832.

Mr.
Lamech Swift.

18 April,
1832.

would have run higher; the same children who now have 15 *d.* per week, would have had 1 *s.* 6 *d.* or 1 *s.* 9 *d.* formerly.

3748. Give the lowest and the highest you used to pay formerly?—We used to go as high as 6 *s.*

3749. For the same quantity of work which they now do, what were the wages in 1826?—Our wages were so low, we have not been able to reduce them sufficiently to meet the times, and therefore we have increased the work.

3750. They do now more work than they did in 1826?—Decidedly.

3751. How many hours did they work in 1826?—Our working hours were the same then as they are now, when fully employed, eleven hours and a quarter a day.

3752. How do you mean that they work double now?—Because we have speeded the machinery much faster, and have made them look after a greater quantity; the time is from six in the morning to seven in the evening in summer, giving them three quarters of an hour for breakfast, and one hour for dinner out of that time.

3753. The greater quantity of work they now do is done by the improvement of machinery, and by their attending to a greater quantity of machinery, not by working a greater number of hours?—We do not work a greater number of hours, but they have more work to attend to.

3754. The speed of your machinery is increased?—Yes.

3755. By which, in the same number of hours, a greater quantity of silk is thrown off?—Certainly.

3756. In what degree is the labour increased by the additional work given?—They are obliged to give greater attention to it, and cannot rest between; the labour is incessant, because the machinery going with that velocity, they are subjected to a constant attendance upon it.

3757. From the increased velocity of the machinery, the threads are more continually breaking, and they are constantly employed to tie them up?—Yes, they had before an opportunity of sitting down.

3758. Is the staple of the silk you receive now, improved?—Not at all, some of the East India silks were of better quality than they are at present.

3759. How is it with respect to the Italian?—We do not get better Italian than we used to; I have not of late worked so much of the East India silks as I did when at Derby, I cannot speak therefore with so much certainty as to that, as I could with respect to the Italian.

3760. You do not conceive the Italian silk you received improved in quality?—Not at all, that I have been in the habit of receiving.

3761. Can you state of what growth the silk you receive is?—I have all descriptions, but not being a purchaser, I do not know the names they go by, but I know the Fossembrone from the Bergam or Piedmont; we have silk that will waste two or three per cent., and we have silks that will make 20 per cent. waste. A few months back I received some Italian silk from London, being very much distressed to employ my people, and after working about 20 or 30 lbs. of it I returned the bale to London, and sent all my people home; if I had gone on I should have lost from 30% or 40% in working that bale, from the quality turning out so bad.

3762. Did you ascertain what kind of silk that was?—It was a silk reeled in imitation of Novi, it was a very inferior Genoese silk, that was got up in imitation of the Novi silks; it was not a white one, it is in a similar proportion to silk reeled in Ancona, in imitation of the real Fossembrone, one is superior to the other.

3763. Do you think, that by any improvement in machinery, by reducing still lower the wages of the hands, or any other means, it will be possible for the English throwster still further to reduce his charges for throwing?—No, I do not think it possible; the wages are so low, that to reduce them still lower is quite out of the question.

3764. Under these circumstances, do you think if the import duty on foreign thrown silk should be taken off, an English throwster of Italian silk will be able to carry on his business?—I have no doubt it would cause the ruin of many throwsters, for I do not conceive it possible to bring down the charges of throwing any lower than they are at present. I would in explanation of that say, that there are many charges of throwing that we cannot, by possibility reduce, however we may reduce our labour, or however we may improve our machinery, there are other charges we cannot control, such as the carriage to and from London or other places, the whole carriage falling on the throwster.

3765. What distance are you from London?—About 160 miles.

3766. Have

Mr.
Lamech Swift.

18 April,
1832.

3766. Have you any water-carriage?—We have water-carriage, but it is too tedious; we have waggon and van, and so on; van carriage is higher, and the prices are so low we cannot afford it.

3767. How far are you from Coventry?—I send my silk to Coventry by way of London, for expedition; but our nearest road is by Bristol.

3768. What do you pay per pound?—The waggon carriage to London I believe, at the present moment, is about 7*s.* per cwt., that makes 14*s.* the cwt. taking it both ways, that is from and to London; the actual carriage upon the thrown silk is increased, because we have the same carriage to pay on what is made into waste, and also the package, but which we get no remuneration for.

3769. Upon a hundred weight sent down to you, and returned, it would amount to about 15*s.* perhaps?—Yes, that at least.

3770. What is the carriage to Coventry?—I cannot exactly say; part of it is water carriage from London, and I am not aware at this moment of the charge.

3771. What other charges are there you cannot get rid of?—Our expense in travelling, as also for oil, candles, and so on.

3772. What is the amount of the house and window tax?—We have no tax on our factories except poor rates.

3773. What is your inducement to have your mills at such a distance from London, is it owing to the cheapness of labour?—It is for obtaining water power and cheap labour.

3774. Does that compensate for the expense of carriage?—The expense of carriage to Manchester is nearly the same as we have, they have no advantage over us, nor we over them in that respect; the prices do not compensate us.

3775. Have you made any calculation of what those additional charges you have mentioned amount to in the throwing?—I have not.

3776. Is it fair for you to give an estimate of what you formerly could throw silk for, and what you can now throw silk for?—Before I can sufficiently and properly answer that, it will be necessary for me to consider the sort of people I must work with.

3777. Taking the same sort of people you now have?—The fact is, we are giving such inadequate wages that the parishes are compelled to allow something to the parents to maintain the children, so that we are partly working with paupers.

3778. Do the persons who receive from you wages of 2*s.* 6*d.* and 2*s.* 9*d.* per week, receive any allowance from the parish?—Some of them may, but I cannot speak to the proportion or amount from my own knowledge.

3779. Are the Committee to understand, that the rate of wages you have fixed is a fair average of those who do not receive parish relief?—Yes, so far as some of my principal hands go; the parents of some younger children receive from the parish, but I cannot say to what extent.

3780. Have the poor's rates of your parish varied much within the last ten years?—I would explain, that my people come from a circuit of several miles round me, and not entirely from the parishes in which the mills are situate, therefore it is not a business, nor carried on to that extent materially to affect the poor's rates in any one parish in particular.

3781. Are there any other silk mills in that immediate circuit?—No.

3782. Are there any woollen mills?—Very extensive woollen mills a few miles from me, but not immediately in my own parish.

3783. Do any of the hands employed in the woollen mills work with you when the trade is slack, or do your hands go to the woollen sometimes?—No; the trade is very different, we cannot afford to pay the same wages and instruct them.

3784. Is there any cotton factory in your neighbourhood?—No.

3785. Then the hands you employ have no means of obtaining employment in any other line?—No.

3786. Do you state, that you cannot reduce the wages you now pay unless you employ paupers?—I cannot reduce the sum; I have hands from 1*s.* 3*d.* to 5*s.*, there are not so many at high wages as there ought to be; I have not advanced them as they ought to have been advanced.

3787. The parents of some of them receive allowances from the parish?—They do.

3788. Would it be possible for you to reduce the wages to a lower rate without compelling those persons to resort to the parish?—No, they cannot maintain themselves for less than they receive.

678.

B b 2

3789. Can

Mr.
Lamech Swift.

18 April,
1832.

3789. Can you state what amount on the whole year may be paid by the parish to those you employ?—I cannot say.

3790. Did any of those, before 1824 or 1826, receive allowance in the same manner?—I cannot say; if they come to me and have been previously receiving parish relief they would receive from me 1*s.* 6*d.* to 1*s.* 9*d.* per week, which is more than the parish allowance, and therefore the parish would immediately strike off the allowance.

3791. Of the 300 hands you employ, how many are under ten years of age?—A great many of the hands that I employ work at their own houses, the wives and mothers who could not come to the factory; they wind the silk and prepare it for the mills, and they employ perhaps younger children in their own families living at too great a distance to send them to the factory.

3792. In the factory how many persons are actually present?—I had about 150 out of that 300, the remainder were working at home in the manner I have described.

3793. Of those 150 how many are above 15 years of age?—I should say three-fourths of them are under 15.

3794. Are there any above 20?—There may be a few, of course there are, for they generally stay with me till they get married, and that is according to circumstances.

3795. How many males are there?—Not one, except my carpenter and foreman, we employ no males, except a few small boys.

3796. Supposing you were to manufacture with that population you now have, are you able to state what the remunerating charge for throwing would be, putting carriage out of the question, that being an extra charge altogether?—That is a question I should wish not to answer at random; with the present state of taxation we are labouring under, which tends to increase our prices, as whatever charges are incurred upon our business, if we are to live by it, we must put it upon the article we work, I do not see how the throwster of Italian organzine can be remunerated under 5*s.* 6*d.* to 6*s.* if the people are to be paid adequate wages.

3797. Is there not a great deal of difference in the silks with respect to the prices?—Unquestionably, there are silks on which will waste two or three per cent., and some that will waste from 20 to 30.

3798. Are not the fresh silks less liable to waste than the old?—Yes, the Italians have a great advantage over us, their silks are not injured by carriage and friction.

3799. Do you apprehend that the Italian will reserve the best silks for himself?—Unquestionably, I should select the best for my own use, if I had them, and export the other.

3800. You have mentioned one charge, that of carriage, which is greater to you than to a person in the neighbourhood of London; is there any other peculiar charge to which you are subjected?—We have a longer coach carriage to pay if we have to come up to London.

3801. If you were assured of 5*s.* or 5*s.* 6*d.* per pound for throwing organzine silk, would that enable you to raise the wages of your people, or would it only enable you to continue them as you now pay them?—If I could get the proper price of my throwing, I should give them proper wages.

3802. Would it enable you to increase the wages?—Yes, certainly; because we are now throwing at 3*s.* 6*d.*; if we got 5*s.* to 5*s.* 6*d.* or 6*s.*, we should give our hands wages adequate to maintain them.

3803. Do you happen to know that there have been several silk mills in the neighbourhood of London, within the last few years?—Yes, I know it, and that many of them have failed.

3804. Do you know any that have succeeded?—I do not know of one, they have been in a worse situation than we have been.

3805. Can you state what are the wages paid generally when fairly employed, to the agricultural labourer in your neighbourhood?—Not employing any myself I cannot speak to it accurately; but I believe it is 7*s.* a week with cider, if they have only two children they maintain them, but if they have more then they receive about a shilling per week for each off the poor's rate.

3806. Is yours a town or a village?—A small town.

3807. Are there many shopkeepers and others dependent upon those work people?—Unquestionably, because whatever I pay them goes to the shops, and is engaged before they earn it.

3808. Are

Mr.
Lamech Swift.

18 April,
1832.

3808. Are the shopkeepers great losers by the depreciation of wages?—My hands, coming from a circuit of a mile or two round, it does not fall on the shopkeepers in the town so materially.

3809. The reduction of 1 s. a week on each will make a great difference in the aggregate to the shopkeepers?—No doubt.

3810. Can you state the average wages of artizans?—I give my carpenter rather more than carpenters in general have, because he is an ingenious man and very useful to me, I give him 18 s. a week, he is a man that serves me as a blacksmith, carpenter or whatever I may require; a common carpenter would get from 10 s. to 12 s. a week.

3811. Have you thrown that kind of silk called marabout?—Yes, I have been in the habit of throwing it ever since early in the year 1826.

3812. To what manufacture is marabout applied?—To the manufacture of gauze, but chiefly gauze ribbons.

3813. In what way is marabout thrown?—It is in fact a very hard thrown tram, generally composed of three threads, that is the better article, but unlike common tram, when it has received a part of the throw it is returned to London to be dyed, and is then sent back to the throwster to receive the remainder of the throwing, and be finished. On that article I have to pay greater wages.

3814. How many turns to an inch do you put on your marabout?—That depends upon the size of the silk.

3815. Do you go to 70 on the average?—Yes.

3816. What is the range?—From 60 to 80 or 90, according to whether it is a very fine article or not.

3817. Does it require a superior kind of silk?—Yes, the very best white Novi's.

3818. Can you throw Bengal, or any other kind of silk except Italian, into marabout?—Bengal is not at all fit for the purpose, China is sometimes used for inferior purposes.

3819. What inferior purposes in that manufacture do you allude to?—An inferior article, used for some purposes of black goods, that the best is not applied to.

3820. Do you throw marabout from Italian single?—No, from the very fine white Novi; we have no single silk in this country of a proper size for it that I know of.

3821. Has not some been introduced of late years applicable to that?—I have never seen any.

3822. Do you ever make it from tram?—This is a tram; we throw it in the first instance into a tram, and send it to London, that the manufacturer may dye it to the colour he may require.

3823. Is not that less expense than your former operation?—It is the same operation that we apply to silk used in the broad trade of Spitalfields, called tram.

3824. Do you obtain a better price for throwing marabout than other silks?—Yes; there is so much more work upon it, that the throwing one pound of marabout is equal to throwing two pounds of organzine.

3825. Do you mean the process before and after dyeing?—Yes, I mean the whole together; that taking it from the raw, it is worth a double price than for throwing organzine.

3826. What is your average number of circles in the inch, in organzine?—It undergoes two processes of throwing.

3827. In what respect is marabout more expensive in its process than organzine?—Silk to prepare organzine from, comes down to the throwster in its raw state; it is wound on bobbins, goes to the mill in a single thread to have a spin or twist put upon it, it is then doubled two threads, and is twisted again the contrary way; a tram silk undergoes only one process of twisting, it comes down in the raw state, is wound and put on bobbins, and doubled two or more threads together as the manufacturer may desire, it then receives a slighter twist than organzine, and is returned.

3828. What is the process of marabout?—The marabout has the same quantity of work put upon it as tram in the first instance; it is then dyed and has to be re-wound, and the finishing twist put upon it to bring it up to the required quantity of turns to the inch, there is a great deal of trouble, and great care required on account of the colour in that article.

3829. Does the operation of dyeing increase the trouble?—No, only we have to have it re-wound before we can apply it to the mill, and therefore more expense is incurred.

678.

B b 3

3830. What

Mr.
Lamech Swift.

18 April,
1832.

3830. What do you receive for throwing organzine?—If I were to quote a price, I should say a catch price, it is not a price remunerating us, it is from 3*s.* 6*d.* to 4*s.*, it is not often we can get more than 3*s.* 6*d.*

3831. What is the average price for throwing marabout?—About double that price, about 7*s.* 6*d.*

3832. Before 1826, what did you receive for organzine?—About 7*s.* to 8*s.* or 9*s.*, according to the demand.

3833. What did you receive for marabout?—About double, but we had a great many experiments to try; not being conversant with the article, we got it dyed in the raw and tried some experiments, it fluctuated as the price of organzine fluctuated.

3834. Will you state what you charge for tram?—The present price for tram is somewhere about 2*s.* 6*d.*

3835. What was it in 1826?—We had 3*s.* 6*d.* and 4*s.*, and up to 5*s.*; we used at times to get 6*s.* for trams, and it has gone down to 2*s.* 6*d.* now.

3836. The French who make marabout must put the same additional labour into it as you do, must not they?—I believe, from the inquiries I have been making, and the information I have obtained, the French have a peculiar advantage over us, which will account in some measure for the great difference in their price from ours.

3837. Do you require different machinery for throwing marabout?—The machinery applied to other branches of throwing is easily adapted to this.

3838. Is marabout imported?—I believe not.

3839. It has been stated to this Committee, that marabout is about 22*s.* or 23*s.* per lb. in France, and about 32*s.* or 33*s.* in England, can you account for this great disproportion?—I am not sure that I can; I cannot say whether I am correctly informed upon this point, but from the best information I have been able to collect, I believe that France has in this article two very great advantages over us; first, that from the prohibition of the export of her raw silk she has it at a lower rate, and of superior quality, than we can buy Italian for, especially such fine Italian as is necessary to make marabout; secondly, that the silk she uses for marabout, is reeled for the purpose in one thread, of a sufficient size, so that while the English throwster is working three fine threads together to compose one of the necessary thickness, she has one already formed in one operation, and this very much lessens to France the cost of throwing.

3840. Can you in England get none of that single thread which the French use?—I believe not; I am not aware that any description of silk is brought to England sufficiently good and even for that purpose.

3841. You are not aware that Italian silk of that description is brought to England?—No.

3842. Are you aware that any Italian silk is used in the single thread in France?—No, I am not; but I believe having the filatures, they can obtain the article to their own size; but in England we cannot do that. According to the healthiness of the season, I believe the worm will spin a stronger or more feeble thread, so that if we sent out an order from this country to Italy to reel so many cocoons, it might come back heavier or lighter than we wanted it.

3843. Do you ever send out to Italy to order any particular kind of silk for this article?—No, I am not aware that any orders have ever gone out to Italy for that purpose.

3844. Is not a merchant at liberty to select from the Italian silks received in this market that which will best suit him?—The manufacturer, or person wishing to throw this particular silk, examines certain samples, and selects that which he thinks best adapted, when three threads are put together, for that purpose.

3845. You think no Italian silk can be got for marabout, equal to the French silk?—No, for the worm, according to the healthiness or sickness of the season, will spin a finer or a thicker thread; therefore if the order was sent out to Italy in a particular way, it might come at one time much finer, and at another time much stouter than was wanted.

3846. Are the Committee to understand that the difference of marabout in France and England arises from the difference of quality of material, or the greater labour in one case than another?—It resolves itself into two points, into a matter of difference in the price of labour, and a difference in the price of silk.

3847. In point of fact, what quantity of marabout in one year have you made?—It fluctuates of course, being applied entirely to the fancy trade; I have thrown from 100 to 120 lbs. per week of it for a month together; every month is not alike certainly

Mr.
Lamech Swift.

18 April,
1832.

certainly, there are some seasons of the year I do not throw any, from the stagnation of trade.

3848. Have you ever thrown four or five thousand, or ten thousand pounds, in a year?—No, the last year I threw only 500 lbs. in the year; in the month of May the preceding year, I threw 430 lbs.

3849. Did you ever throw 1,000?—Yes, I have thrown 3,000 lbs. in a year.

3850. Did you throw only that proportion from the want of demand, or the want of the article to throw it from?—From the want of demand.

3851. Did this arise from the gauze not being manufactured to a greater extent?—The marked was glutted with French goods of the same kind.

3852. Does the throwing marabout give to the throwster much larger profit than the other descriptions of organzine?—It does not, the manufacturer if he cannot get a little more for a fancy thing where he has so much more trouble and increased risk, will not undertake it.

3853. Taking the risk into consideration, do you think you get a larger profit?—No, not in a difficult time like this; it has been valuable to throwsters as employing a great many of their hands and a considerable portion of machinery for a small parcel of silk, having to work it twice over; 1 cwt. is equal to two.

3854. The price at which the foreign throwster sells, compels you to reduce your profits of labour?—Unquestionably.

3855. Do you know the cost of raw silk?—I believe it varies from 19s. to 20s. for the best, applicable to this purpose.

3856. You say the throwing is now 7s. 6d.?—That is the price I am receiving for it.

3857. Do you know what the charge for waste would be?—It depends on circumstances, according whether the raw is a very good winding silk or not; they fluctuate very much, I should think from a shilling to eighteen-pence, including the second operation.

3858. Do you know the expense of dyeing?—That depends upon the colour; I should suppose from 2s. 6d. to 3s., taking the average of colours.

3859. What was the price of throwing fine superior tram in 1821 to 1824?—It fluctuated from 4s. 6d. to 5s. 6d., or 6s.

3860. What was the price of throwing organzine at the same period?—That also fluctuated from 8s. to 7s. 6d., according to the quality, for there is always a difference between a very fine article and a coarse article; the superior fine are of course at a higher rate, from 8s. downwards.

3861. The finer silk is not only of greater length, but more subject to accidents?—The fine silk in a general way takes more precision, independent of their being a greater number of yards in length, and it will not take off the same quantity in weight.

3862. You cannot have the same celerity in motion, because it is more apt to break?—It is a more tender article to deal with, and we cannot apply at all times the same velocity to it.

3863. Of course if you were driven from the use of the finer silks to a coarser material, there is more silk and much less labour?—A greater quantity of silk, and less labour.

3864. So that you may appear to increase your quantity, while you are decreasing the amount?—Yes, for the same quantity of machinery which will turn off 100 lbs. of fine Italian, will turn off two or three hundred of coarser silk; 150 lbs. of Bengal in the article of singles, for instance, appears on paper the same as 150 lbs. of Italian; in point of weight it is the same, but not in the proceeds.

3865. What difference does it make in point of wages?—A very great difference; if I was entirely on that description of coarse silks, I should not want nearly the number of hands I have for fine silk.

3866. If you are driven to use the coarse article, you must diminish your number of hands?—Yes.

3867. What are the articles of thrown silk principally sent from abroad, are they the finer description or the coarser?—The Italian organzines are mostly of the finer descriptions.

3868. Are you aware who else throws marabout in England besides yourself?—Messrs. Courtauld & Taylor, in Gutter-lane; they were I believe the first marabout throwsters, they were throwing it twelve months before I was.

3869. Have you at all any idea of the quantity of silk thrown into marabout in this country?—I have not.

678.

B b 4

3870. You

Mr.
Lamech Swift.

18 April,
1832.

3870. You have not exceeded in any year 3,000 lbs. yourself?—I have thrown in one year 3,000 lbs. weight, last year I did not throw above 400 or 500 lbs.

3871. The importation of raw silk having increased, to what do you attribute the distress of the throwsters?—The importation of raw silk last year very much fell off, and the thrown increased; a large quantity of raw is used in an unthrown state; of the raw silk imported, a larger proportion than formerly, is the Turkey and other coarse kinds, which require little throwing; and also the throwsters distress arises as much from the lowness of price, occasioned by the last reduction of duty, as from the want of work.

3872. If the quantity of silk from Bengal and Turkey had been abundant within the last six years, would you have found any increased improvement more than would have been afforded by half the quantity of Italian raw?—That must depend upon how the trade could have consumed it.

3873. The question refers to the time occupied in throwing it?—Certainly not.

3874. What duty, in your experience, would be a protection to the British throwster?—I should say 5s. organzine, and 3s. tram.

3875. The coarse silk does not give half the employment of the fine?—No.

3876. The marabout has been an advantage to the throwster?—Yes; the marabout gives an immense employment for the lower classes, with a very small consumption of silk.

3877. You are aware that the protection now given is equal to the whole labour of throwing?—I would say if that is taken off, the manufacturer will not reap the advantage of it; we are throwing at 3s. 6d., because we cannot obtain a better price, but it is not a price that will remunerate the throwster.

3878. Do you think that the low price is occasioned by the Italian thrown silk being imported, or by the competition among the manufacturers?—It may be remarked, the very small quantity of Italian thrown silk which has come into this market since the reduction of duty; after the duty was once reduced from 9s. 2d. to 7s. 6d., and subsequently to 5s., the throwster by increased exertion, by screwing down his people, and reducing his charges, kept the Italian in a great measure out of the market; but when it came down to 3s. 6d., we could not decrease our expense in proportion, and the consequence is, there has been an increased importation of thrown silk.

3879. In your opinion, has the reduction of the profit of the throwster arisen from competition at home, or from that small increase of thrown silk?—It has arisen in some measure from the competition at home, that the manufacturer has been forced into, with the foreigner.

3880. The reduction from 5s. to 3s. 6d. you complain of, took place in 1829?—Yes, in 1829.

3881. What has been the state of the trade from 1829?—We have been in a constant state of distress from the period French goods were admitted; it has varied only in degree.

3882. Do you mean to say that in 1829 the throwing was a bad trade?—Yes, and it has been gradually getting worse.

3883. Do you speak of yourself, or of others?—I speak of myself as an old throwster, and knowing that my mills cannot be in a bad state without others feeling a like depreciation.

3884. You have been principally employed by the London and Coventry manufacturers?—Yes.

3885. At the time when your throwing trade was a good one, had any manufacturers mills of their own?—Yes, some have had mills of their own for many years; they have increased of late years.

3886. Have not the number of mills in the hands of manufacturers considerably increased?—Certainly, but not so as to injure the trade.

3887. Have not mills also been established within short distances of London?—I believe there have.

3888. Cannot you account for a decrease in your trade, and your employment, by the expense of carriage, by the establishment of new mills, and by manufacturers who formerly employed you also throwing their own silk?—Unquestionably; every throwster who has been engaged in throwing to a large extent, for a particular house, suffers a loss if that house establishes a mill of their own, and he loses the connection; but as it refers to the mills established in the neighbourhood of London, though there have been many established, they have not succeeded, they have not drawn away our business from us.

3889. They

Mr.
Lamech Swift.

18 April,
1832.

3889. They have affected you probably for the moment?—Yes, they may have done so.

3890. It is the increase of Italian silk which affects you, the increase from 350,000 to 500,000 lbs.?—I do not mean to say it has affected us to that extent.

3891. There were 4,000,000 of lbs. imported the last year into this country, of which only 500,000 were thrown, being only one-eighth; do you think the proportion of one-eighth thrown in Italy, affected the price of the seven-eighths thrown here?—Yes, because it is the quotation they go by; though it is not a quantity for the trade to go on, they will still argue upon it.

3892. You were understood to say that the price of throwing had been depressed by the great increase of importation of Italian thrown?—Yes, the importations from Italy have certainly affected the mills of this country.

3893. What amount do you put down as imported for home consumption of Italian thrown silk the last two years?—It is impossible for me to say what I put down for home consumption, it may be exported again without my knowledge, and though some part of the increase may be in tram, it deprives the throwster of throwing tram equally with organzine, and affects his price; if a single pound is imported, there is a pound less of British organzine or tram wanted.

3894. Do you know the proportion of tram imported in those two years, less than was imported before?—I have not those returns by me.

3895. Can Bengal be thrown into tram?—Certainly, but it will not produce the same article as Italian tram.

3896. Are you aware that tram has been imported only of late years?—It was, I believe, a contraband article prior to the reduction of duty in the first instance in 1826, when the duty was 9 s. 2 d.

3897. Are you aware that of the increased import of thrown silk from Italy, one-fourth of it has been tram?—I am not aware of the respective quantities of tram and organzine.

3898. Are you aware that the importation of organzine silk, for the last fifty years, has never varied 30,000 lbs. on the average of years?—I am aware of that, but I think that is to be explained, because the Italian has had a better market than here; but if you take off the duties, he will send less raw and more thrown to this country.

3899. Have not the difficulties of the throwster really commenced and increased since the removal of the protection given him by the alteration of the duties?—Unquestionably.

3900. If the protection given to him were further removed by lowering the duties, would it not increase their difficulties?—Unquestionably.

3901. You mean to say that the introduction of foreign thrown silk at the duty which made it only to the extent of 3 s. 6 d., depressed you very much?—Yes.

3902. If 500,000 lbs. came into this country, where 300,000 only had come in, that would be so much additional, and you conceive that with the reduced amount of protection, the Italian would send more thrown silk into this country, and less raw?—I think there is no doubt upon that.

3903. You think he can throw silk much cheaper than you can?—Yes; as a question of labour upon a question of machinery, the same machinery in England will throw as good organzine or tram as any machinery they have got in Italy, suppose the quality of silk the same, but then it resolves itself into the difference of labour.

3904. You conceive it is the difference in the rate of labour which makes protection necessary to you?—The Italian has also a decided advantage in selecting the best silks; in this country we cannot do that, being obliged to take that which is sent.

3905. One cause of the advantage they possess is in the cheapness of foreign labour?—Yes.

3906. If you were not to reduce your profits and labour so as to meet the foreign competition, would it not occasion a much larger quantity to be imported?—There is no doubt of that; it is the increased exertion and the decreased prices we have worked at that has kept the importation of thrown silk so low as it is.

3907. If there were even a less quantity of Italian thrown silk it would still compel you to work at low prices?—We must be compelled to work at low prices, unless our manufacturers had an increased remuneration for their goods, we are dependent one upon another.

3908. If you suffer from home competition, is not that an evil that generally

Mr.
Lamech Swift.

18 April,
1832.

remedies itself?—Unquestionably, because, if we have not the foreigner to contend with, those things will always adjust themselves in some way or other, by a little reduction for a time; if the manufacture is depressed, we right ourselves, but we cannot guard against the importation of the foreigner, we cannot prevent his glutting our market.

3909. Do you mean to say that it is the cheapness of foreign labour against which you want protection, and what do you suppose is that difference of labour between England and Italy?—I am not in possession of the exact price of labour in Italy, but the wages of Italy and their rate of taxation altogether, enable them to work cheaper than we can in England.

3910. You admit that they can work cheaper than in England; take the 2s. 8d. you have here protection from the 3s. 6d. what will remain for the throwing?—Only 10d.

3911. Can you suppose that in Italy they can throw for 10d.?—I do not suppose that they can work exactly as we do here; I can speak as to their rate of wages, but if you reduce the protection here they will very soon glut our market.

3912. The apparent difference is 10d., but if it were to be merely for the labour it would be impossible of course for the Italian throwster to throw for 10d. a pound, but has not he other advantages which enables him to throw at that reduced price, and still compete with the English throwster?—There are silks come into my hands that I would not throw at twice the price that I throw others for, yet they both shall go under the denomination of Italian silks.

3913. Has he any other advantages beyond the lowness of wages, which will enable him to enter into competition with the English throwster even at that low price?—He has wonderful advantages in the selection of the best raws above what we can procure in this country.

3914. Are you aware of any disadvantages he has in coming to the English market with the English throwster?—I do not know of any disadvantage he has in coming to the English market.

3915. Do you know that thrown silks sustain greater damage in shipping and landing than raw silks?—I do not, I know that raw silks sustain great injury.

3916. You think he has great advantages in the selection of his silk, and probably that he will send to this country only those silks he does not find it conducive to his interest to work up?—He sends to this country what he does not require for his own use.

3917. Would it not often answer the purpose of the Italian, for the sake of selling his silks, to send them here, even though he got no profit upon the throwing?—I believe it would, because, in the balance of his account with this country, by sending a part thrown and part raw, it answers his end.

3918. He would rather send it thrown than raw?—Yes, he has employment for his people.

3919. Then he is not like a man who depends altogether on the profit of throwing?—No, he has other advantages.

3920. Does he not often work the produce of his own district?—I believe that there are many cases where the filature and the throwing are combined, but never having been in Italy I am not able to speak correctly to those points.

3921. Are you not aware that there are a great many persons in Italy who purchase silk, and have no throwing mills?—I cannot speak decidedly to that.

3922. Are not raw silks injured in their transit from Italy to England?—Very seriously.

3923. Are thrown silks subject to the same injury?—That I cannot speak to, thrown silks not coming into my hands as a throwster.

3924. You mention, that there are some Italian silks which you would require to be paid twice as much for throwing as other silks?—Yes.

3925. Do those silks bear a higher price in the markets of Italy?—I cannot say, but they do not in this market.

3926. Is that owing to the Italian throwster having the choice of silks in that market?—Yes; I have thrown silks at 4s. per pound, that I have got a better remuneration for than some Italians that I have thrown at 8s.

3927. Are you acquainted with the nature of the power used in Italy, so as to form a comparison between the situation of the English and Italian throwster?—I understand their power is mostly water; I am not aware, exactly, of the power they use.

3928. Of the raw Italian silks you throw, are the great proportion of finer or inferior

inferior qualities?—There is a distinction; there are very good coarse raws and very bad ones, and the same in fine; it is not the degree of fineness which constitutes the superiority or inferiority, it depends upon the care with which they are reeled; some fine silks of the same number of deniers, will waste, perhaps, twice as much as others, the coarser the silk, if it is well reeled, the less waste.

3929. You have been asked, whether one cause of the distress of the throwster was not the manufacturers having established mills of their own; you say they have established mills of their own?—Some of them have, and some of them have abandoned them from the serious losses they sustained; they did not reap that advantage from having throwing mills of their own they anticipated.

3930. Have not as many mills, not belonging to manufacturers, discontinued working their mills as belonging to manufacturers?—A great many mills not belonging to manufacturers, have discontinued; a great many have not been set to work at all; led away by the prosperity that was promised to the trade by the alteration of the duties, they were induced to rush into the trade, and many of the mills were created in consequence; but a skein of silk was never, I believe, put into many of them, the trade became so depressed before they could get to work.

3931. Were those mills established by the manufacturers?—No; by parties who rushed into the trade, who were induced to go into it by the state of prosperity they expected the trade would be put into.

3932. What year do you speak of?—Previous to 1826, from 1824 to 1826; the late Mr. Huskisson stated in the House, that he would put the silk trade into such a state of prosperity it was never in before; in consequence of that, persons who could realize a few thousand or hundred pounds, put it into silk mills, anticipating a rich harvest, and some of them have not even commenced working.

3933. It was foretold that it would increase the wages of labour 25 per cent. in six months, had it that effect?—No; but the contrary effect.

Mr. John Sharrer Ward, called in; and Examined.

3934. WHERE do you carry on the throwing business?—At Bruton, in Somersetshire, and the surrounding villages.

3935. How long have you carried on this business?—My father and myself 65 years.

3936. What induced you to extend your business to the villages?—I have been, in all cases, solicited by the overseers of the parishes, or by the principal inhabitants to do so to employ the poor.

3937. What number of hands do you now employ?—At the present moment about 230.

3938. What number did you employ in 1823?—From eight to nine hundred, or perhaps to one thousand, the children often working at their own houses with their parents.

3939. What is the average of your wages?—The average, as well as I can make out at present is 2s. 3d. for women and children; but it is a very difficult thing to give an average, for I had used at Easter to raise all my children's wages, which I have omitted to do the last two years.

3940. What was the average of your wages in 1823?—About 3s.

3941. What was the average of your wages in 1829?—Nearly as at present, 2s. 3d., I have made no great alteration since.

3942. What number of spindles have you now at work?—At present about 7,000, but only working four days in the week.

3943. What number had you in 1823?—Fifteen thousand seven hundred, and they were then in full work.

3944. What number in 1825?—About the same.

3945. What was the number in 1828 and 1829?—They varied a little in 1828 and 1829, in 1828 nearly the same, in 1829 somewhat less; I began to buy my own silk about that time; I began indeed in 1828.

3946. Do you throw Italian silk?—Principally fine Italian.

3947. What was the price of throwing in 1823 for organzine and tram?—From 9s. to 10s. per lb. for organzine, tram 5s. 6d.

3948. What was the price of throwing in 1829?—From 4s. 6d. to 5s., and tram about 3s.

3949. What is the price now?—I understand the price is 4s. for organzine, and

Mr.
Lamech Swift.

18 April,
1832.

Mr.
John S. Ward.

Mr.
John S. Ward.

18 April,
1832.

and 2s. 6d. for tram; but I have thrown none for hire, but for myself, paying me nothing.

3950. By what means have you been able to make that reduction in price?—By lowering the wages, and submitting to great loss.

3951. Has there been, since 1823, any important improvement in the principle of throwing machinery?—No, very trifling; there was no necessity with me, because my machinery was very perfect.

3952. Are some parts of the machinery now turned faster than they used to be?—I have increased the speed of my spinning mills occasionally, according to the quality and strength of the silk.

3953. To what parts of the machinery does this apply?—To the spinning mills chiefly.

3954. Can you state the difference of increased rapidity?—I should suppose about one-twentieth I have increased my speed; then I formerly worked at a greater velocity than others I believe.

3955. Can you state how many revolutions there were before 1823?—It is about 3,000 now, having been increased about a twentieth.

3956. Is this increased speed a great saving in the cost of throwing?—It is inconsiderable, inasmuch as there must be more hands employed to attend our mills, particularly if the silk be of fine or inferior quality, and tender fibre.

3957. Does the portion of additional hands make up for the increased speed, or what is the difference?—In some cases, as matter of experience, we try what velocity the silk will bear, and are obliged to relax occasionally.

3958. What induced you to increase the speed of your machinery?—I had heard that other persons had increased, and I tried the experiment.

3959. Were you, previous to the alteration you speak of, to the extent of a twentieth part, working more rapidly than a great many other mills?—Certainly.

3960. Are you now working with as great velocity as any others?—I understand there are greater velocities used, but I have not found them of advantage to myself; I have the power of doing so.

3961. You consider that the increased number of hands, in consequence of the increased velocity, is not in the proportion of a twentieth?—No.

3962. That is very inconsiderable?—It is very inconsiderable.

3963. What advantage does the Italian throwster possess over the English?—Lower wages; I have no difficulty in asserting that they have cheaper plant and power, meaning their water wheel and their mill; I have been told by a friend of my brother, who had been in Italy to superintend a factory, that a mill can be rented in Italy for 60*l.* a year, English money, that would turn off four cwt. a week; the very coal that a steam engine in England would require, would amount to three or four hundred a year.

3964. What do you pay for coals?—About nine-pence a hundred.

3965. Do you use steam or water?—Both.

3966. You say a mill can be rented at 60*l.* a year which would throw off at the rate of four hundred a week, what would a mill in this country which would perform the same quantity of work, cost a throwster?—Reckoning interest of money, it would cost eight or ten thousand pounds to build a mill, that at five per cent. would be four hundred a year.

3967. Would not the site of the mill cost something in addition to the 8,000*l.*?—No doubt.

3968. Supposing silk throwing did pay, and that a person required a mill, what would a mill throwing 400 lbs. a week let for?—From four to five hundred a year; certainly there is one other matter which is more important still, their silk is in a better condition, and of better quality.

3969. What do you mean by better condition?—In the transit from Italy here, it gets rubbed and so on; I should think that makes about two per cent. difference.

3970. Do you think the circumstance of the Italian being able to make a selection of his raws, a great advantage?—An incalculable advantage.

3971. Is not the circumstance of silk making more or less waste, of great importance?—Decidedly of great importance.

3972. Do you think those advantages are counterbalanced by the present import duty?—By no means, certainly not.

3973. What has been the effect of lowering the import duty in 1829 from 5*s.* to 3*s.* 6*d.* a pound?—To reduce the price to the throwster, and consequent lowering the

the wages to the workpeople, which has brought great distress upon the labouring classes.

3974. What would be the effect of still lowering the duty?—Absolute ruin to the English throwster.

3975. You have stated that ruin would follow a further diminution of duty, on what do you found that opinion?—As the duties have been varied, so has the price of throwing been varied, and it is rather singular it has kept pace exactly with the price of throwing; in 1823 the duty was 9s., the price for organzine was 9s.; at the next reduction of duty to 5s., organzine was 5s., and trams in proportion; now it is 3s. 6d., and I have known trams taken within this three months at 2s. 3d. per pound, the person who sent it said he knew the throwster would not pay himself, but he said I can do no better.

3976. There being so large a proportion of fixed capital, is a constant inducement to the mill owner to throw?—Yes, my inducement is to keep my hands together, hoping trade would revive, by which I have lost thousands.

3977. What is the number of mills in your town and neighbourhood?—I really do not know, there were eighteen, but I believe they are now reduced to twelve.

3978. How many have been erected since 1823?—I believe none of those twelve.

3979. Has it been a total loss to the proprietors, the mills being thrown out of employ supposing it to be permanent?—Yes, the loss of our capital; my mill cost me between 20 and 30,000l., it would be perfectly useless if I were to give up throwing; there is no manufacture in the neighbourhood to employ it about, they must go back to be flour mills I suppose.

3980. Do you know, generally, the value of the mills?—I cannot say that I do; but it must be very considerable.

3981. Are the hands employed in this winding dependent on the poor rate?—They partly have been.

3982. Are there many hands out of employ?—The greater part of them are out of employ.

3983. What is the state of the town and neighbourhood of Bruton, as to poor's rate?—I believed they have increased about one-fourth in the town of Bruton.

3984. What proportion of the mills and spindles in your neighbourhood are now at work?—In my own mill about one-half of the spindles are at work; but they work only two-thirds of the usual time.

3985. You say, one of the disadvantages under which the silk throwster laboured was, that the Italian silk throwster got his silk of better quality?—Certainly he does.

3986. Will you explain to the Committee how it occurs, that the merchants, of whom you buy silk, have not been able to procure silk of equal quality to that they have in Italy?—I can only reason by analogy, if I were an Italian throwster I would work the best silks and send the worst to England, which it is a notorious fact they do.

3987. If an additional price were given, might not the best be procured here?—It is not the fact that it is procured.

3988. You state, that there is injury to raw silk in the transit?—Yes; about equal to two per cent.

3989. Are you able to inform the Committee, whether Italian raw silk, or organzine be subject to the same injury?—I cannot say, I never imported it.

3990. If the duty on thrown silk is lowered, is it not probable that the Italians will keep at home, and throw it?—I apprehend so.

3991. Do you think it is the most likely way to obtain a good supply of Italian raw silk to keep the duty at present existing on foreign thrown silk?—I should hope it would be increased.

3992. Have you been in the habit of working on commission or otherwise?—I never began working my own till about 1826 or 1827.

3993. Which do you find most profitable, working by commission, or your own silk?—I should say, bad as it is, on commission, and for this reason; in 1829 I sold a large quantity of thrown silk at less than it cost me in the raw; also, in 1829 I almost supplied myself by my own means; there is one gentleman I used to earn 3,000l. a year of, and I can get no work from him, except a bale now and then; but what was I to do, either buy my own silk, or turn off my work people; in 1829 a very large quantity of silk I sold which did not pay me 1s. 6d. per lb. for working into organzine, after deducting for waste and broker's commission.

678.

3994. What

Mr.
John S. Ward.

18 April,
1832.

Mr.
John S. Ward.

18 April,
1832.

3994. What induced you then to work for yourself?—It may appear vain to say so, but it was the love of my poor people, who worked 60 years for my father and myself.

3995. Should you have worked for yourself if you had been able to obtain silk to work on commission?—Certainly not; and I would return to commission to-morrow if I could.

3996. Did you ever go to Manchester?—Never.

3997. Your attention has been directed to the circumstance of some establishments being made at Manchester for the throwing of silk?—I am aware there are.

3998. Are you aware of any advantage which exists at Manchester beyond that possessed by you?—I know of none; I believe the gentlemen who employ me and employ the Manchester mills, will say that there has no better organzine ever been made than that I have made.

3999. Are you aware of any advantages they possess over yourself and other manufacturers in your neighbourhood?—No.

4000. Do you think you are able to throw silk as low as they can do it?—I should think I am, our labour is cheaper.

4001. The Committee are to gather from your evidence, that you are of opinion you can throw silk as cheap as they can do at Manchester?—Yes.

4002. Do you think the expense of carriage down to you is compensated by the cheapness of your labour, and other advantages?—Yes.

4003. Do you think you could manufacture it within 20 miles of London cheaper than you do?—Certainly not; labour is dearer; our carriage does not exceed three farthings a pound.

4004. Are you aware of any silk having been sent from Manchester, within the last twelve or eighteen months, to be thrown in your neighbourhood?—I believe not; not to me in Bruton.

4005. A large proportion of people employed in the mills are females?—Almost all.

4006. Is the employment healthy?—Perfectly so.

4007. Is the employment domestic?—I had 500 employed at their own houses.

4008. Do you know of any means by which the poor children could be subsisted, if you should be obliged to dismiss them?—I do not.

4009. You have been obliged to dismiss your labour from the surrounding villages, have you not?—Yes, I have only 230 out of the 800 now.

4010. What protection do you conceive it necessary the throwing interest should have?—I should say at least 5s. organzine, and 3s. tram.

4011. What would such a mill as you now use, if built at the present time in the best manner, cost you?—I cannot tell, I suppose 20,000 l.

4012. If you wanted to let it, what would it let for?—I do not know any body who would take it, I can reason by analogy; I know a gentleman who laid out more than 16,000 l. in a mill and machinery, the most that was bid for it was 2,600 l.; and all the machinery, which cost I suppose 8,000 l., the person who succeeded him, bought for 200 l.

4013. How can such a state of things exist where there is such an increased supply of Bengal silk to be thrown?—I never worked Bengal, mine is entirely fine Italian silk.

4014. Can you at all account for the distress of the throwster, there being such a great increased importation of raw silk?—I believe the great importation consists in a great measure of Bengal, which is put into the loom at Manchester, I believe without any throwing at all; it is worked in the single.

4015. A bale of Bengal would afford very little employment for your people, as compared with a bale of Italian?—Very little.

4016. Can you give the Committee any idea of the difference of employment between working up a bale of ordinary sized Bengal, and a bale of ordinary sized Italian?—No, I can do it in this way, by the price; I work very little Bengal, the last I had, I did it at 1 s. 6 d. per lb. for single, merely wound and twisted.

4017. So that in point of fact there may be a very great increase of Bengal, and China, and Turkey silks, and yet the mills of this country may be very inadequately supplied with silk to throw?—Yes, the mills in the West of England, they are calculated for Italian silk.

4018. You have stated that yourself and your father have been engaged in this manufacture for sixty-five years?—Yes, I have been in it four-and-forty.

4019. Has

4019. Has there not within that period been a progressive improvement in silk throwing?—Yes.

4020. By those means you have been able to compete with the disadvantage occasioned by the successive lowering of the protecting duty you have had to encounter?—Yes.

4021. And by throwing the employment and all the materials into unfavourable situations?—Yes.

4022. Are not all the mills of England, unfavourably situate, thrown out of employment?—Yes.

4023. Whether they are in the neighbourhood in which the labour is not very cheap, or where they have not the advantage of water power, and where coals are not very cheap?—Yes, in some neighbourhoods I suppose not one half of them have been able to stand.

4024. Would 1,000 lbs. weight of Bengal silk find as much employment for the people as 500 weight of Italian?—I should think not.

4025. How do you account for there being so little increase in the quantity of thrown silk imported, considering the several reductions of duty which have taken place?—I suppose that the Italian throwster, as well as ourselves, is getting very little profit, but he has a profit on the raw also.

4026. Is he the grower?—I believe in a great part of Italy he is; I should say also, we have been driven to work at such low wages, that it falls on the throwster.

4027. The wages at which you have been working are such as you cannot continue to work at?—I cannot.

4028. The Italian having a profit on his raw silk, he might be induced to send it over here, though he got nothing on the throwing?—I apprehend he might.

4029. Do not you think that the introduction of so many foreign manufactured goods must have operated very materially to depress the throwster, and also to throw people out of employment?—Certainly so; gentlemen engaged in silk weaving, who gave me considerable employment, do not now, being thrown out of their means of working it.

4030. Do you know any great opening to export, that the importation of foreign manufactured goods as obtained for this country?—No, that is out of my line.

Mercurii, 11^o die Aprilis, 1832.

EDWARD AYSHFORD SANFORD, ESQ., IN THE CHAIR.

Mr. *Alexis James Doxat*, called in; and Examined.

4031. YOU are a silk merchant in the city of London?—I am.

4032. How many years have you been engaged in that business?—I entered the business in the year 1798.

4033. Have you been in the habit of importing silks from other parts of the world besides Italy?—No, Italy only.

4034. You import thrown silk as well as raw?—We do.

4035. Are you able to state from your inquiries and observations, the general effect produced on the silk trade in this country, in consequence of the alterations of duties on foreign raw and manufactured silks?—I am.

4036. In the course of your inquiries into the state of the silk trade of this country, have you made some statements of the progress, at various periods, of the quantities of raw and thrown silk, waste, knubs and husks, consumed by our manufacturers; and also the amount of duties, wages and profits, accruing from those quarters; and have you likewise taken some comparative view of those progresses with those which have taken place in the cotton trade, and if so, will you state what have been the results of your inquiries in those respects?—I will begin by giving in a Tabular Statement I have made, of all the imports and consumption of silks in this country, from the year 1814 to the year 1831; I have endeavoured to separate all the qualities which are placed together in the Parliamentary Returns, duty paid, and I have balanced my accounts ultimately by the Parliamentary Returns [*producing the same, Vide No. 1.*] Being much interested in the silk trade, I have made, at various periods, inquiries into all which relates to that branch of industry, as much as it has been in my power; I have made every inquiry in my power

Mr.
John S. Ward.

Appendix (F.)

power into its various parts, and have endeavoured to make a comparative statement of the situation of the silk trade, before the alterations of 1824 and 1825, when the new duties commenced, likewise its situation since the importation of foreign manufactured silks; leaving the details of points which are seen in all those columns, I will take the per centages of the silk trade, as compared with the cotton trade in this statement [*producing the same, Vide No. 2.*] The cotton trade has often been adverted to of late years, as without parallel in its progress; and the silk trade has as often been mentioned in contradiction as "dwindling, sickly, &c." previously to the alterations in our laws relative to this branch of our national industry, observations so contrary to the real state of the case would not have been offered, had a relative comparative view of the respective progress of the silk and cotton trades been taken, as will appear by the statements and recapitulations as I have mentioned; they differ from year to year; I have contented myself with inquiries in that branch of industry, and likewise made statements of its progress. Last year, a friend of mine, who is a principal broker in the cotton line, sent me a Report of the West India Trade; and every time that a paper is sent to me of that kind, I read it with great interest; every branch of industry has some point of comparative analogy; when I came to the page of cotton, I saw the progress very rapid, but those numbers struck me immediately as less rapid than I was acquainted with, and which were familiar to me in the silk trade; I placed those numbers in comparison, and I found the result to be in this way, taking the average of three years, 1815, 1816 and 1817, and the subsequent three years, 1818, 1819 and 1820, I found the increase to be in the silk trade $31\frac{1}{2}$ per cent., the increase in the relative period in the cotton trade, 22 per cent. The next three years, 1821, 1822 and 1823, the increase in the silk trade was 70 per cent. over the starting point of 1815, 1816 and 1817, the comparative three years in the cotton trade was 48; I would state here, that during those periods of nine years I have been mentioning, the duty on raw and thrown silks, without fractions, was from 25 to 30, 40, 50, 60, 70, 80, and even 90 per cent. upon the value of the raw article, and the article (the thrown) which has received some preparation towards its manufacture. In the average of the years 1824 and 1825, compared with the same years in the cotton trade, the increased consumption of the silk trade was 156, and in the cotton 83; I should mention that on cotton I do not know professionally, but I believe the duties were merely scale duties; there has been lately a duty on raw cotton, but at those periods the duty on raw cotton was next to nothing during the whole of that period. The numbers I have given are $31\frac{1}{2}$ silk, 22 cotton; 70 silk, 48 cotton; 156 silk, 83 cotton; during those last two years, 1824 and 1825, the duties were considerably reduced; the average duty of 5s. per lb. on raw silks was reduced to 3d. a pound, that on thrown silk from 14s. 8d. to 7s. 6d. per lb.; I will avoid further details for the present; I should add with respect to the years 1815 to 1824 and 1825, our wages then were at the rate of about $10\frac{1}{2}$ d. per yard for weaving a certain description, with trifling variations, during those periods; there was scarcely any alteration in the wages during that long period; the silk trade was a rapidly increasing trade, and sustained those wages, which were only moderate wages under all circumstances; the medium numbers of 1821, 1822 and 1823, and 1824 and 1825, that is the medium of those two points compared with 1815, 1816 and 1817, still the starting point is, on silk 113, the corresponding numbers in the cotton 65; taking the whole of that period previously to the repeal of the laws of 1766, the numbers abstractedly were these, $31\frac{1}{2}$ silk against 22 cotton; 70 silk against 48 cotton; 156 silk against 83 cotton, and 113 silk against 65; taking the various quantities in 1826, 1827, 1828, 1829 and 1830, I find the numbers to be 17 per cent. increase in silk over the five preceding years 1821-23, 1824-25, whereas the increase on cotton during the same period was $36\frac{1}{2}$ per cent.

4037. Do you include 1826 and 1830 together, or is it exclusive of those years?—The years 1826, 1827, 1828, 1829 and 1830, that is to say, that from 1815 to 1825, the respective progress of the silk trade was thus compared with the cotton; the silk increased in proportion of seven to four of the cotton trade, the progress has been inverted since; comparing the last five years with the preceding five years, the silk trade has been as six to thirteen in the cotton; this alteration has taken place notwithstanding low duties, duties reduced from the average of 5s. on raws, as I mentioned before, to 1d. per lb.; and the 14s. 8d. on thrown, as compared with 7s. 6d. to 3s. 6d., so that the amount of duty in 1821, 1822 and 1823, was 729,000*l.* upon the average; the average of 1824 and 1825, was 272,000*l.*, and the amount of the five following years 1826, 1827, 1828, 1829 and 1830, were

were 82,000*l.*, 128,000*l.*, 111,000*l.*, 45,000*l.*, and 90,000*l.* While upon this subject, I should state that I believe there is no branch of trade in this country upon which the duty was levied with less expense than upon the silk; upon that subject I would appeal to Mr. Hume of the Board of Trade, who might state that the whole of the silks imported during those periods, were landed in a small space near the Custom House, hardly as large as this room; the remaining duties were collected at the East India House, under their own lock, so that the expense in collecting those duties was very inconsiderable; I have mentioned that during the former periods 1815, 1816 and 1817, to 1824 and 1825, the wages were, taking a certain point, 10 $\frac{1}{2}$ *d.* for weaving well and neatly gros de Naples of a description called 10 to 1100 three doubles, and that the differences from year to year were extremely trifling during those periods; on the whole, I believe they were fully as high from 1821 to 1825 as from 115 to 123; since the year 1826 inclusive, the rate of wages has ranged thus, having been previously upon the average 10 $\frac{1}{2}$ *d.*; from 1815 to 1825 with very trifling variations, about 7 $\frac{1}{2}$ *d.*, 8 *d.*, 7 *d.*, 6 *d.*, 6 $\frac{1}{4}$ *d.*, and 6 *d.*, speaking in round numbers; having spoken of the quantities, and the rate of wages, I will proceed to the amount of duties, wages, profits, &c. that I conceive to have been earned in the respective periods I will take in this case.

4038. Are the Committee to understand you to take the rate of wages for the whole of the silk, as that you have taken for the gros de Naples?—No; I take that as the pivot on which to proceed to other branches, but that would detain the Committee considerably longer; I take that point as forming a large basis in the trade, it seems to be a central point, the amount of duties and wages, profit, &c. are stated collectively in this paper; the average of 1815, 1816 and 1817, I have stated at 2,073,000*l.*; in 1818, 1819 and 1820, the three following years, 2,719,000*l.*; in 1821, 1822 and 1823, 3,514,000*l.*; in 1824 and 1825, 4,263,000*l.*; the medium of 1821, 1822, 1823, and of 1824 and 1825, part with the old duties and part with the new duties, and with the same rate of wages, 3,888,000*l.* I will now proceed to the five following years: In 1826 the amount was 1,941,000*l.*; in 1827, 3,647,000*l.*; in 1828, 2,922,000*l.*; in 1829, 1,832,000*l.*; in 1830, 3,182,000*l.* The average of those five years appears to be 2,705,000*l.* As I have mentioned the quantities consumed in the silk and the cotton branches by per centages, I will mention likewise those per centages with relation to the amount of duties, wages, profits, &c. I find the progress from 1815, 1816 and 1817, to the following three years 1818, 1819 and 1820, in the silk trade, with respect to the amount of duties, wages, profits, &c. was 31 per cent., whilst in the corresponding period, in the cotton, it is only 8 per cent.; the following three years 69 $\frac{1}{2}$ of silk, 13 $\frac{1}{2}$ of cotton; in 1824 and 1825, 105 of silk against 28 $\frac{1}{4}$ of cotton; the medium of 1821, 1822, 1823 and 1824, and 1825, was 87 of silk against 21 $\frac{1}{4}$ of cotton. The following five years 1826 to 1830, as compared with 1821, 1822, 1823, 1824 and 1825, was 30 of silk minus the preceding five years, and the cotton 4 $\frac{1}{2}$ per cent. above the said period of 1821–23, 24–25. Taking the single year 1831, comparing the cotton with respect to the quantities, the increase in the silk has been 32 $\frac{3}{4}$ per cent. over the average of five years 1821, 1822, 1823, 1824 and 1825, and the relative increase in the cotton trade has been 67, that is to say, 67 of cotton and 32 $\frac{3}{4}$ of silk. With respect to the wages, comparing 1831 with the cotton trade, the silk trade presented a difference of 33 $\frac{1}{2}$ per cent. minus the five preceding years, whereas the increase in the cotton has been 7 per cent. plus; and in the period between 1826 to 1831, being a period of six years, the state of the silk trade has been 31 per cent. minus 1821, 1822, 1823, 1824 and 1825, whereas the cotton has been 5 per cent. above; that is, silk 31 per cent. *under*, against cotton 5 per cent. *above*. I have mentioned before, that with respect to quantities consumed, the proportions were as silk 7, to 4 of the cotton trade previously to 1826; and since then the relation is as silk 6, to 13 cotton. In respect to duties, wages, profits, &c. taking the same view of the subject, the increase from 1815, 1816 and 1817, to 1824 and 1825, is 8 per cent. per annum *in favour* of the silk trade as compared with cotton. Since that the progress has been *inverted*, the relative progress of 1826 to 1830, as compared with 1821 to 1825, has been 7 per cent. *against* the silk trade; whereas before it was 8 per cent. per annum *in favour* of the silk trade, showing an inversion. I have mentioned, when I was speaking of the amounts of wages and duties drawn from the silk trade during the years 1826, 1827, 1828, 1829 and 1830, that the variations were very considerable from year to year, as will appear by the amounts which I will read over again, because they are very important. In the year 1826, 1,941,000*l.*,
678. D d the

Mr.
Alexis J. Dozat.

11 April,
1832.

Mr.
Alexis J. Dorat.

11 April,
1832.

the next year, 1827, 3,647,000*l.*; in 1828, 2,922,000*l.*; in 1829, 1,832,000*l.*; in 1830, 3,182,000*l.*; not only have the collective amounts, in the respective years, varied exceedingly in 1826, 1827, 1828, 1829 and 1830, but the amounts *in the years* have varied considerably. I have here a statement of the year 1831, it can be only an approximating statement; but I have supposed this in 1831, taking round numbers, to be 2,600,000*l.* The point I wish particularly to look to is, not only have the greatly reduced returns of 1826, 1827, 1828, 1829 and 1830, averaging 2,700,000*l.* per annum, and those of 1829, 1830 and 1831, 2,534,000*l.*, greatly fluctuated from year to year during that period of six years in which we have been open to foreign competition, but the variations in the course of the *same year* have been extreme; it is estimated, for example, that the variations in 1831 have been as follows, always speaking approximatively: the first quarter at the rate of about 3,100,000*l.* per annum; the second quarter at the rate of 2,900,000*l.* per annum; the third quarter at the rate of 2,600,000*l.* per annum; the fourth quarter at the rate of 1,800,000*l.* per annum; the medium of that year 2,600,000*l.* per annum, the amount at which I have over stated the result of 1831. Then I proceed to observe, if 2,600,000*l.* in one year be miserable for our industrious classes engaged in this branch of our manufactures, what must be the intensity of their sufferings when working at the rate of 1,800,000*l.*!

4039. How do you assume that that is miserable?—I will endeavour to show that; there are some points which I know of my own knowledge; others, that must, in some respects, be hypothetical; I have endeavoured to inquire into those points; “Figures cannot convey any adequate idea of such a state of things; and that in winter months;” it can only be conceived by personal inspection in Spitalfields and other silk manufacturing districts. The intensity of such wretchedness can only be compared in degree with “the exemplary patience, and peaceable forbearance, and loyal demeanour, with which the poignancy of those sufferings is borne.” Considerations these, which make it a duty, an imperative duty, in those acquainted with that state of things, to intreat the attention of His Majesty’s Government towards it, and towards the causes to which it is referrible. I have mentioned before, the valuation in quantities, and in amount of wages; and I will add one observation besides, which is, that according to various comparative estimates, grounded on every antecedent, whilst the average amount of wages in 1821, 1822, 1823, 1824 and 1825, the medium of those two periods, which was about 3,900,000*l.*, would have been more than 6,000,000*l.* in 1829 to 1831, instead of 2,530,000*l.*, which is the actual result of these three years. I should state here, that when I mentioned 3,900,000*l.* as the average amount of the years 1821, 1822, 1823, 1824 and 1825, I have taken the average of those five years at very reduced estimates.

4040. Are the Committee to understand, from this last statement, that it is your opinion, that if the duty of 14*s.* 8*d.* had not been taken off, and the prohibition continued against the importation, the amount of your manufacture in silk would now have been six millions instead of three, as it appears?—I have endeavoured to make comparative statements of what the progress might have been with the continuation of high duties, and the same rate of wages; and likewise, what that progress might have been with a considerable reduction of duties, which is a benefit to the trade. There is no knowing to what extent the trade might have been carried, with the low duties of 1*d.* per lb. on the raw silk, and 5*s.* per lb. on the thrown, and a continuance of protection from the imports of foreign manufactured silks, that is, of a continuance of the protective laws of 1766; but taking the rate of 10½*d.* per yard, for weaving gros de Naples, and the other charges of manufacture in proportion; taking the rate of duties, such as they existed in the previous years, without taking entirely by itself the great increase in 1824 and 1825, I find by taking it with those old duties, as they then existed, and taking it with the low duties, and at the rate of 8½*d.* for weaving, I arrive at nearly the same result, *i. e.* six millions, or thereabout. Then, in the latter period, the advantage is this, that with low duties, a larger proportion of wages would go to the industrious class of this country, so that less would go directly to the Exchequer, but it would go in the most beneficial way to the industrious employment of our lower classes.

4041. Have you made any statement of what the prices of the silk manufacture would have been, supposing this state of things to have existed?—Yes, I have for the year 1830, where I assume the weaving at 8½*d.*, and with the low duties I have even made an addition to the price of the raw silk, corresponding to 2*d.* per yard; because I believe, that if this country had gone on working at the rate it should have

have worked at, with low duties, and a small decrease in the wages, the silk trade in this country would have been so considerable, that it would have had an influence upon the price of silk, not only in this country, but in foreign countries; and I will show that; I made a statement at the rate of 3s. 1d. a yard, which I have called 3s. 3d., supposing, that had we gone on manufacturing under such circumstances, the trade would have been so greatly extended, as to have had some influence on the prices of the raw material.

4042. Is it your opinion, that if the price of the raw material had been kept up by that great additional duty, the increase would have been in the proportion you state?—The amount of wages and duties, &c. would have been the same, that is, 6,000,000 l.; the material would not have been so great; it would have been much less labour, with infinitely more wages for labour to the lower classes.

4043. What would have been the effect upon the price of the raw material, provided the 14s. 8d. duty had been continued?—I have not extended my calculation to that at present.

4044. You estimate the wages as founded on one article, the gros de Naples?—Yes.

4045. Do you understand that silk will follow a different rule from that of any other article?—That answer would require developement. I will beg, at present, if the Committee will permit me, to go through the papers before me, which may answer some of the questions the Committee may be pleased to propose. Three or four days ago I was requested, by an Honourable Member of this Committee, to present a Table, in which the amount of duties should be separated from the amount of wages, and this [*producing the same, Vide No. 3.*] is the result; taking the amount of wages and profit alone, in the years 1818, 1819 and 1820, as compared with 1815, 1816 and 1817, the increase in those years, in wages and profit, was 32 per cent.; the following three years, 1821, 1822 and 1823, over 1815, 1816 and 1817, 74 per cent. in wages and profit; in 1824 and 1825, over 1815, 1816, 1817, 142 per cent., the medium of 1821, 1822 and 1823, 1824 and 1825, as compared with the three first years, 1815, 1816 and 1817, was 108 per cent.; in the year 1826, as compared with 1824 and 1825, the decrease has been 53 per cent.; in 1827 the decrease upon 1824 and 1825 was 12 per cent.; in 1828, 30 per cent., under the same years 1824 and 1825; in 1829, 55 per cent.; in the year 1830, 23 per cent. under 1824 and 1825; the average of 1826, 1827, 1828, 1829 and 1830, has been 34 per cent., in respect of wages and profits, under the average of 1824 and 1825; taking the year 1831 alone, that decrease has been 40 per cent.; taking the six years, from 1826 to 1831, as compared with 1824 and 1825, the decrease has been 35 per cent.; this is the only statement in which I took the point of comparison between the latter years, and 1824 and 1825; in every other paper I have placed the comparisons with 1821, 1822, 1823, 1824 and 1825, for reasons I will state.

4046. Where are the Committee to learn the component parts of the sum of 1,608,000 l.?—It will be my duty to show that. I have taken a comparative view of five years, five years and five years, that is, 1816, 1817, 1818, 1819 and 1820; 1821, 1822, 1823, 1824 and 1825, and 1826, 1827, 1828, 1829 and 1830. I have taken a comparative view of the quantities consumed in the three periods of five years each; the increase of 1821, 1822, 1823, 1824 and 1825, over 1816, 1817, 1818, 1819 and 1820, was 79½ per cent. in quantities, and in 1826, 1827, 1828, 1829 and 1830, as compared with 1821, 1822, 1823, 1824 and 1825, was 17 per cent. increase.

4047. Why do you take the comparison from 1816, when all the other Tables begin with 1815?—Because I have taken it in periods of five years, that the Committee may have it in every possible view, to show the various points of comparison; then if we deduct the 17 per cent. increase in the last five years from 79½, the increase in the preceding five years, there is a balance against the silk trade of 62½ per cent.; the quantities in cotton will be found thus: 45 per cent. increase in 1821, 1822, 1823, 1824 and 1825, over 1816 to 1820, and the increase in the last five years 1826 to 1830, over 1821 to 1825, 36¼ per cent., making a decrease in progress of quantities of 8½ per cent., whereas the decrease in the relative period in the silk trade was 62½ per cent. in quantities. With respect to the amount of wages the comparison is thus: the amount of wages, duties, profits, &c. in the silk trade in 1821, 1822, 1823, 1824 and 1825, as compared with the five preceding years, was 58 per cent. increase; since that an *inversion* has taken place the last five years of 30 per cent. decrease; if we add the increase to the inversion of 30 per cent.,

Mr.
Alexis J. Dorat.

11 April,
1832.

Appendix (F.)

Mr.
Alexis J. Doxat.

11 April,
1832.

cent., it will give a balance against the silk trade of 88 per cent. in respect of wages and duties. Taking the same view of the cotton trade, the progress from 1821 to 1825, over the five preceding years, from 1815 to 1820 was $15\frac{1}{2}$ per cent., and the progress the last five years, 1826 to 1831, as compared with 1821 to 1825, was 5 per cent., that is a less increase; the balance of those two increases shows a less rapid progress in the cotton of $10\frac{1}{2}$ per cent., whereas the decrease in the silk trade was 88 per cent. during the same period. I should observe, in addition to these various points of comparison, I have drawn comparisons of the increases and decreases per annum, not only periodically but per annum, which will form points of reference. I have prepared a paper to show the principle on which I have made those estimates.

Appendix (F.)

[*The Witness delivered in the same, Vide No. 4.*]

4048. You produce this for the purpose of showing the Committee the principle on which you have made out these estimates?—Yes; we made formerly more waste on silks than we do now, I have taken that into the account.

4049. Do any of your statements show the proportion of silk made up into plain goods and fancy goods?—Yes, I have assumed that; in the former years we manufactured one-fifth in figured and fancy goods, that is an assumption of course, there can be no exact statement of that sort. I have assumed, that in the last six years we have manufactured at the rate of one-tenth and one-eighth of those higher branches; but I find, by various information I have lately obtained, that the proportions in figured and fancy goods is considerably less than I had made it of late years; I have reckoned one-fifth in former years, and from one-eighth to one-tenth of late years; but I find, that in latter years, it has been considerably less; I refer to the period since the foreign competition has come against us.

4050. On what do you ground your information that the portion of fancy goods has decreased?—There can be nothing precise upon that point; but I believe I have been enabled to obtain correct information.

Appendix (F.)

4051. What do you consider a good proportion of figured and fancy goods?—I should consider one-fifth as a good proportion. I have prepared another Table, [*producing it, Vide No. 5.*] This is a comparative view of various respective costs of manufacture at London and Lyons, of good gros de Naples, of common colours, “10 to 1100, three double,” neat make; when I mention neat make, I should explain what it is I mean; one man having to make a gros de Naples, and another man having to make, comparatively speaking, a common sacking; an inexperienced hand may work a gros de Naples at 9d., another at 1s. I take my estimate on good work, well made; I compare London with Lyons. I then go to other parts of Europe, in which this article may be made cheaper, as it may be in other parts of England, as also of the most excellent manufacture in various parts of England; but London and Lyons I consider as giving the proper point of comparison, I take it at the best average quality.

4052. Are those actual prices, and in what years are the prices fixed?—This Table is a comparative range of variations, at present it may be applicable to any year since the alteration of the system, with the exception, that I have assumed a rate of wages in column No. 1, $8\frac{1}{2}$ d. weaving, which it is necessary to introduce in figures; but which, I am sorry to say, has not existed since the competition brought against us, and that $8\frac{1}{2}$ d. is, in itself, a considerable reduction on former years. I beg to say, that I have been requested, at various periods, to publish these statements, but I have never done so; they are printed for the use of the Committee; I consider them as entirely for their use.

Veneris, 13^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. Alexis James Doxat, called in; and further Examined.

Mr.
Alexis J. Doxat.

13 April,
1832.

4053. WILL you proceed in your explanation of Paper No. 5?—When I had the honour to be here last, I stated to the Committee, that one object in printing this statement, in fact, my only motive was to save as much as possible, trouble to the Committee; to bring every element of the question as much as possible under the view of the Committee, and to condense every part as much as it was in my power

Mr.
Alexis J. Daxat.

13 April,
1832.

power so to do. The utility of analytical statements is this, that they furnish a clue to all the elements of the question that it is intended to bring under review; an analysis is a point of reference; I am bound to show from every one of these papers, the materials from which I have derived what I have set down; it is not easy to wade through an immense mass of papers, but when these documents and calculations are brought to one focus, reference can be made to any one, two, or twenty points which may be desired, with the utmost facility; an immense mass of papers, if it be not condensed into analysis, is worth nothing; a man may either deceive himself, or he may deceive those before whom he is called; I have here two boxes, the result of my researches for the last ten years; having employed my leisure time in those inquiries, I have spent the interval since the Committee met, in endeavouring to condense still more the information I then gave; but a misfortune happened at seven this morning, the press of the lithographer broke, and I am not able to present it in that shape; the last three or four hours have been occupied in repairing the loss. In the course of the examination with which I was honoured the day before yesterday, I had frequent occasion to recur to various rates of wages, at various periods; and as that forms a very important part of the question, I will beg to detain the Committee a few minutes upon that subject; I have endeavoured at various periods to make inquiry of the amount of wages which may be earned per day and per week in various articles of silk manufacture; but leaving the lowest and highest branches of the subject for the present, I will confine myself to this, on which my statement is grounded. I have been informed by various persons, and by various classes in the silk trade, that taking the average of circumstances, taking the average of material, taking the average of time that is lost by the man obtaining his work, and carrying it back, likewise the circumstance whether a man works with much quickness, or is a slow hand; I have been informed, that under all those circumstances, the average quantity of the description of silk called gros de Naples, 10 to 1100 three double, is about three yards and a half per day; taking the chance whether the warps be good or bad, or whether the delays be greater or less, I make those calculations on the labour of twelve hours per day, inclusive of the usual interruptions for meals, &c.; I am aware that if a man works sixteen or eighteen hours in the twenty-four, he can do more work than that.

4054. From what places have you derived this information?—London and different parts of the country.

4055. Do you refer to Spitalfields?—Yes, but I have made comparative views; if a man works sixteen hours per day here, he can do the same at Lyons; if he can work eighteen hours here, he can do the same at Lyons; if a man has a small family here, he may have a small family there; every thing ought to be parallel, not what one bachelor can get in this country, in comparison with a man of less ability, but every thing should be relative; in stating that the average of that quantity of work well done, neatly got up, is three yards and a half, which at the rate of $10\frac{1}{2}d.$, it will produce $3s. 0\frac{3}{4}d.$ If they require frequently the work to be done more quickly, it may be badly done; and I am told that hands that work moderately fast, if they are steady and able at their work, will turn out work worth some pence more per yard in value than work hurried; if a man can do four or five yards here, he can do the same at Lyons; again I submit, all is relative. At $10\frac{1}{2}d.$ per yard I find that the gross amount per week is $18s. 4\frac{1}{2}d.$, from that, various deductions are to be made, they are technical deductions called quilling, loom standing, candles, fire, soap, utensils, twisting on and turning in; altogether I find those charges were, at the rate of $10\frac{1}{2}d.$, $5s.$ to be deducted from $18s. 4\frac{1}{2}d.$, leaving $13s. 4\frac{1}{2}d.$ as the nett amount of wages per week, arising from the rate of $10\frac{1}{2}d.$ per yard; this was the rate paid from 1815 to 1824 and 1825, with some small variations; and I believe the average rate of wages in 1821, 1822, 1823, 1824 and 1825, the five years preceding the alteration of our laws, was fully as high as in the preceding years. I will descend to the statement, on which I have established the point to which our labourers in this class of industry ought at least to be entitled, that is $8\frac{1}{2}d.$ for the same class of work.

4056. Do you conceive that a man at $8\frac{1}{2}d.$ now, is doing so well as a man was formerly at $10\frac{1}{2}d.$?—Not quite, but that is a rate ($8\frac{1}{2}d.$) which our labourers have not enjoyed, or with very few exceptions, since our change of laws; the gross amount for the said good class of plain work, $14s. 11d.$, the average expenses to be deducted from that $4s. 5\frac{1}{2}d.$, leaving $10s. 5\frac{1}{2}d.$ per week as the nett amount of wages referrible to the rate of $8\frac{1}{2}d.$ per yard; I will now proceed to that point which has been frequently introduced in my statement for late years, which is $6d.$ per yard; I find at

Mr.
Alexis J. Dorat.

13 April,
1832.

that rate, the gross amount in 10*s.* 6*d.* per week, from which, deducting 3*s.* 6*d.* for the charges, there remains 7*s.* nett wages per week; contrasted with the former point of 13*s.* 4½*d.* nett per week.

4057. Why do you allow only 3*s.* 6*d.* for quilling, loom standing, candles, &c., when it was 5*s.* before?—It is against myself; by doing so, the smaller I place the charges to the reduced amount, the greater I make the nett amount of the wages of the weaver.

4058. Is the relative deduction 3*s.* 6*d.* now, the wages being 10*s.* 6*d.*, as the relative deduction was 5*s.* when the wages were 18*s.*?—I have taken it at that, but I think I have rather under-rated the deductions to be made from the gross amount of wages; rents and other things are rather diminished, candles are cheaper, soap is cheaper, loom standing is cheaper; still I do not consider that the actual reduction in the charges which bear on the weaver, are quite so much as the ratio of 5*s.* to 3*s.* 6*d.*, which I have taken as the basis of that calculation. On their general expenses, *i. e.* for food, &c., there is not that reduction.

4059. Do you conceive 5*s.* cheaper than it really was?—No; I think that was about the mark; the nett wages of the labourer are now as 7*s.* compared with 13*s.* 4½*d.*; but there is another view of this question; that, at the former period, our weavers had a large proportion of figured and fancy goods, which went in assistance; for example, in a house in which there were five looms, there might be one employed in figure and fancy goods; which loom, being worked by workmen of more ability, afforded altogether, being a higher branch of manufacture, not only a larger rate of wages, but a larger amount of wages; consequently there was a larger distribution of wages throughout the silk districts. I have assumed, in my comparative Estimates, the quantity of figured and fancy goods to be at one-fifth of the whole, during the periods of 1815–17 to 1824–25. I have assumed, in subsequent stages, that it has been one-eighth and one-tenth, but I find that I have considerably understated the case; that the proportion of figured and fancy goods has been, of late years, considerably under the proportion of one-eighth and one-tenth. If we look at the difference existing between 7*s.* and 13*s.* 4½*d.*, we shall find a difference of 48 per cent. against our labourers, for the same quantity of work; if to that we add the considerable diminution which has taken place in figured and fancy goods, and that that was spread over the whole trade, we shall find a greater diminution still in the relative amount of wages accruing from this branch of industry. I have only stated 48 per cent. with reference to plain goods.

4060. The result is, that between 1815 and 1830, the reduction of wages is 48 per cent., there being no alteration between 1815 and 1825?—I am aware that there have been variations in the payment for industry, and I wish to call the attention of the Committee to the causes which have operated to produce that.

4061. The same rate of wages had continued from 1815 to 1825?—Pretty nearly so.

4062. Then, between 1815 and 1830, the reduction has been 48 per cent.?—Not from 1815 to 1831, but actually from the period of 1826, that is, subsequently to the period of 1824–25; the introduction of foreign manufactured silks commenced in 1826, the reduction, which I have stated at 48 per cent., may be 50 or 55 according to the circumstances. Since I made the statement, if I have mis-stated, it is my duty to correct it on behalf of those more particularly concerned, *i. e.* the lower classes. I am told that where I introduce the point of comparison as 10½*d.* is to 6*d.*, the point of comparison is greater still; taking the proportion of figured and plain goods, there are many species of manufacture, both plain and figured, in which there is a greater difference than from 10½*d.* to 6*d.*, *i. e.* many in the ratio of 9*d.* to 4½*d.*, &c. I would call the attention of the Committee to one point; that since the removal of the protective laws of 1766, which took place in 1826, the changes in this branch of industry have been so considerable and so sudden, from year to year, in every branch of the silk trade, that the lower classes particularly, have experienced the greatest inconvenience from the alterations. Not only has the average amount of wages been considerably less in 1826 to 31, than in 1821–23 to 1824–25, but the variations have been very great from year to year, and even in the same year; and such is the pressure of foreign competition on this branch of industry, that it happens, not unfrequently, that our people when working at the wretched rate of 6*d.* per yard, have only half-work; the lowest rate of wages have frequently been accompanied with a great diminution of work, the same causes depressing the wages, and occasioning an enormous diminution in

in the quantity of work, at various periods of the year; so that when they have been working at 6*d.* a yard, the nett proceeds of which was 7*s.* per week when in full-work, being at half-work on low wages, their nett wages have been only 3*s.* 6*d.* per week.

4063. Has it not been the fact, that while trade was good at Manchester it was bad at Coventry, and so on; do you mean to say that the silk trade has been uniform in every place, and that Macclesfield is equally distressed with Coventry?—Every thing tends, among ourselves, to regulate itself; there cannot be a great activity in Manchester without a corresponding activity in Spitalfields; there may be demands for particular kinds of goods, but whenever the silk trade at Manchester has been in a state of prosperity, a correspondent prosperity has existed in Spitalfields, and Coventry, and Macclesfield, and in other parts of the country.

4064. Is not there at the present moment great distress in Spitalfields and Coventry, and, at the same time, is not the state of the trade in Manchester satisfactory?—A large proportion of goods made at Manchester are low goods and mixed goods, to take advantage of an enormous bounty accruing to that class of goods, from debentures, which are sold on the market at various prices, from 1*d.* to 7*d.* per lb., although they entitle the exporter of those goods to an allowance of 3*s.* 6*d.*, 1*s.* 2*d.* and 7*d.* per lb.; and that in most cases those goods have been manufactured from raw silks, which have only paid 1*d.* per lb. duty, and from waste silks, on which the duty is only 1*s.* per 112 lbs.; but even those goods are manufactured at very low wages to the labourers; and speaking generally of Manchester, I understand that the state of the silk trade there has been very far from satisfactory, often wretched, in the last few years. I believe that in the country, both at Manchester and at Macclesfield—at Macclesfield I know, from my personal inspection of the goods, it is the case—there are some establishments that would do honour to any part of Europe, but in every place there are distinctions; there is in one place a larger proportion of goods of the higher class; and the class of goods manufactured at Manchester altogether is of a lower, and a considerably lower standard than the goods manufactured in Spitalfields, which yield a much larger proportion of labour; this brings me to the very point in question. I will mention a case, to which I would most respectfully draw the attention of this Honourable Committee; I understand that in former periods, taking 1821, 1822, 1823, 1824 and 1825, large quantities of goods were manufactured at Macclesfield, in the higher branches, that is to say figured and fancy goods; and I understand that the weaver who worked 16 to 20 ounces per week, in those higher branches of the trade, earned from 20*s.* to 30*s.* per week, they are branches which require much ability, the average of those was 25*s.* per week; I understand that the average charges to be deducted were 6*s.* 3*d.*, leaving a nett amount of 18*s.* 9*d.* per week, which 18*s.* 9*d.* spread over 18 ounces, would give 1*s.* 0½*d.* nett, per oz. I understand that a very considerable proportion of those works in the higher branches have been lost to Macclesfield, not from want of ability, because there is very excellent manufacture, as I shall mention, at Macclesfield. I will mention in particular, the name of Messrs. Samuel Pearson & Brothers, because when I was requested, some years ago, to make particular inquiries, I had all the samples of their goods, I showed them to foreigners, and they were extremely admired. I understand that of late a very large proportion of those higher branches of silks have been lost to that town, and that large proportions of low goods, such as low bandannas, and other low descriptions of goods are manufactured, from 40 to 60 ounces of which are worked up in the course of a week, at the rate of 6*s.* to 9*s.* per week; the average of that gross amount per week is 7*s.* 6*d.* from which deducting 2*s.* 6*d.*, a nett amount of 5*s.* per week remains for the labour; which amount of 5*s.* per week, spread over 50 ounces, the average, leaves 1½*d.* per ounce, contrasted with 1*s.* 0½*d.* nett, per ounce.

4065. The Committee are to understand, that the prices you have given in the Paper No. 5, from 1815 to the present time, are the prices which are paid to the Spitalfields weavers?—Yes.

4066. You state, in Paper No. 5, that the silk trade in France is subject, from the causes you adverted to, to great fluctuations?—Yes.

4067. From what causes have the fluctuations in the silk trade at Lyons arisen?—Lyons manufactory, being principally for export, is subject to very great and sudden variations; for eight or nine months they will be working at the rate of 70 to 75 centimes per ell (aune); the orders for America will be diminished, or something will occur on the Continent to diminish the demands for export;

Appendix (F.)

for instance, a war between Russia and Turkey, also the demand for home consumption arising from a disturbed state of things. At Lyons, if any thing occurs to diminish the demand of their manufactures for four or five months or less, there is a fall of wages and a fall of silk, and if they have a great abundance of goods on hand the manufacturer is willing to throw off the profit, interest and incidentals, in order to get rid of his goods; they find England a considerable and a rich market, at which they could get their money at once, whether by immediate sale or by way of consignment; and consequently we are overwhelmed with large quantities at considerable reductions; and the more they are depressed from any contingent cause, the more they press upon our industry to a calamitous degree, beyond the usual and already very detrimental course of their competition on our wages of labour, and consumption of our own manufactures.

4068. Will you explain the object you have in giving in Paper No. 5?—The same object I am endeavouring to develope, that the French manufacturers having always great quantities of goods to distribute all over the world, greater proportions of them are sent here in times of pressure with them.

4069. Taking the years between 1815 and 1825, when you state that the nett wages to the manufacturer were 13s. 4½d., are you enabled to give the Committee information, what was the nett wages to the Lyons weaver for the same description of goods?—I can state the comparison for the last five years of the relative wages of weaving in London and at Lyons in 1821, 1822, 1823, 1824 and 1825. I have mentioned, that the rate of wages in London was 10½d.; the relative price at Lyons was, I understand, 6¼d., but I should mention here, that out of that the weaver winds his shute, which is not done here by weavers, which occasions him an expense of a halfpenny, so that it is reduced to 5¾d.

4070. Is he supposed to make the same quantity as the London weaver?—I am assuming, that a man in France can make the same quantity as a man in England, I am supposing an equality of quality; we have made great improvements, and they have made great improvements; this difference between 10½d. and 5¾d., made 83 per cent. In all my comparative Estimates, I assume an equality of perfection, although the French possess some advantages peculiar to themselves, on which I will not detain the Committee at the present moment.

4071. Have the goodness to state what was the amount when you say it cost 8½d.?—I have before stated, that our weavers have of late years worked mostly at the rates of 7d. to 6d. per yard; but I consider 8½d. as a very moderate remuneration for the description of work alluded to in all my estimates, and that to which they are at least entitled. I understand, on the other hand, that 5½d. is the usual rate at which the French weavers work of late years, when they have an usual quantity of employment; deducting a halfpenny (as before mentioned) for winding the shute, there remains 5d. per yard, which compared with 8½d., presents a difference of 70 per cent. only, whilst the former relative rates of 10½d. and 6¼d., equal to 5¾d. presented 83 per cent. higher at London than at Lyons. Consequently, the highest point which I take in my present statement (No. 5.) and in all my comparative statements, as the rate to which our weavers are at the least entitled to, is lower relatively than that which existed in 1821–25.

4072. Can you state the comparative wages when in this country it is at 6d.?—I have taken 6d. as our lowest range, although I am told I might have taken it still lower. I am comparing it with the price of their very low wages; that is, when they are at 4d. per yard, which is equal to 3½d., taking off a halfpenny for winding the shute; comparing the relative rate of 6d. per yard with us for the class of goods I have been mentioning, with the very depressed rate of 3½d. at Lyons, I find the difference to be 71 per cent.; the prices in France apply not to a particular period, but to the variations they are continually exposed to, and over the contingent effects of which we can have no control.

4073. If it does not relate to any particular period, what conclusion are the Committee to draw from this?—It is another element of the question, because the French are exposed to continual variations, not only in the rates of wages for weaving, and all other processes of manufacture, but in the price of their silks also; all these causes combined, occasion an enormous variation in the price of the goods they send to this country; and the greater the depression, the larger masses of goods they press upon us; feeling, besides, willing to sacrifice their profits, interest and charges for incidentals, to send away their goods to a market.

4074. At what do you estimate the quantities and produce of thrown and raw silk consumed by the French manufacturers, and other Continental manufacturers,

to

Appendix (F.)

to the competition of which we are open?—I have no exact collective data upon that subject; I will mention what I understood to be the French consumption, and I will proceed to what I believe to be the Swiss and Rhenish consumption. In France 5,500,000 lbs. English per annum. I will mention here, as it is a question connected with this point, that the French work on a higher standard of silk than the English; they work upon the average of 40 deniers, whereas we work upon 60 deniers, which is a coarser standard by 50 per cent.

4075. That 5,500,000 averages 40 deniers?—Yes.

4076. Have you any means of knowing the quantity used in Switzerland?—I have drawn out a statement of the quantities of foreign silk imported and consumed in France in the years 1825, 1826, 1827 and 1828; of the quantity imported in 1829, 1830 and 1831, I have not the particulars. The average of 1825, 1826, 1827 and 1828, I find to be 380,000 pounds of raw silks; the imports of France in raw silk, are composed mostly of the coarse descriptions; that is to say, the Brussa and other Levant silks, also of the coarser descriptions from Naples; if it were not for that the standard would be higher.

4077. What is the quantity of thrown imported?—Six hundred and ninety-three thousand pounds English on the same average of years, principally of Piedmont organzine, which I understand is required for particular purposes, velvets, &c.

4078. Are not silks of French growth suitable to the manufacture of those descriptions of goods?—Their silks, as I have before mentioned, are of very good qualities; but they import Piedmont organzines more particularly for certain works. The total amount, as I have stated before in answer to inquiries, is 1,073,000 pounds of raw and thrown silk. I have reason to believe that the imports of France from foreign ports of silks, both raw and thrown, in 1829, 1830 and 1831, has decreased, whereas the produce of their own silks has increased correspondingly. I find that they consume large quantities of waste, not only in the raw state, but in a spun state; the average quantity of the raw waste imported for consumption into France in 1825 to 1828, was 146,000 pounds English weight; the average of spun was 287,000 pounds; the collective quantity was 433,000 pounds of waste. I have thought it right to state this quantity, because I am not certain whether it has been included in the statement of 5,500,000 lbs. or exclusive of it.

[The Witness delivered in the following Statement.]

Mr.
Alexis J. Dozat.

13 April,
1832.

RECEIVED AT THE SECRETARY'S OFFICE OF THE HOUSE OF COMMONS

13 April 1832

Paper, No. 16.

FRENCH SILK MANUFACTURES.

A STATEMENT of the QUANTITIES of RAW and THROWN SILKS, as also of WASTE SILK, in the Rough, and in a Spun State, Imported into France from Italy and other Parts, for Consumption.

	1825:	1826:	1827:	1828:
Raw Silks - - - Kilogrammes	145,000 = w ^t 319,000 Eng.	Kils. 285,000 = w ^t 627,000	Kils. 130,000 = w ^t 286,000	Kils. 131,000 = w ^t 288,000

April 1832.

(Errors excepted.)

(signed)

Alexis James Dorat.

Mr.
Alexis J. Dorat.

13 April,
1832.

4079. Can you state the average quality of French silk?—The silk of French growth is in general of a fine description; every year they improve the reeling of their silks, and I believe they reel them gradually on a finer standard. That improvement in reeling French silks has been very great within the last twenty years. I entered into business in 1798, I had occasion to see a great deal of French silk at that period, and the improvement of the French silk within that period, has been extraordinary.

4080. What is the quality of the thrown Piedmont organzine imported into France, in comparison with the organzine silk imported into this country?—I do not know exactly what is the range of the sizes, but I should think that they import rather a coarser size from Piedmont; I have seen statements grounded rather on size 28 to 30. The fine sizes of French silks are so beautifully reeled that the sort of articles I have alluded to in my statements, that is good gros de Naples, double warp, are almost entirely made of their own silks of the size of 22 deniers; I understand they make their velvet principally with 28 to 30 deniers. I suppose the consumption of Piedmont organzine in France rests upon a coarser standard than that of the Piedmonts imported here, which are from 18–20 to 26–27, the average of our Piedmont size is 24 to 25 deniers compared with the consumption of Piedmontese in France, 28 to 30; to their finer fabrics they apply their own silks.

4081. Will you state the importations into other foreign countries?—I have no exact statements, but I can mention them approximately. I believe in the town of Zurich (one of the largest manufacturing towns in Switzerland) and its neighbourhood, there are about 12,000 looms employed. Those gentlemen who are engaged in manufacture, will understand the relation which that number of looms bears to the silk consumed; it is supposed there are about 15,000 to 16,000 looms at work in Spitalfields, when our manufacture is well employed.

4082. You are not able to state the quantity of silk thrown in Switzerland?—No, not exactly; but there are on the whole considerable manufactures and very large manufactures of ribbons at Basle, there are also very large manufactures at Creveldt and Elberfeldt, and other places on the Rhine, &c.; these manufactures are in such a perfect state, and their wages so low, that they sell considerable quantities of velvets in France, although France excels in the highest descriptions of velvets. From Switzerland I understand large quantities of plain goods are sent to France; plain goods from Zurich, and plain ribbons from Basle, though there is a duty of about 10 per cent.; their aptness to manufacture these goods is so great, and their wages so low, they can afford to send them to France, but they do not send figured ribbons or goods, because France has a peculiar taste and ability in the manufacture of those articles; besides the silk of its own growth is particularly applicable to them.

4083. Is the duty levied by weight or by valuation?—I understand by weight, but I am not certain.

4084. Do you know the duty levied on the importation of velvets?—I do not.

4085. Do you know whether there is any duty levied?—I make no doubt there is.

4086. In speaking of the quantity of silk imported from Italy into France, are you able, from any documents in your possession, to state the total amount of raw and thrown silk exported from Italy?—I have no exact information; I have had very various accounts; I have endeavoured to draw up statements from them, but I found the accounts vary so much that I did not think I could lay them before the Committee with satisfaction.

4087. Are you aware that at the Custom House of Milan and Bergamo, from which the silks principally come, regular accounts are kept?—Yes, of course; but those accounts are by no means sufficiently comprehensive as to the total produce of Italy and Piedmont.

4088. Is the silk of which the plain ribbons sent from Switzerland to France are made, the produce of Switzerland or silk imported from Italy?—Silk imported from Italy, and part from Turkey; Switzerland does not produce silk, with the exception of some trifling quantities, in the parts contiguous to Italy.

4089. Do the Swiss import any but organzine silk from Italy?—Both organzine and tram; they have for some time past established some mills, but they find it mostly answer their purpose better to import it ready thrown from Italy.

4090. Are you able to state whether the quality of organzine and tram imported

Mr.
Alexis J. Daxat.

13 April,
1832.

imported into Switzerland is better than that imported into France, or is better than that imported into England?—The thrown silks which are imported into France from Italy are, as I have before stated, almost entirely from Piedmont, whereas the Swiss manufacture rest their consumption principally on Lombardy thrown silks, because Switzerland does not manufacture velvets, and some other descriptions to which Piedmonts are more suitable; and I believe the importations of thrown silk from Piedmont into France are principally for velvets, &c.

4091. What is the quality of that silk exported from Lombardy into Switzerland compared with that we import?—I should suppose very much the same range, with this exception, that we import almost entirely organzine, whereas Switzerland imports one-half thrown and one-half tram.

4092. As to the relative quality of our English imported organzine, is it superior or inferior to the imported organzine in Switzerland?—It is of the same range.

4093. Are the Committee to understand that the Swiss can manufacture plain ribbons which they send into France from that kind of silk?—They manufacture their ribbons with Lombardy silk, but in their figured ribbons they do not equal France at all.

4094. Why are those ribbons imported from Switzerland preferred in France?—They are very well made; I should say equally well made and cheaper; labour in Switzerland being still cheaper than in France. I allude to Basle; the establishments at Basle are so enormous, so considerable, that it is not only their wages, but as they work on a large mass, they produce their goods very cheap.

4095. Are you able to state the quantity of those goods imported into France?—No, I am not, I am told by some of the agents who sell manufactured goods here, that it is so considerable that houses both at Zurich and Basle have regular agents in France, and have depôts in Paris.

4096. Do you know the relative prices?—No; but when they pay about 10 per cent., there must be a difference in the cost.

4097. Is there any duty paid on the importation of thrown silk into Switzerland?—Merely a scale duty.

4098. Is there any duty paid on the importation of thrown silk into Germany?—Merely a scale duty; they have no mills to protect; there are some throwing mills which they are establishing, but their wages and other expenses of building, &c. are so very low, that I suppose they have not thought it necessary to levy a duty to protect their throwing interest.

4099. Will you go on to state the quantity of silk sent to Vienna or Saxony?—I should suppose the manufacture of Vienna is considerable. I have no exact data upon that subject, but I know the principal banking houses at Vienna are much engaged in the silk branch, and that in their establishments they have a separate establishment for the silk; and that it would not be worth their while, if it were not considerable, to interfere in it; but it is fair to say that I do not think there are any goods from Vienna sent here; the manufactures which press upon us essentially are France with plain goods and ribbons of superior descriptions, and figured and fancy goods and ribbons of every kind, besides some velvets, &c. &c. From the Rhenish manufactures we receive velvets and various other goods in which they excel; and from Switzerland, various plain goods and ribbons with some figured ribbons; but on this subject I can speak but generally, our house never having had the least concern in the importation of any kind of foreign manufactured silks.

4100. Do they manufacture for exportation, (alluding to Vienna)?—I think they partly provide Poland and parts of Russia and Greece, the Levant, &c.; they manufacture considerably for their own consumption, but they manufacture for other parts in a degree.

4101. What description of goods do they manufacture for exportation?—I cannot state that exactly.

4102. Do you happen to know the wages of the workmen at Basle?—Not exactly.

4103. Is not a great part of this silk wrought with gold for the Turkish dresses and other things?—At Vienna probably they work that class of goods which goes to the Levant.

4104. Will you state comparatively the quality of silk imported into France and into England?—The consumption of France in foreign organzines rests principally, as I have repeatedly mentioned, on Piedmont organzine; the standard of those

those organzines, I believe to be about 28 to 30 deniers on the average, whereas our importations of silk consist principally of Lombardy organzines, and the quantity of Piedmont which we consume averages 24 to 25 deniers.

4105. Will you explain how the quality is regulated, by English terms?—In almost every silk establishment there is an assay machine, upon which they place six small skeins, taken out promiscuously from a bale, on the reel; they wind off 400 French ells, which are weighed with a weight called deniers; after those six smaller skeins of 400 French ells each have been wound off, they are weighed separately, and again together; we consider that the assay is not exact unless it is done on 24 skeins; in Piedmont it is mostly done on 24 skeins; there are other modes of assaying, the time required to make an assay of 24 skeins, may be about three quarters of an hour.

4106. The Committee understand that the lighter the 400 ells weigh, the finer you consider the silk?—Certainly.

4107. Does that mark the equality of the thread?—Yes; the respective weights of each assay, whether of six or of twenty-four small skeins, indicates the degrees of equality, besides the aggregate standard or size.

4108. How do you compare the equality of the thread?—It is a matter of judgment both in regard to quality and equality; but the assay machine is often used, besides the judgment, in regard to equality.

4109. Comparing the quality of thread sent into England with that sent to other countries, which is the best?—I am not aware that there is a distinction; the French require their 28 to 30 deniers reeled with great care; I understand the standard of 28 to 30 deniers, sent to them from Piedmont, is generally of as good qualities as those sent to us in the 24-25; but the qualities being of equal goodness, and our standard of Piedmont organzines finer on an average, the prime cost is correspondingly higher.

4110. Is it your opinion that we get as good Italian thrown silk in England as any other country gets?—No doubt; the market is open to us.

4111. What is the comparative statement of the quality of silk used in England, and the quality of silk used in France, both as to the home product of France, and as to her import?—I have endeavoured to make an approximating statement upon that subject, of which the following is a rough memorandum.

MINUTE intended to show the degrees of fineness ("size" or "titre") all calculated on the double-thread, on which the Silk Manufacturers have worked during the last Six Years—1826 to 1831.

AVERAGES of Quantities consumed per Annum.		Estimated Sizes.
Thrown Silks (Italian) - lbs.	375,000	
Raw - ditto - ditto, &c. -	1,096,000	Numbers.
	1,471,000 a'	30 deniers $\times =$ 44,130,000
Ditto - Bengal and China -	1,611,000 a'	80 ditto $\times =$ 128,880,000
Ditto - Turkey -	365,000 a'	100 ditto $\times =$ 36,500,000
	3,447,000	209,510,000
Average 1826 to 1831 -		61 deniers.

4112. The standard in France being forty, the standard in England is sixty?—I believe the standard in France is forty; it is, I have reason to believe, at least of that fineness; so that if we calculate our number of pounds by sixty, and theirs by forty, their proportion is much larger than ours, the numbers sixty being fifty per cent. coarser than the forty.

4113. In France they do not use any Bengal silk?—No, or very trifling quantities occasionally; they work on an average on a finer standard than us; they do not make bandannas; their silk manufacture is mostly employed in the superior plain goods, and in figured and fancy goods of all descriptions; comprehensively speaking, in the higher branches of the manufacture.

4114. Are the Committee to understand that the Bengal silk is worked up to make the same kinds they make in France, or a coarser sort of goods?—A coarser kind of goods; for example, those which yield five farrhings per pound at

Mr.
Alexis J. Dozat.

13 April,
1832.

Mr.
Alexis J. Doxat.

13 April,
1832.

Macclesfield, contrasted with silks worked in the higher branches, worked at 1 s. 0½ d. a pound ; this is mentioned of course as a conspicuous point.

4115. The coarser require a certain proportion of fine with them?—Some description of goods do. In addition to our working on a lower standard, the standard of 60, and France working on the standard of 40, I should observe, that a silk of the same quality and fineness, for example, an Italian silk of 24 deniers, can be applied either to make plain goods of a second class and a first class, or to make figured and fancy goods ; which various descriptions yield respectively 12 s., 20 s., 40 s. or 50 s. and more per pound weight of the raw material. But the effect of foreign competition, being to press still more on the high than on the low descriptions of goods, the more we labour under the baneful influence of that competition, the more we must retreat on the low and lowest descriptions of goods ; because there enters in their composition a smaller and much smaller proportion of wages of labour. Hence it is, that of late years Italian silks themselves have, on an average, been worked into much lower classes of goods than previously to the admission of foreign manufactured silks : and in this essential point of view also the standard of English works has become lower yet than would appear by the relative numbers of 60 deniers in England as compared with 40 deniers in France ; goods of inferior quality.

4116. At the present moment, which is the highest price raw silk in London, that which will make the clean, even organzine used by the French, viz. 28 to 30 deniers, or the finer sorts usually sent from Lombardy, of a size 24 to 28 deniers?—Twenty-eight to thirty deniers ; that is the size of Piedmont silk mostly imported into France ; but that is very excellent silk. The Piedmontese do not allow of the exportation of their raw silks, so that it is sent to us in the thrown state, in that respect their throwsters have a great advantage. The Piedmontese raw silk is very good silk, well reeled ; but if I were to speak of silk of equal quality with Piedmont silk of 28 to 30 deniers, I should say I suppose that silk, from its great superiority, would be worth not less than 18 s. 6 d. per lb. at the usual credit of five months, though not of fine size. The next question is, what is the size of the finer sorts usually sent from Lombardy of the size of 24 to 28 deniers, I should say from 17 s to 18 s.

4117. In this market they would fetch the same price?—Yes, nearly so, but one is finer than the other.

4118. Which bears the highest price at this time in London?—I cannot answer that question, for we do not get the Piedmontese raw silks here.

4119. In what does the superiority of the French home grown silk consist over the Italian silk?—The French silk has a peculiar brilliancy ; some French silks have a texture superior to that of Italy, it is susceptible of being reeled exceedingly fine ; they keep up the thread of three to four cocoons better in France than in many parts of Italy, owing to the goodness of their cocoons. I have been reminded that silk of 28 to 30 deniers, where it is reeled with great precision, is as valuable as silk of a finer description, because it is wanted for a particular purpose. There is a silk called Turina in Lombardy, and others which are not so fine, but sell for as high a price, because they are reeled with great precision.

4120. The silk imported into France being of 28 to 30 deniers, but being reeled with great precision, you conceive equivalent to some finer sizes of 24 and 25, to which the same attention in reeling has not been paid?—Yes.

4121. Why does one manufactory reel the silk better than another?—For the same reason that every thing is done better or worse in various establishments in every country, according to the degree of ability and industrious application of the principals, &c.

4122. You do not mean to say that the French silk is not better than any other?—No ; I mean to say that French silk, as a mass, its texture and its brilliancy, is superior to that of Italy. Piedmont silk that is sent to Lyons of the size 28 to 30, is required for particular purposes ; for example, in the highest branches of velvets, they require that particular size. The silk of 28 to 30, sent from Turin to Lyons, is very good.

4123. Is that prepared entirely for the French market?—I am not aware that it is ; but the 28 to 30 Piedmont I believe is reeled with the same as the 24 to 25 ; but there are some ulterior processes of throwing it into organzine.

4124. Are the Committee to understand that in France they can wind better than in England, they having the same quality of silk?—No, not at all ; when we consider the relation of wages we have in this country as compared with France

and

and with Italy, our throwing is done relatively lower in this country than it is in France and in Italy; that is to say, that our wages in that branch of industry, are by no means analogous with the wages given in France and Italy. The "reeling" of silk is winding it from the pod or cocoon; the reeling off the silk to convert it into tram and organzine is quite a separate question. The throwster in this country, whether it arises from smaller profits and lower relative wages, or from greater ability, which I will suppose, does his work much cheaper relatively than France and Italy; consequently we have no right to complain of the throwster in this country, as he has been working at such wages as are miserable.

4125. The importation of raw silk into this country appears to have increased very much since 1826, will you state why you conceive the quantity of silk imported has increased in a greater degree than the quantity of thrown, and why, under those circumstances, the throwsters of this country have any reason to complain?—I will beg to give in a statement I have drawn out upon this subject.

Q^y. How much lower the Wages and Profits in 1826 to 1831, than in 1815 to 1825?—Ans. The Wages estimated at less, and much less in most cases, than one-half.

Q^y. What quantities of Bengal Silks used in a Raw State?—Ans. Some considerable portions of late years.

Q^y. What loss of Capital in this Branch, (fixed capital) during the last six years, to be deducted from the profits?—Ans. Those losses enormous.

On Organzine. On Tram.

N. B.—The Imports of Thrown Silks in 1829 - *lbs.* 169,000 - Duty, 5/ - and 3/ Reduced to 3/6 - and 2/ in June 1829.

1830 - *lbs.* 437,000.

1831 - *lbs.* 514,000.

It is no use to take an "average" of three years, so very dissimilar in the very circumstance which forms the essence of the question, and to say, the Average of 1826, 27, & 28, was - *lbs.* 376,000 and that of 1829, 30, & 31 - *lbs.* 370,000

March 1832.

Alexis James Dorat.

4126. Will you explain that statement you have just given in?—I shall endeavour to show there is a great difference between the quantities of silks imported, and the work accruing to the throwster, and that of late the quantity of foreign thrown silks has increased considerably; but I will touch that question afterwards. Speaking generally, I should say, it has been occasioned by gradual improvement in our mills, and great depression in our wages and profits; mills are a fixed property, of no value except in activity; when standing still they become an actual loss; hence the necessity to work them under the most unfavourable circumstances to the throwster, which has been mitigated only by miserable and wretched wages. Of late years, that is 1826 to 1831, the quantity of throwsters' work has however actually decreased as compared with 1824 and 1825, notwithstanding those calamitous wages; although we have worked at very low wages, and wages the extreme of wretchedness, the quantity of throwsters' work has actually decreased since 1824-25. The quantity of foreign thrown silk has greatly increased since June 1829, when the duties of 5*s.* on thrown silk, and 3*s.* 6*d.* on tram, were reduced in the June of that year to 3*s.* 6*d.* on organzine, and 2*s.* on tram. We were working before that on very low wages; in the last year, we have been working on wages of wretchedness, speaking of the poor labourers; but the gentlemen who come from the throwing establishments, will be able to give answers more satisfactory upon that subject.

4127. How do you account for there being less imported in 1828 and 1829, although the duty was lower than the 7*s.* 6*d.* duty?—I will show a statement bearing upon that subject.

4128. Has the quantity of raw silk imported into this country increased?—Yes.

4129. Why then have the throwsters reason to complain?—I have made a minute respecting the throwsters' work. An "Estimate of quantities of raw silks consumed by our manufacturers in 1824-25, and in 1826 to 1831, computed at various rates with regard to the rates of labour and profit, which those respective descriptions yield on an average to the throwster." In 1824-25, the averages of Bengal and China silk, 1,349,000 lbs. 85 deniers; the average of Italian, &c. silk, 1,269,000 lbs., $\frac{30}{32}$ deniers; the averages of Turkey silk, 334,000 lbs., 100 deniers; total of all descriptions, 2,952,000 lbs. I have endeavoured to get information upon these subjects, and I find that the average quantity of labour afforded by the winding and twisting of Bengal and China silk, as compared with Italian silk, is one-third only; to the Turkey silk I have assigned already 100 deniers; I have called that two-fifths, because being a very long reel, it is wound but slow; to the Italian I do not assign any, because it is my standard; then computing the quantities of Bengal and Italian, and Turkey, consumed in 1824 and 1825, I find the computation of Bengal and China to be 450,000 lbs., bringing it to the standard of Italian; and the computation of Turkey is 133,000 lbs., relative to Italian; and if we add to that, the number of Italian which I have already stated to be 1,269,000 lbs., I have an aggregate of 1,852,000 lbs. of the Italian standard, with relation to the throwsters' work. I have gone through the same process for 1826 to 1831; I have analysed the quantity of work which the throwster has had to do. I proceed to the dissection I have made of the quantities of various silks consumed in those six years; I will not read over all the annual numbers; the average of the six years from 1826 to 1831, has been of Bengal and China 1,608,000 lbs. compared with 1,349,000 lbs. in 1824-25, making a considerable increase of the coarse silks in 1826 to 1831. Then with respect to Italian, I find that the average quantity upon the same six years is, per annum, of Italian 1,113,000 lbs. compared with 1,269,000 lbs. in 1824-25, which was greater; and with respect to Turkey silks, I find the average of the last six years to be 371,000 lbs., which is greater than the corresponding quantity of 334,000 lbs. in the former period; then by computing all those quantities by the same standard, I make this estimate for the last six years to be 1,798,000 lbs. of Italian standard; whereas in the former period, the amount is 1,852,000 lbs., showing a difference of three per cent. less employment for the mills in that point of view in 1826 to 1831, than in 1824-25, although there appears an increase in the gross quantity.

4130. Do you infer that there has been three per cent. less employment for the mills?—Yes, as I understand it in that point of view; there is another point to which I cannot speak practically, but I know that of late years large quantities of Bengal silks have been used in a raw state; that many of the low goods we make, principally for export, are made of very coarse silk, only wound off, and the first operation of winding off coarse silk is very inconsiderable; in that state it

Mr.
Alexis J. Dorat.

13 April,
1832.

Mr.
Alexis J. Dorat.

13 April,
1832.

gives extremely little employment, it is merely the operation of winding off; the throwster has thus to work on a smaller quantity; the goods are produced after the raw silk has been merely wound off; and then there is that which forms the element of the whole question, which interests particularly this branch of industry; how much lower the wages and profits were from 1826 to 1831 than in 1815 to 1825? the answer, as far as I understand it, is this; the wages are estimated at less and much less in most cases than one-half; I have seen statements considerably under that; I state this, not that I know it of my own knowledge, but I know it from gentlemen much better qualified than I am to speak to it. Another reason they have to complain is, the loss of fixed capital during the last six years, and this is again a most important point: I am surrounded by many gentlemen who are throwsters and many manufacturers; one gentleman whom I have in view may employ 500 weavers, or he may employ 200 weavers only; if his trade is pressed upon, he dismisses part of his people; his capital is not decidedly fixed, it is a great loss of capital, a great inconvenience when he is forced to discharge his weavers; but as to the throwster, the major part of his capital is fixed in machinery on which the whole of his business rests; wages constitute the floating part of his capital, and this part of it is returned many times in the course of the year; but when his machinery is stopped, there is not only an end to wages, but there is an absolute loss of capital, his machinery becomes of little or no value; the same causes which bring disability upon the weaver bring disability upon the throwster, but the loss of capital to the throwster is more absolute; his machinery, which is the basis of his business, becomes useless and deteriorated, his people must disperse, the whole of his establishment is gone. The next point for consideration is, how the foreign throwster has been able to grow upon us so considerably during the last two years, notwithstanding the low and wretched wages at which the English throwsters have worked. I find that in 1829, the imports of thrown silks were 169,000 lbs.; the duty, which was 5s. on organzine and 3s. on tram, was reduced to 3s. 6d. on organzine and 2s. on tram, in June of that year. In the next year, 1830, the importation was 437,000 lbs., and in the following year 514,000 lbs. I should observe, however, that 1829 was a low year for the silk trade altogether; the year 1830, an increased year, with a little improvement in wages, but the year 1831 has been a decreasing one, and with wages of extreme wretchedness (particularly in the throwing branches), lower than at any period since this country has worked silks; notwithstanding which, the quantity of foreign thrown silks, which had been 437,000 lbs. in 1830, increased to 514,000 lbs. in 1831. I find that those quantities of thrown silks, viz. 159,000 lbs. in 1829, 437,000 lbs. in 1830, and 514,000 lbs. in 1831, as compared with the quantities of Italian raw silks, (which silks are worked for analogous purposes,) were 20 per cent. in 1829, 36 per cent. in 1830, and 50 per cent. in 1831. Bengal raw silks are worked for various purposes, many of which purposes have no analogy with those of Italian.

4131. Are the Committee to understand that you consider the great increase of thrown silk during the two last years to have arisen from the duty being reduced from 5s. to 3s. 6d.?—Yes, as far as I can understand the question, and I have given it all the attention possible.

[*The Witness delivered in the following Paper.*]

Mr.
Alexis J. Dorat.

And Debentures of 3s. 6d. per lb. on Organzine } granted from June 1829.
Silks, and of 2s. per lb. on Tram, ditto - }

* 1815-17 }
to } Rapid decrease in the relative qualities of Foreign Thrown.
1824-25 }

† 1826 - - - A slight Increase.

‡ 1827-28 - - - Some decrease.

§ 1829 - - - A large decrease. (Wretched Wages.)

|| 1830 - - - Unparalleled increase. (Some improvement in Wages.)

¶ 1831 - - - Further considerable increase (notwithstanding wretched Wages.)

And this calamitous depression in the Throwing Branch has been unattended with any advantage to the other Branches of the Silk Manufacture; the state of which has been miserable in 1831, and aggravated still during the three last months.—(Minute, 7th April 1832.)

Mr.
Alexis J. Doxat.

13 April,
1832.

4132. Are the Committee to understand that you consider the taking off the duty on organzine silk has increased the quantity of imports of thrown silk?—Yes.

4133. Do you find that that has been the case after every reduction of duty?—No, it has not.

4134. Are you aware that, since the year 1765, the importation of thrown silk for consumption has varied, taking the average, between 350 and 400,000 lbs.?—I am told it was only 20 years after 1765, that any organzine silk was made in this country; I have not looked into the whole statement, but there is a point which will meet that. The question I apprehend to be, when we had high protecting duties in favour of the throwsters (that is, at 14s. 8d. on organzine and tram, as compared with 5s. 6d. for the raw, from 1815 to 1824, and at 7s. 6d., as compared with 3d. on raw, in 1824–25), whether they remained sleeping over their spindles, and made no improvements. I have a statement, by which I will show that the internal competition of British mills in various parts of the country, had, during those periods, the effect of reducing considerably the quantity of foreign thrown silks, in proportion to the raw; it is apprehended, in all cases in which we do not alter duties, we keep up charges, but it will be found that those latitudes have not been taken. I will refer to paper No. 10; it appears that the average quantity of thrown silk we imported in 1815 to 1817, was 295,000 lbs., that the proportion was 125 per cent.; that the thrown organzine silks, in the three following years 1818, 1819 and 1820, their relative quantity was diminished to 88 per cent.; in the years 1821, 1822 and 1823 that relative quantity had further decreased to 62 per cent.; in 1824 and 1825 I find the relations altered, in a still greater degree, say, to 38 per cent. in 1824 and 1825, compared with 125 per cent. in 1815, 1816 and 1817; consequently it appears that, in those periods, the throwster did his duty towards his brother at the loom; for I consider this as a question affecting one family, it applies to all the silk family, as one family. I find that the quantity of foreign thrown silk consumed in 1826, was 289,000 lbs.; the duties were lowered by an Order in Council, on the 25th November 1825, to 5s. on organzine and tram, and 1d. on raw; I find a slight re-action in the import of thrown silks in 1826, that is, to 40 per cent., instead of 38 in 1825. In the subsequent years, 1827, 1828 and 1829, we went on lowering our wages and profits, and by so doing, jointly with further improvements—(we have seen the effects of material improvements during high duties)—I find the relative quantities of thrown silks reduced from 40 per cent. in 1826, to 31 per cent. in 1827, to 29 per cent. in 1828, and to 20 per cent. in 1829. It is but fair to notice here again, that which I have mentioned before, that 1829 was a very bad year for the silk trade altogether, and that the manufacturers in such years turn more particularly to the lower branches, and work at a lower standard, because they can employ their people at less loss. But what has been the apparent effect, when we come to 1830? we find the operation of the duty, lowered from 5s. to 3s. 6d., is, jointly with the debentures, although small, to come against the throwster; for the value of those debentures, although given for 3s. 6d., has varied from 1d. to 7d. or 8d., so that the duty has been virtually reduced nearly to 3s. or 3s. 1d., from 5s.; and the consequence appears to be, that in 1830, notwithstanding low wages, the wages in 1830 were not so low as in 1831; we find that the quantity of foreign thrown silk has increased to 36 per cent.; then in 1831, which was a declining year, and particularly a year of wretchedness with the throwing interest, we find an increase to 50 per cent.

4135. It appears that in the year 1830, 1,202,000 lbs. of raw silk were imported; in 1831 only 1,026,000 were imported; during the year 1830 the quantity of foreign thrown was less than in 1831; if this had been the consequence of distress or failure on the Continent which had compelled the foreigner to send it into this country, would he not have been impelled to send an equal quantity of raw?—Certainly; if a man was afraid of his property he would send the one as well as the other.

4136. Is it not the fact that Germany and other places principally import thrown?—Yes.

4137. If from disease and other circumstances on the Continent in the two last years an interruption to the trade took place there, would that necessarily alter the proportion between thrown and raw, and leave a larger quantity of thrown on the hands of the Italian merchant?—I feel that that question cannot be answered without explanation, and we now touch the minute at which the Committee are going to adjourn.

4138. Has not a larger quantity been consigned to you from Italy?—Certainly.

4139. Has

4139. Has it not been stated to you that the state of the European market has been the reason for so much being sent?—I cannot do justice to so important a question without going into an explanation.

4140. You consider that the alteration of the proportion has arisen from the state of the law, not the state of Europe?—Yes, just so; but I respectfully repeat, that the moment of adjournment does not allow of the requisite developement.

Mr.
Alexis J. Dozat.

13 April,
1832.

Martis, 17^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. *Alexis James Dozat*, again called in; and made the following Statement.

I AM particularly anxious to take up two points in answer to questions before put: first, as to the prosperity that is supposed to have existed in the silk manufacture at Manchester, at the time that great misery was existing in the silk manufacture in Spitalfields; and the second point is this, whether the misery that existed in Spitalfields in so many instances during the last few years, is analogous, or arises from the same causes as the transient misfortunes that weighed on that industrious part of the community from 1815 to 1825. With respect to the first point, I claim the indulgence of the Committee, because it is very important. Manchester is more particularly engaged in the manufacture of silk goods, and of silks mixed with cotton of low descriptions, which are well made in their various kinds, and likewise some mixed figured and fancy goods; goods which have been manufactured however at very low wages, and which have the benefit of the bounty before alluded to, which is an immense bounty. Many of those goods are entitled to a bounty of 3s. 6d. per lb. whilst most of them have paid only the lower duty of 1d. per lb., and I believe many of them are manufactured even with waste which has paid only 1s. per cwt.; consequently it is a bounty to the highest extent. But, returning to the abstract question of the prosperity of Manchester, I would beg leave to read a letter dated the 2d of January 1832, addressed to the Board of Trade, which I had heard something of before, but of the contents of which I was not fully aware, and which has been sent to me by a friend since my last examination.

Mr.
Alexis J. Dozat.

17 April,
1832.

[For the Letter and the various signatures attached to it, vide

Mr. Royle's Evidence, p. 166-7.]

The silk family is one family all over the kingdom. But I speak of those particularly that I am acquainted with; and I feel anxious that nothing I shall say shall throw a cloud upon them. That letter presents a most lamentable picture of the state of the silk trade at Manchester; it speaks in every sense for itself. I am aware that another letter signed, I understand, by some of the same parties, was addressed subsequently from Manchester to the Board of Trade, dated 26th March, praying, that no alteration might be made in the laws relative to the silk trade; I understand that it was written under the impression which was conveyed in the House of Commons by the Right honourable the Vice President of the Board of Trade, not as a threat, but it was received almost as such, that the duties would be taken off on foreign thrown silk, and the corresponding drawbacks (bounties) granted on the export of manufactured goods would cease. The manufacturers in Manchester having mostly mills of their own, it is a question which would concern them doubly; in this way, if the duty were taken off thrown silk their mills which, "since 1829 have become worth next to nothing," would become, notwithstanding the very low wages at which they have been working the last two or three years, if I may so express it, worth less than nothing, and not only that, but they would lose the advantage peculiar to Manchester, of having an enormous bounty, in some cases 50 per cent. on the duty paid, in some cases 100 per cent. taking the duty on the waste, and comparing it with the bounties; so that it would fall on Manchester twofold. It appears that they have been carrying on the manufacture on very low wages, and that the exportation has taken place essentially, and mostly on account of the immense bounty. With respect to Spitalfields, I was anxious to submit these points, because there is an impression that Spitalfields is behindhand in point of industry, that there is a disability in Spitalfields; and that does not exist; there is in this district amazing industry and assiduity; the work is well done there, and comparatively

Mr.
Alexis J. Dozat.

17 April,
1832.

comparatively cheap with regard to its excellence; and I believe it can be shown from step to step, that Spitalfields remains what it has long been, the eldest brother of the silk trade in this country. With respect to the distress in Spitalfields, I will beg leave to read a paragraph of a letter which I addressed to the Right honourable Vesey Fitzgerald on the subject of the silk trade, dated the 28th of April 1829;—I could dwell here at great length.

“ Sir,

“ ON the subject of that part of our industrious population, engaged in the silk trade, with which I am more particularly acquainted; but again, I should trespass too much on your time, when inquiring into a state of things which requires the immediate application of every remedy that can be recommended by His Majesty’s Government to the Legislature, I will only repeat here, the expression of my deep conviction that there does not exist in these realms, or in any part of the world, a class of people more industrious, more moral, and in every sense more deserving the protecting hand of a government, than the Spitalfields weavers; I speak as I conscientiously believe from experience, and close and intimate and continued observation, which has been most fully corroborated by persons perfectly foreign, by their professions, to every kind of trade or commerce, but who have made the subject of the industrious man, and of all that can contribute to his comfort and his moral improvement, a subject of deep and solicitous study; and hence, when I hear it expressed as a regret, that we should have in one part of this metropolis fifty thousand such people, I would say, by whom should we reimplace such people, such industrious, such assiduous, and such peaceable and loyal members of our social family? Admitting that at some periods, namely, in 1792 and in 1815, much distress prevailed among them, owing to a change of fashion in the former period, and a change from war to peace in the other, and that a benevolent public held out a truly charitable hand to those industrious sufferers, can the amount of subscriptions during those periods, however great and however beneficent, be considered, in a pecuniary point of view, otherwise than as a mite, compared to the benefit accruing (in a pecuniary point of view alone) to the country from the possession, within itself, of such industrious classes? And as to some trifling subscriptions, which, at some other periods, have occasionally been made to furnish those industrious people, under the pressure of very inclement seasons, or some circumstances of general pressure to the country, with some blankets and soup, the amounts occasionally expended in such relief, would not deserve to be mentioned, but as proofs of the kindness with which British beneficence is ever found to flow on all occasions calling for its exertion. And has the silk trade stood alone in receiving occasionally the fruits of such beneficence? Have not other portions of our industrious classes had to lament much more frequently, during the said period of 1792 to 1823, far greater vicissitudes than those experienced by the silk trade? Have we not seen, in particular, immense masses of workmen, employed in the cotton and in other trades, suddenly thrown out of employ, to a degree that even endangered the tranquillity of great districts? Can some occasional relief, afforded formerly to the silk trade by means of soup societies, &c., be for a moment placed in comparison with such calamitous occurrences, incident to trades dependent in a great measure on exports for employment?”

Every thing in trade and commerce must be comparative; I have mentioned that the silk trade was prosperous from 1815 to 1825, notwithstanding the enormous duties in most of these years, and it has since been exposed to as great vicissitudes as possible. The reason why I wished to introduce the comparative numbers of seven to four as regarded the progress of the silk trade from 1815–17 to 1821–23, 1824–25, compared with that of the cotton trade, was, because I was asked, whether the silk trade had not been exposed to contingencies as well as the cotton and other trades during the periods anterior to 1826. The cotton trade has been considered as without parallel in its progress, whereas I have found that during that period of eleven years, the progress of the silk trade had far exceeded that of the cotton, that is, in the ratio of seven to four; and that from 1826 to 1830, those progresses had been *inverted* in the ratio of four the silk, to nine the cotton.

4141. What in your opinion has been the effect of the alteration of the laws relative to the silk trade since 1826, on the trade of Spitalfields?—A material reduction of the rate of wages for a certain description of goods which I have taken the whole way through as my standard; a reduction of wages from $10\frac{1}{2}d.$ to $8d.$, $7\frac{1}{2}d.$, $7d.$, $6\frac{1}{2}d.$ and $6d.$ The rate of wages in 1821, 1822, 1823, 1824, 1825, for that class of goods I understand to have been $10\frac{1}{2}d.$

4142. What is the article on which the wages have been so reduced?—It is 10 to 1100 three double gros de Naples, neat made and well got up.

4143. Has that reduction of price arisen from competition of foreign silks or competition of home silks at Manchester?—I believe from foreign silks; the pressure has originated from abroad, from the period I have referred to; I believe that

that the wages from 1821 to 1825 were the same, on the average, that they were in 1815 to 1817, because it was a rapidly increasing trade, a trade entirely of luxury which afforded those wages, and which were only fair and moderate wages; by no means extraordinary wages.

4144. Do you know the quantity of foreign gros de Naples which has been imported in the different years since 1826?—I do not, because a very large proportion is imported by the smugglers, I believe.

4145. What means have you of showing that there has been the introduction of a large quantity from France?—I am told of it generally from various quarters; our business is in raw and thrown silk, and we are foreign bankers; our business is banking and silk; we have, in almost every week, men that come from the Continent for their silk goods here, and drafts to large amounts pass through our hands upon various houses; but there are agents coming over frequently, they enter freely upon their business when they come to the counting-house, one says I am following a parcel of goods which I have sold, another says I am come to take orders; I cannot follow the smugglers to know what they do, but I understand that immense quantities are smuggled. I could have known every particular about it, over and over again, but the moment that I find the agents conversing about private business with me, I tell them I do not want to hear any secrets; I do not know whether you are aware that for the last few years I have endeavoured to do all in my power by applications to Government, to induce them to re-consider the changes that took place in 1826, in regard to the silk trade of this country; I wish to hear nothing private upon those matters; any thing you tell me respecting your prices of weaving, of winding, throwing, &c., I shall be glad to hear, I hear that they are bringing over very great quantities of goods, and that a large proportion are smuggled.

4146. Have you reason to believe from your transactions that that is the case?—Yes; from the drafts that go through our bill books, and also from what I hear continually in various ways, and from various quarters on this subject.

4147. Do you know from any bills which pass through your hands as a banker, that the goods which are paid for have been introduced into this country in an illicit manner?—There is scarcely a week passes but some bills drawn for silk goods pass through our hands.

4148. Are such bills to a large amount?—They are sometimes.

4149. Were they so in the year 1826?—I cannot speak to that particular date.

4150. Have you any means of knowing the particular amount drawn for from Lyons on England?—No, it is impossible for me to speak with any degree of precision on this subject.

4151. Do you know for what the bills are drawn?—They are drawn on silk mercery houses.

4152. Are you certain they may not be for silks which have paid duty?—Some of them may be, no doubt.

4153. Bills drawn at Lyons upon London cannot be for raw silk can they?—For raw silk they are upon us sometimes, and upon other merchants; the silk is sent to Lyons, if it does not sell there, it is forwarded to London; consequently bills on silk merchants we know to be for raw silk, as also occasionally for thrown silk.

4154. But those bills you refer to are drawn by manufacturing houses on warehousemen in London?—Yes.

4155. May they not be drawn for other goods besides silk manufactures?—I would say distinctly, I believe they are for silk goods.

4156. Was the description of goods such as was made in Manchester in 1825, such as was likely to interfere with the manufacture in Spitalfields?—This question I am not sufficiently informed upon, and would rather leave it to others.

4157. Do you know whether they now make in Manchester such goods as they used to make in Spitalfields?—I believe not; that a very large proportion are low goods, well made for that class, but goods made essentially to have the benefit of that immense bounty given to them; and that they have been made at very low wages. I would beg to draw the attention of the Committee to one point, I was at Malvern in Worcestershire, for two or three months last summer with my family; I heard a great deal of the distress of the glove trade; sometime after I had been there, some gentleman of the neighbourhood called upon me, and

Mr.
Alexis J. Dozat.

17 April,
1832.

Mr.
Alexis J. Dorat.

17 April,
1832.

told me there was a gentleman from Manchester who said that the distress of the glove trade was nothing to that of the silk trade in Manchester, and he entered into various particulars on the subject; this was I think in August last.

4158. Was the gentleman in the silk trade?—Yes, he was; I asked who he was, and they told me, he was a manager in one of the first concerns in Manchester, with whom we had transacted business for 32 or 33 years. He told me the situation of the silk weavers at Manchester was dreadful; I did not ask him minutely the rates at which they were weaving, but he mentioned them generally.

4159. Is it your opinion that the competition of Manchester making any goods, such as are made in Spitalfields, does not affect the Spitalfields wages?—Every competition may affect wages, but every thing within ourselves tends to regulate itself; the Spitalfields weaver is not afraid of the competition of any fellow labourer; on the contrary I believe that the Spitalfields weaver does his work as cheap as any, considering the perfection of his workmanship, speaking as a whole.

4160. Do you think that the silk manufactured at Manchester tends, by competition, to lower wages in Spitalfields?—It may in some degree, but the pressure is from abroad; I might say Spitalfields presses on Manchester, and it does press upon Manchester in various respects.

4161. Are not the goods coming from abroad, of a class and description more likely to interfere with Spitalfields than those made in Manchester?—Generally speaking, certainly; but superior goods press always directly and indirectly on low goods.

4162. Then independently of that, if there is a competition which may injure the manufacturer, must not the bringing in a large importation of foreign goods tend still further to press upon the market and injure it?—Yes.

4163. You are understood to state, that notwithstanding any occasional vicissitudes in trade, the silk trade of Spitalfields from 1815 to 1825, was in a progressive state of improvement?—An extraordinary state of improvement, notwithstanding the high duties from 30 to 40, 50 and 60, and 70, and 80 per cent. upon the raw material, and upon the prepared material, and with fair moderate wages to our labourers in every department of that manufacture.

4164. Since 1826, has there been the same improvement, or has it suffered a depression?—It has suffered a calamitous depression in these years, upon the whole; and there is besides an essential consideration, that the largest masses of foreign goods, most frequently come in at the most depressed prices; so that although our labourers retreat from very low, to wretched wages, they are, at these, often reduced for a time to half work; and over such contingencies, with our foreign competitors, they have no control.

4165. There has not only been great distress in reduction of wages, but also great numbers of individuals out of employ?—The unsteadiness of the trade has been unparalleled; I have taken the whole way through, the former standard of $10\frac{1}{2}d.$ against $6d.$ for plain goods, but I am told by various members of the manufacture, that if I were to take the average of plain goods, the average difference would be more than that of $10\frac{1}{2}d.$ to $6d.$

4166. When you state gros de Naples, did you merely take that as a criterion to form an estimate of the general depression?—Yes, I take it as a centre.

4167. If you have taken that as a criterion, the introduction of any foreign article of the same description, whether smuggled or otherwise, would not matter, because the different kinds of silk introduced, must cause a further depression?—Upon some articles, I have said before, that the depression was as $10\frac{1}{2}d.$ to $6d.$ upon the wages; I understand it goes further still, and thus in taking the proportion of $10\frac{1}{2}d.$ to $6d.$, I under-rate the average of depression.

4168. It is the general operation on a large quantity of goods?—Yes, if we extend the comparison to figured and fancy goods, of course it will be higher.

4169. Does the competition of French goods with Spitalfields, depend on the price and quality of the goods?—In all the calculations I have made, I assume an equality of perfection in the goods made here and abroad. By referring to my Tables No. 4 and No. 5, it will be seen that I assume we make the same article in this country, as well as they do abroad, in all the departments of manufacture; that our dyeing is equal, our brilliancy is equal, and our ability in every respect equal. I assume an equality. Then as to the differences of prices between Lyons and this country, I estimate that there are the differences I have stated.

4170. You suppose the quality to be equal?—No, I do not suppose that, I assume that.

4171. What

Mr.
Alexis J. Daxat.

17 April,
1832.

4171. What is the difference of price between the Lyons and Spitalfields manufactures, first in materials, secondly in wages?—If our weavers were to work at $8\frac{1}{2}d.$ per yard, and other charges of manufacture in proportion, the price of the article would be $3s. 1d.$ when we have retreated from step to step, and are brought down to the wretched wages of $6d.$ a yard, we come to $2s. 8d.$ For the same goods at Lyons, the usual rate for the last few years has been $5\frac{1}{2}d.$ which is equal to $5d.$ per yard, as the weaver there winds his shute. When they are manufacturing at that rate, which is a rate of ease with them, and considering the relative circumstances, is equal to our $8\frac{1}{2}d.$; and supposing the price of silk with them at the highest relative point, the price of the manufactured silk at Lyons will be $2s. 4d.$ and $\frac{3}{4}ths.$

4172. What would be the cost in England under those circumstances?—Three shillings and one penny, as stated before.

4173. What per centage would that be?—The difference between $3s. 1d.$ and $2s. 4d. \frac{3}{4}ths.$ is 30 per cent.

4174. Are the Committee to understand, that the expense of weaving and manufacturing plain silks at Lyons, is 30 per cent. lower than in England?—It varies continually.

4175. Give the variation; what is the lowest, and what is the highest?—I have not the last price of goods at Lyons, but I will mention what I understand to be the variations in the course of the year, at Lyons; whether they are working on high prices, or at very low prices of silk; and whether their wages be much depressed, or fair wages; and whether the manufacturer wishes to effect the sale of his goods, when he has few orders from America, &c. or whether any thing occurs in France, to diminish the sale of his goods; I understand the variations may be from $2s. 4d.$ and $\frac{3}{4}ths.$ to $1s. 9d.$ and $\frac{3}{4}ths.$ If I take the extremes from $3s. 1d.$ to $1s. 9d.$ and $\frac{3}{4}ths.$, the extreme is as much as 70 per cent. It is frequently the case, that when we are working here at tolerable wages, a sudden fall happens at Lyons, which depresses the silks; and that an enormous difference, as much as 40 or 50 per cent., takes place in a short time, without our having any control over it, under contingent circumstances with the French and other foreign manufacturers. The rate of $6d.$ per yard does not at all shelter us from those contingencies.

4176. Are you able to state the rate of wages for weaving a neat made gros de Naples at Lyons, and a neat made gros de Naples at Spitalfields?—Not at this moment.

4177. When was the last account you heard?—I have had no recent account, except that there is great activity at Lyons; but I believe that a great deal of gros de Naples made there in the last year, was so low as $4d.$ a yard for weaving, and I believe, in some cases, even lower.

4178. What did it cost here?—Sixpence per yard, which is a low and wretched rate of wages here.

4179. Has not gros de Naples been down at $5d.$ in England?—It has of late, but not for the same description of goods; and $6d.$ for these does not shelter us from those contingencies.

4180. How low do you know it to have been in France?—When I say $4d.$ in Lyons, it is equal to $3\frac{1}{2}d.$; and I mention that, as the lowest point at which I have taken my calculations; I believe that, not unfrequently, at the rate I have been alluding to at Lyons, of $4d.$ equal to $3\frac{1}{2}d.$, goods are manufactured, and even lower; that is to say, the rate of $4d.$ is equal to 53 centimes, and I believe that when very much depressed, they have been lower than that; for example, that before the riots at Lyons, the rate of wages was even lower than 53 centimes.

4181. Do you know the prices at which work of that kind has been done at Manchester, or at Spitalfields?—I believe it has been done so low as $5d.$; it is done under circumstances of extreme wretchedness; and when goods are turned out from abodes of misery, they cannot be suitably got up, goods deserving the denomination of superior class—of goods to be compared to those produced at Lyons.

4182. Does not wretchedness exist at Lyons, as well as here?—They are open to frequent and material changes, they manufacture for export principally.

4183. You mean to say, the wages have been depressed from $10d.$ to $6d.$, and under, and that that has been in consequence of the competition?—Yes.

4184. What do you estimate the total value of the silk manufacture of England?—It has varied extraordinarily the last five or six years.

678.

G g

4185. What

Mr.
Alexis J. Doxat.

17 April,
1832.

4185. What do you understand to be the difference between the price of silk in Lyons and London?—The price of the raw material varies continually.

4186. Take the average?—The question is not one of averages; the business of the merchant, or the man who deals in goods, is to avail himself of differences existing between one period and another; when those differences subside into what may be called an average, less importations take place; but when prices are very low, the merchant's business is to operate under the averages; that is the very point they are continually looking after.

4187. It is the business of the merchant to look out for an opportunity of making a profit by the difference in price?—Yes; he imports more or less according to the price.

4188. In your opinion, can the price of silk at Lyons and in London differ more than the cost of transport from one place to the other?—There are frequently considerable differences existing at Lyons in the price of the major part of the silks, arising from this; that the consumption of silks in France has been, upon the average of the last few years, 5,500,000 lbs., and I have submitted a paper, in which it appears, that the quantity imported into France is about a million of pounds; of that million of pounds, a large proportion, that is six or seven hundred thousand pounds of thrown silks, principally Piedmont organzine; the remainder, three or four hundred thousand raw, are principally Levant silks, and other coarse silks; out of those three or four hundred thousand pounds of raw silks imported into France, I believe a small proportion, an hundred thousand, or an hundred and fifty thousand pounds, consists of fine silks. I have stated, that the quantity consumed in France is 5,500,000 lbs., and that the quantity of silk imported there from various foreign parts, is about 1,000,000 lbs., and the remaining quantity, referrible to the trade of France, would appear to be 4,500,000; the largest proportion of that is fine silk; so that it is 4,500,000, contrasted with 1,000,000 lbs. imported into France, being a small proportion; consequently the manufacture of the French rests, in a very great measure, on their own silk, on some portion of foreign thrown, and a little coarse raw; with some very small quantities of fine Italian silk, when they are in a state of great activity; and then they can import Italian silk at cheaper rates than us, being nearer the Italian markets, and their import charges being a trifle lower than ours; but when they become depressed, they obtain their own fine silks (that is the great basis of their manufacture) much lower than we can import from Italy; and they have their own silks lower, under general circumstances.

4189. Not having an export for the raw material when trade is low, the raw material must fall?—Yes.

4190. Have there been any years in which they have not imported more or less?—No; in my statements laid before the Committee, I have assumed that the price of raw silk at Lyons varies from 17s. to 14s. 6d. per lb. I have two statements here, from two respectable houses at Lyons, dated the 19th and 22d April 1831, before which period there had been a great depression; the one mentions, that French organzines of 21-22 deniers, which in February could not be sold at 28 francs (equal to 17s. 6½d. per lb. English), or at most at 27 francs, 50 cents. (equal to 17s. 2½d.) were then easily saleable at 32 francs (equal to 20s. 4d.) The other, that good current French organzines, of 22 deniers, which a month previous were fallen to 28 francs, (equal to 17s. 6½d.) had got up to 32 francs (equal to 20s. 4d.); that rise was attributed to orders from America. All those quotations in French money are with their usual discount of 12½ per cent. I should observe that the size of 21-22 deniers, is finer than that of 22-24, upon which I have grounded all my calculations at London and at Lyons. The lowest point I have taken in my Lyons estimates of costs ("4. 4," in Tables No. 5, 6, 7, and 18,) for organzines of 22-24 deniers, and tram of 24-26 deniers, collectively, has been 17s. 7d.

4191. What was the distance of time between the price of 17s. 6d. and the 20s. 4d.?—They say from February and March to April: they say that the Lyons manufacture had been very much depressed, and that when they receive orders from America, that immediately raised the price of the article, and raises the wages.

4192. This is to mark the great and sudden variations in the price of French produce?—The variations are sometimes greater still; I was going to compute from that the price of French raw silk; in one case I had 17s. 6½d.; the price of throwing in France is generally for that size 3s. 9d., but we will assume that they were

Mr.
Alexis J. Dorat.

17 April
1832

were depressed in their price of throwing; I will assume that they were working the raw at 3 s. per lb. into organzine, that the waste upon that was about 8 d., I must then deduct the price of the throwing and the waste from the price of the organzine, to come to that of the raw.

4193. The Committee wish to know the actual result when you have known a great variation in the price of raw?—We can judge of the price of the raw only from the price of the thrown. I quote the prices of the French organzine silk, from which I deduce the price of the French raw, as we but seldom get quotations of French raw.

4194. Does the price of the Italian organzine vary as much as the price of the French organzine?—Not so much, because they consume Piedmont for some particular purposes, for peculiar articles; but the great mass of their manufactures rests on fine French silks.

4195. Can you state the price of Italian organzine in April 1831?—It was by no means so depressed.

4196. Can you make a comparison between the price of the Italian organzine at Lyons and in England at the same time?—I cannot at this moment, not having the quotations with me.

4197. Can you furnish the Committee with a list, during a series of years, of the prices of Piedmont organzine at Lyons and in London, taking the same qualities?—Yes; certainly.

4198. Can you furnish the Committee with a Table showing the price of French organzine at Lyons, and of Italian organzine in London, or English organzine in London, made from Italian silk, at the same periods?—Taking Piedmont organzine and English organzine collectively of the same description, I have the price of 22 s. 10 d., but that is for a class a little inferior; I should say from 23 s. to 24 s., corresponding with that I have referred to as 17 s. 6 d. and 17 s. 2 d.

4199. What was the relative price with the 17 and 24?—The French were depressed at that period.

4200. Did the price of Italian and English organzine in London rise or fall equally with that, or did they maintain their price?—They were not influenced by that; the French were going on working on their low prices, they were consuming nine-tenths of their own silk at that period.

4201. Can you take an average of two or three years of the same quality of silks at Lyons and in London, and thus come to some general conclusion, avoiding or embracing the different variations?—I can draw the average, but that average is departing from the very question now under the consideration of the Committee, which is, to see the extraordinary variations we are exposed to from foreign competition; and how far we are pressed upon generally by the comparative low rate of wages; but I repeat that low and wretched wages do not shelter us.

4202. What influences the price of Italian organzine silk in this market, is it the competition of the English organzine, or the price which organzine bears in the rest of Europe?—There are two distinctions; France consumes its own silk, and rests essentially on silk grown at home; frequently the difference in price is very considerable; they are usually under the proportion of the price of silk in other parts of Europe, silk of French produce being retained entirely for her own consumption, France cannot equalize itself in that respect.

4203. Do you mean to say that in times of depression the manufacturer at Lyons can buy his silk at an extremely reduced price, which silk he can manufacture up at wages also reduced and send the goods into this country, to the great injury of the manufacturer here?—Yes.

4204. When he procures large orders from America, silk will naturally rise in the Lyons market, wages will rise, and he ceases to send goods to this country for a time?—Comparatively less quantities; the intensity of foreign competition varies much.

4205. Italian silks sent into this country are to a certain extent protected; you have limits as to price?—Yes.

4206. An Italian merchant has the option of withdrawing the silk consigned to you and consigning it to France or Germany or to other countries, and he will not admit of this reduction of price, when there is a better state of trade elsewhere?—No.

4207. Therefore the English manufacturer in that state of trade has no chance with the French?—No; on every pound of Italian silk imported into France, the export and import duties and charges, inclusive of commission, are about 2 s. 1 d.

Mr.
Alexis J. Dozat.

17 April,
1832.

The charges to this country, although more distant, are about 2*s.* 2*d.* to 2*s.* 3*d.* sending them forward, packing them, and so on, including the export and import duties; the import duty at Lyons is 5½*d.* and 1½*d.* at London.

4208. Will you state the component parts of that 2*s.* 1*d.*?—The charges of brokerage and packing 2*d.* a pound; export duties 9*d.*; carriage to Calais and putting on board for London 3½*d.*; the import duties here are called one penny; but there is a city due which makes a penny and one third of a penny, including the scavage; then there are the various charges, insurance, freight, entries, landing charges, stamps, &c., commission and brokerage in London, 1*s.* 0½*d.*, making 2*s.* 4*d.*, it may range from 2*s.* 2*d.* to 2*s.* 4*d.*

4209. Does the 1*s.* 0½*d.* include the freight from Calais to London?—Yes, and other port charges.

4210. Those are the whole charges from Lombardy to London on a pound of raw silk?—Yes, the charges being a little more or less, according to the price of the silk.

4211. What do they pay at Lyons for the same articles?—The charges at Lyons are 2*d.* for the packing, brokerage, &c., the export duty 9*d.*; the waggon charge to Lyons is 1½*d.*; the import duty at Lyons 5½*d.*, they have no charges of freight and insurance, &c. the commission and brokerage 7*d.*, and one quarter, as compared with our 1*s.* 0½*d.*, making 2*s.* 1*d.*; every pound of silk that France imports from Italy costs them 2*s.*; besides which the Italian markets are nearer to them, which constitutes a relative cheapness; and they have the silk of their own growth, which forms the great mass of their consumption.

4212. Whilst the same article to us costs 2*s.* 4*d.*?—Yes; 2*s.* 2*d.* to 2*s.* 4*d.* besides some difference, owing to our market being further from the sources.

4213. What does the home grower in France save out of this, is there any part of the charge which falls upon him?—Comparatively trifling; the produce of silk is spread all over the South of France, and there are no duties on it.

4214. Can you state the charges on the thrown imported into France?—Yes; I will take it from Piedmont organzine, because that is the largest quantity, as France consumes principally Piedmont organzine; I will take the relative charges in respect to Piedmonts, to London and to Lyons; first to London, packing, brokerage, &c. at Turin at per pound of organzine silk, three pence and a quarter, the export duty 6½*d.*; (Piedmont does not allow an exportation of its raw, consequently we have no comparison of that); carriage to Calais, and putting on board 3½*d.* our import duties 3*s.* 7*d.* per lb., including the penny for the scavage, insurance, freight entries, landing charges, stamps, &c.; commission and brokerage in London, 1*s.* 7*d.* making together about 6*s.* 3*d.*

4215. How much of that does the Lyons merchant pay per lb. on silk from Piedmont?—The brokerage, packing, &c. remains the same, 3½*d.*, the export duty remains the same, 6½*d.*, the carriage is 1½*d.*, the import duty 11*d.*, commission and brokerage 10*d.*, making the total of about 2*s.* 8*d.*

4216. Do you know that which is stated in this letter to be the fact; “I learnt that the custom of sizing a bale of silk is attained in this way, to obtain the number of deniers in a bale of silk we take out ten hanks, and measure from each 400 aunes, French ells, weighing the 400 aunes, which divided by ten, will give the average length of the bale; the persons who perform this are not paid in money, they keep for themselves the silk thus weighed; when trade is brisk they gain from eight to ten francs per day, sometimes from 15 to 20?”—I know that the employment is one of great confidence; it is an assay, and they depend upon the correctness of the assayers; I know at Turin, there are many respectable ladies who maintain themselves in assaying silk.

4217. From the statement you have given of the expense of charge of a pound of Piedmont thrown silk, from Piedmont to Lyons and Piedmont to London, it appears that the charge is 2*s.* 8*d.* as compared with 6*s.* 3*d.*?—Yes; we are more distant from the source.

4218. Deducting the amount of import duty and scavage from that, the English manufacturer receives his Piedmont silk only at an increased price of one penny more than the Lyons manufacturer?—Yes, it is one penny all but the duty; that is, that the Lyons manufacturer, for that part which he imports in thrown silk, has it so much cheaper.

4219. Of the organzine which arrives in London, what portion of it is sent to Spitalfields for their manufacture, what portion to Coventry, and what portion to the rest of England?—Speaking of an average, except the last two years in which the

the importation has been so much greater, Spitalfields for some years past has consumed for the far greater part English organzine; our imports of thrown silks are mainly the Milan and Bergam, that is, Lombardy silks, of which a very small part is disposed of in Spitalfields, I should think not above one-sixth in Spitalfields, and still a less proportion where there is a common degree of activity in Coventry, and a common degree of activity in Spitalfields; I believe we sell ten bales of Lombardy organzines to Coventry to one in Spitalfields. That brings me back to the point, that Spitalfields consumes but a small proportion of Piedmont thrown silk, and consumes principally English organzine.

4220. Do you think nine-tenths goes to Coventry?—When there is a fair degree of activity the Piedmont are principally sold in Spitalfields, three-fourths of the Piedmont thrown are sold in Spitalfields; there were immense quantities sent in some years to Norwich; this depended upon what particular works were going on.

4221. Do you draw a distinction between the Piedmont and the Lombardy?—Yes; for example, in one year we sold one hundred bales of thrown silks to Norwich; the same year only fifty to Spitalfields, but the following year it was reversed; if speaking to the average, we say one-fifth of the thrown imported is sent to Spitalfields; that I think will be near the mark.

4222. Where do the other four-fifths go?—To Coventry principally.

4223. The largest proportion of foreign thrown silk goes to Coventry?—Yes.

4224. One-fifth to Spitalfields, and the rest is spread about to Norwich and Kidderminster and other places?—Yes; there is some sent to Manchester, but mostly of the finest description, to be mixed with cotton to hold the cotton threads together, to receive the drawback.

4225. The English weaver having 3*s.* 7*d.* more to pay than the Lyons weaver, can he possibly meet him in the foreign market without some bounty?—The Lyons manufacturer has a proportionably higher price to pay throughout the year for Piedmont organzine, for specific and limited purposes, than for the great bulk of his own produce, on which rests the very major part of his manufacture. The English weaver has likewise on some fractional part, on some proportion of his goods, to pay a higher price for the Piedmont than for the English organzine; for the English throwsters most frequently are found to work under protection, otherwise they would be overwhelmed. It must not be taken that our weavers pay generally a difference of 3*s.* 6*d.*

4226. Take the prices of Italian thrown silk in England for the year 1830 or 1831, what proportion per cent. of the price paid by the manufacturer does the import duty of 3*s.* 7*d.* bear?—I have made out a Table which comprises the prices of various descriptions of Bengal and China silks and Italian silks, both raw and thrown. This Table of comparative prices of various descriptions of silks, we fill up at the periods of the East India Company's sales. I commenced it in June 1824, after the period of our alteration in the import duties. In February 1830, this Table being for 26 and 28 deniers, Milan and Bergam organzines, which form a large feature in our trade, the average of that size was 22*s.* 9*d.*

4227. What was the portion of duty in that?—Three shillings and seven-pence, contrasted with the Lyons at 11*d.*; and I should mention that organzine silk here pays 3*s.* 7*d.*, at Lyons it pays 11*d.*; at Lyons tram pays 11*d.* likewise, here it pays 2*s.* We import, generally speaking, extremely small quantities of tram; the imports of the last four years have not averaged 40,000 lbs.

4228. Will you state the per centage which 3*s.* 7*d.* forms?—It varies according to the fluctuation in the prices, as may be seen by the following quotations of Milan and Bergam organzine of 26–28 deniers, taken from a paper before me. In June 1830, the price was 23*s.* 8*d.*; in October 1830, 24*s.* 4*d.*; in February 1831, 23*s.* 4*d.*; in June 1831, 22*s.* 4*d.*; in October 1831, 21*s.* 10*d.*; in February 1832, 21*s.* 9*d.*

4229. The Committee understand this all to be Milan organzine?—Yes; Milan and Bergam of 26 to 28 deniers; I could have taken a comparison with Piedmont, but that it forms so small a proportion, and the Piedmontese do not allow their silks to go out in raw; then there is another point of view connected with this, which I should wish to mention, that although the duty in France on tram and organzine is only 11*d.*, still as the throwster has the whole surface of French raw silk to work upon, and the exportation of that article is prohibited, he has all the advantage of the difference that exists between the price of Italian raws and French raws, which is very considerable; sometimes two or three shillings, sometimes

Mr.
Alexis J. Dorat.

1832.

times more. Although the French have only a duty of 11 *d.* both upon tram and organzine to protect their mills, their raws being frequently 1 *s.*, 2 *s.* and 3 *s.* lower than they can import from Italy, their throwsters have all that difference, as a protection beyond the duty of 11 *d.* a pound both on tram and organzine. Upon this very point, I have mentioned before, that every pound of Italian raw silk imported into France, bears about 2 *s.* or 2 *s.* 1 *d.* charges, so that the French manufacturers start with an advantage of about 2 *s.* 1 *d.* on their raw silks; and *primâ facie*, there is thus an advantage to them of 2 *s.* 1 *d.*, supposing the raw silks in Italy and in France both grown on the same terms; but beyond that they have those enormous variations alluded to before in respect of 21–22 deniers French organzine, which was 17 *s.* 2½ *d.* to 17 *s.* 6½ *d.*, when the import cost at the same period of 23–24 deniers Piedmont at Lyons, would have been 20 *s.* 6 *d.* to 21 *s.* The same protection which our weavers require, our throwsters require. On this very point I am anxious to show that the throwster in this country does his work cheaper, “*relatively*,” than the French and Italian throwsters.

4230. Do you mean to say that you would give to the throwster the same protection for the Bengal and China silk he throws, as for the Italian?—Bengal and China silks are only imported in a raw state; and the expense of working a pound of Bengal and China, is not more than one-third, on an average, of that of the fine Italian; there is so little labour in working those coarser descriptions.

4231. As it appears by the prices you have given, that the 3 *s.* 7 *d.* duty, when the price was 22 *s.* 9 *d.*, amounts to 15 per cent., and when at 21 *s.* 9 *d.*, it amounts to 16 per cent. must not that affect the weaver by increasing the cost of the material to him, and prevent his competition with the French weaver?—Of course partially.

4232. Will it not to the whole extent?—No, not to the whole extent, because we consume a small proportion only of foreign thrown; and we have seen that the French manufacturers only import a small proportion also of the thrown silk that they consume. We must take the surface on the French side, and on this side; we must see what is the bulk of goods that France comes upon us with, and what is the relative quantity made here; besides which, as I have observed before, our throwsters work mostly under protection; and again, the duty on tram is only 2 *s.* in this country; goods are made half of tram and half of organzine. Moreover we must notice here, that the purchaser of foreign thrown, has the advantage of the debentures of 3 *s.* 6 *d.* on organzine, and 2 *s.* on tram; for which he can obtain some market value, if he does not use them himself for export.

4233. You have been asked whether the English weaver would not be afraid of coming into competition with the French, do you mean in this market, or in the foreign market?—Not at all in this market, if we are not pressed upon by foreign competition.

4234. At present there is no competition with the French in any foreign market, is there?—No, except those goods we export with an enormous bounty.

4235. If the thrown silk was admitted here free of duty, do not you think that the English weaver would still be enabled to meet that competition in this market?—The duty laid upon thrown silk is only intended as a protection to one of the brethren in the silk trade; and I have endeavoured to show before to this Committee, that the throwster in this country does his work as cheap *relatively* as all his brethren in the trade, and that he does it even cheaper, which can be accounted for: (and I would feel pleasure in following the subject step by step) so that we shall find that the work is not relatively done cheaper abroad. If we dismiss the throwster, then we must next dismiss the dyer, then the warper, and the winder successively; and then we shall come to the whole weight of the question, which is, that the labouring classes in this country require certain protection from the beneficent hand of the law, and that without that protection they cannot sustain competition.

4236. If the duty be taken off the foreign thrown silk, would that enable our weavers to meet the French competition in this market?—No.

4237. Would it not have the effect to destroy the throwster?—Yes; it would be an imaginary advantage, for we should be entirely in the hands of the foreigner for our supply of thrown silk, and should have to pay variations incident on various contingencies, instead of a competition between throwster and throwster, in this country, between Congleton, Macclesfield and Somersetshire, and various other parts of the country, which is always active enough, and takes care that the profits shall not be too high. It is not only a competition amongst our throwsters, as it stands at present, but between our throwster and the foreign throwster; the effect of which is to supply our manufacturers with thrown silks, at the lowest possible point

point under the relative circumstances of this country, in regard to wages, &c. Laying aside the desolation, which the withdrawal of a protecting duty for our throwsters would occasion on that important branch of our silk manufacture, the manufacturer himself (speaking abstractedly) would lose many important advantages, attendant on his having the throwing done in this country, and we should expose ourselves to all contingencies of foreign supply, and occasionally to differences much more considerable, than the fractional one, which it causes on the total cost of the goods; I say fractional, because it is in fact, speaking comprehensively, much less than would appear from the rates of 3*s.* 6*d.* on organzine and 2*s.* on tram; all which points are susceptible of minute developement.

4238. Supposing we were entirely dependent upon the foreign throwster, you think there would be greater variations in the price than there are at present?—Much greater occasionally.

4239. Do you find in practice, that the Swiss who depend altogether on the foreign throwster, are exposed to great changes?—They are exposed to all the variations; but being nearer the sources, they are not liable to the same contingencies.

4240. Do they not receive their silk cheaper than we do?—They have nothing to protect; the wages in Switzerland are cheaper even than those of France; they are so cheap, that with their cheap labour they send large quantities of their own plain manufactured goods and plain ribbons for sale in France.

4241. If the duty on Italian thrown silk be further reduced, will there be an increased importation of Italian thrown silk?—Yes.

4242. What proportion of the thrown silk which Italy exports does she send to England?—A very small proportion.

4243. Can Italy with her present mills and machinery throw more silk than she now does?—Certainly, considerably; beside that, there is no difficulty in establishing mills in Italy.

4244. If Italy should send more of her thrown silk to England, is it likely she will send as many raws as she does?—No, she will retain still more of the higher descriptions of raws than she does at present for her mills.

4245. What are the advantages which you think the Italian throwster possesses over the English throwster, either in respect of wages or in any other respect?—The wages in Italy are considerably lower, I cannot say exactly how much; but I have been told that a common labourer, with 10*d.*, considering the lower prices of food, the climate and the habits of the people who use very coarse bread and garlic, &c. that 10*d.* is relative to 30*d.* in this country.

4246. Do the Italians keep their best raws to work at home?—Decidedly; many of them never part with their raws. An enormous difference in price might extract some portion of those filatures which are invariably retained, but even then, I believe there are some filatures, a large proportion of filatures, which never come out, being exclusively reserved for the use of their own mills, the regular employment of which, and with the same silk from year to year, is to them of the most material importance.

4247. Does that custom operate to a sufficient extent to be an advantage to them?—It does; it gives an amazing advantage to them; as they take the silks from their filatures they dry them and put them carefully at once into large boxes; and from those boxes they are taken out as required all through the year, and put at once on the mill, so that not a thread is broken, nor any other deterioration whatever occasioned.

4248. Since the reduction of the duty on thrown silk in 1829, has there been a tendency to the importation of a larger quantity of thrown silks and less raw?—Yes; I find that in 1829 the quantity of Italian thrown silk, as compared with Italian raw, was only 20 per cent.; and in the succeeding year, 1830, the quantity increased to 36 per cent.; and in 1831, the quantity of thrown silk, still in relation to Italian silk, was 50 per cent., an increase of such magnitude I do not find any example in any previous case.

4249. What proportion of the thrown silk imported is Piedmont organzine?—It varies much; some years, one eighth, some, one quarter, &c.

4250. Will not a further reduction of the duty, and a consequent increased importation of foreign thrown silk which you have stated you expect will happen, have the immediate effect of throwing out of employment some of the mills of this country, and of eventually transferring the throwing of Italian silks from this country to Italy?—Yes.

4251. Will the British manufacturer be as well supplied, in your opinion, when

Mr.
Alexis J. Dorat.

17 April,
1832.

Mr.
Alexis J. Dozat.

17 April,
1832.

he is wholly dependant on foreign thrown silk, as he now is having the thrown silk both of Italy and England, as well as a general choice of raw silk which he can have thrown to suit his own purposes?—If such a thing were to take place, it could not take place without the demolition and destruction of the throwing interest of this country, which is a most essential and important part of its silk manufacture. If it were to take place, we should lose the immense advantage, which our manufacturers possess, in having near them, their right hand; that is, the throwster here; and we should thereby expose ourselves, as I have before stated, to all contingencies. In case of war, or of any interruption, we should then unavoidably depend upon the foreign throwster; we can put up a loom, but cannot put up a mill, in an hour.

4252. Are the prices of silk in France generally higher or lower than in England, independent of the duty?—The prices of silk in France are decidedly lower; that is to say, that every pound of Italian raw silk, imported into France, pays about 2s. charges; and when a depression takes place in the French manufactures, the silk of their own produce sinks under the level of the Italian raw, making a still greater difference.

4253. Do you attribute the fact of silk being lower in France than in England to the circumstance of France herself producing a large proportion of the raw silk used in her manufactures?—Yes; she has every advantage that Italy can possess in regard to the cultivation of silk; she has the whole produce of Italy to select from at first hand; and in addition to that, she has *exclusively* the whole of her immense home growth, which is, as a whole, of excellent quality, and rather preferable to that of Italy, particularly in regard to texture and brilliancy.

4254. Is Italian raw silk of the same quality, thrown as well in England as in Italy?—Mr. Royle's mill at Manchester, and Mr. Ward's mill at Bruton, Somersetshire, with all their care, and all the perfection of their machinery, do not produce better organzine than we receive from good mills in Italy, where the mills are more bulky, but still producing excellent organzine. All we have been endeavouring to attain, and in which we have succeeded for a number of years past, has been an equality in throwing with those mills, which are called by many over bulky.

4255. Are the Committee to infer, that in your opinion raw silk is thrown as well in England as in Italy?—Yes; there are good and indifferent mills in this country as well as in Italy, but there is no disability in this country.

4256. Is it customary to buy raw silk in Italy, or does it come to this country on consignment?—I can only speak of our own house, in which I have been ever since 1798, and we never have imported, to my knowledge, a single bale of silk on our own, or on half account, either thrown or raw.

4257. Do we get any raw silk from Piedmont at all?—None whatever, its export is strictly prohibited.

4258. Can you state what is the comparative price of Italian thrown silk, and Italian silk thrown in England at Mr. Royle's or Mr. Ward's mills?—I cannot, exactly; I can do it only approximately; we do not sell English organzine; I can only state what foreign organzine sells for.

4259. The French grower of silk sells only to the French manufacturer; so long as he supplies him with all he requires, of course none need be imported from Italy?—Certainly not, except as I have mentioned before, some portion of foreign thrown, principally Piedmont organzine for particular purposes, and some small quantities of foreign raw silks, principally Levant coarse silks, for particular purposes also.

4260. That might continue for some time, might it not?—Without doubt.

4261. By possibility it may continue, if the growth of French silk should be increased in quantity there will be no necessity to import from Italy at all?—I can produce some letters showing, that every year the quantity of her produce increases, and her imports decrease; and we should not lose sight of the fact, that her produce, as a whole, is not only excellent, but of a fine standard.

4262. Can you show, by Table, the progressive imports of Italian silk into France?—I have given that for the years 1826, 1827, 1828 and 1829. Ten or twenty years ago the quantity of Italian silks imported into France was much larger; the quantity imported gradually diminishes, I understand, each year.

4263. Are you able to state, whether the silk manufacture in France, as a manufacture, has decreased or not?—I am not able to state that exactly; but I have every reason to believe, that in the last ten years it has, on an average, increased materially.

4264. It

4264. It is your opinion, that the silk may be very much lower at Lyons than in Italy?—Certainly; I have mentioned before, as an example of great depression in silks the produce of France, that in February and March, of last year, that good French organzine of 21–22 deniers, was only worth 17*s.* 2*d.* and 17*s.* 6*d.*, that is 27 francs 50 cents., and 28, with the usual discount of 12½ per cent.

4265. Has the price of silk in Italy any thing to do with the price of silk in France?—Not as a whole, but partially only, that is in regard to small quantities, and mostly of particular descriptions, for particular purposes.

4266. What do you think has been about the average difference?—When good thrown silk of 21–22 deniers was at Lyons, 17*s.* 2*d.* to 17*s.* 6*d.*, I believe the same quality here was worth 23*s.* 6*d.* to 24*s.*

4267. That is an extreme case, is it not?—I mentioned it as an extreme case: I have not taken my comparative statement from it, but it was in my memory, and I referred to it about a fortnight ago; I went to our old book of prices current, and found those prices.

4268. What do you think is about the average of the difference of price between Lyons and Italy?—I cannot say at this moment, but I might easily by reference.

4269. Do you think it is ten per cent.?—Upon the raw silk it is often more than ten per cent.; the duties and import charges upon it into France are more than that, although the market prices at Lyons of French raw silks come occasionally in contact with those of Italian raw silks.

4270. What do you think is the difference of price at which the manufacturer in London and in Lyons is supplied with the material necessary for his manufacture?—The difference will vary from three to four, five and six shillings and more; I am alluding to thrown silks; the thrown silk made in France is with extremely small exceptions, made from raw silks of their own produce.

4271. Do you think that the duty on Italian silk imported into France raises or not the price of French silk?—I do not think it does; for they will only pay for those specific articles they want, their manufacture rests essentially upon their own produce in the first instance; and they have all the advantage of the fall, but no inconvenience from rise, for when they come occasionally in contact with Italian silks, they have them a little under us.

4272. To what extent does the duty levied on Italian organzine silk imported into this country affect the price of organzine thrown here?—That is a question which has been answered before; it is a complex question; if you look at figures merely, you would say it affects it, 3*s.* 6*d.* with regard to organzine, and 2*s.* on tram, but that is not the case; we import usually but a small proportion of foreign thrown silks, and it is the same at Lyons; but the great mass of our manufacture is carried on with British thrown silks, worked at rates under the protection; for although the protecting duties on thrown silks have been reduced of late to a miserable point (jointly with the effects of the debentures) for the English throwster, he has participated beyond that, in the calamitous pressure of foreign manufactured silks, on every constituent part of our silk manufacture, of which the throwing forms a very important branch. On this subject I shall have the honour to submit hereafter some particulars to the Committee.

4273. You mean to say we have no raw Italian silk imported to be thrown in England, of the same quality as that thrown in Italy?—No, that is not so.

4274. Take the same quality of thrown silk imported into England as that thrown in Italy, and state the effect the duty on the organzine thrown in Italy when imported into this country will have upon the price of that imported raw and thrown here?—Three shillings and sixpence is the duty, but it does not operate to the extent of 3*s.* 6*d.*

4275. To what extent then does the duty on foreign organzine thrown silk affect the price of British organzine?—To answer this, we must see what difference exists between the relative quality of raw and of thrown silk in this country; I will go to the comparison between Bergam and Milan raw silks of four to five cocoons, and thrown silk from the same countries of 26–28 deniers. I began this statement many years ago, I placed Milans of 4–5 and 5–6 cocoons against 26–28 deniers, but the more exact comparison should be between 4–5 cocoons and 26 to 28 deniers. I have now made a statement reducing this Table alone to 4–5 cocoons Milans and Bergam raw silk, against 26–28 deniers organzine, which correspond as nearly as can be; I reckon about six deniers to the cocoon; multiplying the four-and-half by six will give 26. I find that in February 1831, the
678. H h average

Mr.
Alexis J. Dorat.

17 April,
1832.

Mr.
Aleris J. Dorat.

17 April,
1832.

average price of Milan and Bergam raw silk was 18s. 1d. taking the average of 26–28 deniers thrown silk, Milan and Bergam at the same period, I find that the average was 23s. 4d. each at five months credit; I find the difference between these two prices is 5s. 3d. The value of the debenture has varied greatly, from one penny to 6d. and 7d. which is to be deducted, because the manufacturer who buys a bale of foreign thrown silk is entitled to a debenture; the value of the debenture is 3s. 6d., but the export is so little that its value in the market is from one, two, three, four, and up to seven pence. I have taken the average market value of it at four pence; I deduct 4d. from the difference of 5s. 3d. that will leave 4s. 11d., which remains for work and waste, interest and profit, besides the risk of alterations in the market, whilst the raw silk is under work, risk of the buyers and some charges for agencies. If the manufacturer comes to us to buy foreign thrown silk it is all at hand; we have only to take it out of dock; in the course of three or four hours it may be had up. The man who buys raw silk to work it into organzine or tram, must take all the chances of the market; and no man will run the risk without some consideration for that particular. Then the ultimate difference is 4s. 11d. (it has even been reduced to 4s. 5d. from January of this year), for work and waste and chance of market, and a comparatively inferior choice of raw silk. Besides this we make rather more waste in this country than they do on the spot; if from 4s. 11d. we deduct the waste, say 10d. or 11d., there remains 4s. a pound (and even only 3s. 6d. if from 4s. 5d. as just mentioned) abstractedly of all other considerations. The rate of 4s. per lb. is considerably lower here relatively than the charges for similar work in France and in Italy respectively; that can be demonstrated step by step; and on this subject I shall have the honour to submit to this Committee, two Statements marked (D.) and (E.) furnished in April 1829 at his request, to the Right honourable Vesey Fitzgerald. The rate of 4s. per pound has been obtained only by extremely low and wretched wages; the same will be found in regard to weaving, warping and winding; the same in the dyeing, which requires much manual labour; the quantity of manual labour in dyeing properly, so that the silk shall be neatly turned out and retain its colour, is very considerable; the same exists in regard to every process of the silk manufacture; there are analogies through every part of it.

4276. Do you mean to say that we actually do manufacture cheaper?—Relatively cheaper; that is to say, a labouring man in Italy lives, as I understand, on tenpence compared to thirty-pence, in this country; and those proportions have been stated to this Honourable Committee by a gentleman who went from Manchester to make inquiries into every thing relating to the throwing of silk in Italy; he said the inquiries he had made, led him to the conclusion that the difference was as three to one. Then there are other elements in this question; we suppose that our steam engines give us a great advantage of power; water power costs a great deal in this country; for example, a mill that shall turn out a certain quantity of silk, will occasion an expense of one hundred pounds for turning power, whether by steam or by water, or part one and part the other. In the north of Italy, all that is to be done, is to direct the currents of water; there are so many small rivers come down from the Appenines and the Alps, that it will cost them in the proportion of 1d. to 5d. per lb. of organzine, that is 20l. per annum, as compared with 100l. with us. We have here coals; and for some branches of industry it is to us an incalculable advantage; but this very point, in which it is imagined we have a great advantage in silk throwing, that is the mota, the moving power, costs in Italy in the proportion of 1d. to 5d. here.

4277. They have more mill sites than are occupied?—Yes; there is a stream in the neighbourhood of Turin, which is divided to irrigate a large portion of that district; it is divided off to various sites in small currents, at a very trifling expense; the whole of the north of Italy is one receptacle for water.

4278. Are you able to give the Committee information as to the quantities of silk imported from our own possessions abroad?—Yes; our importations of Bengal silks, exclusive of China, I think form about one-third of the whole of our consumption of raw and thrown silks, exclusive only of foreign waste.

4279. Has there been any improvement in the quality of silk imported from Bengal since you have been acquainted with the silk trade?—I apprehend that that answer will occupy more time than the Committee can now afford me, I beg to be permitted to defer answering that question, as the Committee is going to adjourn.

[The Witness delivered in the following Paper.]

Alexis James Dorat.

Query—What is the Charge of the Smuggler on Plain Goods?

Mercurii, 18^o die Aprilis, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. *Alexis James Dozat*, called in; and further Examined.

4280. YOU stated in your examination yesterday, that early in 1831, the market price of good French organzine of the size of 21–22 deniers, was 17s. 4½d.; have the goodness to state what the cost of Italian raw silk of the same kind would have been, if imported into Lyons at the same period?—Seventeen shillings and four-pence.

Mr.
Alexis J. Dozat.

18 April,
1832.

4281. The price in fact of the two articles would have been precisely the same?—With this difference, that the raw silk with which the organzine silk in France was made, was rather superior to the quality of Italian silk on which I have made the calculation.

4282. In point of fact, French organzine of rather superior quality as to raw silk, was at the same price there, within one halfpenny, of the Italian raw silk at the same period?—Yes, the 17s. 4d. as compared with 17s. 4½d.

4283. How do you arrive at the fact of the price of Italian raw silk in Lyons?—At that period there was no Italian raw silk consumed in France to my knowledge; the French silk was so considerably cheaper, the export of the French silk not being allowed, they worked upon that; that is, upon a produce of 4 to 4,500,000 lbs., mostly of fine descriptions.

4284. Do you know whether at that time there was any Italian raw silk in the city of Lyons?—There was, in transit for this country; but it was not touched by their manufacturers.

4285. It is supposed that because France finds it necessary to buy some Italian silk of a particular description, and for particular purposes, the price at which that silk is sold in Lyons must have an influence, and must regulate the whole of the silk of France of the native growth sold in Lyons; are you quite certain that such is or is not the fact?—I have answered that question before; if it is the wish of the Committee, I will go again through the subject; it forms one element of the question; a certain quantity of Piedmont organzine is imported throughout the year for particular purposes, but it forms but a small part.

4286. Do you know whether that has sold at a higher price than French silk of similar quality?—Yes, for those particular purposes; but the great bulk consumed in France is sold considerably under; I understand the consumption of France is, upon the average, 5,500,000 lbs.; the importation of Italian thrown silk, principally Piedmont organzine, about 600 to 700,000 lbs.; the importation of foreign raw silks, 350 to 400,000; and of those 350 to 400,000, a small part only is fine silk, the large bulk is Turkey silk and coarse Neapolitan and Venetian silks; I believe upon the average the quantity of fine Italian silk consumed in France, is about 150,000, as compared with about 4,500,000 lbs. of their own growth.

4287. Are you aware whether there is any importation of marabout into this country?—I am not aware that there is; I do not know that it is thrown in Italy.

4288. What do you consider to be the various degrees of competition against which our silk manufacturers have to contend?—I had the honour to state yesterday abstractedly, that taking the standard, which I consider to be but fair moderate wages for the description of manufactured silks, I have been alluding to in all my calculations, that is gros de Naples, 10 to 1100 three double neatly made, at the moderate wages of 8½d. for weaving, and other work in proportion, would be 3s. 1d.; whilst when we manufacture at the rate of sixpence per yard for weaving and other charges in proportion, then it is depressed to 2s. 8d. per yard. I have made a comparative statement of the cost of the same article with France, and I find the following variations. When they work at moderate wages, and at the same time at the highest relative point for the cost of the raw silk, the comparative point between Lyons and this country, that is the relative price under those circumstances, is 2s. 4d. and three-eighths, as compared with 3s. 1d. with us; then they descend rapidly if there is for some time a want of orders for America, or any other particular cause of depression, a war on the Continent, or any internal disturbance in France, upon any occurrence which checks the vent of their goods, they reduce their price of weaving, and their price of throwing, and of every operation; and

Mr.
Alexis J. Daxat.

18 April,
1832.

the silk falls also in price gradually; and they go beyond that, they will do what the manufacturer will do here to get rid of their goods; they will sacrifice the items of incidentals, interest and profit. Taking into consideration all those circumstances to which they are continually exposed, I find the difference to be from 2 s. 4 d. and $\frac{3}{4}$ ths down to 1 s. 9 d. $\frac{1}{2}$ ths.

4289. Then it is comparing 3 s. 1 d. down to 2 s. 8 d. in this country with 2 s. 4 d. $\frac{3}{4}$ ths. down to 1 s. 9 d. $\frac{1}{2}$ ths in France?—Yes.

4290. You have stated, that under a certain state of things silk falls in Lyons as well as labour and other things. If the grower of silk in France were allowed to export that silk would it sell so low?—It would not; it would in some measure equalize itself; still the French would retain a great advantage over us, as they have no charge on their own silk, while every pound they import from Italy has about 2 s., and we about 2 s. 2 d. besides our being more distant from the source; consequently they would yet start with a comparative material advantage of about 2 s.

4291. You conceive it would be a very material point if we could induce the French government to allow us to have a free importation of their raw silks?—Certainly, in many respects; but there are many points of importance in the whole of this question; and it is a matter of such great moment to France to have the possession of our vast and rich markets, both under ordinary and contingent circumstances, that they might possibly be induced to that course if pressed so to do by an apprehension of losing such benefit; but there are so many other causes of disability besides, with respect to this branch of industry which requires so much of manual labour, and hence employs such considerable numbers of our population, that the privation of so good a material, and at prices comparatively low, forms one part only, among many, of this momentous question. And we could not fall into a more baneful error, than that of allowing ourselves to be drawn into such an arrangement; whereby we should confirm, as it were, by our own act, the state of misery in which has been placed, of late years, a manufacture of such vast importance, in every sense, to Great Britain; a manufacture which operates as a direct and most beneficent transfer from the superfluities of the rich, to industrious employment.

4292. You think that the French manufacturer considers it a very material point if he has sufficient influence with the French government to prevent their acceding to our wish upon that subject?—It has often been a subject of consideration, it was so two or three years ago, and again three or four months ago.

4293. The effect of keeping it at home is to compel the grower to submit to the reduced price whenever they have a bad trade?—Yes; a fall in wages takes place, and the price of silk falling to, they work therefore with some degree of safety; but if good times do not speedily return they make some sacrifice on those low cost prices of their goods, as I have before stated, and this accounts for the intensity of their pressure on our industry, to degrees of extreme misery, under contingent circumstances with them.

4294. You do not imagine that if we had the finer raw silks of France imported here, there is any thing to prevent our manufacturers from making as good an article of any sort?—No, there is a peculiar taste in France; but in respect of quality there is no doubt we can make as good articles; there is every possible means in this country to do every thing which can be done there; it is not want of ability in our manufacturers and labourers; the question is one of wages, that is the basis of all; the French materials form one part.

4295. The question referred to the possibility of the manufacturer in this country to have the best quality of French silks, from their skill in making as good articles in every respect as the French?—I repeat, that our manufacturers and their labourers, are capable of doing every thing that is done by foreign manufacturers; but our progress in improvements has been, as a whole, considerably impeded by the discouraging and calamitous effects of foreign imports; we have been compelled, for the very major part of our manufacture, to confine ourselves to plain goods, and in these to *retreat* mostly on low, and very low descriptions, for the sake of cheapness, which classes afford but small amounts of wages to our labourers.

4296. Do you consider the silk manufacture exotic?—Not at all; I find in cotton only one-nineteenth part is the produce of our Colonies; whereas of the silk, one-third is the produce of our Colonies.

4297. To what manufacture is the silk which is grown in our own possessions applied?—Very principally to low and coarse goods.

4298. Can

4298. Can you, at all, state the proportion of wages paid upon the silk grown in our own Colonies and the silk grown in Italy?—The proportions, I should suppose, from inquiries, to be from 5 s. to 12 s. per lb. on the Bengal, and from 14 s. to 40 s. and more per lb. on the Italian.

4299. Can you state the relative increase, since the alteration of the duty in the importation of Italian, with other silks?—Yes; in 1826 the quantity of foreign thrown silk, as compared with the quantity of Italian raw silks, was 40 per cent.; in 1827, 31 per cent.; in 1828, 29 per cent.; in 1829, it fell so low as 20 per cent. The last alteration of duty took place on the 2d of June 1829, from 5 s. to 3 s. 6 d. on organzine thrown silk, and from 3 s. on tram to 2 s.; in addition to which the debentures, to which I have often had occasion to allude to in the course of my examination, have been granted from that period to the purchaser of foreign thrown silk. I have stated, that in 1829 the number was 20 per cent., that is the relation between foreign thrown silk imported into this country and Italian raw silk. I find, that the following year that ratio was increased to 36 per cent.; and the following year, 1831, to 50 per cent.

4300. You refer to the relative proportions of raw and thrown silk imported from Italy; the question referred to the increase of the quantity of Italian silk imported into this country since the removal of the duty between the importation of Italian silks and other silk?—In 1824 and 1825 the importation of Italian raw silk, as compared with other silks, was 75 per cent.; in 1831 that proportion was 52 per cent., showing a greater relative proportion of Bengal, China and Turkey silks, that is, a much greater proportion of coarse silks in 1831. In 1824 and 1825 the quantity of Italian thrown silk imported was 38 per cent. relatively with Italian raw; in 1831 it was 50 per cent.

4301. You would infer from that, that our manufacture as to quality, has certainly declined?—They have worked on a much lower standard; and beyond that, silks of similar standard have been applied, of late years, to much lower classes of goods, on an average.

4302. Has not the China and Bengal improved of late years?—I think that our importation of China silks of late years has been, on an average, of a finer standard, and we apply them very usefully. With respect to Bengal silk it is not so; taking the average of the last ten years, and the previous ten years, as to Bengal, I think there is not any great alteration; some filatures have improved and others may have gone back.

4303. Is there any doubt that since the year 1825 the proportion of coarse goods made in the silk manufactures of this country has been relatively much larger than at any former period?—Incomparably larger.

4304. Has that proportion been gradually increasing?—It has been gradually increasing.

4305. Has not the effect of that been, to employ a much smaller number of persons to produce the same number of yards?—Very much so; I gave in a statement the second day I was before the Committee, showing that one kind of silk gave ten times the labour which the other did, so that one pound of Italian silk worked into some high branches of the manufacture, gave ten times the amount of wages of labour than coarse Bengal, applied to low works. I mention that not as an extreme point, but as a conspicuous point, because it occurs on a large surface.

4306. Has there been a diminution in the price of silk in the home market, corresponding with the reduction of duty on imported thrown silk?—Yes; every time that the duty has been reduced, the difference between raw and thrown silk has been diminished, even beyond the amounts of the respective deductions in duties; and there has been a greater proportionate quantity of thrown silk imported during the last two years. I have a statement made from year to year since 1824, of the comparative points between a certain quality of fine Italian raw silk, and a certain quality of foreign organzine silk; the difference has been this, applying it to the Milan and Bergam raw silk of 4-5 to 5-6 cocoons, and Milan and Bergam organzine silk of 26 to 28 deniers, the results are as follows: 11 s. 3 d., 13 s. 9 d., 18 s. 9 d., 12 s., 10 s. 9 d., 9 s., 7 s. 3 d., 7 s. 5 d., 7 s. 6 d., 7 s. 2 d., 7 s., 8 s. 5 d., 6 s. 8 d., 7 s. 1 d., 7 s. 1 d., 7 s. 3 d., 6 s. 1 d., 6 s. 2 d., 6 s. 9 d., 6 s. 5 d., 5 s. 7 d., 5 s. 4 d., 5 s. 4 d., 5 s. 1 d.

4307. Those are the differences between raw and thrown?—Yes; from June 1824 to April 1832, both inclusive, specified at distinct periods three times a year. I should observe on this subject, that from June 1829, in addition to those differences so considerably diminished, that the debenture comes against the British throwster;

Mr.
Alexis J. Dorat.

18 April,
1832.

throwster; though the debentures are worth nominally 3 s. 6 d. they have been sold in the market from 1 d. to 7 d., I will take the average at 4 d. which will come pretty near the mark. The manufacturer who purchases the foreign organzine, has the benefit of the debenture; he has it in two ways; if he exports he uses it; if not, it is a marketable commodity.

4308. You have alluded to the lamentable and overwhelming pressure of foreign competition in the silk manufacture, the effect of which has been to reduce the wages of the labour to a low and wretched rate; have the same reductions taken place in regard to other manufactures?—No, they have not; I will take as a relative point, one I have frequently alluded to. It appears by statements I have submitted to the Committee, that from 1815 to 1830 the difference in the amount of wages per pound weight of cotton wool, has been about 50 per cent.; but those reductions have not been absolutely in the rate of wages, but composed of various elements; one part has arisen from reductions in the rate of wages to our labourers, another from gradually larger quantities of cotton exported in a spun state only to the Continent, &c. which have become very considerable of late years; in addition to these, considerable quantities of work have been done in the cotton manufacture with power looms, diminishing the amount of wages; so that if the whole range of diminution of wages which has occurred in the cotton trade from the manufacture of one pound of cotton appear as 5 s. to 2 s. 6 d. from 1815, 1816 and 1817 to 1830, that diminution has not only been gradual during that period, but composed of various elements; whereas the diminution of wages in the silk manufacture has taken place entirely since 1826, that is, subsequent to the periods of 1821–1823 and 1824–1825. I take the surface of the country, and find, that whether I take the average wages of Spitalfields, or the average wages at Manchester, or at other silk manufacturing places the same relation, with some variations from year to year, on the goods manufactured, exists. I have taken it in my various statements in the ratio of 10 $\frac{1}{2}$ d. to 6 d. on plain goods, but I find that I have underrated it.

4309. You have stated that the wages in the cotton manufacture began to decline from the year 1815, did the wages in the cotton manufacture decline at Manchester from 1815?—I believe so, and prior.

4310. Did they decline in the silk trade from 1815?—I am not aware that they did; there were some trifling fluctuations, but I believe the wages in 1821, 1822, 1823, 1824 and 1825, were the same, or as nearly the same as possible, as in 1815, 1816 and 1817.

4311. So that that proves that the wages in one branch of trade in the same town may decline, and not in another?—I will even go further, and submit that even in the same branch of trade there is no equality of wages. I understand from minute inquiries I have made, that the wages earned by a man in the cotton spinning mills, are from 18 s. to 21 s. per week, and that the price of weaving in the same town and in the same street, whether by power or by hand loom, is from 6 s. to 7 s. and 8 s. a week, as compared with 18 s. and 21 s. I understand that in spinning cotton, our machinery gives us immense advantages; the spinning of cotton is performed almost as a metamorphosis by the extraordinary power of our machinery, and we export immense quantities of cotton yarn to foreign nations; whereas the looming, whether by hand or by power, depends much more upon manual labour. Machinery has immense power in the conversion of cotton wool into yarn. We export upwards of sixty millions of pounds per annum of this article, from which large quantities of goods, manufactured by foreign nations with cheap labour, meet in various parts of the world our own goods, although the looming part of our work has been done at such very low rates of wages; and that on the spun cotton sent to them (on which our labourers have had good wages,) the foreigners have had to pay various charges of agency and transmission. So that, notwithstanding all those peculiar advantages which we possess in this manufacture, in its very basis and very important parts, we meet at every step the ultimate effects of cheap foreign labour, whether the looming abroad be done by hand or by power. If we are thus pressed upon with regard to a manufacture in which we possess such paramount advantages of every description, and which in the aggregate so greatly depends upon the operation of machinery; what must be our relative situation with France, &c. in regard to the silk manufacture in which our foreign competitors possess material advantages, and in which manual labour obtains of necessity, in such considerable ratio, as ten to one with machinery in its most improved application. With respect to the latter point, I made three years ago, at the request of the Right honourable Vesey Fitzgerald, some statements, showing the dissection of every process and charge in the

the silk manufacture. I have had copies of those Statements printed for this Honourable Committee, and I beg leave to submit them to their consideration (*Vide*, Tables Nos. 8 and 9, marked originally D. and E. April 1829); and also the printed Paper No. 18, which I mentioned on the second day of my examination had been destroyed by an accident under the Lithographic press.

[*The Witness delivered in the same. Vide Papers Nos. 8, 9 and 18.*]

Mr.
Alexis J. Daxat.

18 April,
1832.

Appendix (F.)

Jovis, 19^o die Aprilis, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. *Alexis James Daxat*, called in; and further Examined.

4312. HAVE you any observations to make on the prices of silk at Lyons, in addition to your former evidence?—I observed, in the course of my examination yesterday, that in the early part of last year the market price at Lyons for French organzine of 21–22 deniers was 17 s. 4½ d. on the average; and that the importation of Milan and Bergam raw silk of the same size, that is the same fineness, but not of quite so good a quality, would have been 17 s. 4 d. I have looked this morning at our own price currents, that is to the price currents in London at the same period, for the same description of Milan and Bergam raw silk, and I find its price 18 s. on an average, at the usual credit of five months, equal to 17 s. 6½ d., deducting the customary discount of 2½ per cent. for cash. I have thought it right to state this to the Honourable Committee, in order to complete this view of the subject. I shall only add, that in looking through also the quotations received from Lyons for the same period, I have found various quotations of French raw silks, which fully corroborate the low prices of French organzine so distinctly quoted to us by two respectable houses at Lyons at that period. But I will not further detain the Committee on these particulars.

Mr.
Alexis J. Daxat.

19 April,
1832.

4313. Will you state the price of organzine in London at the same time?—I do not know exactly what was the price of English organzine at that period, but the average price of Piedmont and of Milan and Bergam organzine of 21–22 deniers was then 24 s. 8½ d. at the usual credit of five months, equal to 24 s. 1 d. for cash.

4314. What was the price of French raw silk of the same quality at the same period at Lyons?—I find the range of prices that may be referrible to the same quality, rather higher yet, 14 s. 6 d., 15 s. 9 d., 14 s. 2¼ d., 15 s. 1½ d., 13 s. 10½ d. and 13 s. 3 d., averaging 14 s. 5½ d.

4315. How many deniers weight is that?—Eight to ten deniers against eight to ten deniers, 10 to 12 deniers, 10 to 12 deniers, 9 to 10 deniers, and 10 to 11 deniers; that is, corresponding to rather a finer standard than 21–22 in organzine.

4316. You have stated that the consumption of foreign thrown silk in France is 700,000 lbs. per annum, principally Piedmont organzine and low Italian trams, are you to be understood to say, that this is the average consumption of foreign thrown silk, and that much less of foreign raw silk is consumed in France during the periods of frequent occurrence in which there exists some considerable depression in the prices of organzine worked in France from raw silk, the produce of their own growth?—The quantity just mentioned of 700,000 lbs. of foreign thrown silk imported into France, has reference, as I have upon a previous occasion observed, to the average of the years 1825, 1826, 1827 and 1828; the respective quantities were in 1825, 741,000 lbs., in 1826, 755,000 lbs., in 1827, 740,000 lbs., and in 1828, 534,000 lbs.

4317. Can you state how you get at the fact of that importation?—By the French official Custom House Returns; the gradual improvement taking place in France in her throwing mills, some of which have attained great perfection, and the cultivation of silk gradually increasing in that country every year, I have reason to believe that the importation of foreign thrown silks has been less on the average during the years 1829, 1830 and 1831, than during the former period.

4318. Have you any Return?—I have not the Returns of the last three years; and with respect to the second part of the inquiry, I should answer, that the Pied-

Mr.
Alexis J. Dozat.

19 April,
1832.

mont organzines imported into France are in general applied to specific purposes to which they are more particularly suitable; many of those purposes are supplied by French organzine when some material difference exists between the price of French and Piedmont organzines.

4319. Do you consider the general trade in silk in France, including the manufacture, to be in a state of improvement, or the reverse?—As far as I can answer the question, I will do so. In the figured and fancy branches, and in the higher classes of plain goods, they are, I understand, without rivals. Then with respect to the secondary class of goods, and all plain ribbons, they are pressed upon by lower wages in other parts of Europe; that is to say, in Switzerland and on the Rhine. I have had the honour to state before, that although the Swiss and Rhenish manufacturers have not the advantage of silks of their own growth, their wages are so much lower than in France that they send, I believe, some large quantities of plain goods and of plain ribbons into that country; in addition to this, I believe that the Rhenish manufacturers send some quantities of secondary velvets, very well made in their class.

4320. Do you consider the silk trade of France, in the year 1831, larger than it was in the year 1825?—I should say in 1831 not; because it has been impeded by various causes.

4321. Take the average of 1823, 1824 and 1825, and 1829, 1830 and 1831?—The last four or five years there was an increase, I apprehend, on the previous years; but I have no exact information upon that point. The silk trade in France is, I believe, in a state of progressive increase, though the manufacturers are occasionally much depressed, owing to various circumstances to which I have before alluded.

4322. Why do you make the exception of last year?—The cholera on the Continent, and the war in Poland, and so on; natural and political causes.

4323. May not the same causes that prevented the trade of France with the rest of Europe to which you have referred, have tended to throw a large quantity of organzine silk from Italy into England, than had previously taken place?—The same causes would operate upon the bulk; that is, they would have sent us more raw silk from Italy than of thrown, whereas there has been a considerable quantity of thrown sent in the last year, and a decrease in raw.

4324. Do not those countries take only thrown silk, and as the impediments to those countries took place, would not naturally there be a surplus of raw silk, which would find its way to England?—The operation of the lowering the duties on thrown silks has, in my opinion been, that of inducing them to send us large quantities of thrown silks; and had it not been for that, we should have had larger quantities of fine raw sent here instead of thrown.

4325. Might not the causes which impeded the French trade in silk, such as cholera and war in Poland, influence the supply of organzine silk from Italy here?—I said before, it may have had some influence; but even then we are not to suppose they send to us all, and that they do not send to other countries; after all, the thrown which they send to us is but fractional; and if the circumstances of the Continent were such as to influence their sending of thrown silks to us, the same causes would send us here large quantities of manufactured goods at reduced prices.

4326. Were not the prices of manufactured silk goods lower in France in the year 1831, than they had been for many years past?—I believe so, but still I believe that in 1829 the depression was as great.

4327. Do you believe from the prices at which French manufactured silk goods were sold in England, in the course of the last year, that it is possible the manufacturer could have obtained any profit or any remunerating price for them?—I do not think so; France depends I believe essentially upon export for her manufactures; whenever manufacturers are impeded in the sale of their manufactured goods, they are very happy to throw off one, two, or three pence a yard; it is an advantage to them to have a market, and not only a market, but a rich and very considerable market, where they can not only effect sales by dropping the price, but they can immediately draw upon account on consignment; so that if they have England at hand, it is an immense advantage to them, England being the largest market for silk goods; for there is no country in which silk goods of every description are so generally used. It has been supposed by a portion of the British public, that the changes effected in late years in our laws, relative to the silk trade, impeded the progress of the French manufacture. I cannot for a moment imagine how

how such an idea can have been entertained; the condition of the labourers at Lyons, which was very lamentable some months ago, would have been much more so, but for the immense quantities of goods which the opening of our ports since 1826, enabled them to send to this country, both in figured and plain goods. France presses upon us at all times, she depresses the whole surface of our wages, deprives us of the manufacture of the very major part of the higher branches; and keeps us pinned down in all the branches of our silk manufacture to low and wretched wages under the ordinary range of her competition; but even the extremes of wretchedness in wages, cannot shelter us from the overwhelming and calamitous effects of their contingencies, that is of their much increased sendings of figured and plain goods at very reduced prices, as I have had occasion to mention before. I should take here the opportunity to observe that, important as are the advantages to foreign manufactures accruing from the opening of our markets to them, those advantages constitute only a fraction of the blighting effects of foreign competition, on this branch of our national industry, under ordinary circumstances, and of its calamitous effects from contingencies with them.

Mr.
Alexis J. Dozat.

19 April,
1832.

4328. Do you know whether manufactured silk goods have risen in price since the period of depression in November last at Lyons?—Yes; there has been extraordinary activity at Lyons. I am told the quantity of silk sold at Lyons in the last month, was greater than it had been for a long time previous.

4329. Do you know that those silks so sold were ordered at the period of depression, and that cheap as silks were in November, they may be purchased at Lyons at the same or even lower prices?—I know nothing about the value of goods at the present moment.

4330. Can you give the Committee any notion, from your own knowledge, of the comparison between the quantity of manufactured goods exported from France, with what they actually consume within themselves?—I cannot; there are some returns, but whether those returns comprise the immense quantities smuggled to this country, I do not know. With respect to raw and thrown silk, the quantities of silk raw and thrown imported into France, that is not subject to error; but in respect to manufactured goods, I believe that cannot be given with the same distinctness, and a great deal depends upon the class of goods exported.

4331. You have given in evidence, that at the time Italian raw silk was 17s. 6½d. per lb. cash price in London, the French raw in Lyons ranged from 15s. 9d. to as low as 13s. 3d. averaging 14s. 5½d., is that difference so much more in favour of the French throwster and the French manufacturer, over the English throwster and the English manufacturer?—I consider the question to be in this way; the duty on foreign thrown silks, whether organzine or tram imported into France, is 11d. a pound, they make no distinction between the one and the other. But the French throwster having the whole of the French native produce reserved to him, which is reckoned at 4,500,000 lbs. of fine standard, he has beyond the duty of 11d., all the advantage by this protection of the difference in price at which raw silk can be imported from Italy into France, and the actual price of French raw silk. Italian silk could not be imported at the period alluded to, under 17s. 4d., whereas the average of French silk was at the same period 14s. 5½d. and rather of superior description; the throwster has not only the duty, but all the differences in price of raw silks in his favour, so that the actual protection is not only 11d., but it is generally more, for the average difference in the prices of raw silks is at least 1s., it would be like 11d. and 1s., or I might begin at 6d.; it is as 11d. and 1s., and 11d. and 2s., and 11d. and 3s., so that the French throwster has all that advantage reserved to him, and in addition to that, he is much nearer to Italy; and the condition of the labourer in the South of France and in Italy, has infinitely more analogy than that of the labourer here.

4332. How do you account for that permanent difference in price between the French silk and the Italian; why should they pay 3s. more for the same quality of Italian silk than they can get their own French silk for?—That is not the case; they do not purchase Italian raw silks under those circumstances. The consumption of France, I understand, is about 5,500,000 lbs.; the imports into France are about 1,000,000 lbs., of which about 600,000 or 700,000 lbs. in thrown silk, and 300,000 to 400,000 lbs. in raw silks; of the 300,000 to 400,000 raw silks, a very large proportion consists in Brussa and other coarse silks; the remainder will be 100,000 to 150,000 lbs. of fine silks; these
678.

Mr.
Alexis J. Doxat.

19 April,
1832.

are further compared with 4,500,000 of fine French raw ; so that the quantity of Italian fine silk consumed, is about 100,000 to 150,000, compared with four millions and a half pounds. When a great demand occurs in France, that raises altogether the price of French silk ; the Lyonese having a large entrepôt of foreign silks, they have a certain quantity always at hand ; if they find that the French growers avail themselves too much of such a demand, and that the price of silk rises for example to sixteen and seventeen shillings, they will come in such instances, in contact with Italian raw, and a certain quantity of fine Italian raw silk is then drawn into the French consumption ; but it will run in general only in the proportion of one hundred or one hundred and fifty thousand pounds, compared to the four millions and a half, so that it is just like keeping a rod over the growers in France. If you will not let us have your raw silks at a fair price, we will bring in the Italian.

4333. Is the Italian raw silk of the same quality with the French silk, higher or lower in price at Lyons, speaking generally ?—It is always higher ; it is higher in the proportion as 150,000 is to 4,500,000, and it is only now and then that they come into contact.

4334. Is it one franc or two francs ?—It happens occasionally that they come in contact ; that is, the price is nearly the same, but it is seldom that that does happen ; and on an average it happens only in the proportion as an hundred or an hundred an fifty thousand is to 4,500,000 lbs,

4335. The export duty from Italy being but 10*d.* for the raw, why should the Italian silk be more than 10*d.* above the price of the French silk ?—This question is answered by the evidence I have given the day before yesterday, in which I was asked particularly what were the relative charges of bringing one pound of Italian raw silk into this country, and one pound of Italian raw silk into France. I found that every pound of silk imported into France was about 2*s.*, whereas here it is about 2*s.* 1*d.* and 2*s.* 2*d.* As respects the export duty from Lombardy and the import duty in France, the one is about 9*d.* per lb. and the other 5½*d.* together 14½*d.*

4336. You are understood to say, that silk at Lyons varies from 1*s.* to 2*s.* per pound, differing in price from Italian silk in England ?—Even more, as I have previously stated circumstantially

4337. Lyons being merely a place of transit, if the quantity of French native silk is so considerable and the native grower can only sell it to the native consumer, if it is so considerable that the price keeps lower than the average of that passing through France to any part of the world, the Frenchman does not consume it, is that so ?—Yes, it is so.

4338. If the quantity of French silk from the extreme briskness of trade at Lyons, should become short, and the Frenchman be compelled from necessity to resort to the Italian, he will stop it in transitu, and buy it at the price at which it will be sold in England, is that so ?—Yes ; rather under that, owing to the import charges being a little lower, besides that the Lyons market is contiguous to the sources.

4339. If French silks were imported into a country where the expenses of throwing were equal, there will be nothing for that importing country to fear ?—No.

4340. If you resided at Lyons, and you were a throwster, and if the manufacturer imported into Lyons, or if he stopped in the course of transit a quantity of Piedmont silk for any particular purpose of manufacture, you do not conceive that the small quantities so imported would interfere with or regulate the price at which the whole of the silk of native growth would be sold ?—I do not.

4341. You conceive that French silk is cheaper in France than Italian of the same quality in England, by reason of the French grower of silk supplying only the native manufacturer ?—Yes.

4342. Do you conceive that the introduction of the dearer Italian silk into the cheaper country of France, would have the effect of raising the price of the silk of native growth ?—No.

4343. Supposing the home grown silk in France is dearer than Italian silk at Lyons, what will be the effect upon the market by the introduction in transit of the cheaper Italian silk on the price of the home growth ?—It will naturally have the effect to lower the price of the French silk.

4344. Why should not the reverse take place with the Italian silk ?—Because the

the French silk cannot come out either in a raw or a thrown state, so that French silk may be depressed.

4345. Do you believe that any manufacturer of goods at Lyons will give 16*s.* for a pound of Italian silk, when he can buy the French silk of the same sort for 14*s.*?—No one would buy it under such circumstances; they will only be bought when they come into contact, even at the highest point of contact, which happens but seldom on an average; that is in the proportion of 100 to 150,000 to 4,500,000.

4346. Is it not the fact, that the French silk of native growth, may supply the manufacturer for eleven months in the year by possibility; so long as the native silk of France supplies the home manufacturer, he must sell to that manufacturer because he has nobody else to sell to; and in the next place the price of that commodity will not rise till it becomes scarce from the consumption of the manufacturer; but when the native silk is so consumed by the trade at Lyons, they must then have recourse to the Italian silk passing in transit through Lyons; of course, as the silk of France becomes scarcer it will become dearer, and will ultimately reach that point where it would have stopped; and that stop is the price of the Italian silk so passing in transit through Lyons, is that just the fact?—Yes.

4347. That happens every year?—Some part of the year.

4348. You are understood to say, that France does not grow every quality of silk, is that so?—Yes.

4349. It may be necessary for the French manufacturer to have silk from Piedmont for a particular purpose?—Yes.

4350. If the Piedmontese grower can obtain a greater price in Germany, in Switzerland, in Austria, or in England, will he sell that commodity at a lower price to the Frenchman?—Certainly not.

4351. Whatever that price may be for particular purposes, it is essential that the French manufacturer should have it, is it not?—Yes.

4352. It sometimes also happens, that the Frenchman may, for a particular purpose, require a silk even inferior to his own; and that it would answer his purpose better to pay a somewhat dearer price relatively, for an inferior commodity for which his own silk is not applicable, and that he will not pay for that a price beyond its real value?—Yes, that is the case.

4353. Is raw silk dearer in England than in France?—Yes, it is, generally speaking.

4354. How much does it differ occasionally?—From 6*d.* to 3*s.* and even more.

4355. Is thrown silk dearer in England than at Lyons?—Yes, it is.

4356. How much, occasionally?—3, 4, 5 and 6*s.* to 6*s.* 6*d.*

4357. Italian silk passes through Lyons on its way to England?—Yes, the major part.

4358. The silk of native growth in France must be consumed at home?—Yes.

4359. Therefore, if the silk manufacturers at Lyons have a bad state of trade they will consume less silk?—Yes.

4360. The silk falls as a matter of consequence?—Yes.

4361. Does it happen that the Italian silk falls at the same time?—Not at all proportionably; it is sent on to other countries.

4362. Is it limited in other countries as to the price at which it shall be sold?—Mostly; speaking as a commission merchant, I should say it is frequently.

4363. When the French manufacturers shall, from an increased business, have consumed the whole of the silk of native growth, they will touch the Italian?—They will.

4364. They must then pay the price for that Italian silk which it would realize in other countries?—Yes, with the exception of the differences of charges.

4365. It does sometimes happen, that though silk may be cheaper of native growth in France, it is not always applicable to the purpose for which the manufacturers require it?—Just so.

4366. Therefore he will pay for Piedmontese silk, or any other he may require, and for which silk of native growth is not applicable, a higher price proportionably than for the silk of France?—Yes, that is perfectly the case.

4367. Do you suppose any Italian silk can ever be sold at Lyons, but when the price of French grown silk rises on a level to that of Italian?—Speaking

Mr.
Alexis J. Dozat.

19 April,
1832.

generally, not; the French cocoons are mostly of very good qualities, and they do not apply them to coarse silks, except in very small proportions, and the quantity of raw silk imported into France is very small; it is for the major part, of coarse, and very coarse descriptions, that is from 70, 100, and even up to 200 deniers, descriptions of silks to which they apply their cocoons in very small quantities; they are too good to be applied to inferior purposes. They find it worth their while to import certain coarse silks, that they may reserve their own cocoons for fine silks. I will repeat that there are some periods in each year in which the Italian silk and the French silk come in contact; I will suppose that contact to be 17 s.; that the French silk, by particular circumstances, is raised to 17 s.; at that price some fraction, and a very small fraction, in the average of the year, will be taken out of entrepôt and brought into consumption; so that the range shall be sometimes in contact at 17 s.; but taking the average of years, it will range in this way: I will suppose that the Italian silk shall be at the highest point, namely, 17 s. and that the French will fluctuate, according to various circumstances, from 16 s. to 15 s. and 14 s. 6 d. and even rather under. The French consumer never touches the Italian raw silk, except when it comes in contact; thus the large mass of his consumption of fine raw silks rests on the produce of France, which is of about 4,500,000 lbs., compared with 100,000 to 150,000 lbs. of fine Italian raw silks, consumed per annum, on an average.

4368. Are there not sales of Italian raw silk at Lyons, of the same quality as that which is grown in France during every portion of the year?—Lyons being a transit market, there are quotations at Lyons the whole year through for Italian silks; they are frequently purchased to be sent on to this country, and thus they enter but very partially into the consumption of France.

4369. Are the Italian silks of the same quality as that grown in France purchased by the French manufacturer, in every month in the year, at Lyons, for consumption?—Certainly not.

4370. During the whole period of the year, you say you can quote the prices at Lyons, how are those prices at Lyons calculated; is it in relation to the use made of it in England and in Germany, and in other parts of the Continent?—The entrepôt at Lyons is an open market; the French silk is a close market, reserved to themselves alone; there are at Lyons 25 silk merchants, more or less; we are in correspondence with about 20 of them; they go to the entrepôt; if they find a difference in the price currents of this market of 6 d. or 1 s. beyond their prices, they purchase the silk, and send it on for sale.

4371. It is not that they are not actually disposed of, but that they are not disposed of in the Lyons market for French use?—Just so.

4372. Are those quotation prices of Lyons regulated by the markets of England and Europe generally?—With reference to Europe generally; but particularly the English market as respects raw silks.

4373. Those quotation prices are made up by the 20 or 25 merchants at Lyons?—By the effect of the buying and selling; it is a buying and selling market for export; but at some periods of the year they come into contact; I should observe here again, that some descriptions, such as Piedmont organzines and coarse Levant raw, sell more or less throughout the year for specific purposes.

4374. Can you state the difference of price in the market of Lyons between the organzine grown and thrown in France and the organzine imported?—I will take the same period I have already taken, of the early part of last year; at that period I find the prices at Lyons, of 23 to 24 deniers Piedmont organzine, were depressed to about 19 s. to 19 s. 6 d., owing to the great depression of the French organzines; when I mention the great depression of French organzine, I refer to the average price of 17 s. 4½ d. for 21–22 deniers, which is a rather finer size; while the import cost of Piedmontese, was 20 s. 6 d. to 21 s.; that is the price at which Piedmont organzine of 23–24 deniers would have stood in France; at that time the great depression in French silks dragged down to a certain degree even the Piedmont. As I have mentioned before, when French silk is much depressed, when it falls greatly, then the price of Piedmont organzine is lowered by it; for then they only touch a small quantity, for those particular purposes to which it is absolutely necessary.

4375. Can you state the price in London at the same period?—I believe at that period, that is in February and March last, Piedmont organzine was at about 24 s. and 24 s. 6 d.

4376. Was

4376. Was it sold in England at that time?—It was; we were then in a state of activity in England, and they were in France in a state of great depression.

4377. The 17*s.* 4½*d.* silk of France was as good as the Piedmontese, the import cost of which was 20*s.* 6*d.* to 21*s.*?—Yes; the great bulk of their own manufacture rested on silk of their own growth at 17*s.* 4½*d.*

4378. Can you state what is the quantity of Piedmont organzine silk consumed in this country in a year?—Yes, about 100,000 lbs. on an average.

4379. You have spoken of the sale of raw silk formerly in France imported from other countries, are they always the fine Italian raw or sometimes the coarser kind from Modena and Naples, such as the French do not accustom themselves to reel, but which they must have sometimes?—Yes; the coarser descriptions have a sale throughout the year to a certain extent.

4380. Are not those silks sometimes sold as low as 11*s.* and 12*s.*?—Yes, and below that.

4381. What do you consider to be the effect of the price of foreign thrown silk coming into this country and being sold here, upon the throwster in England?—The quantity of thrown silk imported into this country varies from 200,000 to 500,000 pounds weight; it has the effect to depress the whole of the throwing interest; and the quantity imported in 1830 and 1831 has increased considerably as compared with 1829.

4382. When you sell the Italian silk sent to you on commission, do you, in selling it, pay any attention to its prime cost, or do you not get what the silk market will give you?—We pay continual attention to the prime cost, and the instructions we have; sometimes we use our discretion if we see that the market will not afford a better price, or a better prospect for our principals; I allude to the cases frequent, in which we are requested to act according to our own judgment; but we always consider the prime cost of the article, as also the state of foreign markets, in order to do the best for our correspondents.

4383. Do you not, in all cases, endeavour to get the best price for your consignees?—It is our duty so to do.

4384. If you have cheap silk sent to you, do you not sell it at the average price of the same silk in the market?—If it is very cheap, the effect of competition is naturally to depress it in our market also.

4385. Are the Committee to understand, that the silk sent to you is sold with reference to the price abroad, whatever the price in England may be, or are you limited in the sale to a certain standard?—Some correspondents limit us, others do not; but we always take into consideration the state of the markets abroad, and likewise the state of the market here.

4386. It is your opinion that the amount of four or five hundred thousand pounds weight of Italian thrown silk depresses the price of the whole of the British silk?—It is; and I can show that, step by step, by a Paper now in my hand.

4387. You have stated that you sell your silk frequently with reference to the price in foreign countries; when Italian thrown silk is quoted to you at Lyons at 17*s.* 6*d.* do you immediately sell your Italian thrown silk at 17*s.* 6*d.* in England?—No; we should not be doing justice to our correspondent; but if the market at Lyons is heavy, it will in some degree influence the market here.

4388. You always take care to keep a distance from the price at Lyons?—Certainly, as much as possible.

4389. If it was not so your friends would be dissatisfied with your sales, and not send you the Italian silk, as they might send it either to Switzerland or Germany, or some other country?—Yes.

4390. Do you not sometimes send from England Italian silk to Lyons when the market is depressed?—Seldom to Lyons; we have sent some to Russia; we have sent some to the Rhine; and some sent to our market not suitable to our consumption, we have occasionally sent back to Lyons.

4391. Whenever the price of Italian raw silk is below the price in other places, you ship it to other places?—That does happen occasionally, seldom, however, in regard to raw.

4392. Thus the price of Italian silk approximates to its level?—The price of Italian thrown silk in entrepôt at Lyons approximates sometimes to their own; but generally speaking, the case of France is distinct from that of other countries, in consequence of her own very considerable and good produce.

4393. Are the Committee to understand, that the sale price of Italian silk here is often or generally regulated by what the price of that silk may be at Lyons, or

Mr.
Alexis J. Doxat.

19 April,
1832.

Mr.
Alexis J. Dorat.

19 April,
1832.

other parts of the world?—Not at Lyons, properly speaking, with regard to its consumption; but in some measure with its entrepôt as a general market; in which I should observe here again, that the French manufacturers have the first and the cheapest choice, in addition to their other considerable advantages relative to the silks of their own produce.

4394. The Lyonese must pay for the quantity of silk he requires, of either the growth of Piedmont or Italy, nearly the same price as any other part of the world must pay?—Quite so; except with the difference of duties and the difference of charges.

4395. That does not at all go to say, that he pays the same price for the rest of the silk he may require, and of which the Italian forms but a small proportion?—By no means; it has nothing to do with it. Some questions were asked me

Appendix (F.)

incidentally yesterday, whilst I was placing before the Committee this Paper, (No. 18.) which diverted my attention from it at the time. The purport of this Paper is to show, in one distinct view, all the elements of the various costs of manufacture of one yard of good plain gros de Naples, in common colours, (which I take as the basis of all my calculations), “of 10 to 1100, three double,” of superior make, at London and at Lyons, respectively; both in regard to the raw material, and to the various processes of manufacture; also what are the amounts per cent. of those differences between our manufactures and those of Lyons, which (as well as other foreign manufactures) are greatly dependent on export, and hence continually exposed to sudden and considerable variations, over which our manufacturers have no control; thus greatly aggravating the degrees of intensity with which foreign competition presses on this branch of our national industry, in which the *wages of labour alone*, independently of other charges of manufacture, obtain in the ratio of at least *ten to one* of the charges referrible to machinery in its most improved application (respecting which *see* Papers D. and E. Nos. 8 and 9.) Such is the range of those contingent variations, even in the prices of foreign plain manufactured silks, with which our manufacturers have to contend, that their *retreat from step to step*, down to very low and wretched wages, to wages of absolute misery, cannot shelter them from the calamitous pressure of such competition, as may be seen by the graduated scale of per centages, set forth in the margin on the right of this Paper; as also of Papers, No. 5, 6 and 7; and still more by the *inverted* scale of those variations (placed under the graduated scale,) even without taking the extreme points of this *inverted* scale. I should observe, in regard to the *starting point* which I have taken on the London side, of $8\frac{1}{2}d.$, for weaving, well and neatly, one yard of that description of plain goods, that it is only a very moderate remuneration for work well done; and considering the great value of the commodity placed under the entire control of the weaver, upon whose skill and care greatly depends the marketable value of so delicate and valuable an article. The rate of wages for weaving the same description of silks was, on an average, $10\frac{1}{2}d.$ per yard from 1815–17 to 1824–25, with very little variation; and I have reason to believe that the rates of wages in this branch of our national industry, so rapidly increasing previously to 1826 were, on an average, quite the same in 1824–25 as in 1815–17. I should add, that in taking $8\frac{1}{2}d.$ per yard, for weaving the said description of good plain goods, and the other charges of manufacture in proportion, compared with the usual rate at Lyons, of late years, that is $5\frac{1}{2}d.$, equal to $5d.$ per yard; I take a lower relative stand than that of $10\frac{1}{2}d.$ against $6\frac{1}{4}d.$, equal to $5\frac{1}{4}d.$ which obtained from 1821 to 1825; $5d.$ per yard against $8\frac{1}{2}d.$ presenting 70 per cent., whilst $5\frac{1}{4}d.$ per yard against $10\frac{1}{2}d.$ presented 83 per cent. From all these data, it will appear that low and very low wages afford us no effectual shelter in respect to plain goods, from the range of ordinary variations with our foreign competitors, nor even the extremes of wretchedness from particular contingencies with them. These estimates and comparative views relate to good plain goods, neatly made, in common colours. The differences in the respective costs of plain goods of high colours, and of figured and fancy goods are much greater; and the duties on them, as also the charges for smuggling, are proportionably lower, with regard to their higher costs. I have endeavoured to condense this Paper (No. 18) still more; I have condensed all the charges at Lyons and here, showing, at one view, side by side, every charge at Lyons and in London, at various periods. The object of my making out this Paper, besides the great facility of comparison it affords in every respect, is to show that the wages of labour in our silk manufacture is considerably lower than the range which existed in this country in 1821 to

Appendix (F.)

Appendix (F.)

Appendix (F.)

1825. I naturally ask, Why is it that since the opening of our ports to foreign manufactured goods, our labourers have scarcely or never enjoyed the rate of $8\frac{1}{2}d.$ for weaving gros de Naples, neat make, 10 to 1100, three double, nor proportionable rates for other work; but that they have been mostly pinned down to $7d.$ $6\frac{1}{2}d.$ and $6d.$? notwithstanding which latter miserable rate, we have frequently not been able to keep out overwhelming quantities of foreign manufactured plain goods; that is, quantities beyond the usual sendings to our markets of those descriptions? To which I answer, it is consequently not from calculations alone, that is, calculations made on paper, that I deduce the fact, that wages even of wretchedness *do not shelter us*, in good plain goods, under contingent circumstances, with our foreign competitors.

Thus when our weavers are reduced to $6d.$ for superior gros de Naples, and their masters to sacrifices on the cost of their goods, although manufactured at such lamentable rates, we find,—we find even then!—our poor labourers reduced, not unfrequently to half work, that is, to $3s. 6d.$ nett per week. And if a man, in order to save his family from starvation, work eighteen hours per day, work till he drop, if such labour continue for any length of time, his extra and harassing labour deprives another man of what might otherwise have been his share of the scanty pittance arising from work under such melancholy circumstances.

Thus the man who is fortunate enough to obtain some work, exhausts himself; and his neighbour is obliged to seek at the workhouse door, or worse—in the workhouse, for that which cannot be called relief!

The poor rates cannot provide for such a state of things; they are only intended for the common course of casualties; not for such general and awful calamities, to which the hand alone of the Legislature can and may apply effectual remedy.

And here it is my duty to recal to the recollection of this Honourable Committee, sitting on so interesting and so important an inquiry, as that relative to the welfare and very existence of immense numbers of our fellow beings; that the changes which were made in the laws respecting this branch of our national industry, have over and over, and at various periods (which the very last clause of the Act of 10th Geo. 4. c. 23. sufficiently indicates,) been mentioned as

“ AN EXPERIMENT.”

I will add the expression of my intimate conviction, that could the lamented Right Honourable Gentleman, the principal projector of those alterations, have been able to see the full extent of the calamitous results with which they may have been attended; and have been present at the developement, by various witnesses, brought before this Honourable Committee, of the causes of those results, he would have been the first to take the beneficent course of recommending to the Legislature the reconsideration of those measures.

[Whilst reading this paragraph, Mr. Doxat interrupted Mr. Gurney in the trouble which he was taking of putting down his words, observing that they might be taken from the printed Paper (No. 21), which he was then giving in.]

The Paper I now beg to deliver in, will bring all these various points more distinctly before the Committee, showing, as it does, the usual charges in London and in Lyons, at the periods of 1821 to 1825, and the relation drawn out in per centages, in which they stood with each other; the usual rates of those charges at Lyons, in 1826 to 1831, compared in the same column, with such as our labourers are at the least entitled to. And the last column, under the head of 1831, presents the rates of wages to which they fall at Lyons when depressed by any contingent circumstances; exclusive of the fall in the raw and thrown silks of their own produce, which contributes to enable their manufacturers to make goods at very low prices. (Weaving at Lyons falls sometimes under $4d.$, equal to $3\frac{1}{2}d.$ for the said description of goods.) And with respect to London, the same column shows the rates of wages to which we are frequently obliged to retreat, owing to the pressure, varying in its intensity, of foreign competition; but which retreat to wretched wages does not afford us any effectual shelter, as may be seen by the various parts of this Paper (No. 21), and by the whole series of my other comparative statements, but more particularly by the recapitulation of the costs of good plain goods, adjoined to the printed paper No. 5, which I put in on the first day of my examination.

[The Witness delivered in the following Paper.]

Mr.
Alexis J. Doxat.

† The actual Charge for throwing good Organzines of 22-24 drs. in ¹⁸²¹⁻²³1824-25 } was 9s.; but for the reasons stated in my printed Paper, marked No. 4, I have introduced, at 7s. 6d. only, that Charge in my Estimates for that period.—And the same with regard to the Work of fine good Tram, 4s. 6d. instead of 5s. 6d.—Also of winding Warp, 2s. 9d. instead of 3s. 3d.—And of winding Shute, 2s. 6d. instead of 3s.

(a) Rates of Wages to which they fall at Lyons, when depressed by any contingent circumstances; exclusive of the fall in the Raw and Thrown Silks of their own produce, which contributes to enable their Manufacturers to make Goods at very low prices.—Weaving at Lyons falls sometimes under 4d. = 3½d., for the said description of Goods.

(b) Rates of Wages with us, to which we are frequently obliged to retreat, owing to the pressure, varying in its intensity, of Foreign competition; but which retreat to wretched Wages, does not afford us any effectual shelter, as may be seen by the annexed Remarks.

§ The Weaver at Lyons winds his own Shute.

Query?—

Query?—Why is it that since the opening of our Ports to Foreign manufactured goods, our Labourers have scarcely, or never, enjoyed the rate of $8\frac{1}{2}d.$ for weaving good gros de Naples, neat make, 10 to 1100 three double,—nor proportionable rates for other work; but that they have been mostly pinned down to $7d.$, $6\frac{1}{2}d.$ and $6d.$? notwithstanding which latter miserable rate, we have frequently not been able to keep out overwhelming quantities of Foreign manufactured plain goods—that is, quantities beyond the usual sendings to our market of those descriptions.

It is consequently not from calculations alone,—that is, calculations made on paper,—that I deduce the fact, that wages even of wretchedness *do not shelter us*, in good plain goods, under contingent circumstances with our Foreign competitors.

Mr.
Alexis J. Dozat.

19 April,
1832.

N. B.—I should observe, in regard to low, cheap plain goods, that although manufactured at low and wretched wages with us, they are ultimately depressed and beaten down by the importation of Foreign manufactured plain goods of superior classes, at comparatively cheap prices. I will suppose a very low gros de Naples, of British manufacture, single warp, at $2s. 2d.$ per yard, weighing 16 drams,—

(there are lower priced goods, but they are as *brown paper* is to *white*,)
against which, a Lyons gros de Naples of double warp, of first class, and same weight per yard, shall come in, according to circumstances, at the respective

(First Class of Lyons Gros de Naples.)		COSTS OF		(First Class of Lyons Gros de Naples.)	
s.	d.			s.	d.
2	$11\frac{3}{4}$	per yard on our Market	- - - -	2	$2\frac{5}{8}$
that is 2	$4\frac{3}{8}$	highest prime cost at Lyons on my	{ lowest prime cost at Lyons }	1	$9\frac{5}{8}$
		Table No. 18, and others, of com-			
		parative costs - - - -			
-	$1\frac{1}{2}$	Charges of purchase at Lyons, and	{ - - - - }	-	1
		of transmission to Paris, where the			
		smuggler takes up the goods -			
-	$5\frac{1}{2}$	for 18 per cent. on cost and charges,	{ - - - - }	-	4
		which I assume as the Estimate			
		of the charge for smuggling plain			
		goods inclusive of insurance -			

Thus when our weavers are reduced to $6d.$ for superior gros de Naples, and their masters to sacrifices on the *cost* of their goods, although manufactured at such lamentable rates, we find,—we find even then!—our poor labourers reduced, not unfrequently to half-work—that is, to $3s. 6d.$ nett per week. And if a man, in order to save his family from starvation, work 18 hours per day,—work till he drop, if such labour continue for any length of time,—his extra and harassing labour deprives another man of what might otherwise have been his share of the scanty pittance arising from work under such melancholy circumstances.

Thus the man who is fortunate enough to obtain some work, exhausts himself; and his neighbour is obliged to seek at the workhouse door,—or worse,—in the workhouse,—for that which cannot be called relief!

The Poor Rates cannot provide for such a state of things,—they are only intended for the common course of casualties:—not for such general and awful calamities, to which the hand alone of the Legislature can and may apply effectual remedy.

And here it is my duty to recal to the recollection of this Honourable Committee, sitting on so interesting and so important an inquiry, as that relative to the welfare and very existence of immense numbers of our fellow-beings, that the changes which were made in the Laws respecting this branch of our national industry, have over and over, and at various periods, (which the very last clause of the Act of 10th Geo. IV. c. 23, sufficiently indicates,) been mentioned as

“AN EXPERIMENT.”

I will add the expression of my intimate conviction, that could the lamented Right Honourable Gentleman, the principal projector of those alterations, have been able to see the full extent of the calamitous results with which they have been attended; and have been present at the developement, by various witnesses, brought before this Honourable Committee, of the causes of those results, he would have been the first to take the beneficent course of recommending to the Legislature the reconsideration of those measures.

18th April 1832.

Errors excepted.

Alexis James Dozat.

4396. In 1825, the difference of throwing organzine in England and in Lyons, was 87 per cent., and in 1831, only 50 per cent., how do you account for the reduction?—I account for it by the extreme depression of wages, and loss of profit;
for

Mr.
Alexis J. Dorat.

19 April,
1832.

Appendix (F.)

for it will be seen by a note at the foot of my said Paper No. 21, that in the column 1821-1825, I introduce the charge for throwing good organzine of 22-24 deniers at 7s. 6d., instead of 9s. which was the actual charge at that period, for the reasons stated in my printed Paper No. 4.

4397. Has there been a diminution in the price of raw silk corresponding with the reduction of duty on imported thrown?—I have here a comparative view of the market prices at London, of Milan and Bergam raw silks of four to five cocoons, and of Milan and Bergam organzine of 26 to 28 deniers, at various periods from June 1824 to February and April 1832; from which it appears, that with a difference in price of 12s. 2d., there is a difference in duty of 7s. 3d.; with 13s. 6d., 7s. 3d.; with 7s. 9½d., 4s. 9d.; with 7s. 1d., 4s. 11d.; with 6s. 10¼d., 4s. 11d.; with 7s. 0¼d., 4s. 11d.; with 6s. 9d., 4s. 11d.; with 6s. 4d., 3s. 5d.; with 5s. 9¼d., 3s. 5d.; with 4s. 9d., 3s. 5d.; with 4s. 5d., 3s. 5d.; inclusive of the market value of the debenture granted since June 1829, taken at the average of 4d. for the 3s. 6d. duty.

[The Witness delivered in the same.]

No. 22.

A COMPARATIVE VIEW of the MARKET PRICES at *London*, of *Milan* and *Bergam* RAW SILKS of 4 to 5 Cocoons, and of *Milan* and *Bergam* Organzine of 26 to 28 deniers, at various Periods, from June 1824 to February and April 1832.

* The purchasers of Foreign organzine silks have had, since the 2d June 1829, the benefit of a debenture of 3s. 6d. per lb.; of which, if they do not avail themselves for the purpose of export, they can effect the sale on the market, to other manufacturers who export; and the market value of these debentures having fluctuated from 1d. to 7d. per lb., I have introduced the average of 4d., as above, in deduction of the differences existing between the prices in our market of Italian raw silk and Italian organzine.

April 19th, 1832.

(Errors excepted.)

Alexis James Doxat.

NOTES RELATIVE TO THE ANNEXED TABLE.

In 1824, the throwster had not only a difference of $\begin{matrix} s. & d. \\ 7 & 3 \end{matrix}$ in regard to the respective duties on raw and thrown silks, but of $\begin{matrix} s. & d. \\ - & - & - & 4 & 11 \end{matrix}$ beyond that, as may be seen by the annexed Table; constituting a total difference of $\begin{matrix} s. & d. \\ 12 & 2 \end{matrix}$, within which to ground his operations.

He has now only $\begin{matrix} s. & d. \\ 3 & 5 \end{matrix}$ in regard to the duties, and $\begin{matrix} s. & d. \\ 1 & 0 \end{matrix}$ beyond that; constituting a total difference

of only $\begin{matrix} s. & d. \\ 4 & 5 \end{matrix}$, for work of 26-28 deniers organzine thrown silk, waste, interest, profit, risk of differences in markets (while the silk is under work), and of the buyers, besides some expenses of agencies.

Whilst every charge, inclusive of the *del credere*, is comprised in the Account of Sales rendered of Foreign thrown silks; which, besides, are always ready at hand to supply the demands of our manufacturers, two or three hours being sufficient to enter silks for home consumption from the docks.

Mr.
Alexis J. Dozat.

19 April,
1832.

It is not likely that, under the calamitous circumstances in which our throwsters are placed, by the *collective* influence of the present very reduced duties on organzine and tram (besides the debentures), and of the general pressure of foreign manufactured silks, on every constituent branch of our silk manufacture, of which the throwing is a very important one,—it is not, I say, likely that our throwsters can keep any thing like stocks, assortments, and regular supplies of organzine and tram, whereon our manufacturers are to provide themselves. Thus the more our throwsters become discouraged and depressed in their operations, notwithstanding the wretched rates of wages to which their labourers have been reduced of late, the more we shall decline in that important branch, the support of which I consider so necessary for the well-being of the whole silk manufacture of Great Britain, and the more foreign throwsters will get possession of our consumption.

I might offer a variety of other important details on this subject, but I will confine myself at present to the foregoing.

4398. You mean to show by that document that the whole pay of the throwster is 4s. 5d.?—Yes; the ultimate difference existing between those two periods, the *absolute* difference, is as 4s. 5d. now, to 12s. 2d. in 1824. There are two points of view to be considered in this Paper, the absolute difference, and the ultimate difference between the two differences; the absolute difference is as 12s. 2d. to 4s. 5d. and then the ultimate difference between the two differences, is considerably less now than it was formerly. The throwster now works very near to the amount of the protecting duty, which is very much reduced; whereas in former times, he had a large protecting duty, and beyond that, a large margin; therefore the ultimate, the total difference on which the throwster now works, that is work, waste, &c. &c., is 4s. 5d. per lb.

4399. When he had a higher price for work he had a higher protecting duty, and when he has a lower price he has at the same time a lower protecting duty?—Yes; and the throwster has gone even nearer to the duty; this shows the enormous pressure which exists against the throwster.

4400. By the statement that you have now given, the difference in 1824 between the thrown and the raw, both duties paid, was 12s. 2d., from which deducting the tax on raw, 11s. 11d. remained, being an inducement to the English throwster to throw?—Yes.

4401. In 1832 the difference was 4s. 9d., from which the debenture of 4d. and the tax on raw a penny being deducted, leaves 4s. 4d., the inducement stands therefore, in 1824, 11s. 11d. in 1832, 4s. 4d.?—No, not exactly so; the actual and total difference is this, as 12s. 2d. to 4s. 5d.; not only has the duty been considerably lower, but the throwster is driven to work nearer to the duty than he did before, for the reasons stated in the Notes to my Paper, No. 22.

4402. On what principal do you deduct the 4d. debenture?—Because the manufacturer who comes to us to purchase a bale of foreign thrown silk, has the benefit of that debenture; consequently that virtually lowers the price of foreign thrown silk, and depresses still further the throwing interest in this country, that is beyond the effect of the lower protecting duties. The purchaser of foreign thrown silk asks for that which he can use to the extent of 3s. 6d. a pound if he exports, or which he can sell in the market at the average of 4d. This makes the foreign thrown silk so much the cheaper; therefore the British throwster works now with a total difference of only 4s. 5d., whereas formerly that difference was 12s. 2d. and more. There are many other points of importance which bear upon this part of the question, and others of great importance generally, which I have not had the honour to submit to the Committee in order not to detain them.

I beg leave to deliver in a Paper (No. 7,) which belongs to the first series of my Papers, and which it had escaped me to deliver in on the second day of my examination.

[The Witness delivered in the following Paper.]

The preceding Abstract of Comparative Costs of good *Plain* Manufactured Silk in Common Colours, shows a *graduated* Scale of Variations at LONDON and at LYONS. And the following presents those Variations in an inverted order, which is of frequent occurrence. By means of these *Two Tables*, may be seen at one view the various differences in Costs (in those *Plain Goods* alone) against which we have to contend with our Foreign Competitors:—differences incident on contingencies with them, over which we have no control. The difference in the respective Costs of Plain Goods of high Colours, and of Figured and Fancy Goods, are much greater;—and the Duties on them, as also the Charges for Smuggling, are proportionably lower, with regard to their higher Costs.

LEGAL IMPORTS.

ILLICIT IMPORTS.

LONDON Cost of 1 lb. of manufactured good plain Silks, in common Colours.	LYONS Cost of 1 lb. of manufactured good Plain Silks, in common Colours, inclusive of 6 per Cent. for Charges of Purchase, &c. at Lyons, and of transmission to London.		Differences of Costs and Charges per lb. of those descriptions of Plain Silks.		Duty on manufactured Plain Silks per lb.	Differences on Legal Imports against in favour of the Lyons Manufacturer.		LONDON Cost of 1 lb. of manufactured Plain Silks, in common Colours.		LYONS Cost of 1 lb. manufactured Plain Silks, in common Colours, inclusive of 4 per Cent. for Charges of Purchase, &c. at Lyons and of transmission to Paris, where the Smuggler takes up the Goods.		Differences of Cost and Charges per lb. of those descriptions of Plain Silks.	
Estimate at London.	s.	d.	s.	d.	s.	d.	p'cent.	Estimate at London.	s.	d.	s.	d.	p'cent.
(1) Raw - 17 6 } Weaving - 8½ } 49 3					11 - = 33	-	17 p'cent	Raw 17 6 } (1) Weaving - 8½ } 49 3			Raw - 14 6 } (4.4) Weaving - 4 } 30 -	16 11 = 52	
(2) Raw - 17 6 } Weaving - 7½ } 47 1					11 - = 31	-	-	Raw 17 6 } (2) Weaving - 7½ } 47 1			Raw - 15 6 } (3.3) Weaving - 4½ } 35 3	11 10 = 33	
(3) Raw - 17 6 } Weaving - 7 } 44 11					11 - = 33	-	7 p'cent	Raw 17 6 } (3) Weaving - 7 } 44 11			Raw - 16 - } (2.2) Weaving - 5½ } 37 3	14 4 = 44	
(4) Raw - 17 6 } Weaving - 6 } 42 7					11 - = 29	11 p'cent	-	Raw 17 6 } (4) Weaving - 6 } 42 7			Raw - 17 - } (1.1) Weaving - 5½ } 39 4	7 8 = 21	
					11 - = 31	4 "	-					10 3 = 29	
					11 - = 27	21 "	-					3 3 = 8	
					11 - = 29	12 "	-					5 11 = 16	

(See annexed Notes relative to these Tables.)

Our relative situation during the last 4 or 5 months, (*i. e.* from December 1830 to April 1831,) in respect of good Plain Goods of common Colours, appears to have been as follows:—which difference of Costs are consequent on a little improvement in Wages, &c. with us, and a great depression at Lyons, jointly with very low prices of the Silks of their own produce. (Some accounts show yet greater differences.)

s.	d.	s.	d.	s.	d.	s.	d.	p'cent.	s.	d.	s.	d.	p'cent.
(3) 44 11 (Raw - 17 6 } Weaving - 7 } * Per Yard - 2 9½				32 11 (14 6 Raw - - 4 Weaving 1 11½ p'yard.		12 - = 37	-	4 p'cent	(1) 44 11 - - -		(4.4) 32 4 - -	12 7 = 39	
				30 8 (14 6 Raw - - 4 Weaving and loss of Profit, &c. 1 9½ p'Yard.		14 3 = 46	-	10 "	- - - - -		30 1 - - -	14 10 = 49	

* In this Estimate (3) the throwing of good fine organzine is cast at 5 s., and of good fine tram at 3 s. with the rate of waste assumed in this, as in all my Estimates, at 4½% *i. e.* ½ of an ounce in lb. 1. 0 ½; whilst those charges for throwing and waste have been higher during the last few months; but, on the other hand, our manufacturers have been able to meet partly those higher charges by purchases of foreign organzines and trams (inclusive of the advantage of the debentures,) at rates lower than the increased cost of English thrown silks in this period.—Minute made in April 1831.

March 1832.

Errors excepted.

(signed)

Alexis James Dorat.

Lunæ, 7^o die Maii, 1832.

EDWARD AYSHFORD SANFORD ESQUIRE, IN THE CHAIR.

Mr. *William Banbury*, called in ; and Examined.

Mr.
William Banbury.

7 May,
1832.

4403. YOU are a silk merchant, are you not?—I am.

4404. In what house are you a partner?—In the house of James Vere, Nephew & Company.

4405. Is not that a house which has been very long established in the silk trade?—Upwards of an hundred years, it was established in 1720, I believe.

4406. How many years have you personally known the silk trade?—Fifty-two years next October, but for about seven or eight and thirty years I was a broker, I served my time to a silk broker, and when the late Mr. Vere retired from business, I joined that house as a merchant and silkman in the latter end of the year 1817.

4407. You are acquainted with the laws which have been passed at different times in regard to the silk trade?—Yes ; when the contemplated measure of the repeal which had so long protected the silk manufactory took place, I took pains to collect all the information I possibly could, presuming that at that period we should have got a hearing in defence of the system that worked so favourably for us, but Parliament refused that, and I am very sorry for it, for the result has been extremely prejudicial to my interest.

4408. You are now speaking of the alteration of the law in 1824?—I am.

4409. Will you state the several Acts which have passed to prohibit the importation of foreign wrought silks?—The Act for prohibiting the importation of foreign wrought silk and velvets, passed (the 6th of George the Third,) in May 1766, and came into operation the 17th of June the next month ; but ribbons were then, and had been prohibited upwards of 260 years, they were prohibited in the 19th of Henry the seventh, chapter 21 ; the Act passed in 1503.

4410. What led to the prohibition in the 6th of George the Third?—That refers to the broad silks and the velvets ; it appears that that was owing to the introduction of so many foreign silks, which injured our own manufacture, that was the apparent cause.

4411. Do you consider that the prohibitory laws had a beneficial effect on the silk manufacture of Great Britain?—I have no more doubt of it than I have of the baneful effects which have resulted from the repeal of those salutary laws.

4412. In the year 1766, was not a Committee appointed in consequence of complaints then made, and was not the effect the prohibition?—Yes, it took place as an experiment for five years, I think the government wished it to be three years, but I believe Mr. Pattison pressed for five years, to give it a more fair trial.

4413. The effect of it was extremely beneficial in your opinion?—No doubt of it, I have felt the good effects of it myself.

4414. Did the manufactures very much increase under the operation of those laws?—It wonderfully increased ; at the time of those laws taking place, the importation of raw silk was not above 6 or 700,000 lbs. and of thrown silk about 360,000 lbs.

4415. Were the operatives in general employed in the manufactures, both in Spitalfields and Coventry, well employed and fairly paid during the prohibition?—Generally they were ; but of course at different periods they were not so well employed, they were at times extremely brisk ; Coventry used to be very well employed in the spring season, they used to say that where a person came to make goods thin, and who had not employed them in other times of the year, they called them cuckoo masters.

4416. Did the throwing trade extend very much during the same period, and can you state the degree in which it extended?—The comparative state of the trade in 1766 and 1826 will prove it ; at the former period there were only seven mills in the kingdom that threw organzines, and those were in trifling quantities compared with the late returns of our mills, I should say perhaps not a fiftieth or even an hundredth part of that which has been lately thrown in this country.

4417. Can you state to the Committee what was the duty on foreign thrown silk in 1765?—Yes, I have an account from the year 1660 to the present time.

4418. What was the duty on foreign thrown silk in 1765?—Four shillings and five-pence

five-pence and $\frac{1}{2}$ ths, it may be called 4s. 6d. on thrown silk, and 1 s. 3 d. the pound on raw.

Mr.
William Banbury.

7 May,
1832.

4419. Have you a general statement of the duty on foreign thrown silk in 1765, and the changes afterwards made in that duty?—Yes; in 1765 it went up to 4s. 9d., there was 6d. additional duty put on in the year 1765, and they took off 6d. off raw silk, to encourage the throwing trade.

4420. Have you any objection to put in that statement for the information of the Committee?—None at all.

[The Witness delivered in the same, which was read as follows:]

B. - - - - 1784, and at present, 1786	-	-	-	-	7 4		

It must be observed, that except at the periods marked A. & B. the duty on most other goods was increased in proportion to their rate, or supposed value in the Book of Rates, in an equal degree with thrown silk. In 1765, the period marked A. the additional duty imposed was 6d. per pound; but it was in consideration of a material reduction then made in the duty on raw silk, for which see the Table; in 1784, the period marked B., the increase of duty was not on goods in general imported, but applied to silk only; for the increase on raw silk see the Table.

AN ACCOUNT of the PROGRESSIVE variation of DUTY on RAW SILK, from the Year 1660 to the present time 1786.

	CHINA, the Pound of 24 oz.	BENGAL, the Pound of 24 oz.	ITALIAN, &c. the Pound of 24 oz.

Mr.
William Banbury.

7 May,
1832.

The Duty was now paid on Raw, by the lb. of 16 oz.

	£.	s.	d.	£.	s.	d.	£.	s.	d.
Nett Duty in the Year 1784 to 1787 - -	-	3	-	-	3	-	-	3	-
1797 - - -	-	3	3	-	3	3	-	3	3
1801 to 1805 - -	-	5	1	-	3	9	-	5	1
1807 - - -	-	5	5	-	4	9	-	5	5
1814 - - -	-	5	7	-	3	9	-	5	7
1817 to 1823 - -	-	5	6	-	3	6	-	5	6
1824 - - -	-	-	3	-	-	3	-	-	3
1825 - - -	-	-	1	-	-	1	-	-	1

It must be observed, that until the year 1750, the duty on most other articles was increased (in proportion to their rate, or supposed value in the Book of Rates) in an equal degree with raw silk; and that in the year 1765, when the general reduction of duty on raw silk took place, an addition was made to the duty on thrown silk of 6d. the pound of 16 ounces.

(Mr. Banbury.)—There is one circumstance may be observed; there was a duty of 2s. in the pound laid on in the year 1824, on both raw and thrown; that was at the suggestion of the trade; Mr. Pitt, on the winding up of the American war and then funding the outstanding debts, among other taxes, proposed to levy 120,000*l.* by a stamp on ribbons and gauzes; the trade felt that would be extremely vexatious and troublesome, and it was suggested by them to Mr. Pitt, that if he took 2s. a pound on all the silk imported it would produce that revenue, or perhaps 30,000*l.* more, making 150,000*l.*; and when they offered that, he took it directly.

4421. Up to the period when the prohibitory laws were repealed, had there been any very large amount of capital invested in silk mills and machinery?—An immense quantity in both, as by reference to the mills in Cheshire, Somersetshire, Essex, Norfolk, Berkshire, &c. will appear.

4422. Has not that capital been subsequently very much deteriorated?—In many instances totally sunk, and in every instance seriously injured.

4423. From what period do you date that deterioration?—From 1826; the throwing trade until that period was a progressively improving trade.

4424. Was not the silk trade during your experience, setting aside any casual circumstances, a generally progressive improving trade?—Exactly so.

4425. Then you say that this increase of capital, which took place during the progress of prosperity, has been deteriorated since the year 1826?—Precisely so.

4426. It appears by the papers you have delivered in, that in 1784 the duty was raised from 5s. 1d. to 7s. 4d.; that was done on consultation with the merchants?—It was.

4427. Can you state that, at any of the subsequent periods, when the duty was laid on and increased to 14s. 10d., on each of those operations the merchants were consulted?—No, never on any other occasion; the duties were laid on at different periods; during the late war, the silk trade very much increased, then the duties still continued to be augmented; but the general feeling was, silk is an article of luxury; the minister must have taxes; and therefore with what face can we go before the minister, and ask him to take off taxes on an article of luxury, when it would be much more useful for them to be taken off necessities, and we always submitted to it without a word.

4428. The trade went on progressively increasing notwithstanding those heavy duties?—Yes, wonderfully.

4429. Did you complain to the Government that it was a falling trade?—No.

4430. Though it was burthened with heavy duties it increased?—Yes.

4431. By the trade, do you mean the whole of the persons employed in the silk manufacture?—Yes, I mean the silk trade generally.

4432. Do you mean the merchant, the throwster and the manufacturer?—Certainly, the whole of the trade; if Government wanted any information from the silk trade, the merchants were generally consulted, and they first of all consulted the manufacturers.

4433. Recurring to the capital invested in mills and machinery, what is the present condition of the throwing trade in this country?—It is miserably bad; many

many of the mills are now shut up, and only dragging on their operations partially at ruinous and starving prices, alike destructive of the comfort and even necessities of life to both master and servant; it is miserably bad.

Mr.
William Banbury.

4434. Have there been many failures in the throwing trade since the repeal of the prohibitory laws?—Enormous.

7 May,
1832.

4435. You mentioned that several mills had been thrown out of employment, can you give any description of them or their situations?—There are several mills at Reading, which are all shut up; Mr. Billings, a very capital mill at Twyford, and others; I am told Mr. Kay's is shut up.

4436. Have not all the mills been thrown out of employment that are in unfavourable situations, where, being worked by steam, they are not near coals, or where they are in a situation where they cannot get cheap labour?—I know that Macclesfield and Congleton used to be considered very favourable situations; but that half of them have been shut up.

4437. You mentioned that Mr. Kay's mill is shut up?—I have been told so.

4438. Where is that situate?—At Tring, in Hertfordshire.

4439. Do you know when that mill was built?—I should think about six or seven years ago.

4440. Was not that built in the year 1826?—I believe it was; we too were unfortunate; we erected a mill ourselves for the benefit of an old clerk, who wanted a situation for his son; he thought a silk mill would be a very good employment for him, and would yield him a comfortable subsistence; and in consequence of that we agreed to advance him four or five thousand pounds; and that was just built in 1824, when Mr. Robinson brought forward the contemplated alterations; I wished to knock it on the head then, and shut it up; but they thought that he would not persevere in his plan.

4441. To what do you attribute this reverse in the throwing trade?—The diminished consumption of thrown silk that would have been required to make ribbons and broad silks for our own use, and which have been supplanted by foreign, brought in legally and illegally, to the injury of every branch of the silk trade; the importation of trams, which were formerly prohibited, and the reduction of the duty on organzines to 3s. 6d. a pound.

4442. You of course conclude that mills in the worst situations would naturally decline first, were they to charge more than mills more favourably situate would be obliged to charge?—I think that is the natural cause.

4443. You do not mean to say, that the mills in Congleton and other places, which have decreased, were under disadvantageous circumstances?—No, only from the depressed state of the trade.

4444. Arising only from the general depression and want of employment?—Yes.

4445. Of course, in either way, the weakest would go first to the wall?—Yes.

4446. If one mill had an advantage over another to the extent of 1,000*l.* a year, that would last longer than the one which had no such advantage?—These are difficult questions to answer; but, generally speaking, I should say, there is no profit at all now, but a loss.

4447. What has been the specific effect of the reduction of the duty upon organzine from 5*s.* to 3*s.* 6*d.*?—It does no good to the manufacturer, for he is as bad off as ever he was; and it is an injury to the throwsters, for it has still further tended to reduce the wages and his own charge, which was before ruinously low.

4448. What do you conceive would be the effect upon the throwing trade of this country if the duty on thrown silk should be still further reduced?—Bad as it is at present, that must naturally, if possible, make it still worse.

4449. What effect was produced upon the trade by the sudden reduction of the duty on thrown silk from 7*s.* 6*d.* per lb. to 5*s.* per lb. in November 1825 by a Treasury order?—That was a dreadful event; the trade, from the recent alterations was then in a very ticklish feverish state, and that was an unexpected reduction of duty which nobody could contemplate, for it was done by a Minute of the Treasury, in consequence of a representation from Mr. Jaques, a silk dyer. In the Act passed for the admission of thrown silk 7*s.* 6*d.* was the duty; but it was the same both on the silk in the gum, and that which was dyed. Mr. Jaques went up to the Board of Trade and made a representation that that would be very injurious to his trade, though I do not suppose there would have been five cwt. of silk imported in the dyed state in the next twelve months; but in consequence of his representation the Government altered the duty from 7*s.* 6*d.* to 5*s.*, the trade was

Mr.
William Banbury.

7 May,
1832.

at that time in such a ticklish feverish state, that it gave us a complete damper, I will venture to say, our house lost from four or five thousand pounds by that event, and the trade in general four or five hundred thousand pounds; we had three and forty bales consigned to us, which had paid the 7*s.* 6*d.* duty; we memorialized the Board of Trade to put these in the same situation as if they had been still in the Docks; it was mere matter of accident whether they were in the one or the other, and we thought it very hard that our friends should suffer; those silks being on consignment, we memorialized the Board of Trade, or the Treasury, and I think we never got an answer for five months, whether they would or would not allow it; but about two or three days before Parliament met, they gave us an answer that they could do nothing in the business, so that those forty-three bales stood waiting the result of the determination of Government, and then had to pay half-a-crown more than other silks, and our friends sustained a serious loss upon them in consequence.

4450. Who was Chancellor of the Exchequer at that time?—I believe Mr. Robinson.

4451. Do you mean to say the trade had no previous notice until the Treasury order appeared?—They have not above two or three days at all events.

4452. This change took place to protect the dyer, the duty being 7*s.* 6*d.* both on dyed and undyed thrown silk?—Yes.

4453. To protect the dyer, the duty of 7*s.* 6*d.* on thrown silk was lowered?—Yes; and the duty of 7*s.* 6*d.* remains on the dyed by way of protecting the dyer; the silk, in dyeing, loses about four ounces—about one quarter.

4454. At the time of issuing the Order in Council for the reduction of duties, did the throwsters take any steps to represent to the Government the effect of such a change?—I do not recollect whether they did or did not; Mr. Bull, a considerable throwster, was very much alive to that matter; but whether the throwsters made any representation I cannot say.

4455. You say, that no answer was received for five months to your representation?—Yes; that is speaking as near as I can recollect.

4456. Do you consider it essential to the prosperity of the silk manufacture that the throwing of Italian silk in this country should be encouraged?—I do consider it a most important part of the silk manufacture in this country, one of its essential parts, independent of the employment it gives to women and children, who are as competent to perform the requisite labour in a silk mill, or perhaps more so, than the most athletic men; that circumstance, and the peculiarly clean delicate nature of the article, renders it a very desirable occupation for those interesting classes of society.

4457. You have stated, that the silk trade had been increasing in prosperity up to 1826?—I have.

4458. Do you believe, that but for the law which was then passed, it would have continued to increase in prosperity?—I think it would have increased in prosperity and in extent, it was progressively improving with the large duty of 14*s.* 7*d.* on thrown, and 5*s.* 6*d.* on raw; at 14*s.* 7*d.* the duty amounted, not unfrequently, to cent. per cent.; when we have had a few bales of silk, not of very marketable quality, when they have lain in our warehouses for two or three years, the duty and charges have amounted to more than the nett proceeds; there was perhaps interest for two or three years on the duty. We sold silk at ten months; there was our and the broker's commission, and the *del credere*.

4459. At what credit do you sell now?—At five months; it is a most extraordinary circumstance; I was very extensively employed as a broker towards the latter end of the last century and the beginning of the present; I have sold for Mr. Doxat 150,000*l.* a year, and other houses in proportion; I went on for ten years and never made a bad debt for a friend; and now latterly we cannot sell three bales of silk but there is a bad debt; probably from one, if not two.

4460. Those were good old times?—They were good old times indeed.

4461. Do you find your neighbours much better off than you?—I have known a terrible rot among other trades, for instance, the cotton, and we have been as sound as an acorn.

4462. What duty do you think would be a sufficient protection to the throwster?—That is a consideration a good deal with manufacturers; my opinion has always been, that about 4*s.* would be a fair protection to the throwster, and not injurious to the manufacturer.

4463. That

Mr.
William Banbury.

7 May,
1832.

4463. That is an advance of 6*d.* on the present?—Yes, and I would make it the same on tram and on organzine.

4464. Do you give that opinion with reference to the manufacturer having to compete with the French?—I do not think we can do that.

4465. Do you found your opinion that the manufacturer could easily bear 4*s.*, on a supposition of a prohibition taking place, or on a supposition of the English coming into competition with the French manufacturer?—I ground it more on the old system.

4466. What do you conceive would be the effect upon the throwster, of the duty remaining at 3*s.* 6*d.* as it is?—The throwster is very much injured by the reduction to 3*s.* 6*d.* in my opinion.

4467. What would be the ultimate effect of the duty remaining at 3*s.* 6*d.*?—He certainly will not be in a very enviable situation at that price.

4468. Do you think he will be able to exist with it?—It will be a miserable existence. I think; unless we have prohibition we shall never do any good; and I am determined, unless something of that kind is done before the end of this year, I will leave the silk trade.

4469. What effect will keeping the duty at 3*s.* 6*d.* or increasing it to 4*s.* produce upon the manufacturer in this country, looking at it not as you have said, with reference to prohibition, but as entering into competition with the foreign manufacturer?—In the present situation we are placed in with respect to the admission of foreign goods, I think it is of very little importance whether it is 3*s.* 6*d.* or 4*s.*

4470. Do you mean to say that the English manufacturer cannot the better meet in competition with the French by having the silk 3*s.* 6*d.* cheaper than he now has it?—I do not know that he would get it cheaper; because if the duty was to be taken off, that would knock up the mills in this country, I should think; and they would take advantage of us abroad, and would make us pay for it.

4471. What do you conceive would be the rise of price of foreign thrown silk in this country, supposing the throwster in this country was entirely destroyed?—I think it is very likely it would rise 2*s.* 6*d.* or 3*s.* 6*d.*; last Thursday we had a letter from Bergamo, from the house of Piatzoni & Co.; they stated the prices, so that they would stand here for us to sell, of 18–20 deniers at 28*s.*, and of 20 to 24 at 27*s.*, we paying duty 3*s.* 6*d.*; the price here at this moment I have sold that silk at, is 23*s.* 6*d.*, so that we are considerably under the prices abroad, that is owing to the competition among our throwsters, who are selling their silks at a loss.

4472. Have you lately received any consignments?—We had 5,000 weight of trams consigned to us a fortnight ago.

4473. Do those houses who send you those prices send you any silk?—Not an ounce; we used to receive hundreds of bales from them; we have received some from Milan, on a supposition that the duty was about to be taken off; but we never gave them that information I am sure.

4474. What do you put as the expense from thence to London?—About five or six shillings, with the duty, and every thing; the commission, the *del credere*, the brokerage, and so on, five per cent. more; five months credit, that would be about 1*s.* 6*d.* besides the duty.

4475. You have stated that the mills would be all knocked up; are you aware that during the year 1831, the whole of the mills for Italian in England have been obtaining only 3*s.*, between the price of raw and of thrown; that the prices of Italian and Bergamo silks have been on the average 18*s.* 6*d.* raw and 25*s.* thrown?—No, the thrown has been lower than that; the raw, I should suppose was upon the average about 16*s.* 6*d.* Bergamo raws, and the thrown about a guinea or 21*s.* 6*d.*

4476. What has been the difference in 1831 between raw and thrown?—About 4*s.* 6*d.*

4477. Deducting the 3*s.* 6*d.* duty from that, all that the throwster had was 1*s.*?—That is all.

4478. Do they get more now; is the difference greater between the raw and the thrown?—They are selling at such prices, it is impossible to tell; I saw beautiful organzine the other day sold at 21*s.* 3*d.*

4479. Has that reduction of price been effected, in your opinion, by the competition among our own merchants?—Yes, and the want of demand; there has been more silk thrown.

4480. Has not the operation been of a ruinous nature, and not of a remunerating nature?—Quite so.

Mr.
William Banbury.

7 May,
1832.

4481. When you place the duty on thrown silk at 4*s.* a pound, as a sufficient protection, you mean for tram and organzine together?—Yes.

4482. So that, presuming that half and half are imported, that would make 5*s.* for the organzine, and 3*s.* for the tram?—Yes, there is more organzine comes than tram.

4483. You do not conceive that 4*s.* on organzine alone would be a sufficient protection?—I am doubtful of that, it would do very well if we were under the old system, which I hope we shall be.

4484. Considering the ruinous price at which the Italian thrown silk has been sold here, has there been less imported the last twelve or eighteen months than there was before?—There was a great deal imported in the latter part of 1830 and the beginning of the year 1831, but the latter end of last year there has not been nearly so much.

4485. Do you think the difference of price has made the quantity of Italian thrown fall off?—Yes.

4486. Still there is some comes?—Very little; I am offering trams at this moment at a guinea; I sold the same man's silk at 19*s.* last week, but they were very superior raw; the tram paid 2*s.* duty, so that the throwing is given away.

4487. Of what country?—Milan silk.

4488. How do you account for men going on sending a manufactured article to sell at the same price as the raw article?—Ten months ago we were a little lively, and then they inundated us with silk.

4489. Does it not arise from this, that the silk throwsters in England being in close competition with each other, are obliged to buy raw silk to keep their mills going, and that they drive down their people to a pitch of suffering, and thus undersell the Italians?—Yes.

4490. Are not some of the families employed in the silk mills, partially supported by the poor's rate?—I do not know that fact.

4491. Is it your opinion, that it is the competition amongst our own throwsters that regulates the price, and not the importations from abroad?—Yes, it is from the want of demand for the thrown article.

4492. Do you think that the last eighteen months, in the silk throwing, the expense and the manufacture has been paid out of capital, or out of profit?—Out of capital; profit is an obsolete term.

4493. Are you aware that in 1831, there were 456,345 lbs. of organzine not dyed, and 170,645 lbs. of tram not dyed, imported, notwithstanding the great reduction of price which you state?—Yes, they imported a great deal; that has been the reason we have been selling at such a loss; they wrote us word that formerly our market was the best market in Europe, and they now find it is the worst.

4494. Do you mean to say that our market here is not so good as other markets in Europe?—No, it certainly is not.

4495. Then why do they send it here?—They do not send the same quantity, and there has lately been many bales of thrown silk sent back.

4496. Has the effect of the alteration in 1829 been to increase the quantity of thrown, and to decrease the quantity of raw silk imported from Italy?—I think it did increase it, but they sent in a great deal in the year 1831; but they are not sending now, there is nothing coming to our house but two or three bales from Piedmont.

4497. If there is a great diminution of silk from Italy, how comes it that the throwsters are supplied with Italian silk, so as to compete with each other?—At present there is no good raw silk coming.

4498. What is the raw silk which comes now?—There is some very good in the country, but now is getting scarce; some has been sold; I was only offered 18*s.* at Christmas, and would not then take it.

4499. Is there, in your opinion, a diminution of importation within the last six months of the finer qualities of raw silk from Italy?—Yes.

4500. Is there, in your opinion, a great increase of thrown silk from Italy?—No, there is a reduction of late.

4501. What silk are the throwsters generally throwing now?—Some of last years; there has been very little come in of late.

4502. Do you not know that during the last eighteen months, the state of disease and so on, on the Continent, influenced the export?—I cannot say, the trade is remarkably good on the Continent; it is very good in Germany; it is very good in Switzerland, and is very good at Lyons; it is better here within the last ten days than

than it was, but after this and next month I expect we shall revert again to our old miserable state.

4503. Do you think that the distress of the throwster arises more from the introduction of manufactured goods than the importation of foreign silk?—From the importation of manufactured goods, there is where the mischief lies.

4504. Will you state how the importation of manufactured goods affects the throwster?—Every yard which is imported diminishes the manufacture in this country.

4505. Are you acquainted with the condition of the silk manufacturer in England?—I have had a long and intimate acquaintance with persons residing in Spitalfields, but a manufacturer would be able to answer that question better than I can; I have had frequent communications with them, and a tolerable knowledge of their trade.

4506. What is their condition now as compared with that in which they were previously?—It has been latterly very bad; there has been very little demand for goods, and no sales of consequence made without a great sacrifice, but if they submit to it, then the great monopolizing or slaughter-houses (as they are called) are always ready to grapple with their unfortunate victim.

4507. What do you mean by slaughter-houses?—That is the term for those great houses which are always ready to buy any goods when they can get them 10 or 15 per cent. under cost—great houses with large capital.

4508. They buy at all prices?—Yes, I dare say they do; but as low as they possibly can.

4509. When the distresses of others oblige them to sell they buy?—Yes.

4510. But that will not continue when the distresses of those persons must oblige them to discontinue their trade?—I should think not.

4511. Can you devise any plan by which the silk manufacturers of Spitalfields can get rid of their goods without selling them in the best market, the whole trade being open to them they will naturally take the best price they can get?—No doubt.

4512. Those slaughter-houses are resorted to in such cases probably?—Yes.

4513. The silk manufacturers sell to those houses at the prices the trade generally will give, do they not?—They sell as much in the regular way as they possibly can, but when they get distressed, those gentlemen are generally, as they suppose, aware of that.

4514. Do not you suppose those persons who keep those which you call slaughter-houses are holders of large stocks, and that they have no true interest in beating down the manufacturer, but that in self defence they are compelled to buy at the cheapest market?—I cannot say.

4515. Are the Committee to understand, that the sellers of goods have any better market than those slaughter-houses?—They have no other now.

4516. Do you consider that that may be beneficial to them?—That is a new system; formerly the manufacturers gave credit, and when they gave credit there was a profit on goods, but now when they sell for money there is never any profit.

4517. It is a ready money trade?—The next thing to a ready money trade.

4518. Therefore the commodity comes forth to the public not taxed with those long credits which used to be given?—I suppose that is the case, but when there was credit given, there was a deal more profit.

4519. Must not that be beneficial to the operative, as the public will consume more of a cheap than of a dear commodity?—We can only judge of things by the results; during my experience, which has been pretty extensive, since this system has been adopted, of selling at short credit to those houses, we have made enormous bad debts, and they have, I believe, very much participated in them.

4520. You have shortened your own credit?—Yes, we have been obliged to do it.

4521. Is not the result of that system of short credit and small charge beneficial to the consumer?—It may make it a little cheaper, but those great houses are nothing but middle houses, they buy of the manufacturer and then sell to the shops after that.

4522. Why does not the manufacturer sell to the shop-keeper?—Some of them do; and those who do so, do best.

4523. Are they not at liberty to go to those slaughter-houses or to retail shops?—Certainly.

4524. If those wholesale houses absorb a great portion of the trade, is not that to be taken as a proof that the manufacturers sell to them because they get the best market by that mode?—They are almost the only buyers now.

Mr.
William Banbury.

7 May,
1832.

Mr.
William Banbury.

7 May,
1832.

4525. Are the dealings of those large houses sufficient to fix the price in the market?—I should think they would materially influence it.

4526. When the trade was more divided, and there were not those very large houses existing, was there not great competition, and had not the manufacturers a better chance of deriving a fair profit by their trade?—There is no question of that, the trade has never flourished since that system ceased.

4527. There being but few buyers, and those being very large buyers, have they it not in their power frequently to rule the market by raising or depressing the prices to suit their interest?—I do not think they much raise them, they depress them as much as they possibly can, but manufacturers in constant communication with those houses will give a much better answer on that point than I can, as I have no communication with them direct.

4528. You have been asked whether, if manufacturers were ruined, they would leave off selling; do you not know a great many individuals who have been so ruined compelled to leave off selling?—Yes, when they have broken they have nothing to pay beyond 1s. to 2s. 6d. and when they have failed they have no goods.

4529. Have you known any silk manufacturers who, when they have wanted money, have gone and sold at an immense sacrifice to raise money?—Frequently that has been done; I could mention instances, if necessary; there have been two or three actions brought against the purchasers of those goods. I received a dividend last Friday from Marshall, of Watling-street, he had goods consigned to him from Manchester, he was to sell at such and such prices, he sent them to those slaughter-houses as they are termed in the trade; there were actions brought against two or three of them; they compromised, and I got 5s. 7½d. in the pound on my debt, in consequence, or I should not perhaps have got sixpence but for that.

4530. Has it not been notorious to the trade that there have been disputes between the creditors of those persons who have failed, and some of those houses who have been purchasers?—This is a case in point.

4531. And all those persons have compromised the matter by making that payment?—Yes, instead of standing the trial.

4532. You could name the houses?—I could if it were necessary.

4533. In which actions had been threatened against persons who had purchased of other houses' agents, who had received goods to sell by commission?—Yes.

4534. Do you not know, that recently there have been actions brought against individuals, and that those individuals have been ruined in consequence of verdicts being obtained against them?—I recollect something about it.

4535. You have been asked whether those very large purchasers, by buying low, do not benefit the consumer; however these great monopolists may benefit the public by cheapness, do they not do essential injury to those individuals who manufacture the goods?—That is my impression.

4536. You mention these things merely to illustrate the distressed state of the trade, which gives to large buyers an advantage which they would not have under a more prosperous state of things?—Yes.

4537. When a manufacturer has been buying goods on credit, and has bills out for those goods, is there not a great inducement when he is pressed for money, to sell goods for cash, to meet his demands which are coming due?—Yes.

4538. So that he may go on for a considerable time in the hope of recovering himself?—Yes.

4539. Does not an operation of that sort ultimately very much increase the mischief arising from his insolvency?—Yes.

4540. The observations you have made are not intended to apply unfavourably to large businesses?—Certainly not; I only mention that a manufacturer told me, when the trade was bad, we cannot sell our goods in the regular way; but if we choose to make a sacrifice, we can sell all we have got.

4541. The extensive operations of those houses have grown out of the importance of the trade?—Yes, they have.

4542. Does the mischief of which you complain, arise from the manufacturer making more goods than he can sell to a profit, or is it not very much aggravated by the pressure of French goods upon the market?—That certainly magnifies the evil.

4543. Have the same sort of compromises you refer to, taken place in the Manchester trade?—I believe they have.

4544. Do

4544. Do you know that there is a possibility of a fraudulent debtor conniving with fraudulent assignees, to allow such sort of transactions?—I am not aware of such a circumstance, but it is possible.

4545. Do you mean to apply that charge of making those compromises to all the great dealers in the city?—I believe it is pretty general with them, they all buy as cheap as they can.

4546. Are the parties who sell, at liberty to sell where they please?—Yes, certainly.

4547. You state that a number of persons are breaking every day?—Not now.

4548. Are there more in the silk business now than there were some years ago?—I should think not half.

4549. There have been too many in the business to find a living?—Yes; there has been such an immense quantity of foreign goods come in, it has tended, I have no doubt, very greatly to the distress which they now feel.

4550. Do you mean to say that trade is in a more wholesome state than formerly?—Yes, I think there is more care; we have not had a bad debt of late.

4551. Is there larger capital in the trade than formerly?—I think not.

4552. They give more credit than in the cotton trade, do they not?—I cannot say.

4553. Are you not aware that raw cotton is sold at a very few days' credit?—I do not know the customs of that trade.

4554. Are you not aware that the credit in Coventry is generally one week?—I have no doubt Mr. Cope gives a credit.

4555. Why do you merchants trust the little houses?—We trust very little now, that evil is pretty well cured.

4556. Has there been any alteration in the credits given by merchants to manufacturers of late years?—I forget how long it is since the last alteration was made; I think four or five or six years ago we used to give ten, then eight, and now it is five months.

4557. How much discount?—Two and a half per cent. now; half a per cent. per month.

4558. Do not the manufacturers now generally take the discount?—Some of them do and some do not, the majority to whom we sell do not.

4559. The throwsters do not?—Some of them do, and some do not.

4560. What credit do you get on China and Bengal silks?—That is ready money article.

4561. You purchase of the East India Company on ready money?—Yes.

4562. What is the credit given on the Turkey silk?—That used to be seven months, now I believe they generally allow five per cent. and sell for money; the broker gets that I believe.

4563. You sell a great deal more silk to the throwster than you were in the habit of doing, do you not?—Formerly the throwsters did not buy at all, they were not buyers of silk.

4564. Do you find the throwsters pay ready money more frequently than manufacturers?—I think not.

4565. Upon British thrown silk, what is the credit?—Five months, the same as Italian.

4566. Has not this curtailment of credit had the effect, that many of the brokers, instead of acting fairly as brokers, and being content with the commission, advance the money and guarantee it at a certain per centage?—I believe there is a great deal done in that way now, but I am not acquainted exactly with that business.

4567. Do you charge 5-8ths brokerage now?—Yes, we pay that charge.

4568. You say that the British thrown silk and the Foreign are sold at the same credit?—Yes.

4569. Many of the brokers guarantee the debts, and charge a per centage now, do they not?—Yes, I believe so.

4570. That was not formerly within the line of the broker's duty?—It was always done more or less.

4571. But persons who have large capital engross the trade by holding out this inducement to manufacturers?—Yes, capital will have its advantage.

4572. You have been asked whether the British thrown silk was not sold at four months, with the discount of three per cent. for ready money, whilst Italian

Mr.
William Banbury.

7 May,
1832.

was sold at five months and two and a half?—No, we sell at five months, and allow three per cent., whereas the foreign is five months, allowing two and a half.

4573. Do the merchants take a guarantee for the security of their debts now as before?—Precisely the same.

4574. What is the per centage allowed to brokers?—Five-eighths.

4575. What for the guarantee?—We say such a man owes a good deal of money, and I should rather not sell him any more unless you will guarantee; he says, I will guarantee, and we allow him accordingly.

4576. Has any change taken place in that respect since 1826?—There has been no alteration in that respect that I know of.

4577. You do not mean to say that the guarantees have not been carried to a greater extent than formerly?—I cannot say, I am out of that line now.

4578. Is that system of guarantee a system you approve of?—I cannot say indeed.

4579. You avail yourselves of the custom?—Yes, occasionally.

4580. Do you, looking at your general business, do you guarantee those who consign goods to you on the sale?—Uniformly; they would not send silk to us without, to be sold on their credit; such an experiment was tried before my time, and it did not succeed; there were bad debts made, and the Italians will not send their silk here to come and look after it.

4581. What effect had the Berlin and Milan Decrees on the silk trade?—We had very little connexion with the Continent during that time; we had very little silk in our market in consequence, there was no Italian thrown silk to be got, and our manufacturers at the time were obliged to have recourse to any expedients to make a few goods, they even threw singles hard, wove and used them as warp, and tram they threw hard and used that as warp for the time; certainly those times were good for the throwster.

4582. Having been accustomed to depend on Italy for their organzine, and being deprived of that, they were reduced to considerable distress?—Yes, the manufacturers were.

4583. The price rose very much?—Yes, to 100s. I believe.

4584. Was not there some smuggled through Holland?—Yes, it used to come in little bags, sometimes pushed into butter firkins and come as butter; it was not smuggled in here, but smuggled out of Holland, because they could not let us have it from Italy, owing to the Berlin and Milan Decrees.

4585. It was so scarce, was it not, as to influence the operations of trade?—Yes.

4586. All the operations used were not sufficient to supply the want of it?—No, there were not mills at that time sufficient, mills have much increased since that period, that gave a stimulus; there were enormous profits made at that time on the silk thrown in this country; my partners told me that in one year about that time, they got no profit as merchants, but that they cleared about 10,000l. upon their British silks.

4587. Did the high price and the difficulty of getting silk, produce the effect of drawing more attention to the throwing?—I think it did, it gave a great stimulus.

4588. It increased the throwing of silk in this country?—Yes; and the high duty on organzines was another stimulus to induce persons to erect mills.

4589. If England were chiefly dependent on Italy for her supply of silk, would not an interruption of trade with the Continent cause much greater inconvenience to this country than if we threw the greater part ourselves?—There is no doubt of that; the consequence would of course be very serious, but if there were plenty of mills to throw organzines and every description of silk, the inconvenience would not be so much, there is always a great quantity of China and Bengal which can be substituted.

4590. The result of your long experience and extensive information is, that it is quite necessary for the prosperity of the silk manufacture of this country, that it should continue to protect its thrown silks?—Yes, I think it is.

4591. Was it not considered of so much consequence that Parliament voted Sir Thomas Lombe 14,000l.?—Yes, that was before my time; I have the Evidence in my pocket of Mr. Pattison, the father of the highly gifted director of the East India Company.

4592. What, in your opinion, would be the most effectual remedy for the existing evils of the silk trade?—I am of the old school; I speak with the greatest sincerity from the conviction of my mind, that the only effectual remedy for the present

Mr.
William Banbury.

7 May,
1832.

present distress of the silk trade is to return to that state under which it so long flourished, prohibition and nothing but prohibition.

4593. Is not the exportation of raw silk from Piedmont prohibited?—Yes, it has been for many years.

4594. For what reason?—It was generally supposed that when Sir Thomas Lombe got the secret of throwing in this country, the King of Sardinia was so exasperated he prohibited the exportation of raw silks. In regard to the raw silks of Bergamo and Brescia, those countries were formerly under the government of the republic of Venice, and during that period we never saw any silks from those countries but organzines, as the raws were prohibited; but for the last thirty years there has been an immense quantity of those silks imported, and also Bolognas; those we never used to see but in the thrown state, they come now raw.

4595. To what is that to be attributed?—Because they (Bergamo and Brescia) are under the Austrian government now.

4596. Whatever was the cause of prohibition, the Piedmontese government have continued it?—Yes, I believe the Grand Duke of Tuscany.

4597. We get none of the finest of the raw silks from France or Piedmont?—No; France prohibits all silk, except manufactured, to be exported.

4598. Do you think it would be of any importance that the silk trade should be able to avail itself of the raw silk of France?—Yes.

4599. That would tend to equalize the prices?—Yes; as they have no vend for their silk to a foreign country, they depend entirely on their own manufacturers; when that manufacture is flat they must of course comparatively give it away, or sell it at very low prices.

4600. Therefore the French manufacturer is placed in a situation to undersell the English manufacturer who purchases from Italy now, Italy having three or four other markets?—Yes.

4601. You state that the only remedy is prohibition?—I think so.

4602. Have you considered well the effect of prohibition?—Yes, I have both considered it and felt it; the prohibitory law for silks and velvets passed in 1766, was tried as an experiment for five years, and at the end of those five years it had answered so well, that it was renewed every time it was about expiring, till Mr. Perceval's administration, when it was made perpetual without any question about its propriety and usefulness.

4603. Who was in administration at that time?—It was a Whig administration that gave us the prohibition, the Marquis of Rockingham.

4604. That was a very powerful administration?—Yes.

4605. England is a manufacturing commercial country, would you propose to extend prohibition to any other trade?—I cannot say, I want only the benefit I had when I was a youth.

4606. When silks sold for 32s. the duty and charges amounted to half of that?—Yes.

4607. Did you receive at that time your commission on the whole gross amount?—Yes, because we sold it, and paid all the charges and ran the risk.

4608. Every diminution of duty lessened your commission?—Yes; but I should not regard that if I saw the manufacture flourish.

4609. You think the manufacturer can flourish best with dear silk?—We did formerly well; under the duty of 14s. 7d. and 5s. 6d. trade was as prosperous as possible, I went on for ten years and never made a bad debt.

4610. You propose an increase of duty now?—I do not think an increase of duty would do any good, because they would smuggle in manufactured goods.

4611. What are your ideas about smuggling, if we prohibit the importation, should we be in danger of smuggling?—No, it was particularly mentioned by the Custom House officers, and people who were examined in 1765 and 1766, that the extension of duty would not prevent smuggling, and that nothing less than an absolute prohibition would.

4612. What do the Custom House officers say now?—I cannot say.

4613. Are you not aware that considerable smuggling takes place now?—Yes.

4614. What is the inducement to smuggling?—To get in their goods cheaper, I suppose.

4615. Can you state what is the charge for smuggling?—Not being engaged in that line I cannot say; I never had a transaction of the kind in my life.

4616. Do you not consider, that if French goods were prohibited now, there would be a considerable increase of smuggling?—No, I think not; I remember,

Mr.
William Banbury.

7 May,
1832.

for many years, during the prohibition, when the duty was very high, and I never heard any thing about smuggling.

4617. Goods may be admitted now at a duty of 25 or 40 per cent., and yet smuggling takes place, that must be because they get the goods cheaper?—Yes.

4618. If prohibition was to take place what do you conceive would be the effect?—Then the houses would be afraid to deal in prohibited articles, they could not keep them.

4619. There is much greater facility to smuggling now than under prohibition, in your opinion?—Certainly, no doubt there is; when the duty was 14 s. 8 d. on organzine silk I know there was a little smuggling of that article, it was too high, and had not the duty been lowered there would probably have been more smuggling in it; prohibited articles it is that people are afraid to deal in.

4620. You think, that if prohibition was to take place to-morrow our manufacturers would be better employed, trade would be improved, and no smuggling take place?—Exactly so.

4621. The goods smuggled are made of the finer qualities of French silk?—No doubt they use French silk.

4622. If there is at this moment a demand for those smuggled goods depending on their being of better quality, in the opinion of those who receive them, do you imagine, under the prohibitory system, you can manufacture those goods without having the raw material?—I apprehend, if the French discover any very material alteration or improvement, it is very likely we could get their goods over to see how they make them; and I think there is capital and ingenuity enough in this country to imitate them.

4623. Is it or not, in your estimation, in the power of this country to command the raw silk?—I do not know, we cannot interfere with other Governments to make them alter their laws.

4624. We cannot get the raw silk from France?—No.

4625. It is a manufactured article from France of a superior quality and fineness that takes in this market; if you cannot get the raw material to make them, and there is a prohibitory system, how can you meet the French manufacturer?—I do not know that there is any article for which Italian might not be substituted.

4626. You could make goods in this country from the Piedmont silk, or Italian silks imported, equal to those imported from France, which now command the market?—Yes; but they certainly have an advantage by growing the silk, and keeping it for their own use.

4627. You are of opinion, that Piedmont and Italian silks can be substituted for the French silk which we cannot obtain?—Yes; in my opinion.

4628. Do you mean to say, that the French manufacturers have a decided advantage over you in the quality of their silk, or is it more an advantage in price?—I do not know; some few years ago we had a vast deal of French silk over soon after the revolution, but I never saw any French silk that was better than some Italian.

4629. What advantage has the French manufacturer over the English?—I suppose because he prohibits the exportation of his raw silk, he must have it cheaper than we have it, as Italy is open to all the world.

4630. Is there any thing peculiar in the quality of the silk?—I do not know any thing peculiar in the quality of any silk, but that we can find something similar to it in Italian; a great quantity of it came here in the early part of the revolution.

4631. Had you an opportunity of examining it?—Yes, it was not well selected; it was not sent over so well sorted; and I said, at the time, these Frenchmen are an hundred years behind the Italians; the Italians are extremely neat in their packing, the French came higgledy piggledy, like a bundle of sticks almost.

4632. Were they smuggled?—No, they let them come out I believe at that time.

4633. Do any French silks come here now?—I have not seen them for some years.

4634. What was your opinion of its quality?—There are some of the Italian silks superior to any French I have ever seen.

4635. Have you ever been at Lyons?—Never, I have never been out of this country.

4636. You

Mr.
William Banbury.

7 May,
1832.

4636. You suppose the advantage the French manufacturer has, is in the cheapness of the article he uses?—Yes, certainly that is an advantage.

4637. Your opinion is founded upon your knowledge of the French silk which you saw introduced into this country, about forty years ago.

4638. Have you known from any late quotations, the price of French silk in that country?—No.

4639. Do not you think that these French silks are superior to some of the silks of Italy?—No, I think not; there is a new filature started on the Piedmontese principle at Naples, they send over a great deal of very excellent silk, which probably approximates more nearly to that of Piedmont.

4640. Have you ever known in this market thrown silk sold at less price than the raw silk?—I have.

4641. In what year was that?—That must have been before 1787 or 1790; at that time there was an immense demand for gauze made of raw silk; I think at that period there was not less than 1,500 to 2,000 bales a year used for gauze; when the muslins came into use, about the year 1788, that began to dwindle.

4642. Is the Italian silk thrown in England as well thrown as the thrown silk you have bought from Italy?—I think there are some mills in this country equal, if they had the raw material, to the Italian.

4643. Is Italian silk thrown in England as well thrown as that in Italy?—Yes, if the silk is similar, I think we can do it as well here as there; in Piedmont they do throw the silk most beautifully.

4644. What is the relative price of Italian and British thrown silk, both of the same material?—They must approximate pretty nearly to each other; if the manufacturer can buy good English thrown silk at eighteen-pence less than the Italian, he will buy it, and *vice versa*.

4645. Is there is any difference in the goodness of the thread in our own thrown?—I think that we clean their silks in our mills better than the Milan or Bergamo people do at theirs.

4646. Has the thrown silk much improved, or deteriorated, in your opinion?—I think it has improved, but Mr. Pattison had a beautiful mill at Congleton, and he used to work Fossembrone silk, he used to send it out as Bologna; I recollect when that silk would fetch eighteen-pence a pound more than the best Piedmont of the same size.

4647. How many years ago?—Forty years ago.

4648. You mean to say we have been able for forty years to throw as well as the Italians?—Mr. Pattison could; but forty years ago we could not get the Bergamo or the Bolognas in the raw state.

4649. Are the Committee to understand, that since 1824, any decided improvement in the throwing of silk has taken place?—Two or three mills have got a great credit, Mr. Brawns at Colchester for instance; but his is on the principle of Mr. Cortauld and Mr. Royle of Manchester; there are excellent mills in the West of England; if you give them a good raw silk they do as well as possible.

4650. Has there been a considerable improvement in the throwing of silk since 1824?—No, I do not think there has been a considerable improvement; there was never any better thrown silk than Mr. Pattison's.

4651. Has Bengal silk improved in quality since 1824?—No, nor never since I have been in business. I believe they began to reel it after the Italian fashion about the year 1770. I have known it well since the year 1780; I have heard it said there was never any better silk than Mr. Weiss first sent to this country; he was sent over by the Company to establish their filatures, and I do not think they have at all improved since that time.

4652. Has China silk improved in quality since 1824?—We have had a good deal more of the fine qualities, there are very nice silks among them.

4653. It appears that in the years 1823 and 1824 the amount of waste imported was between fifty and eighty thousand pounds weight, and now it amounts to 752,000 pounds; do you know to what particular manufacture that is applied?—I am not very well acquainted with that article, I understand a good deal of it is exported now; we sell a little now and then.

4654. Is it exported in the thrown state?—It is carded and spun like cotton.

4655. With respect to the cheapness of silk in France, do you mean that they have their raw silk cheaper, in consequence of the prohibition of the export of that article?—I have no doubt of that.

4656. You think that they have raw silk cheaper in France than they have

Mr.
William Banbury.

7 May,
1832.

in Italy or in England?—I should think at times they have; generally I should say.

4657. Have you any doubt about that?—No, I have not.

4658. Would your observation apply to thrown, as well as to raw silk?—Yes.

Mercurii, 9^o die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. Thomas Willmott, called in; and Examined.

Mr.
Thomas Willmott.

9 May,
1832.

4659. HOW long have you been engaged in the silk trade?—I have been 32 years engaged in it.

4660. Where?—At Sherborne in Dorsetshire.

4661. Do you throw Italian silks?—Principally; I throw Italian silks, trams and organzines; my mills are principally calculated for throwing such descriptions of silks.

4662. Do you throw those silks on your own account?—No, I throw them on commission.

4663. When were the mills erected, and what is their power?—One of my mills was erected about 80 years ago, two others were erected 18 or 20 years ago; the power is water.

4664. Are there any other mills in your town?—There is one other mill, formerly employed in throwing organzines and trams, but which has been discontinued, in consequence, as I suppose, of the low and ruinous prices of throwing silk.

4665. What was the condition of the silk trade in that neighbourhood before 1826?—The throwster was constantly employed, and at prices by which he could live himself as well as his hands.

4666. What number of spindles had you then at work?—About 8,000.

4667. How many work people did you then employ?—About 600.

4668. How many spindles have you now at work?—Not more than 3,000.

4669. How many people do you now employ?—Not more than 150.

4670. Has this decrease in the number of spindles and hands been of long duration?—Yes, I have been gradually decreasing the number both of spindles and hands since 1829.

4671. What was the cause of your thus decreasing them?—I found it difficult, if not impossible, to obtain as formerly, a regular supply of silk, and the prices of throwing became so low as to leave me no profit.

4672. Have the poor rates in your parish increased in consequence of the want of employment?—Yes; the poor rates within a few years have increased in the parish of Sherborne about 1,000*l.* per annum.

4673. What were they before, and what are they now?—In the year ending at Easter 1825, they were 1,590*l.* In the year ending at Easter 1831, they were 2,340*l.* In the year ending at Easter 1832, they were about 2,450*l.*

4674. Have you the other years?—I have some.

4675. What was the year 1821?—One thousand seven hundred and thirty pounds. I have an account from the year 1816.

4676. How did you become possessed of that account?—From the vestry clerk of Sherborne.

4677. Did you see the extracts made?—No, I did not see the extracts made, but they came from him.

4678. You are a rate-payer in the parish?—I am.

4679. That consists, with your own knowledge, of the facts?—Yes.

[The Witness delivered in the same, which was read, as follows:]

AMOUNT of ASSESSMENTS for POORS' RATE, for Sherborne.

	£.	s.	d.		£.	s.	d.
For the year ending}				For the year ending}			
25 March 1816 -}	1,439	4	-	25 March 1825 -}	1,597	5	6 $\frac{3}{4}$
— 1817 -	1,711	6	11	— 1826 -	1,726	2	9 $\frac{1}{2}$
— 1818 -	1,973	2	7	— 1827 -	1,825	13	2 $\frac{1}{4}$
— 1819 -	1,779	17	8 $\frac{3}{4}$	— 1828 -	1,766	6	9 $\frac{1}{4}$
— 1820 -	1,706	9	6 $\frac{1}{2}$	— 1829 -	1,760	6	4
— 1821 -	1,729	19	8 $\frac{3}{4}$	— 1830 -	2,108	7	9 $\frac{1}{2}$
— 1822 -	1,616	1	7 $\frac{1}{4}$	— 1831 -	2,359	18	8 $\frac{1}{2}$
— 1823 -	1,448	6	6 $\frac{3}{4}$	— 1832 -	2,450	-	-
— 1824 -	1,575	9	11 $\frac{1}{4}$				

Mr.
Thomas Willmott.9 May,
1834.

4680. What is the population of the parish?—I believe nearly 4,000.

4681. What increase has there been in the population?—No very material increase; I speak at random, but I do not suppose the increase was 300 in the 20 years.

4682. Were all the people you employed belonging to the parish?—No, not half of them belong to Sherborne.

4683. Are you aware whether the people employed in the other mills which have been shut up, belonged to the parish?—A great many of them, some of them from the surrounding country.

4684. Are the persons you now employ inhabitants of your parish?—Mostly.

4685. Have you reduced the wages of your work people as well as diminished their number?—Yes, I have been compelled to reduce their wages, something more than 30 per cent.

4686. Since what period, have you made the reduction of 30 per cent.?—Principally since 1829.

4687. What was the average of your wages in 1829; were your work people divided into classes?—Children and grown women.

4688. Will you state the rates of the women and the children?—Our payments have been 5s. per week for that class of girls we call mill hands.

4689. How many hours per day?—Our people work about ten hours and a half.

4690. What do the common hands receive?—Gradually diminishing to 1s. 3d. and down to 1s. for the young children.

4691. What do you pay to the same description of hands now?—The reduction of wages bears no proportion to the reduction of the price of throwing, it was impossible to reduce the wages of our hands in an equal degree to the reduction of the price of throwing.

4692. Have the goodness to state in what way wages are reduced 30 per cent.?—The mill hands at present are paid 4s. 6d. there has been a reduction of 6d. upon them.

4693. How long do they work now?—The same hours.

4694. Do they do more work now in those hours?—No, the average that I speak of is taken upon the aggregate of wages, women and children.

4695. How long do you pay the others, or on what class is there the greatest reduction?—That is the greatest reduction per cent.; the way in which I have taken the average has been by taking the amount for a certain quantity for six months.

4696. Do any receive under 1s. a week?—No; but I include in wages that which I pay for winding silk on which there is a very great reduction.

4697. That comes also into the throwing department?—Yes.

4698. How much a pound did you pay in 1829 for winding?—For fine silks as much as 2s. 3d.

4699. What do you pay now?—One shilling.

4700. Did you include the winding in the 600 you mentioned?—Yes.

4701. What proportion were employed upon that?—I suppose 400.

4702. Then there were two-thirds winders, and one-third for your mills?—Yes.

4703. That you say was for the finest silk?—Yes.

4704. What was paid for the average of silk?—Two shillings.

4705. What is the average now?—For any silk we give out we give but 1s.

678.

M m 4

4706. How

Mr.
Thomas Willmott.

9 May,
1832.

4706. How much a week can a good hand wind?—I will explain why it is impossible to give a definite answer to that question. Here is a mother with a family, takes silk to her own home, if her children are ill she cannot do so much.

4707. How much can a girl wind per week?—That depends upon the quality of the silk; it depends first, upon the length of time she devotes to it, which being a domestic employment may be uncertain.

4708. Supposing a hand employed at home in winding silk, and her attention not distracted, how many pounds per week would she wind?—I should think from two pounds and a half to three pounds per week, according to the quality of the silk. I have taken the average in this way, the total amount paid for six months in 1831, and then I have taken the last six months.

4709. You do not mean to say, that a person earned only a shilling a week in winding?—Certainly not; I said that it of course depended upon circumstances, such as whether there was a family in the way, or illness.

4710. You mean to say, that they now earn 1s. per lb. for winding silk, and that they wind $2\frac{1}{2}$ lbs. of that silk per week?—Yes.

4711. You mean to say, that they earn 2s. 3d. a pound for winding silk, and that they can then wind off the same quantity?—Yes; but the 2s. 3d. was for the finer silks, the average was about 2s.

4712. The people you employ are divided into two classes, the people in the mill and the winders?—Yes.

4713. Which of them are the most skilful; the people in the mill are the best workpeople, are they not?—They are the most important.

4714. The winding is done in their own houses?—Principally.

4715. Those persons have other employment to attend to besides silk winding, have they not?—Certainly, agricultural employment; they are not confined to us; they are not under any engagement.

4716. The sum they would earn per week would be the same probably they would earn in other employments?—That I cannot say.

4717. When there is other employment, they will not work for you, if they can obtain higher wages at other employments?—Of course not.

4718. Supposing they were not employed in the silk trade, is there any other employment in that neighbourhood to which they could apply themselves?—They lie under the same state of distress as the glovers do; there is a great deal of gloving in our neighbourhood, but they are reduced nearly in the same proportion.

4719. What kind of silk do you principally work upon?—Principally Italian tram and organzine.

4720. Do you undertake to say, that there is a want of employment in other lines, and that the wages of labour are lowered?—There is a very great want of employment, and the wages are lowered.

4721. You have an account of the wages you have paid of late, and you have compared it with what you have paid before, and there has been, you say, a reduction of at least 30 per cent. in the wages according to your calculation, is that so?—Yes.

4722. You are quite confident that the reduction, looking at the whole of the persons employed by you, is to the extent of 30 per cent.?—Certainly.

4723. Is there less employment than there used to be?—Yes.

4724. That, in your business as well as in the glovers and others, has occasioned a great increase of the poor rate?—Yes, certainly. I stated just now that whereas I used to employ 600 hands, I have employed only about one-fourth part of that number lately.

4725. To what do you attribute this loss of trade and depression?—To the introduction of foreign thrown silks; to the introduction of manufactured silks, which both oppress the throwster and the manufacturer, from having goods brought in, the manufacturer has less demand for manufactures, and the throwster has again to compete with the introduction of the foreign silks.

4726. Is there not a greater quantity of the coarser silks now used than there used to be?—I am not competent to speak upon the application of the silks to the manufacturers' purposes.

4727. You happen to know, probably, that the coarse silks require less labour than the fine silks?—Certainly.

4728. Should there be a decrease in the finer silks, and an increase in the coarser, that would of course lessen labour?—The purposes for which the fine silk,

silk, and the purposes for which the coarse silks are used, are so different that one cannot be substituted for the other in the employment of my machinery.

4729. The coarse silks would require less labour than the fine?—Certainly.

4730. They would not employ so many hands?—Certainly not.

4731. Are there not as many fine silks thrown in this country as formerly?—I suppose there are, when the mills are in a state of activity.

4732. Are there not as many imported now as formerly?—I am quite unconnected with the import; I cannot speak to that.

4733. Up to 1826 was there not a gradual increase in the consumption of the finer silks?—There was an increase in the quantity which we were called upon to throw.

4734. You found a gradual increase up to that time?—Up to 1826.

4735. From the year 1815 up to the year 1826, you found a gradual increase of your trade?—Yes, with very little exception, arising from temporary causes, momentary depressions.

4736. Since that period you have found a decrease?—Yes, a very material one.

4737. What do you think would relieve the throwing trade from its present difficulties?—Government affording us the same protection, or something like the protection it used to do, probably a return to the duties of 1826.

4738. The duties of 5s. and 3s.?—Yes.

4739. What do you think would be the consequence of lowering the present duties?—I have no hesitation in answering that, the total ruin of the throwster without any relief to the manufacturer; I consider that such a measure would be a total destruction of my property, vested in buildings, machinery, and so on; and the still further pauperizing of the already poor people I employ, and in fact ruin of the English throwsters altogether.

4740. Did not the reduction of the duty from 5s. 6d. to 3s. 6d. cause a reduction of profits and labour to that extent?—Yes; the prices of throwing were lowered in proportion.

4741. Of course that must fall, either upon the manufacturer or his labourers, or upon them together?—Yes; when the term manufacturer is used, I suppose it refers to the throwster.

4742. A reduction from 5s. 6d. to 3s. 6d. must cause an equal reduction either in the profits of the throwster, or his labourer, or the two together?—Yes.

4743. You say your trade has diminished in the fine goods, but independently of that, was not that reduction in wages a great loss, and did it not cause great distress in the trade?—Very great distress among the poor people.

4744. You now complain that with the duty of 3s. 6d. you have not an adequate protection, so as to enable you to give fair wages and to pursue your trade with a fair profit?—It is not sufficient, it does not enable us to give remunerating wages to our work people.

4745. You have just stated, that since 1829, there has been a reduction in the wages of 30 per cent., has there within that same period been a similar reduction in agricultural and other branches of labour?—I am not in possession of sufficient data to speak positively to that.

4746. Do you believe there has been anything like a reduction of 30 per cent. in the wages of agricultural labour?—I think it is probable, but I cannot speak decidedly to that.

4747. You have said that on the reduction of the duty from 5s. to 3s. 6d. the working classes have been reduced to distress; are the Committee to understand that since 1826 the wages have been bad the whole of the time?—The trade, I apprehend, has been gradually getting worse since 1826; but in 1829, the period when a further reduction took place, our distress increased in proportion, we were deprived of the fair remunerating prices we used to have.

4748. The question before asked was, whether on a reduction of duty in 1826, a reduction of wages took place; you say the distress of the poorer classes took place from that time, has that distress continued all that time?—It increased materially in 1829.

4749. After the duty was reduced in 1826, what was the effect?—In 1826, when the duties were reduced there was a corresponding lowering of our prices of throwing, consequently a gradual reduction in our wages.

4750. Do you mean to say that the throwing trade has been bad since 1826?—Yes.

678.

N N

4751. Who

Mr.
Thomas Willmott.

9 May,
1832.

Mr.
Thomas Willmott.

9 May,
1832.

4751. Who used to supply you with goods, did you throw on your own account or obtain the silk from others?—Italian silks I always have thrown on commission.

4752. From whence were those silks sent you?—From different houses, either silk men or manufacturers.

4753. Where were they situate?—My principal house has been for many years the house of Vere & Company, in London.

4754. What are the expenses of carrying the silk backwards and forwards, from the time the raw silk leaves the house of Vere, until you return it thrown to Messrs. Vere again?—That would require me to go into so minute and elaborate a calculation, I do not know how to answer the question at the moment.

4755. Are you aware that other mills have been erected since that time, and that they may have been more convenient in point of situation for the throwing than yours?—I never found that our distance was considered a disadvantage on the part of our friends who sent us the silk.

4756. At what time was the machinery in your mills erected?—In one, eighty years ago.

4757. Does that mill contain all the late improvements in throwing?—The mills have been gradually, from time to time altered, so as to suit the improvements whenever any improvement has taken place.

4758. How many revolutions in a minute do your spindles perform?—Really I cannot say.

4759. One thousand five hundred or 3,000?—Not so many as 3,000 I should think, but I really cannot answer the question.

4760. Are you aware what is the greatest number of revolutions performed by any of the lately erected mills in England?—I am not.

4761. Are you aware of the quantity they will perform in the same time, and whether they can throw a greater quantity in the same time than you?—Not materially, I believe.

4762. You are not aware whether your loss of trade has been owing to others doing the throwing cheaper than you?—Certainly not.

4763. Do you suppose that less silk has been thrown in England since 1826 than formerly, because you have thrown less?—I cannot speak precisely to that point.

4764. Do you conceive less is thrown in England, or that it has changed hands?—I have no reason to suppose that it has materially changed hands, houses that used to give me large quantities of silk per week have ceased to do so, my services are not wanted by them.

4765. Are the Committee to conclude that you conceive there has been less manufactured of later years because you have had less to do?—Yes.

4766. There have been some new mills erected of late years, if the quantity were not increased they could not be all employed in the same manner as the smaller number had been employed before, it is possible therefore, is it not, that some of the new mills have taken part of that employment you used to receive?—Yes; but still other mills may be in a state of distress, if there has been an increase in the demand for thrown silks those additional mills would not account for the depression of the throwsters.

4767. Will you explain your own view of the cause of the depression?—I view it as connected with the importation of foreign thrown silks and of foreign manufactured silks; that we were placed between two fires.

4768. Are you aware that since 1826 there has been more silk thrown in England?—I think it is possible; I am not in possession of any fact to know that it is so.

4769. Have you ever seen any of the new throwing mills?—Yes, I have, at Congleton.

4770. Have you seen those in Reading?—No; but I believe in the West and the South our mills, generally speaking, are as well appointed as most others, I have not seen any of late years.

4771. Have you, within the last ten years, visited any of those erected at Congleton and Manchester?—No.

4772. Do you believe that any have been erected on a construction superior to your own?—There may be improvements, but I conceive not essentially.

4773. The speed may have been increased?—Yes.

4774. Do

Mr.
Thomas Willmott.

9 May,
1832.

4774. Do you conceive the speed may have been increased without injury to the silk?—It is possible.

4775. Are you to be understood to say, that the throwing trade in the West of England has been getting considerably worse since 1826?—Yes, gradually.

4776. That it was better before 1826 than it is now?—Yes, certainly.

4777. When you allude to 1826, you refer to the introduction of thrown silk, by the lowering the duty in the July of that year?—Yes, I allude generally to that period, as marking it by the alteration of the duty.

4778. Do you mean to state that the throwing trade was good in the winter of 1825, and the spring of 1826?—In 1825 it was getting worse, but we did not feel it so much, because perhaps at the time the alteration took place, my warehouse perhaps was full of silk; I had a stock in hand that would have carried me through the winter of 1825.

4779. You did not petition the House of Commons in the spring of 1826 on the distress of the trade?—I do not recollect that I did.

4780. You have stated, that up to 1826 there was an increase in the throwing trade?—When I referred to 1826, I meant as marking the time of the alteration of the duties.

4781. There have been of course intervals of distress, but independently of those, you are understood to say that the trade up to 1826 was an increasing and prosperous trade?—Yes, I considered it so.

4782. All this was done under the high duties on the raw material?—It was.

4783. Were not you taught to expect that the duty being taken off the raw silk would give an increase of trade to the throwster?—That idea was held out, but that was never realized.

4784. After that period, you say there was a reduction of your profits and wages?—Yes.

4785. Were not you after the taking off those duties, led to expect that there would be a great increase in the trade?—I do not recollect.

4786. Do you believe that if it were not for those laws, the trade would have continued to have increased as it had before done to 1826?—I think it would.

4787. Have you any doubt of that?—I have no doubt of it, because of the vast increase of consumption in silks as an article of dress.

4788. You have been asked how you could account for the depression, did you not charge 5s. 6d. for throwing at one time?—Yes.

4789. What do you charge for throwing now?—Two shillings and nine-pence for the same article; just half.

4790. Do you mean that you would restore the duty on the raw material?—I am of Mr. Banbury's opinion, that when the trade was the most taxed, it was the most flourishing.

4791. Therefore you would restore the duties to enable the throwster to revive the trade?—I should have no objection to it as a throwster.

4792. When you speak of 2s. 9d., do you mean for tram, or for organzine?—For tram.

4793. How much for organzine?—Three shillings and nine-pence, and four shillings.

4794. You are understood to state that your trade of a throwster is very materially injured, and that at this moment you throw at 2s. 9d., whereas you used formerly to throw at 5s 6d.; and by way of improving that trade, that you would increase the price of the raw material?—Then there would be a corresponding duty upon the thrown silk; place us in the same situation as we were before Government interfered, and that would satisfy us.

4795. You stated that by a return to the duties of 2s. 6d., and 5s., and 3s., there would be a protection to yourself?—That we might live.

4796. Do you mean that without enacting a prohibition against the importation of manufactured silks, or do you include a prohibition of the importation of manufactured fine silks?—The prohibition would prevent smuggling, as was stated.

4797. You include in your view of return to the state before 1826, also a return to the prohibitory system of importation of manufactured silks?—Yes, I think that would place us in a state of prosperity.

4798. Do you conceive that with the taste for the finer quality of silks of France, you can by any prohibitory laws prevent their introduction?—The introduction of manufactured silks, so far as I can understand it, would be prevented, because they dare not be exhibited.

Mr.
Thomas Willmott.

9 May,
1832.

4799. You think that smuggling would not increase under a prohibitory system?
—No, I should think not.

4800. Are the Committee to understand, that it is your opinion, the increase of poor rates has arisen from the decrease of employment in the silk mills?—Certainly.

4801. Were there any other trades carried on at Sherborne, were not gloves manufactured, and were not silk shirt buttons manufactured?—No; gloving was like the winding of silk, given out; there is no establishment of the kind, of a glover, in the town; but at Yeovil, and at Milborne Port, there are a great number, so that they are sent over.

4802. In 1826 and 1827, were there any great number of people employed in sewing gloves?—Not in Sherborne, in fact nothing beyond a few straggling hands; because frequently some connexion of one family to another at Yeovil might occasion some work.

4803. Are the people employed in the glove trade now as they were before?—Certainly not.

4804. Was there any other employment for them at Sherborne?—Not in my recollection. With respect to the duties, I think that I ought to state, as a country throwster, I am not prepared on the spur of the moment to give an opinion upon it, it not being a thing which comes under our observation.

Mr. Thomas Field Gibson, called in; and Examined.

Mr.
T. F. Gibson.

4805. HOW long have you been a silk manufacturer?—I have known the trade ten years.

4806. How long have you been employed in it connected with the trade?—I have been employed as a manufacturer ten years, with the exception of one year, when I was not manufacturing.

4807. In what branches, and where, do you now carry on your manufacture?—In Spitalfields, in the broad silk trade.

4808. How has the alteration of duties in 1826 affected the trade of Spitalfields, in your opinion?—I think the reduction of duties on raw and thrown silk has had a very beneficial effect, and the admission of French goods has certainly not been advantageous to the trade.

4809. Do you mean, that the reduction of duties has been advantageous to the manufacturer by his obtaining the material cheaper, or in what other way?—Principally by his obtaining it cheaper.

4810. What kinds of silk are principally used in the Spitalfields manufacture?—The largest quantity used is Italian silk.

4811. Are the Committee to understand, that the finest kinds of plain goods are manufactured in Spitalfields?—Yes.

4812. Are there any other parts of the country where goods of the same description are made?—Various other parts.

4813. What are the principal parts?—In Lancashire the trade is most extensive.

4814. As the principal part of the silk you use is Italian silk, the reduction of duty which has taken place has enabled you to obtain it cheaper?—Very much cheaper.

4815. It is in that way you think the change of the duties has done your manufacture good?—We have been enabled to manufacture goods at a much cheaper rate and have brought them within a much larger range of consumers.

4816. Has of late years the competition between the Lancashire and Spitalfields manufacturers increased?—Very greatly of late years.

4817. What has been the effect of that competition on the goods and on the profits of the master manufacturers in Spitalfields?—The effect of the competition on the labouring class of people has been to reduce their wages very materially, the competition with the master manufacturers has had the effect of diminishing their profits.

4818. In Spitalfields at present are you aware that there are any fixed rates of wages for any particular branches, or is that open?—It is entirely open.

4819. Is there no fixed rate for velvets?—Not fixed by law.

4820. Is there any fixed by the masters and the workmen under them, are there any exceptions to the rule?—The rate of wages is entirely open to mutual agreement between the masters and the labourers.

4821. There

Mr.
T. F. Gibson.

9 May,
1832.

4821. There is no general conventional agreement?—There is a conventional agreement, but it is entirely unrestricted by law.

4822. There is no list similar to that which formerly existed?—No.

4823. The manufacture of velvets is confined to Spitalfields, is it not?—Entirely.

4824. Is the manufacture of satins?—Principally.

4825. What was the book price for weaving velvets?—That varied according to the quality, from 4s. 6d. to 5s.

4826. What is it now?—It varies now from 3s. to 4s.

4827. Can you state the proportions of the different kinds of silks which are used in Spitalfields, Italian, China and Bengal?—I should say about two-thirds of Italian and one-third of the others, but this is quite a vague statement.

4828. Every reduction of the amount of duty in Italian silk must benefit the manufactures of Spitalfields?—I consider so.

4829. If the duty of 3s. 6d., which now exists, was taken off, you, as a manufacturer, would consider yourself likely to be benefited?—Looking at my competition with the foreigner.

4830. The question was asked, supposing you had competition with the French manufacturer in the goods you make?—Certainly.

4831. Have you any means of judging of the quality and prices of the goods made by you in Spitalfields as compared with goods of the same kind made in France?—I see the goods occasionally that come from France.

4832. You have stated that the profits of the master have been reduced, do you attribute that reduction in the profits to the competition with the French manufacturer entirely or conjointly with the competition you have met with from Lancashire?—I think conjointly with the competition from other parts of the country.

4833. Are you able to give an opinion as to the proportion of that reduction arising from one cause and the other?—I should say that the competition at home was the most important.

4834. Have you ever calculated the increase per cent. on the value of goods which the duty of 3s. 6d. now adds?—Yes, I have; and I marked it to be between eight and nine per cent.

4835. That is to say the organzine silk you use, being subject to 3s. 6d. duty, adds eight or nine per cent. to the value of the goods you turn out?—Yes.

4836. A reduction of the duty would lower the price of goods to that amount?—Provided the price of the silk were reduced to that amount.

4837. What do you think will be the effect on the price of silk if that duty were taken off?—I think the great effect would be, to equalize the prices in this market and the foreign market.

4838. Do you mean to put the manufacturers upon the same footing?—Yes.

4839. Do you mean to say, that at the present moment you are not on an equal footing with the manufacturer abroad, in the prices of silk?—Certainly not.

4840. Is it to the extent only of the duty, or is there any other cause?—There are other causes.

4841. Wherein is the manufacturer differently situated?—The French have a very important advantage, in being large growers of raw silk, by which they are able to supply themselves much better than we who are limited to the Italian market, the trade of France has been of much longer standing than the trade in this country; it has been more fostered by government, and the climate is more favourable to it, and all the operations of the manufacture are cheaper in consequence of the cheaper rate of labour in France than in England. All those are advantages the French manufacturers possess.

4842. Are you able to state, what are the wages which you consider to afford an advantage in France as compared with those in England?—The price of dyeing is lower, the price of weaving is somewhat lower.

4843. Can you state the price of dyeing there, and the price of dyeing here, of your own knowledge?—Only from what I have learnt from dyers; the last account I got was a difference of 10 per cent.

4844. All colours, or only one colour?—All colours. In weaving, the present tariff is very nearly the same as our actual prices of weaving plain goods; but I believe it is ascertained that the tariff is not adhered to.

4845. The weaver winds his own shute, does he not?—Yes.

4846. Will you state the price as now fixed at Lyons and here for weaving the same

Mr.
T. F. Gibson.

9 May,
1832.

same articles?—The price of weaving three single or three double gros de Naples by the tariff, is precisely the same there as in England.

4847. Assuming that the tariff is adhered to the prices would be equal?—Yes.

4848. What is your opinion of the quality of English thrown silk as compared with the Italian thrown silk imported?—I am of opinion that there is as good thrown silk produced from English mills as can be imported from Italy.

4849. Has the quality of the Italian thrown silk improved of late years, or not?—Decidedly not, in my own experience.

4850. Has the quality of English thrown silk improved?—The operation of throwing has been improved within the last five or six years.

4851. Is the quality of raw silk imported better now than formerly?—Yes.

4852. Therefore you are able to make a better thrown silk?—Yes.

4853. What is the quality of silk imported from Italy here?—We have some of all descriptions.

4854. Which are the best, the raws or the thrown?—We have the best raws and the best throws from Italy; and we have the worst raws and the worst thrown.

4855. Have you ever been in Italy?—I have been there.

4856. Have you attended to throwing silk?—I have been in many mills.

4857. Have you ever superintended the throwing it there?—No, I have not.

4858. Are you able to state what the expense of throwing there is as compared with the expense of throwing here?—The cost of throwing organzine in Lombardy was 2s. 6d. per lb. three years ago when I was there.

4859. Does that include the waste?—No, that would be 6d. more, making 3s.; from the best kinds of raw silk.

4860. Have you any throwing mills in England?—Yes; I am interested in a throwing mill here.

4861. Can you state what the expense of throwing here is?—The actual price of throwing organzines in this country, of the same quality now, is about 4s.

4862. Do you mean, in speaking of 4s. that that is the actual cost?—That is the actual price. I speak of the *actual* price in Italy, and the *actual* price in England.

4863. Is that your cost for throwing?—It would be difficult to state what the cost is.

4864. Treating it as a question of price in both instances?—Yes.

4865. Do you throw for any other persons?—No.

4866. If you threw for others should you receive 4s.?—I should be very sorry to throw for 4s.; but I am afraid I could not get more.

4867. Is that a losing or a gaining price?—It would be a losing price to me.

4868. Are you aware whether it has been done for less?—It certainly has.

4869. Do you include in the 4s. waste?—That would depend upon the kind of silk.

4870. What addition would that be?—Perhaps 9d.

4871. Do you mean that the difference is between 3s. in Italy, and 4s. 9d. here?—Yes.

4872. Why should the waste here be 9d. and in Italy 6d.?—Because the waste made from silk thrown immediately is much less than it is after it has been kept long.

4873. The result is, that the price is 3s., including waste in Italy, and 4s. 9d., including waste in this country?—Yes.

4874. You do not know whether it pays in Italy or not?—I do not, but it is an established price.

4875. It does not pay here?—I should be sorry to throw for this price.

4876. And yet others do throw it?—Yes, they do.

4877. How do you account for that?—Because they would rather throw it than shut up their mills, and wages are lower in some places than in others.

4878. If the duty was entirely thrown off must not the consequence be, that they must shut up their mills?—No, I think not.

4879. At present they cannot obtain more than 4s., and they cannot afford to throw it at less, how would they be able to carry on their business if the 3s. 6d. duty was taken off foreign thrown?—The question would take for granted, that there would be a much greater import of foreign thrown silks.

4880. You are understood to say, that the price now of throwing silk here is 4s., and that you should be sorry to do it for that; you consider that a losing price,

Mr.
T. F. Gibson.

9 May,
1832.

price, though there are some individuals who, rather than shut up their mills, do throw for less?—Yes.

4881. If that be their present condition, that they are throwing silk at less than they can afford to do it, how would they be able to conduct their business, if the 3*s.* 6*d.* was taken off foreign thrown?—They would conduct it as they do now.

4882. They must either go on at a loss or shut up their mills?—Yes, unless they can get a better price.

4883. Are they likely to get a better price when 3*s.* 6*d.* is taken off the thrown, than when 3*s.* 6*d.* is paid?—I think it probable they may, in altered circumstances of the trade.

4884. Is it your opinion that the price of Italian silk regulates the price of English silk, or that the price of the English thrown silk regulates the price of the Italian?—I conceive that the price of the English thrown silk regulates the price of the Italian. With regard to the profit of throwing at 4*s.*, I speak of my own experience at my own mills; there are mills at which the wages have been latterly extremely reduced in amount, as has been stated before this Committee; the persons who employ hands at lower wages, are much more able to work at 4*s.* than I am.

4885. How do you explain to the Committee the opinion you have given, that the price of silk in this country regulates the price in Italy?—I think that the very much greater quantity of English than of foreign thrown silk will regulate the market price; the large amount of silk used in this country being thrown in England, will regulate the amount of the smaller quantity imported from Italy.

4886. Is it your opinion that a reduction of the duty heretofore on organzine silk has led to an increase of import or not?—The facts do not show that it has.

4887. Is it your opinion, that if the duty was taken off organzine silk, we should have a larger quantity of organzine thrown?—Yes, I think we should have a larger quantity, but not to an important amount.

4888. If hitherto the reduction of the duty has not led to any great increase, what reason have you for supposing that a still further reduction of duty would lead to any increase?—I have no reason to suppose it.

4889. As you have stated that silk can be thrown at 3*s.*, including the waste in Italy, and it is 4*s.* 9*d.* in this country, on what do you found that opinion that there would not be a very large increase of Italian thrown silk imported, in case of the duty being removed?—Because there are other markets for Italian thrown silk, which already take off a great quantity of it, and would continue to take off the same quantity.

4890. Have not the Italians the means of throwing at least double the quantity they now do?—I am not aware of that.

4891. Have they not it in their power to throw every pound they grow?—Certainly not.

4892. Is it your opinion, from what you observed on the spot, that they have the power of doubling, or increasing, even to any considerable extent, the quantity they now throw?—They could certainly increase the quantity, but not rapidly, nor to any considerable extent.

4893. Are you aware that for the last two years, the difference of price between raw and thrown in this country, has not afforded to the foreign throwster there, any thing whatever for throwing?—It would appear from the prices of thrown silk, that he has obtained a very small amount.

4894. What is the difference you have made between the raw and the thrown the two last years; what has been left for the throwster?—It is very difficult to state averages, they must depend so much on the different qualities of silk; I have seen averages lately, and have seen that they do not at all correspond one with another; but the difference has not been equivalent to the cost of throwing in Italy, added to the charges made by the merchant here.

4895. Are you aware whether the difference, deducting the duty between the thrown and the raw, has been more than from 2*s.* to 4*s.* a lb.?—No, I should think not.

4896. You have stated that the expense of throwing in Italy, including waste, is 3*s.*; it has been stated, that the expense of transport would be about 3*s.* 11*d.* per lb., making the two together 6*s.* 11*d.*; do you conceive that all the difference between the raw and the thrown, below that sum, is a loss to the throwster?—If the statement made with regard to the 3*s.* 11*d.* be correct, it must be so.

Mr.
T. F. Gibson.

9 May,
1832.

4897. Do you expect that the Italians will continue to send their silk here unless they receive a fair return for the labour in throwing?—I should conceive not.

4898. Is it your opinion from that, that if those relative prices of raw and thrown continue, the quantity of thrown will be diminished?—That it will not increase and would diminish either in quantity or quality.

4899. You have employed people in Italy, have you not?—Yes, in reeling silk.

4900. What wages did you pay there?—They varied very greatly; the wages obtained in Italy during the reeling season are no criterion for the general wages of the country.

4901. What does a woman earn per day at reeling in Italy?—The women were receiving 10*d.* per day.

4902. Did they earn that during the reeling season?—Yes; girls of fourteen to fifteen, and women.

4903. In the winter time wages are lower?—Very much lower.

4904. It is in the winter time they throw the silk principally?—Yes.

4905. At what time is the reeling?—In the summer and autumn.

4906. Then the silk would be in the hands of the English throwster here as soon as it would be in the hands of the Italian throwster, would it not?—No, there must intervene the time of transport and sale.

4907. He does not throw his silk till the wages are low?—He cannot throw his silk during the time of its being reeled, but he may begin immediately afterwards.

4908. The reeling and throwing would then go on together, the early produce might be in the course of being thrown, while the latter would be reeling?—The advantage of winding silk immediately after it is reeled is so great that those reelers who have large filatures and are throwsters likewise, wind the silk immediately and keep it on bobbins till they want to throw it.

4909. When you state that the price of throwing silk in Italy is 3*s.* a pound, you do not mean that they pay 10*d.* a day wages to the women?—No.

4910. What do they then pay?—I have no means of stating that.

4911. On what ground do you state that the price of throwing is 3*s.*?—That is the market price.

4912. Do you mean that the difference between raw and thrown is to that amount?—If I were to offer to an Italian throwster silk to throw for me, he would throw it at 3*s.* including waste.

4913. Do you consider that it is more profitable for an Italian, supposing him to be a merchant, and also a throwster under the existing laws, to import his article here in a raw state or in a thrown state?—In a raw state.

4914. Do you consider that, according to the existing law, the duty at present comes out of the pocket of the Italian?—I hardly understand the question.

4915. You say it would be more profitable for the party to introduce the silk raw than to throw it there on account of the duty?—Yes, on account of the duty and charges which thrown silk pays in this market.

4916. Does not the duty form a material part of your calculation?—It forms a part, to the amount of 3*s.* 6*d.*

4917. Supposing that duty were taken off, would it or not alter your view of the case?—If the price of thrown silk remained the same it would be more advantageous than it is now to import thrown silk.

4918. It would then place the question in a totally different point of view, would it not, as to the merchant possessed of a quantity of raw silk, whether he should then introduce that in the raw or the thrown?—Supposing the prices remained the same, certainly.

4919. Do you not conceive, supposing the prices to remain the same, that might so far alter the view of the case as that it might become more to his advantage to introduce it in the thrown state entirely, and to forbear from introducing any in a raw state?—I think that the total abolition of the duty (for which I am not an advocate) would have the effect of placing much greater advantages in the hands of the Italian spinner.

4920. In case of a repeal of the duty on the organzine silk, whilst it gives an advantage, would that advantage be more than counterbalanced by the effect of competition from the English throwster here with regard to price?—I think the English throwster can never produce his organzine or tram at the same price as the Italian, other things remaining the same in this country.

4921. What amount would you think necessary to place them upon the same footing

footing?—I should say, that if he had 2*s.*, the prices remaining as they are, that would be a protection.

4922. Do you mean on organzine and tram?—On organzine; I am not prepared to say what amount of protection should be given on tram.

4923. According to your statement just now the difference was 1*s.* 6*d.*, leaving out the waste?—I do not say that 4*s.* 9*d.* is an advantageous price to the English throwster.

4924. Do you consider that 3*s.* to the Italian throwster to be a remunerating price?—I consider that a price that satisfies him.

4925. Do not you suppose that a reduction of 1*s.* 6*d.* would tend to increase the quantity of foreign thrown silk imported into this country?—I do not think it would have any important ultimate effect.

4926. Would a diminution of 3*s.* increase it materially?—It would have a greater tendency certainly, and by how much you go on to decrease the scale of duty the greater the amount that would be imported.

4927. You think the difference of 2*s.* would be necessary to put them on an equality?—Not less than 2*s.*

4928. Is the machinery in England worse than in Italy?—Better.

4929. Are the wages higher in England than in Italy?—Very considerably.

4930. Can you state what is paid there as compared with what is paid in this country?—I cannot.

4931. Are you aware, that the weekly wages in throwing silk are less on an average than 2*s.* 9*d.* in Italy, taken the different wages?—I should not think they were less.

4932. What did you pay during the time you were there?—I did not throw silk, the wages I paid were for reeling from the cocoon.

4933. Judging from the 5*s.* per week you paid for reeling, do you think that those employed in throwing would have been satisfied with 2*s.* 6*d.*?—I cannot think that the price is lower than 2*s.* 6*d.* I have no certain knowledge.

4934. At what time are the cocoons reeled off, are they reeled immediately?—Immediately, for the most part.

4935. Was there not a considerable increase in the quantity of foreign thrown silk imported after the reduction from 5*s.* to 3*s.* 6*d.*?—That does not appear to have been the case, with the exception of the last year, when it was much larger than in the previous years.

4936. If foreign thrown silk, paying a duty of 3*s.* 6*d.* per lb., is sold here for 22*s.*, do you suppose that if the duty of 3*s.* 6*d.* per lb. were to be repealed, the silk, without such charge of 3*s.* 6*d.*, would be sold for more or less than 18*s.*?—For more.

4937. So that the reduction of 3*s.* 6*d.* would not be all in favour of the manufacturer, which is the case supposed?—No.

4938. If the Italian now finds it to his interest to throw a considerable quantity of silk, and send it into this country where it is charged with a duty of 3*s.* 6*d.*, would he not find it much more for his advantage to send it here when it was not charged with the 3*s.* 6*d.*?—Certainly, I consider that the Italian, for the last few years, has sent silk here at a sacrifice; that he has not obtained a remunerating price, and that if the duty is reduced, the price would not be reduced in the same proportion.

4939. If the duty were repealed he might be induced to increase his means of throwing, and might throw every pound he sent to this country, might he not?—It is not physically impossible.

4940. Inasmuch as he can do that for 3*s.* which it appears from your evidence, you cannot do for less than 4*s.* 9*d.*, would it not be to his interest to throw that silk rather than send to this country raw?—That would depend entirely upon the amount of duty imposed by the English Government upon foreign thrown silk.

4941. Would he not rather buy it of the Italian throwster if he could get it 1*s.* 9*d.* per lb. cheaper?—If he could buy foreign thrown silk for 1*s.* 9*d.* less than he could buy it of the same quality from the English, he would buy of the Italian, no doubt.

4942. What is the cause of the Italian throwster losing in this market by sending his silk here?—My own opinion is, that it is the competition of the English throwsters.

4943. If the duty were withdrawn, he would then be able to introduce it into this country at a profit, would he not?—Yes, the prices being the same.

Mr.
T. F. Gibson.

9 May,
1832.

4944. You have stated what you think would be a protecting duty for thrown silk; have you formed any opinion what would be a proper protecting duty for the manufacturer of plain goods in Spitalfields as against the French manufacturer?—The duty remaining as it does now I think 25 per cent. would be sufficient.

4945. Supposing the duty taken off, what would it be?—It would be less by eight per cent.

4946. Have you formed any opinion how that duty could be efficiently collected?—No, I have not.

4947. Are you aware of any scheme by which that duty might be efficiently and *bond fide* collected. Is it your opinion that the duty of 25 per cent. could be collected?—Yes; I state that from the opinion of others.

4948. Are you aware whether the smuggling has been carried to any extent in plain goods?—I have no information on the question of smuggling. I do not believe that the smuggling of plain goods has been of greater amount than might have been expected where a duty is collected to the extent of 30 per cent.

4949. What is the protection on plain goods you manufacture under the present law?—Thirty per cent.

4950. Do you think the duty should be decreased?—I think it would be better to make it 25, that the smuggler might have less inducement.

4951. You believe that the manufacturer is protected to the extent of 25 per cent. and no more than that?—Yes; I would add, that the cost of smuggling may be very greatly augmented by the regulations of the Government.

4952. Has the importation of thrown silk, in point of fact, increased or decreased during the last two years?—It has not greatly increased, as appears by the official returns, with the exception of the last year.

4953. You think that the Italian throwster has persisted in introducing his thrown silk to an increased amount, though at a loss?—Yes.

4954. Have you any solution for that which appears a singular problem?—I conceive that the general condition of the continental market for the last two years has been unfavourable to the Italian throwster, and that he has sent it to the best market he could find, though a bad one.

4955. Do you know whether, in point of fact, the number of throwing mills in England has increased or diminished during the last five years?—I should think within the last five years they have not increased much, but the previous five years they increased enormously.

4956. You think the last five years they have not increased much?—They have increased, but not greatly.

4957. The importation of foreign thrown silk has increased during the last two years?—Yes.

4958. Then the increased distress that has arisen to the throwing trade during the last five or six years, it will follow that that must arise, not from the home competition from the mills having been increased, but from the increase of the foreign thrown goods which have been imported?—No, I think not; the increased amount of foreign thrown silk is not such as to have caused the distress of the throwster; but although the number of English mills has not increased materially during the last five years, the quantity of silk which the same number of mills has produced, has greatly increased, in consequence of the greater speed at which the machinery is worked.

4959. Supposing the quantity produced from the foreign mills had not found its way into this country, do you not conceive that the trade of the English throwster would at this time have been in a different situation from that in which it is at present unhappily placed?—If there were no importation of thrown silk from Italy, we should have a much greater demand for our own mills.

4960. Do you conceive it probable, that the foreigner has continued to import, though as you state at a loss, looking forward to the probable abolition or reduction of duty, when he might import not at a loss but at a profit?—I have no reason to suppose so; I have no reason to suppose the foreigner has ever had such an expectation; one other reason why the foreigner may have continued to send silk here under a sacrifice of price is, that this market is one which has formerly been very advantageous to him, and some time will elapse before a man will give up a favourite market, and forsake his connexions.

4961. Do you know about what quantity is thrown annually in Italy?—No, I do not.

4962. Do

Mr.
T. F. Gibson.

9 May,
1832.

4962. Do you know what quantity they grow?—According to the best information I could get, it was about four millions of pounds weight.

4963. Do the mills work all the year round?—No.

4964. Then they are capable of increasing their production?—Yes.

4965. Do they send their silk thrown to Austria?—Yes.

4966. Do they also send their silk thrown to Switzerland?—Yes.

4967. Do they send much of it thrown to France?—The Piedmontese do. It is reckoned that the Piedmontese send half their thrown silk to France.

4968. Do they send it thrown to any other countries?—To Germany.

4969. What do you think is the aggregate amount of the silk so sent to those countries?—I have no means of forming an opinion.

4970. Have you the means of knowing the quantity they send unthrown?—France and England are the only countries to which they send any raw.

4971. Have you any means of knowing the quantities sent to France?—I have not.

4972. Do you conceive they have the means of throwing more than two millions of pounds now?—I should think not.

4973. At what period of the year are the mills still?—I do not think there are any certain times; they would be standing still perhaps during the reeling season in consequence of the working people being better employed in reeling.

4974. When you calculate eight per cent., are you speaking of the whole of the duty being repealed?—Yes.

4975. You are supposing if there were a diminution in the price of foreign thrown silk, that would operate to that extent on the British thrown silk?—I am not supposing that the reduction of duty would effect a reduction to the same amount in the price of silk, but that 3*s.* 6*d.* is eight per cent. upon the manufactured article.

4976. You are supposing, that the reduction of the duty, taking the whole of the duty of 3*s.* 6*d.* off, would effect a reduction of eight per cent. on the manufacture?—Rather it would have the effect of equalizing the price of thrown silk, so that the French manufacturer would be put upon the same footing as ourselves.

4977. Supposing that to be the effect, from your calculation, would it or not effect a reduction of 3*s.* 6*d.* on the British thrown silk?—It would effect an equalization in price between France and England.

4978. Would not that give a bounty on the importation of foreign thrown silk, because of the existence of the duty on the exportation of raw silk from Piedmont?—Raw silk is not imported from Piedmont.

4979. There is a duty imposed in Italy upon the exportation of raw silk?—There is.

4980. If the whole of the duty paid here on the importation of foreign silk was removed, would there not be a bounty, in fact, existing upon the introduction of foreign raw silk, supposing the duty still to continue on foreign raw silk in Italy?—There is a greater advantage in exporting thrown silk from Italy than raw, by the difference of 10*d.* and 5*d.* in the pound weight.

4981. If that duty on foreign thrown silk remained in this country, they would have a bounty?—They would have an advantage of 5*d.* per lb.

4982. You have stated it as your opinion, that the peculiar situation of the Continent induced the Italians to send an increased quantity of thrown silk here the last two years, would not the same causes induce them to send raw silk?—That would depend very much upon the stock in hand.

4983. If they sent the one in consequence of distress or alarm, would they not equally send the other?—The same causes would not operate, inasmuch as this country being the only great market for raw silk, the alarm or distress on the Continent would not affect the quantity of raw.

4984. You stated that the throwsters are obliged to throw at less than 4*s.* rather than shut up their mills, you stated since that you think 2*s.* would be a fair protection, will you explain why, if 3*s.* 6*d.* is not a sufficient protection to ensure them a remunerating price, 2*s.* would be?—But I do not admit that the fact of their throwing for 4*s.* is owing to the very great increase of the import of foreign thrown silk.

4985. You say the Italians have sold their silk here at a price which did not pay them, owing to the competition here?—Yes.

4986. That competition would of course exist if there was a reduction of the duty on the Italian thrown?—Yes.

4987. If the competition at present is a strong competition, so that the throwsters

Mr.
T. F. Gibson.

9 May,
1832.

cannot afford to do it at the price, how can they afford to do it at all, if the duty were reduced to 2s.?—I do not see how the alteration of duty will affect the price, if it be admitted that the competition of the English mills governs the price of throwing.

4988. Do you mean to say that the low price of silk is owing to competition here?—Yes.

4989. And not at all owing to the foreigner?—Not at all more so now than it has always been.

4990. Formerly you were protected by a higher duty, do you mean to say that the reduction of duty on thrown silk has not caused a greater competition than existed before?—I mean to say, that when the amount of duty was high, the quantity imported was as large, with the exception of the last two years.

4991. If there is already such a competition, that the foreigner to meet that, sold at a price which does not remunerate him, how is it that the reduction to 2s. will not put him on a better footing?—It will put the foreigner on a better footing.

4992. Then that is giving an advantage to him over the home throwster?—It would be giving him a greater advantage than he has at present.

4993. You admit that that portion of duty which you say ought to be remitted—I do not say ought.

4994. Which you say might safely be remitted is at present paid by the Italian throwster?—A portion of it is a loss to him.

4995. Consequently to that amount he would be a gainer?—Certainly.

4996. The home throwster says, that owing to the home competition, he cannot get a profit; you say, owing to this competition he cannot get a remunerating price?—Yes.

4997. Will not that reduction of duty give an advantage to the foreigner as against the home throwster?—It will certainly give a greater advantage to the foreign throwster than he possessed before.

4998. Then if there is that advantage given to the foreigner, that it destroys the throwing trade at home, would you put the trade into the hands of the foreigner?—If the reduction of duty would destroy the trade at home, I would not recommend it.

4999. Would it not be the destruction of immense property?—If the trade is destroyed there will also be destroyed a large quantity of property.

5000. You stated that the competition at home has been beneficial to the manufacturer?—I stated the reverse.

5001. You stated that the introduction of the foreign goods has been injurious, but that the reduction of duties has been beneficial to the manufacturer?—Yes.

5002. Since all those laws have come into full operation since 1829, has the prosperity of the manufacturer, and also their workmen depending upon them, increased or not?—The prosperity of the workmen is not so great as it was, because their wages are very materially reduced, speaking of Spitalfields.

5003. By the reduction of goods, which are the particular class of persons benefited?—Those persons who use them.

5004. The consumer?—Yes.

5005. Does not the profit of the manufacturer depend upon the amount of his returns, does it depend upon the number of pieces?—The amount of his profit depends on the rate he gets upon his return.

5006. Does not the manufacturer calculate upon the amount of his returns; does not a man calculate on more by selling 100l. worth of goods than 50l.?—It depends upon whether he sells at a five per cent. profit in one case, or at 10 per cent. profit in the other.

5007. Does not a man estimate his profits on the amount of his returns, if you are getting 10 per cent. upon 100l. worth of goods, if you sell only one half, will not your profit be decreased?—If the rate of profit is the same, of course the amount of profit will be reduced.

5008. Does not a tradesman or a manufacturer generally regulate his profits by a certain per centage upon his returns?—He ought to get as much as he can.

5009. If a man returned 50,000l. a year in his concern, if his returns are reduced to half would he get the same profit?—That depends upon the rate of profit.

5010. If a manufacturer gets 10 per cent. upon the goods he sells, if his trade is reduced to one half, must not his profits be diminished, supposing that he continues to sell at the same rate of profit?—Nothing can be more clear.

5011. When the duty upon thrown silk was reduced from 14s. 7d. to 3s. 6d. and

Mr.
T. F. Gibson.

9 May,
1832.

and the duty upon the raw material from 7s. 6d. to 1d. per pound, and profits and labour are also reduced, has not that had the effect of lowering the returns of the manufacturer?—I think it has increased the returns.

5012. Do you mean to say, that in point of amount, there are more goods selling now than in 1826?—In quantity, certainly.

5013. The question refers to money?—The same amount of goods does not come to the same amount of money.

5014. If the prices of goods are reduced, the returns must also be reduced?—Yes, unless the returns are made up by an additional quantity.

5015. There must be double the quantity sold if the price is reduced to half?—Yes.

5016. Is there double the quantity sold?—I do not know.

5017. Do you not know, that the great increase has been in Chinese and Bengals and articles manufactured out of waste?—No, not out of waste.

5018. You have also stated, that there is a saving in the dyeing at Lyons of 10 per cent., but you say the wages are the same; if that is the case, how can you make it out that plain goods are manufactured there 15 or 20 per cent. cheaper than here?—I cannot make it out.

5019. Do you suppose there is a greater difference in the price of silk than that which arises from the difference of duty?—I really know nothing on the subject of French manufactures.

5020. Do not the French derive an advantage, first, from the cheapness of labour; secondly, by their growing a great deal of the raw material in their own country; thirdly, by manufacturing their goods to order; do not you know that fancy goods are manufactured chiefly by order from this country?—The fancy goods are, I believe.

5021. Does not that give them a great advantage?—Yes.

5022. If a manufacturer has to manufacture goods on his own risk, and to meet goods which are ordered, does not that give him a great advantage?—It gives him an advantage, certainly.

5023. Do not you know that there is a great taste for foreign fashions?—Yes.

5024. Have you not heard that one house has lost connexions to the amount of several thousands in a year from that cause?—No.

5025. Have you been in the habit, as a manufacturer, of receiving orders for goods?—Not of late.

5026. The French derive an advantage, first, from the cheapness of their labour; secondly, from having an excellent raw material growing in their own country; thirdly, from their manufacturing many of their goods to order; and fourthly, from the prejudice in favour of French fashions?—Yes.

5027. Do not those circumstances give them a great advantage in this market?—Yes.

5028. You state that you think that the depression in prices and lowness of labour is occasioned, not by foreign but by home competition?—Yes, principally.

5029. Could not our own manufacturers supply the demand of this market without any foreign goods?—Yes.

5030. Do not you think there would always be a sufficiency of goods in the market to meet the demand?—I think so.

5031. Do not you think there would be a considerable competition among our own manufacturers?—Yes.

5032. Does not that competition in all trades generally regulate itself according to the demand, that if men over-manufacture they draw in?—The supply is generally proportioned to the demand.

5033. Must not the introduction of French goods into this market in large quantities, tend exceedingly to depress the prices in this market?—I think the French goods which have been imported into this market have had a partial effect, as I stated before, of increasing the competition amongst ourselves.

5034. Do not you know, that when the market is full of goods buyers keep back, and regulate the market almost to their own demand?—That depends upon the number of buyers there may be.

5035. When there is a large quantity of goods on hand, are not buyers a little shy and cautious, and careful to beat down the prices?—This seems to me to be the same as stating, that when there is a glutted market prices will always decline.

678

003

5036. Must

Mr.
T. F. Gibson.

9 May,
1832.

5036. Must not the quantity of French goods, with all the prejudices existing on their behalf, greatly depress the prices of goods here, and thereby lower labour?—The effect is to increase competition and to keep down prices.

5037. Can you state any new channel which has been opened by the introduction of foreign manufactured silks?—I am not a merchant, and therefore cannot say, but I have no doubt that foreigners do not send their goods to this market without obtaining an equivalent.

5038. Can you state any new channel that the introduction of French goods has opened to the trade of this country?—No; I have no knowledge upon that subject.

5039. Were we not told that it would give us an export trade?—I never heard it said.

5040. What class of consumers have been benefited by the reduction of duty?—The persons who buy the cheaper articles.

5041. Are you not aware, that a great part of the wages of the weavers and labourers are paid in taxes?—Certainly; I am sorry to say that is so.

5042. Do you think it fair and just that the duty should be taken off for the benefit of the consumer of the articles, while taxes on labour are continued?—I think the alteration of the corn laws would be a most beneficial measure. If I am asked, whether the taxes that press on labour ought not to have been taken off at the same time that the duties on silk were taken off, I should say, yes. If the lowering of those duties were a mischief to the labouring man I should be opposed to it; but I think the labouring man has not been prejudiced by the removal of the restrictions, although it would have been far more just to have made other alterations at the same time.

5043. Do you think that the introduction of foreign goods has been beneficial to the manufacturer and to the weaver?—No; there is nothing that would be so agreeable to me, as a manufacturer, as to have a strict monopoly of my trade.

5044. Is there not, in this country, always sufficient competition among the manufacturers of silk and other fancy goods, to insure to the public a plentiful supply at a reasonable profit?—Quite a sufficient competition.

5045. Is there not a sufficient supply to give the manufacturer a fair advantage?—If you ask me as a manufacturer, I should say certainly, if it were less I should be satisfied.

5046. Do you mean to say that persons concerned in manufacture and trade have an undue advantage, and are getting too much?—Not at all, I should like to get more.

5047. Do you think it is necessary for foreign competition to come in and put down prices?—No, but the reverse.

5048. Is not the competition among manufacturers sufficient to ensure to the purchaser goods at a fair rate of profit?—I do not know what would be considered a fair rate of profit.

5049. You have stated that the prices of throwing silk is determined by competition in England; do you not believe that the profits of manufacture and the wages of labour are mainly determined by the same circumstances?—Yes.

5050. Of 100*l.* worth of goods in Spitalfields, what proportion is labour of weaving?—The value of the article is increased from 45 to 50 per cent. by the operations of dyeing, winding, warping and weaving.

5051. What article do you speak of?—Plain gros de Naples.

5052. Do you think it possible to exclude French goods by prohibition?—Not entirely.

5053. Are you aware that smuggling took place to a considerable extent before 1826?—Yes.

5054. Do you not believe that would be resorted to again if there were a prohibition?—Yes, I think it would.

5055. Do you think there has been more or less smuggling since 1826?—More.

5056. What advantages do you imagine the Italian throwster has over the English, independent of the cost of throwing?—I know of no other advantages. The only advantages I know that the Italian possesses over the English throwster, are these, that he is able to work his silk at less waste, that he procures his labour at a less price, and that his mill and machinery cost him much less money.

5057. You state that the price charged in Italy for throwing is 3*s.* a lb., he has probably some other advantages beyond that of buying his silk on the spot; what are those advantages?—I do not know of any other advantages.

5058. In

5058. In point of fact, you believe there are no advantages beyond those you mention?—None whatever.

5059. The Italian silk throwster is accustomed to work his mills at certain periods of the year?—Yes.

5060. The people are employed at other seasons of the year in other occupations?—Yes.

Mr.
T. F. Gibson.

9 May,
1832.

Veneris, 11^o die Maii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. Thomas Field Gibson, called in; and further Examined.

5061. WHAT kind of thrown silks are imported from Italy?—Organzines and trams.

5062. From what parts of Italy?—The principal importations are from Piedmont and Lombardy.

5063. To what uses are they applied?—To the manufacture of all kinds of silk goods.

5064. Of fine silk goods?—Principally to the manufacture of broad silk goods.

5065. Therefore, chiefly used in Spitalfields?—Chiefly in Spitalfields.

5066. To what use is the Piedmont silk applied?—The largest portion of Piedmont silk which is imported, is consumed in the manufacture of broad silks, such as the richest kinds of gros de Naples, also in velvets, and the richest kind of satins. I am not aware of any other appropriation of it in Spitalfields.

5067. What description of broad goods are imported from France?—The richest kind of plain silks principally.

5068. Such as are manufactured here from those fine silks?—Yes.

5069. The taking off the duty upon thrown silk, or materially reducing it, would in your opinion materially benefit Spitalfields?—I conceive it would.

5070. That it would increase the demand for goods?—It would place us more nearly on an equality with the French manufacturer.

5071. It would increase the consumption?—I think the small amount of duty which might be taken off would have no great effect in increasing the consumption.

5072. It would have some effect?—I think that every deduction of price has a proportionate effect in increasing the consumption.

5073. And consequently increasing the demand for labour?—Yes.

5074. Have you reason to suppose that any considerable part of the goods manufactured in Spitalfields are exported?—I think none whatever.

5075. What kind of goods do you believe are exported?—The greatest proportion is of the lowest kind of silks, principally handkerchiefs.

5076. Where are they manufactured?—At Manchester and Macclesfield.

5077. From what kind of silk are they made?—From Bengal and China.

5078. So that the duty is levied on the fine goods made in Spitalfields, and the drawback allowed on the common goods made at Manchester and Macclesfield?—Undoubtedly.

5079. What is the price of the debentures now?—They are worth scarcely any thing, one penny, I believe.

5080. What is the difference, at present, between the price of Italian thrown and raw silk of the same quality?—From 5s. to 6s.

5081. That would, after paying the duty, leave the Italian from 1s. 6d. to 2s. 6d.?—Yes.

5082. Have you reason to suppose he can continue to send thrown silks here?—I should think he could not send them profitably.

5083. So that if the difference between thrown and raw silk continues as it is at present, we shall get very little Italian thrown silk?—I am of opinion, that it would be a continually decreasing quantity, supposing the law to remain as it is.

5084. If the imports of thrown silk diminished, or if the exports of manufactured silk increase, the debentures would rise in price?—Undoubtedly.

5085. In that case they would probably reach, ultimately, somewhat about 3s. 3d. a pound?—There would be very little advantage to the buyer of the debenture if they ever arrive at that price.

678.

o o 4

5086. The

Mr.
T. F. Gibson.

11 May,
1832.

Mr.
T. F. Gibson.

11 May,
1832.

5086. The advantage to him would be only 3*d.*, and he will not buy unless he has some advantage; would not 3*d.* be sufficient to induce him to buy?—That would be a very small inducement in such a case. The advantage upon the value of the silk he exports would not be very important.

5087. Supposing the price to rise to 3*s.*, in that case the throwster would not be benefited, because he would get in the sale of his debenture so large a proportion of the amount of the duty he had paid?—Yes.

5088. Therefore the protection would be diminished?—Yes.

5089. Supposing the debenture to sell at 3*s.* the throwster would have a protection of only 6*d.*?—Just so.

5090. In that case, without any benefit to the throwster, it would be a material injury to Spitalfields; and the only party who would benefit would be the manufacturer at Manchester and Macclesfield?—The Spitalfields manufacturer would have obtained the 3*s.* for his debenture, he would have bought his silk nearly without duty.

5091. You mean to say, that if foreign thrown silk is imported, and a duty of 3*s.* 6*d.* paid for it, if the debenture sold for 3*s.*, the manufacturer would pay only 6*d.* duty?—Just so.

5092. And that the benefit of that debenture would go to the manufacturer?—Yes.

5093. Then if we continue to export the same quantity of coarse made goods from Manchester and Macclesfield, that would be decidedly beneficial to the manufacturer of the finer articles, who use the foreign thrown silk without injury to the maker of coarse goods, if he continued to export the same quantity he now does?—The effect of such a state of things would be to destroy the protection of the throwster.

5094. There would be the machinery and collecting the duty, and allowing the drawback, without any benefit?—Just so.

5095. Have the goodness to state what are the terms on which the manufacturers of Spitalfields generally sell their goods?—They generally sell them for a two months' bill at the end of the month in which the goods are sold.

5096. There is a settlement at the end of the month?—Yes.

5097. Can you state the probable number of considerable buyers in Spitalfields?—From twenty to thirty.

5098. Have the goods been sold on those terms ever since you have been in the business?—Certainly not.

5099. Formerly, what was the credit given?—It was either six months or twelve months.

5100. The consequence of that change has been, that the manufacturer, instead of having his capital in his books, is enabled to pay cash for his silk, for which he formerly used to obtain credit?—The effect of the alteration has been, to give him a much larger money capital.

5101. It has had the further effect, has it not, of excluding the middle-man, the speculating jobber in silks in a great measure?—I am not aware that it has had that effect.

5102. The manufacturer now buys direct from the merchant, and has his silk thrown?—Yes.

5103. Was not he in the habit formerly of buying from middle-men?—Yes, he was.

5104. Of what class were those persons you called middle-men, between the manufacturer and the merchant?—The middle-man who was just referred to, was a person between the manufacturer and the silk merchant; he was called a silk-man, a dealer in raw and thrown silk.

5105. Are the Committee to understand, that the effect of the alteration has been entirely to destroy that class of persons, so that they no longer exist?—The fact is, at this moment there exist very few of such middle-men, and six years ago there existed a large number.

5106. There is one class of persons which it appears has been nearly annihilated by this alteration of the law?—No, I do not mean to say that it has been by the alteration of the law.

5107. In point of fact, there was a class of persons getting their livelihood in the silk trade some years ago, which class has now almost ceased to exist?—Yes.

5108. You are understood to say, that the manufacturer goes immediately to the merchant in a greater degree than he did formerly?—Yes.

5109. You

Mr.
T. F. Gibson.

11 May,
1832.

5109. You are understood to have stated, that you conceive, supposing the law should continue precisely in its present state as relates to the duties, there will be found a decreasing quantity of imported foreign thrown silk?—Yes.

5110. Is not that supposition of yours contrary to the fact, with reference to the experience of the last two years?—Yes.

5111. Upon what grounds do you form that supposition?—Upon the acknowledged fact, which will be confirmed by every person who is well informed in the trade, that the foreign throwster has for the last few years been losing by the silk he has sent to this market.

5112. For how many years do you suppose any foreigner has been thus importing at a loss?—I should wish to avoid that question, not being a merchant; but to the best of my belief, for three or four years.

5113. Are you enabled to give a general statement of the portion of foreign thrown silk imported into this country during the last year, as compared with the Italian silk thrown in this country, speaking generally of the quantity?—I should think the raw silk imported from Italy during the last two years, has been from double to treble the amount of silk imported thrown.

5114. Can you state in what degree that proportion has varied, either one way or the other, during the last three or four years?—I do not think it has varied importantly, except in the last year.

5115. In the last year, on which side has the balance of variation been?—In favour of the thrown.

5116. Can you state from recollection, the amount of Italian thrown silk that was imported in the last year?—I cannot say; there is one circumstance I would state, which has increased the quantity of thrown silk last year, which did not operate in the preceding year; during the last year, a very large quantity of foreign thrown tram was imported into this market. An article which had never been imported (or to a very small extent) in previous years; I believe that the persons who imported this silk, invariably lost by it.

5117. Are you enabled to give any statement to the Committee of what might be the proportion of home thrown silk in the market during the last year, as brought in competition with this large quantity, which it appears was imported?—I can only make an estimate from the published reports, of the whole amount of raw and thrown silk which was brought into the market. The whole amount of raw silk imported was nearly 4,000,000 and the amount of thrown was 500,000, therefore there was 3,500,000 lbs. speaking roundly, of silk to be thrown in this country.

5118. Did not the price of trams in this market, fall considerably at the end of the year 1830 and the beginning of the year 1831, in consequence of so large a quantity of foreign tram coming into the market about that time?—The price of trams fell, but I do not think it fell in consequence of the large amount that came in, there was a slackness of demand for trams generally. The British mills had been very actively employed on trams, and there is no doubt that the large importation of foreign thrown trams operated conjointly with the glut, from the working our own mills in reducing the price.

5119. You stated on a former day, that though there are not more mills at work in England than there were five or six years ago, yet you consider that the mills which are in existence turn off more work than they used to do, will you state whether, in your opinion, all the silk mills now at work turn off more silk of a certain fineness than all the mills at work did five or six years ago?—Most undoubtedly they do, they are capable of doing so.

5120. Do they, in point of fact, turn off more?—I believe they do.

5121. Seeing that the foreigner has, during some years, as you state, imported and continued to import, in the face of discouragement and disadvantage and actual loss, do you not suppose that if the law was so far altered as to give him even a very small certain remuneration upon his import, the quantity imported would not only be increased, but very considerably increased?—I think that every reduction of duty on foreign thrown silk is *pro tanto* an advantage to the Italian throwster.

5122. Do you not conceive that taking off the whole duty would be a very serious evil, amounting almost to ruin to the English mills?—It would be a very serious evil.

5123. The Committee are to collect from your evidence, that according to that opinion it is a question of degree as to how far it would be expedient to relax the duty, and that you would not consider it politic or safe with reference to the

Mr.
T. F. Gibson.

11 May,
1832.

existence of the English throwster, to remove the whole duty?—Speaking as a throwster, I should say so.

5124. Do you think, from what you know of the existing state of throwing in this country, that if the whole duty was off, the Italian organzine would for any length of time keep the market against the British organzine?—I think the advantage would be so much in favour of the Italian throwster, that we should have a very small part of the raw silk to throw if the whole duty were taken off.

5125. It being in your mind a question of degree, do you not think it would be a dangerous experiment to make any considerable alteration in the rate of duty, speaking with reference to the throwster?—I think the alteration I before mentioned of 1*s.* 6*d.* would not be productive of serious inconvenience. I observe from evidence which has been given before this Committee by a gentleman in every way qualified to give the best information, Mr. Doxat, that the amount of charges paid by the Italian merchant, including the duties and all expenses on thrown silk imported into this country is 6*s.* 3*d.* If to this sum we add 3*s.* as the cost of throwing in Italy, we have total of 9*s.* 3*d.* The charges upon raw silk are stated to be 2*s.* 4*d.* by the same witness, and this amount being deducted from 9*s.* 3*d.* leaves 6*s.* 11*d.* as the sum which the Italian throwster must now obtain on thrown silk more than on raw to remunerate him in this market. Now if the duty were lowered by 1*s.* 6*d.* there would remain 5*s.* 5*d.* as a protection to the English throwster.

5126. Taking the importation of Italian raw silk at 1,021,000, what proportion do you consider may be thrown for sale against the competition of the foreign throwster of organzine?—I really have no means of stating that at the moment, I should very much doubt the fact of there being only 1,021,000, I conceive the quantity is more than that.

5127. Taking the quantity of Italian raw imported during the last year at the amount stated, 1,021,000, and the greater part of that being bought up by throwsters who were also manufacturers, is it not very likely to be the fact that there would be but a small quantity of British thrown actually in the market in competition with this 600,000*lbs.* of foreign thrown imported?—No, I should not think so.

5128. Is it not the fact that a very considerable quantity of this raw imported silk was in the hands of those throwsters who were also manufacturers?—There is always a large market for raw silk as well as for thrown silk. It would be a question with the purchaser of silk whether he should buy it raw, and throw it, or buy it thrown, according as the advantage might appear to him to be.

5129. You stated that you have been in business about ten years, when you first entered trade, was it by yourself or in partnership with any other?—In partnership with my father.

5130. At the time when you entered into partnership with your father, was he a manufacturer in any considerable degree of fancy silks?—Yes; in as great a proportion as other persons in the trade at that time.

5131. He was in a very large way, was he not?—In a considerable way.

5132. He was selling many of his goods in the fancy line to the great houses at the West end of the Town, was he not?—Certainly.

5133. Was it not the fact, that your father's trade and your's was a very prosperous and profitable trade in that line at the time of the opening of the ports to the foreign silk goods?—It was as advantageous as that of other persons employing capital in that trade.

5134. How long after that period did your father and yourself continue in that line of business?—My father left trade about three years ago, and I have always continued in the same line of business.

5135. Are the Committee to understand, that you continue precisely in the same line, that is, as much engaged in the manufacture and sale of fancy articles as you were when you first engaged in business?—I am not a manufacturer now of fancy articles, because there is but little demand for fancy articles of the description referred to.

5136. Do you conceive that that want of demand may, in any degree, be attributed to the opening of the ports and the admission of foreign goods?—It was to be expected that the opening of the ports would have had a contrary effect; but the fact is, that the public are not disposed to use the kind of articles which were made ten years ago—fancy silks.

5137. Do you mean that the public do not, in point of fact, now purchase fancy articles of the general description you manufactured when first in trade?—Only to a very small extent.

5138. Are

Mr.
T. F. Gibson.

11 May,
1832.

5138. Are the Committee to understand, that the taste is so totally changed in this country, that articles which fell under the class of fancy articles when you first entered trade, are considered quite out of fashion, and entirely gone by; or that the public taste may be changed with reference to colour and pattern?—It is the taste of the public to use plain silks much more than it was ten years ago.

5139. Have you not lately been copying some French figured silks?—Yes.

5140. You have told the Committee, that the taste of the public is not for those goods, but that you expected that when the ports were opened the public taste would have been for those goods?—It was to have been expected I think.

5141. On what do you found your opinion that there is no taste among the public for that description of goods?—From the fact of there not being any demand.

5142. Do you know that very large quantities are imported from France, and sold in this country, and that they have entirely superseded the English, because you have been unable in your attempts to cope with them in price?—I am not aware, that with the duty we now enjoy, we are unable to cope with them in price.

5143. Have you lately made any article, which you have given up, because you cannot compete with the French?—No.

5144. Have you not abandoned the article you were in the habit of making?—I made it much cheaper than the French.

5145. How do you know that?—From what I was informed by the person for whom I made it, Mr. Ellis.

5146. At what did you make it?—I made it at 3s. 9d. a yard, and I understand that it cost 4s., imported, with the duty.

5147. Did you get a fair tradesman's profit by that article when you sold it at 3s. 9d. a yard?—I got more by it than I could have got by the plain silk.

5148. Then why did you decline continuing to make it?—Because the person for whom I made it refused to take it.

5149. Was this article made only for a particular house?—It was made only for a particular house; the pattern was given me by that house.

5150. Is it the understanding of the trade, that when a pattern is given by a particular house, it is considered that the order is to be executed for that particular house exclusively by whom the pattern was given; that it would be considered improper in the manufacturer to furnish that particular pattern to other houses?—Certainly.

5151. When this particular article was declined by the warehouseman, do you conceive it was declined because the public taste had declined, and the article had become unsaleable; or because an article of the same description could be procured from another quarter, and the public taste supplied at a cheaper rate in another manner?—My own belief was, that the demand for the article had ceased.

5152. You have stated, that taking the French tariff for your guide, the rates of wages at Lyons and in Spitalfields are the same, or nearly so; what are the wages now paid in Spitalfields for the principal works manufactured there?—The price in London of making three single gros de Naples is 5d. per yard, the tariff of Lyons is, as nearly as possible, the same; the price of weaving three double gros de Naples is 6½d. per yard, and the price at Lyons, by the tariff, is the same; in the price of weaving figured gros de Naples the greatest difference appears to exist in Spitalfields, the price would be from 1s. to 2s. 6d.; the price in Lyons is from 7½d. to 11½d..

5153. How can you account for that difference?—I conceive it is to be accounted for by the use of the Jacquard machine, which has been employed in Lyons for a much longer time than it has been in London.

5154. For how long a time has the Jacquard been in general use in London?—In general use about six years.

5155. What are the articles you speak of as being at so high a rate as 2s. 6d.?—The most expensive kinds of figured satins woven in the Jacquard machines; but I am not myself a weaver of these articles, therefore I do not speak with great certainty.

5156. Can you state what was paid for the same works in Spitalfields in the year 1826?—The works which are now made at 1s., in 1826 would have been made at 18d., speaking from the information I have gained; I am not myself a large figured weaver.

5157. There is about a difference of one-third upon the former price?—Yes.

5158. You have stated, that the difference in the price of dyeing between London and Lyons is about 10 per cent., can you state to the Committee the

Mr.
T. F. Gibson.

11 May,
1832.

respective prices of the leading colours?—The following is a comparative List of prices:—

	London.	Lyons.
White and light colours - - - - -	1/3	1/.
Middle and dark colours - - - - -	1/9	1/3.
Black supple and 16 ounce coloured ditto -	2/	1/3.
Black soft - - - - -	1/3	1/.

[Note.—The Witness not having this list before him during his examination, made the statement of difference of 10 per cent. between the prices at London and Lyons erroneously.]

5159. Upon what is it you found your opinion as to the difference of price being 10 per cent.?—From the statement given to me by an English dyer connected with a Lyonese dyer.

5160. Is there any particular colour that you are more particularly concerned in in your manufactory, is your manufactory generally applicable to all colours, or is it to any one in particular?—To all colours alike.

5161. Do you conceive that there is any peculiar advantage that the foreigner has in dyeing in any particular colour?—I am not aware that there is any advantage whatever.

5162. Is there any advantage that the English dyer has in dyeing of any particular colour?—No, except in the article of white; I believe in that we have a decided advantage over the French dyer.

5163. Have not we now an advantage in black?—Not materially in the price of dyeing. But I think our black goods are, upon the whole, superior in colour to the French blacks I have seen.

5164. Is it not the fact that there is less pressure on the English black goods from foreign competition than upon many other colours?—I know no reason why there should be.

5165. Is it the fact that the importation of black foreign goods is in as large proportionate quantities as in other colours?—I believe not.

5166. The importation not being so large, is it not a fair inference, that the English have an advantage in that colour which they have not in others?—In the mode of dyeing I think it would be a fair inference; for although the price of dyeing in black more nearly approaches to the French than in many other colours, the difference is not very important.

5167. Are you aware of the amount of duties paid on dyeing stuffs introduced into France as compared with the duties paid on their introduction into this country?—No.

5168. You stated on a former day, that you conceive at the present day smuggling is undoubtedly carried on to a greater extent than it was during the existence of the prohibition?—Yes, the smuggling now takes place principally in the lighter description of manufactured articles.

5169. It is a fact that there is also some smuggling carried on in the plain silks?—To a very small extent now I believe.

5170. Do you imagine there is much in the figured broad silks?—I should think the quantity is larger than that of plain silks.

5171. With respect to the lighter articles there can be no doubt that it is carried on to a great extent?—I do not know that of my own knowledge, but I judge so from the conjoint belief of those persons who have made inquiries.

5172. Was it your opinion, prior to the opening of the ports, that this would have been one of the consequences of the introduction of foreign silks, that the smuggling would be increased instead of diminished?—I did not then form any opinion.

5173. How many years were you in Italy?—I was there two successive summers.

5174. Two crops?—Yes.

5175. Were you at all engaged in the throwing trade?—Not at all.

5176. Had you an opportunity of examining their mills?—Yes.

5177. And the general system of the trade of the throwster?—Yes.

5178. You state that you do not think the throwsters there possess any peculiar advantage over the throwster in this country?—No other advantages than these, that the wages are less, the waste is less, and the throwster has his plant and machinery at a less cost.

5179. Does

Mr.
T. F. Gibson.

11 May,
1832.

5179. Does not the Italian throwster reel his own silk?—Some of the throwsters reel the silk from the cocoon, and also possess machinery.

5180. Do not you conceive that is a very great advantage?—No, I do not.

5181. Do not you conceive it is a very great advantage that he should be able to select his raws upon the spot?—I think the English throwster has as good a market for raw silk as the Italian throwster; in fact, he has a better market. In England he sees the produce of every part of Italy at one view, whereas an Italian throwster can only make a selection from the silk of the district in which he resides.

5182. Has not he an opportunity of assorting his silk better than in any market here?—No.

5183. You do not consider the Foreign thrown silk at all better than the English thrown silk?—Of the same quality of raw silk, I do not.

5184. Being thrown in Italy before it is transported to this country, you conceive it possesses the same advantages, after having crossed the sea in a raw state that it does when thrown in Italy?—I can state from my own experience, that the silk thrown in England from the same quality of raw is as good silk as the silk thrown in Italy.

5185. Are you aware of the rapidity with which the mills are worked abroad?—I do not know it precisely, it is much less than that of the mills in this country.

5186. As a throwster, do you not conceive, that silk thrown in a mill which does not go at the same rate of speed lately attempted in this country, is better than the silk which has undergone the operation with that speed?—I am able to say from my experience as a manufacturer, that the increased speed of throwing is no injury to the silk.

5187. You state that the removal of the duty in your opinion, would be very injurious to the throwster?—Yes, the removal of the entire duty.

5188. Do you think that if removed it would afford any equivalent advantage to the manufacturer?—I have to speak both as a manufacturer and throwster; as a manufacturer I should like to say the duty entirely off, as a throwster I should wish it on,

5189. Are you able to say, that supposing the whole of the duty was removed, that would give an equivalent protection to the manufacturer?—No, I think the protection which may be afforded to the English manufacturer, against French silk goods, will be sufficient to cover 2*s.* of protecting duty to the throwster.

5190. Has your last answer reference to the existing protection to the manufacturer, or do you contemplate any variation of that protection?—If the present duty were really collected, there would be an ample protection.

5191. You are aware that in point of fact it is not collected?—I believe that it is not collected.

5192. You state that you think 25 per cent. might be collected as a duty to exclude the smuggler?—Yes.

5193. Have you purchased cocoons in Italy the same way that the Italian would do?—Yes.

5194. You have had the silk thrown in Italy on commission for yourself?—Yes.

5195. Has not your trade lately been principally in black?—My trade for the last year and a half has been divided between blacks and colours.

5196. Are not your goods principally of a low description?—No, they are not.

5197. Not of a quality principally for the consumption of the lower class?—No, they are fitted for all classes.

5198. Are you not aware that the largest throwsters in Italy have reeling houses and reel their own silk?—It is a very common case for the owner of a large filature to be also a throwster, but it is not the general practice.

5199. Can you give the Committee an average of the earnings of the workmen, or any given number of workmen, employed by you at present?—I took an average of their earnings a very short time since, and found that for the last three months the earnings of the head of the family were 13*s.* 9*d.* per week, and the earnings of the women and children in the family varied from 8*s.* 6*d.* to 9*s.* 6*d.*

5200. When you say women and children, do you mean a woman or child?—A woman or young person.

5201. Did you ever take the average of such earnings previous to the repeal of the prohibitory laws?—I do not remember to have done so; there is no doubt that at the time when the laws relating to the silk trade were altered, the earnings of the work people were larger than they are now.

Mr.
T. F. Gibson.

11 May,
1832.

5202. Did you make a very extensive average of your work people lately?—I took an average of twenty.

5203. On what goods were they employed?—On three double gros de Naples.

5204. Not on velvets?—On velvets they would be larger.

5205. What deductions has a weaver to pay out of that 13s. 9d.?—I think one shilling should be deducted as the necessary expense for quill winding.

5206. During how many weeks in the year does he lose time?—He must lose two days in every change of his work.

5207. What price do you pay for that work on which those persons are employed, three double gros de Naples?—Sixpence halfpenny.

John Benjamin Heath, Esq. called in; and Examined.

John B. Heath,
Esq.

5208. YOU are a silk merchant?—I am.

5209. How long have you been engaged in that trade?—More than twenty years.

5210. Your house has been established longer than that in London, has it not?—We have had our house in London since the year 1805.

5211. Can you state the gross produce of silk in Italy, on an average of years, in the different States of Piedmont, Lombardy, the Tyrol, Tuscany, Fossembrone and Naples?—Yes; I can state the average of the three last years of the production of Lombardy, the Tyrol, the Frioul, and other Italian States.

5212. From what documents do you take that statement?—From documents which I have collected, that have been transmitted to me by my correspondents in Italy from time to time, chiefly founded on official returns.

5213. You have been for years past in the habit of having regular returns of every thing connected with the silk trade?—I have the average from Lombardy, the Tyrol, and the Frioul, for the last three years 1829, 1830 and 1831; it was 17 to 18,000 bales, weighing 4,250,000 lbs. Italian, or about 3,000,000 of lbs. English; Piedmont I estimate 1,250,000 lbs. English; the Roman States, Naples and Sicily, 3,000 bales, of 200 lbs. each, together 600,000 lbs.; making a grand total of between 5 and 6,000,000 lbs. English, the whole produce of Italy.

5214. Is the quantity capable of any great increase in any or all of those countries?—In most of them, certainly.

5215. Has it within the last eight or ten years much increased?—It has increased very much.

5216. In what proportion?—I cannot state precisely; it has diminished in some parts, and very much increased in others. My last journey to Italy was in 1825, I remained there eight months, and made many inquiries on this subject; there were great complaints, that the general produce of the soil was not remunerating to the grower, and that the only thing which paid the agriculturist, was silk; and the result was, that a very great increase in the plantation of mulberry trees was taking place.

5217. Were the prices for silk higher than they are now?—They were.

5218. The price of the silk would depend upon the proportionate profit from growing silk, as compared with the other produce of the soil?—Yes, no doubt of it.

5219. Can you state how much of that is made into organzine and tram in each country?—That depends entirely upon the demand in the foreign markets for organzine and tram; there is no datum by which that can be ascertained.

5220. Can you state the average quantity in the three years you have alluded to?—No, I cannot.

5221. By reference to your papers will you be able to do so?—No, I fear not, as there are no official returns.

5222. Can you state to what countries that silk is exported, and in what proportion, particularizing that to France and England?—I can state what the export from the Lombardy States alone was in 1831; to Berlin and Vienna, 335,000 lbs.; to Russia, 120,000 lbs.; to Switzerland, 200,000 lbs.; to the different manufacturing places on the Rhine, 500,000; to England, 2,250,000 lbs.; making in the whole, 3,405,000 lbs. of export.

5223. In what way is the silk that remains over and above the exports worked up in that country, is it worked up for manufactured goods for export, or for home consumption?—I am not able to answer that question; I should think there is no export of silk stuffs from the North of Italy; from the Tuscan States there is.

5224. Any velvets?—The velvets are chiefly from Genoa.

5225. Can

John B. Heath,
Esq.

11 May,
1832.

5225. Can you state generally the quality of the silk produced by each of those States?—Each State produces a silk different from the other; in Lombardy, for instance, there are a great variety of sizes of silk, but it is of the same description; Tyrol the same; and in the Frioul the same; the manufacturers are better able to speak as to the application of the silk that they manufacture.

5226. Are you able at all to state the expenses in either of those States, attendant on the throwing?—I have notes which show that.

5227. When you were in Italy yourself, did you attend particularly to that branch; did you take the notes then, or is it information since received?—I have notes which I took then, and I have received information since.

5228. Take the most important place from which the greatest quantity is sent, can you state what is the expense of the different branches, from the cocoons to the finishing of the organzine?—I can state what the expense of throwing was, but the actual expense of the reeling varies according to the season, and other circumstances.

5229. Are you able to state the prices at which the cocoons are purchased in that country?—They vary every year according to the season, and to the state of the different silk markets.

5230. Will you state generally what you know of the expense of throwing in Italy?—In Piedmont, an organzine of 22 to 24 deniers, which is a fine size, including the waste, is thrown at the price of 3 livres to 3 livres. 5. of that country, which I consider to be equal to 4*s.* to 4*s.* 4*d.* of our pound English weight; the second and third sizes, which I class under the head of 24 to 30 deniers, from 3*s.* 6*d.* to 4*s.* the English pound.

5231. Waste always included?—Yes, in Lombardy; the finest size which is 18 to 20 deniers, 3*s.* 6*d.*; 22 to 24 deniers, 3*s.* 4*d.*; 28 to 30 deniers 3*s.* per pound English.

5232. At what period was that price given?—For several years past; my last note on the subject is dated about eighteen months ago.

5233. Have you reason to believe that those prices charged are the average prices of the country?—They were so at the time this list was furnished me, and I believe are so still.

5234. With regard to tram, will you state the information you have of the expense attending the throwing that?—My information with regard to tram is more limited, I have merely the average expense of throwing trams from 22 to 26 deniers, and 26 to 30 deniers, without the waste, 1*s.* 9*d.* to 2*s.*

5235. Can you state what are the wages the parties employed in that receive?—I cannot.

5236. Have you yourself visited the machinery for throwing in Italy and in this country?—I have visited mills in Italy on various occasions, but never with any other view than that of satisfying my curiosity; I did not take any notes respecting the mechanical part.

5237. Have you visited mills in this country?—I have seen mills in this country.

5238. Will what you have seen enable you to form any comparison between the state of machinery there and here?—No; I have not made sufficient observations to answer that question satisfactorily.

5239. What duties are levied in each of those States on the export of raw and thrown?—The export duty in Piedmont upon organzine is 50 centimes the pound of that country, which is equal to 62 centimes and a half the pound English, making a small fraction above 6*d.*

5240. Is that for organzine?—Yes; the exportation of raw from Piedmont is prohibited; in Lombardy the export duty on raw silk is 241 Austrian livres and a fraction for every 100 kilogrammes, which is equal to about 9*d.* a pound English; the export duty on organzine from Lombardy is half that amount, 120 Austrian livres and a fraction for 100 kilogrammes, equal to 4½*d.*; and in the kingdom of Naples the export of raw silk is free.

5241. Is there none thrown in Naples?—Very little indeed; what is thrown is for the use of their own manufactures; there is a large export of sewing silk, but none of organzine.

5242. From what part is the sewing silk exported?—It is exported from different parts of Italy, but chiefly from Naples; there is a very considerable trade carried on between Naples and the United States in sewing silk; the silk is shipped generally through Leghorn, and the proceeds come through London.

John B. Heath,
Esq.

11 May,
1832.

5243. Does any of that sewing silk find its way to England?—I should say not. My house received, two or three years ago, a box containing various samples of sewing silk of that country, for which we could not find a sale here.

5244. The Committee are to understand, that from Naples generally nothing but raw silk is imported?—Nothing.

5245. From whence do we import our largest quantity of thrown silk?—The largest quantity from Lombardy, some from Piedmont, a little from the Duchy of Modena and the Roman States, but the latter quantity scarcely worth mentioning.

5246. Can you state the proportion which on any average number of years we have received from Lombardy and Piedmont?—I can put in a document to that effect.

5247. Does all the silk which is imported from Italy now come through France?—Not the whole of it.

5248. How long is it since silk was brought through Lyons?—I do not recollect precisely the period, but not very long after the peace. A considerable quantity used to come through the ports, Leghorn and Genoa, but it was found more advantageous to let it have the double chance of the markets of Lyons and London.

5249. It is distinguished as Italian silk, is it not?—It is put into depôt at Lyons as Italian silk.

5250. What are the qualities of the silks that find their way to England, is it of the superior or the middling quality?—There is some of all sorts; a great deal of indifferent raw silk finds its way into this country.

5251. Is there any difference in the quality of the thrown?—They are of different qualities, from 18 to 20 deniers up to 36 and 40.

5252. Does England receive a greater proportion of fine than any of the other countries you have stated?—That depends on circumstances; I do not think there is any general rule by which to answer that question satisfactorily.

5253. Are the Committee to understand, that it will vary according to the different prices?—I think so; the market of Norwich used to consume a quantity of the finest organzine, while Coventry always used that that was coarser from 26 to 30 deniers; the consumption of Norwich has almost entirely ceased, and where I used to sell 50 bales of silk for that city I do not now sell two.

5254. Of the silk you import from Italy can you state where it is principally manufactured?—It is a difficult thing to answer that question; there is generally a large assortment of bales in the market, and the manufacturer selects that which suits him, and is adapted to his particular purposes.

5255. Can you state to the Committee what quantity of silk is exported from Italy to France, and what are its qualities?—The quantity of silk imported into France from Italy, Spain and Turkey, in the documents I have, is stated thus: The average of foreign raw and thrown silk imported into France from 1825 to 1830, both inclusive, is 540,390 kilogrammes, making 1,186,719 pounds English; the average duty on which, as stated by a deputy to the Chamber at Paris, was 1,034,800 francs.

5256. Of that how much is Italian?—I should say seven-eighths of it, or more; the consumption of foreign organzine in Lyons is about 700,000 lbs. weight annually, the greater part of which comes from Piedmont; France employed three-fifths of the organzine silk thrown in Piedmont.

5257. Is that she employs of a finer quality than that which other countries receive?—That will depend, I should think, entirely upon the stuffs for which they are employed; they have the Piedmont thrown silk of all sizes from the finest to the coarsest.

5258. Have you any returns to show where the other two-fifths go to?—A great deal comes to England; I should think very nearly the whole.

5259. You do not state that there is much Piedmont in the quantities exported to Germany and other countries?—What I stated was only the exports from Lombardy.

5260. From what document do you state the amount to be upwards of a million of pounds?—I procured the information partly at Lyons and partly from Paris.

5261. Under what date?—I do not recollect the precise date; but I got part of it when I was at Lyons last July.

5262. Did that come in the raw or the thrown state?—According to the statement I have given, it appears to be about two thirds thrown, and one third raw silk.

5263. Can you state what duties are paid on the import of foreign silks into France?

France?—The duty on foreign raw silks is 1 franc and two-thirds per kilogramme, equal to about 8*d.* per pound English.

5264. Does all raw silk pay the same duty, or is that Italian?—Every kind of raw silk except India; if India silk is imported direct it pays 55 centimes, about 2½*d.* an English pound.

5265. Coming indirect, what does it pay?—It is not admitted; the duty on foreign thrown silks is two francs and 42 centimes per kilogramme, equal to about 1*s.* a pound.

5266. Do they import any silks from Spain?—Yes, they do, but very few.

5267. Does that pay the same duty?—Precisely; all foreign raw silks pay the same duty, except those from India.

5268. Are you able to state the prices of silks for different years in Italy, and the prices of the same silks at Lyons, and the prices of the same silks in England?—I have not the document with me, being informed that those prices had been given to the Committee; I can put the document in if it is wished.

5269. Will you lay before the Committee the prices on the average of as many years as you can of the Italian raw and thrown silks in Italy at one or two of the principal markets, the prices of the same at Lyons, and the prices of the same in England, as nearly as possible of corresponding quality and at corresponding times?—I will.

5270. Will you further state, if you can, the amount of the sale of Italian silks at Lyons?—I have not any document to enable me to do that here; but I can get it from Lyons in eight days; the sales are all registered by persons appointed for the purpose, and the returns are easily procured.

5271. In what manner is the registry kept of the quantity of silk consumed at Lyons?—I have never seen the registry, therefore I am ignorant of the manner in which it is done, but I very frequently find it mentioned in letters, that the monthly sale has been such a quantity.

5272. That you believe to comprehend the whole of the silk?—Yes.

5273. Do the French import any fine Italian raw silks?—Yes, they do.

5274. Under what circumstances is it that the French resort to the use of Italian raws, when they grow silk themselves?—They do not perhaps grow enough for their consumption when the demand is very brisk.

5275. Do they ever resort to those till their own stocks are exhausted?—That depends in some measure on the prices; the prices of their very best are generally 10 per cent. dearer than the Italian of the same class.

5276. Is there any duty paid on the import of organzine silk into Switzerland, or any other of the places to which you have stated the exports of Italy to be sent?—I have a note here, that at Zurich, which is one of the principal places in Switzerland for the manufacture of silk, the manufacture has increased there in a most extraordinary manner; in the year 1792 they had only 1,000 looms and now they have 12,000, and both raw and thrown silk are imported there free of duty.

5277. Is there any duty paid at Vienna, or Berlin or Moscow, or any of those places?—I believe there is, but I do not know the fact.

5278. Have they any silk mills in Switzerland?—At Zurich they throw very little indeed, and that little is, I believe, tram; they get the thrown silk free of duty, and therefore they have probably no inducement.

5279. From what part of Italy do they get their silk?—They get it from Lombardy and from other parts. I suppose for some particular kinds of goods they may get a little from Piedmont also.

5280. Are you aware whether the same thing exists at Basle?—I do not know.

5281. Can you state for what purposes the silk is sold at Zurich?—As they have the number of looms I have stated, I take for granted it must be in stuffs, in broad goods of some description, but I have no information upon that subject.

5282. How much silk would 12,000 looms use up?—I am not able to answer that question, I am not acquainted with the details of manufacture.

5283. Probably you would think, that if we had no throwing interests to protect in this country, the best way would be to repeal all duties on raw and thrown silks?—That is a question I cannot satisfactorily answer, it is necessary I should know something connected with the throwing in England, which I do not.

5284. Have you yourself been interested in throwing silk in Italy?—Never.

5285. Have the relative prices of raw and thrown silk in this country afforded what you consider remuneration to the foreign throwster of late years?—If by
678. that

John B. Heath,
Esq.

11 May,
1832.

John B. Heath,
Esq.

11 May,
1832.

that question I am to understand that the foreign throwster is the person sending his silk to be sold in this market, I should say not.

5286. Taking the price of raw Italian silk, and the price at which the thrown silk of the same qualities has been sold in the English market, has the difference between those afforded what you consider to be the expense of throwing the article in Italy?—According to the evidence which I have upon the subject of throwing in Italy, I should say not; the persons who have of late years sent the thrown silk to be sold in this country, have generally lost by it.

5287. Are the persons who send the thrown silk, the throwsters, or persons who buy it of those who have separate establishments?—There are some of both.

5288. For what period do you consider that the importer of foreign thrown silk has been a loser?—That is a question I cannot answer with precision; but for the last four or five years, I conceive the person who has sent Italian thrown silks to this market, has not been remunerated.

5289. Do you conceive that he has not only not been remunerated, but has been a loser?—Naturally the non-remuneration is a loss.

5290. Can you state from your local knowledge of Italy, and the observation thereon made, whether the throwster in Italy has any advantages over the throwster in England, and to what extent, and in what those advantages consist?—I am not aware that he has any other advantages than that of having a better climate to work in; I believe that they prove of some importance.

5291. Do they work there in the open air?—No, the mills are constructed in the same way as those in this country.

5292. It has been stated to this Committee, that the Italian throwsters have an advantage equal to the payment of 3*s.* 6*d.*, the amount of the present duty on the English throwster?—I should doubt that very much; if I knew the evidence upon which that supposition is founded, I might perhaps better explain it.

5293. This question was put to Mr. Brockwell, "Will you state what are the advantages which the Italians possess in throwing, over the English, which will enable him to undersell the British throwster?" to which he answered, "I am to understand, that to refer to local advantages, reeling his own silk, selecting the best kind of others reeling for his own mills, assorting silk at the time of purchasing, and putting aside all which does not precisely correspond with the sample, in size as well as goodness, or making a second price for the objectionable part, less waste, and the raw silk retaining a quality upon it advantageous to the price when thrown, a more intrinsic article when in organzine or tram, more uniform in size, more valuable to an intelligent manufacturer, because the thread has not been overstrained by speed; all those are advantages of no small importance in skilful hands; the Austrian Government too lends him their aid, so far as to cede to him 5*d.* per pound below the duty charged upon the raw silk exported to other countries, the raw silk paying 10*d.* a pound and the thrown 5*d.*;" then, when afterwards stating what the amount of the advantages is, the answer is repeated, that 3*s.* 6*d.* a pound, which is the present duty on organzine, is about an equivalent to the local advantages enumerated?—If I may be allowed to answer this question by an explanation, I should say, that comparing the English with the Italian throwster, the English throwster has perhaps the better chance of the two in the selection of silk, because when the English throwster wishes to make a purchase, he has the produce of all the different countries of Italy before him to make his selection; the Italian has only the silk of his own country before him, and not that of the other States, as Fossebrone, Naples, and so on; I do not at all understand what is meant here by local advantages, nor do I see on what ground it can be that the foreign throwster has the advantage of 3*s.* 6*d.* over the English throwster; I do not see that he has any.

5294. How do you account for so many English throwsters failing of late?—Because I think many English throwsters have set up mills who had no capital to support them, and as there is no trade so susceptible of variations from the caprices of fashion, and from the state of the national prosperity as the silk trade, a throwster should possess means. As long as it is a remunerating trade, they will go on; but the moment a check comes, they naturally fail, not being able to support themselves till a reaction takes place,

5295. Are you aware what time is taken to throw silk?—It depends entirely on the nature of the machinery; if the machinery is good, it will of course go with greater speed.

5296. Do they throw in Italy in the winter or the summer?—It depends on circumstances;

John B. Heath,
Esq.

11 May,
1832.

circumstances ; in the summer time they are principally employed in spinning the silk ; in the winter time they throw according to the demand ; I have known mills in Piedmont, going the whole winter, as long as there was a supply of water ; the whole of the mills in Italy are turned by water ; here there is in many cases the expense of steam.

5297. The Piedmont thrown silk is the best silk of Italy, is it not?—It is in general.

5298. Those throwsters are not in the habit of going out of their own market, are they?—I have known instances, where, on account of a deficiency in the crop, Lombardy silk has been imported into Piedmont to be thrown.

5299. Does the superiority of the Piedmontese arise from the growth of the silk of Piedmont, or from its being thrown immediately after the growth?—I should think it operate both ways ; in the first place, any person at all acquainted with the conduct of the filature and spinning of silk, knows that the temperature, the weather, has a great influence ; besides the utmost care is taken in the reeling. With respect to throwing, the government of Piedmont have always taken great pains that proper persons should be appointed to examine the organzine, in order to preserve the character of the thrown silk of that country ; it is done with a great deal more care than in other parts.

5300. Are not those advantages you have enumerated just now, which the throwster there possesses over the English throwster?—They are advantages as far as they go, they render the organzine perfect certainly ; but I do not see that as a matter of remuneration to them, they are advantages. If the English throwster excels in his work, he will be remunerated by a better price for his article.

5301. Are you of opinion that there are too many mills in this country already, and that the competition is too great?—As a matter of opinion I should say so, but I have no precise information upon that subject.

5302. You state that the foreign throwster has been sending here at a loss?—I conceive that is the case.

5303. How has the market been in other parts of Europe at the period at which he has been sending here at a loss, has he equally sent to other markets at a loss?—That I am not able to answer.

5304. Has the importation of the foreign thrown silk into this market regulated the price of the market here, or has the competition of the English throwster regulated the market?—I think they both have operated, it depends very much on circumstances.

5305. Taking for granted that you are correct in supposing that the importer of foreign thrown silk has imported at a loss for some years past, how do you reconcile that with the fact, that the importation has increased in quantity, particularly during the last two years?—I am not able to answer the question, except in this way. I can in some measure account for the increase since July 1830, because I know from the nature of the letters I received from several correspondents at that period, that when the Revolution broke out in France they felt that there was no knowing how far it might spread, and a great deal of silk was sent here with a view to its being placed in greater security.

5306. When you state that you believe that the number of throwing mills in this country is too large, do you give that opinion without reference to the increased and increasing quantity of the importation of foreign thrown silk?—I merely judge from this fact, that we have unfortunately had a great many failures in the silk trade ; the majority of those failures now, and in 1826, was among the throwsters, unfortunately I was interested in some of those failures, and it turned out on investigation of the bankrupts' accounts, that they were mostly persons who had set up mills without the least means of resisting the pressure of trade.

5307. Has the number of throwing mills, in point of fact, increased within the last five or six years?—Judging from what I hear, I conceive it has.

5308. You state that you conceive silk has been sent here in the raw state for security?—I conceive it was upon the occasion to which I have referred.

5309. Why has not the quantity of thrown silk sent to this country increased in the same proportion?—I have not investigated that fact.

5310. In 1830 the quantity of thrown silk introduced was about 437,000, the quantity of foreign raw 200,000, whereas last year the quantity introduced was 514,000 thrown, and the raw was 1,026,000, diminishing by 200,000 in the raw state, and increasing in the thrown?—I cannot give a positive answer to that, further than to say that I have observed that when anything has occurred at Lyons,

John B. Heath,
Esq.

11 May,
1832.

in the shape of commercial or political convulsion, silk has been often forwarded in the same way.

5311. Do not you conceive that would have an effect equally upon raw?—Yes, I conceive so.

5312. There is no reason why it should not have produced the effect on raw?—No; when I stated that the import was great, from a political cause in 1830, it should be stated that that was in July at the very commencement of a new crop when the amount of raw silk on hand would be low.

5313. Is not England the principal mart for the raw silk of Italy?—That is shown by the return of the exports of silk from Lombardy, to which I have before alluded; by that it appears that while the largest export to other countries, which is that to the Rhine, is 500,000 pounds, that to England has been 2,200,000 pounds.

5314. You account for the large import in July 1830 by the effects of the French Revolution?—Yes, I do in some measure.

5315. How do you account for the larger import in November, December, January, February and March following?—I have not had the opportunity of seeing the returns.

5316. Is not the export of raw silk from Piedmont prohibited, and also exports of organzine from France prohibited?—Not that I know of; the export of organzine from France is not prohibited, for I have seen some here, but it was not approved, and I returned it a month ago.

5317. Have you any raw from Piedmont here for the English market?—We have, but it is smuggled.

5318. For what purposes is the raw of Piedmont principally required?—There is no purpose that I am aware of that renders the raw of Piedmont indispensably necessary; there is a quality of silk from the Piedmontese States called Novi, the principal place of consumption of which is England, it is smuggled out of the country, and brought here.

5319. Does that belong to the Genoese?—To the King of Sardinia.

5320. Could you obtain any greater quantity than now comes, if you had a market for it?—Novi silk is not of current sale in quantities.

5321. Could you obtain a greater quantity from Piedmont, if there was a sale?—The Piedmontese States are placed in a very different situation from the rest of Italy; the export being prohibited, there is no encouragement to increase the cultivation of the mulberry tree; the consequence is, that Novi, which produces the silk the most sought for in this country, is the place from which the principal smuggling takes place.

5322. Are you aware at what expense that smuggling is performed?—It is a per centage upon the value of the article, but I cannot say exactly what it is.

5323. To what place is it smuggled generally?—The mode in which it is done is extremely curious; the persons undertaking to get the silk beyond the frontiers, deposit the value of the silk with the individual who sends it out; he does not restore the money, or pay the man his agency till he is advised that it has passed the frontier.

5324. Is that of Novi used in the manufacture of marabout in this country?—I believe it is.

5325. Has any considerable improvement in the quality of raw silk in Italy taken place since 1824?—In some places, certainly.

5326. What places principally?—Chiefly Lombardy and Naples.

5327. In what respect has the improvement been?—In reeling the silk with a great deal more care, and cleaning it more.

5328. You have stated in a former answer, that the best silks in Lyons, the produce of France, bear an increased price of 10 per cent. above the best silks from Italy?—Some of the very best qualities.

5329. Are you acquainted with the qualities of the silks generally produced in France?—Not with the whole; I have seen a great many of them; a fair average.

5330. Have you brought some silks of French growth with you?—I have.

[The Witness produced the same.]

5331. Do equal qualities of Italian and French silks obtain equal prices at Lyons?—There are some qualities among the French which, as I said before, are worth 10 per cent. more; I have stated to the Committee that last July when I was at Lyons, I made some inquiries upon the subject, and procured those samples I

have

John B. Heath,
Esq.

11 May,
1832.

have now laid upon the table; at that period there was some notion that the French Government intended to take off the restriction on the French raw silks, and I took these samples with a view to having them examined here, to see whether some business might not be done between the two places, but I found on inquiry that they were so much above what we could get for them here, it would not answer.

5332. Have you received consignments of French organzine here?—I have of French thrown; I do not know whether the raw silk of which it was made was grown in France.

5333. Can you obtain the French silk used in making marabout?—That is prohibited among the rest.

5334. Is any of it smuggled here?—I have never seen any; if the price at Lyons is higher than it is here, there could be no inducement to bring it here.

5335. Do you know that French silk, of the native growth, and thrown in France, is allowed to be exported into this country?—I cannot answer that question; all I can say is, that I have received silks thrown at Lyons which passed through the regular channel.

5336. Did your correspondent inform you that it was French thrown silk?—Yes.

5337. Have you ever heard of the growers of French silk having petitioned that Government to allow the exportation of it to this country?—When I was there I heard that they had petitioned to be allowed to export it, but the manufacturers opposed it on the ground that they possessed certain qualities which gave them a superiority in manufacture which would be attained by others if the export was permitted.

5338. If it is not allowed to be exported through the Custom House, must not there be a considerable expense in smuggling it through France?—I should think very considerable expense and great risk; but I am not sufficiently acquainted with the subject to speak positively.

5339. Will you state to the Committee through what channel this silk, which was consigned from Lyons, reached you?—It came to me through Calais, in the ordinary way, with all my Italian silks. This skein of silk I hold in my hand is one of the qualities they use for making the article they call marabout; this is a silk which in the month of July last was worth, in the market of Lyons, 59 francs the kilogramme, which, deducting $12\frac{1}{2}$ per cent. discount for cash payment, made that silk cost at Lyons 18s. 10d. the English pound, in addition to which there would be the charges to add, supposing it brought here. In July last we had great difficulty in being able to sell Lombardy silk of the best quality at 17s. to 18s.

5340. Are the Committee to understand, that the silk you exhibit is silk of French growth?—Yes, it is; I got these six skeins through a French silk merchant; they were sent by the diligence. I did not bring them with me; there was no difficulty in sending mere samples.

5341. What is the comparative quality, judging from your knowledge of silk, between that which was 18s. 10d. at Lyons, and that which was selling from 17s. to 18s. here?—The best answer to that would be, to exhibit another sample which comes nearer the Lombardy silk; that silk, No. 748, which would make an organzine of 18 to 24 deniers, cost 54 francs the kilogramme at Lyons at that period, that would stand in about 17s. 4d.; for the parallel quality to this, as nearly as possible in London, at that time it would have been difficult to have obtained more than 17s., all the charges being paid.

5342. What are the charges of transport per pound of raw silk from Lyons here?—I have the account of charges on a bale of raw silk weighing 288 lbs. English.

Carriage from Lyons to Calais, 45 centimes per kilogramme,	£. 2. 5
Freight to London, and Charges at Calais	- 12 -
Duty, entry, scavage and expenses	2 10 4
In all	£. 5 7 4

making 4 1d. per pound.

5343. You mean that the French manufacturer at Lyons was in a situation to procure silk at 17s. 4d. per lb., equal to that you could sell in England of Italian growth at 17s. to 18s.?—Yes, within a fraction.

John B. Heath,
Esq.

11 May,
1832.

5344. Have you any samples of French thrown silk?—No.

5345. You know nothing of the comparative prices in July?—I do not recollect them.

5346. Would the silk you now produce have made marabout?—I am not acquainted with the details of the manufacture, but those are the silks which I was told at Lyons were used for that purpose.

5347. Is Lombardy silk as well adapted for making marabout as the French silk?—I should think not, it is not the quality used for that purpose here.

5348. You have stated that the best raw silk of France is 10 per cent. higher than the best raw of Italy?—Yes, in the Lyons market; at least in was in July last; I should think the same difference exists now.

5349. Why does not the French manufacturer buy the imported Italian raws, until the raws of France fall to a par with the price of Italian?—I can only answer that, by stating that there is a very strong prejudice in the French manufacturers' minds in favour of silks of their own country; they have been always used to employ that silk in their manufactures, and they have not been so accustomed to use Italian raw silk.

5350. The French manufacturers prefer their own silk, though it is 10 per cent. higher?—So it appears.

5351. You say that they frequently resort to the Piedmont silk on account of their own being 10 per cent. higher?—I did not state that it was on that account, but that it was the fact that the great consumption of foreign organzine at Lyons was chiefly confined to Piedmont thrown.

5352. Are there any other places in Switzerland besides Zurich where silk is manufactured?—Yes, I believe there are; I do not know it of my own knowledge.

5353. You are not able correctly to state what quantity of silk a loom will take?—No, I am quite ignorant of all details of manufacture.

5354. Can you say that a loom on the average might use one or two pounds per week?—I have not the smallest knowledge upon that subject.

5355. Supposing the looms to consume from one to two pounds per week, there being as you state 12,000 looms in operation in Zurich, allowing only one pound to a loom, it appears that there would be 600,000 pounds of silk used in a year at Zurich alone; even supposing there were no other place in Switzerland having looms, it appears from the account you have given, that you portion to Switzerland no greater quantity than 200,000 pounds of silk as exported from Italy to that quarter, how do you explain that?—The 200,000 pounds I alluded to were the export from Lombardy alone. The remainder is probably derived from the produce of the other parts of Italy and Turkey.

5356. But you are not able to state from whence they derive the remainder of the quantity?—Not with accuracy.

5357. Are you aware whether in Switzerland there have ever been throwing mills to any extent?—I have heard that they throw very little in Zurich, and that that is tram chiefly.

5358. Are you aware whether there have been throwing mills there to any extent?—As matter of opinion I should say there have not.

5359. Are you aware that there are other throwing establishments?—I do not know it of my own knowledge.

5360. Is it your impression that there have not been?—I have not considered the subject and have no impression, but finding that silk is admitted duty free into that country, that the increase in the manufacture has taken place since the peace, that they could obtain thrown silks on a more reasonable footing than others, I conclude, therefore, that they had not the same inducement to set up throwing mills which persons have in other places.

5361. There is not that inducement which exists in this country, where we have silks from all parts of the world?—No.

5362. Is there any China or Bengal imported through this country into Switzerland?—There has been in small quantities.

5363. It is not your opinion that the price of Italian silk produces an effect upon the price of the French silk at Lyons?—That is a question which does not apply generally; what I have stated respects certain qualities not to be equalled by any silk I have seen in any other part of the world; it is that which is ten per cent. higher, there is a great deal much more moderate in price and inferior in quality in France.

5364. Do you think that the price of the quality in which the Italian may come

come in competition, is regulated by the quantity introduced from Italy?—No doubt it is.

John B. Heath,
Esq.

11 May,
1832.

5365. That amounts in France to about two millions pounds weight?—As I before stated to 1,200,000 pounds. I have a document here showing the average production in France for the last three years, including the season of 1832. It is estimated at 10,000 bales, weighing 826,000 kilogrammes, or 1,750,000 pounds English. I have reason to believe that what I have stated is correct, for it was the information collected for the Committee who were appointed by Government to ascertain whether they should permit the exportation of the silks of France.

5366. Can you state how many looms there are in France?—No, I do not possess that information.

5367. In what do you imagine the superiority of the French silk consists?—I conceive that it depends upon the elasticity of the thread, and that greater care is taken in the cleaning of it.

5368. Are you able to state what proportion of silk of that superior quality bears to the whole produce of silk?—I cannot say accurately, but I should think a very moderate proportion.

5369. Can you state what is the average consumption of silk in France?—No, I have no document here to show that.

5370. Is the proportion of the best kind of raw silk, as compared with the whole produce of silk, greater in France than in Italy?—I am not able to answer that question, I have never considered it; a great deal will depend upon season.

5371. Can you state the total quantity of foreign silk imported into France?—I have before mentioned, that the average quantity of raw and thrown silk imported into France from 1825 to 1830, both inclusive, is 540,390 kilogrammes or 1,186,719 pounds English annually.

5372. Is the superior quality of the French raw to be attributed to the difference in the quality of the cocoon, or to greater skill in reeling?—I have before stated that there is a great quantity of French raw silk which is not of superior quality, but that if allusion is made to the best quality, I should say the temperature has a great deal to do with the giving the thread of silk a greater elasticity; I should also add that greater care is generally taken in the reeling of the silk and cleaning it.

5373. Has the increase of production of silk in Italy been since 1826?—There has been a gradual increase ever since the peace.

5374. Has it been progressive in the same degree?—I should say not latterly so much as before.

Martis, 15^o die Maii, 1832.

J. A. S. MACKENZIE, ESQUIRE, IN THE CHAIR.

Mr. Andrew Martin, called in; and Examined.

5375. HAVE the goodness to state the name of the firm to which you belong? Morris, Prevost & Company, in London.

Mr.
Andrew Martin.

5376. Can you inform the Committee the gross produce of silk in Italy?—I have put down the information which I got in Italy in 1824; the quantity at that time, which was produced in Italy, was about four millions of pounds English; the crop was rather abundant that year.

15 May,
1832.

5377. Have you the detail of the countries in which it was produced?—I have; in Piedmont, 1,100,000 pounds English; in Lombardy and Tyrol, 2,300,000 pounds, English weight; these I believe are pretty correct; the following are not so accurate, as it is difficult to get at the account of the quantity produced; Naples and Sicily 400,000 pounds, the Roman States about 300,000 pounds, Tuscany and Lucca about 100,000 pounds.

5378. Have you any reason to think the produce has much increased since 1824?—Taking the average of the last three years, I should say in Piedmont it has not increased materially, that it is still about the same, 1,100,000 pounds; in Lombardy and Tyrol, about 3,000,000; Naples and Sicily, 450,000 pounds; the Roman States and Tuscany, and Lucca, the same.

5379. The increase appears to be in Lombardy?—Yes.

5380. That makes the average of the last three years 4,900,000 pounds?—Yes.

678.

Q Q 4

5381. Have

Mr.
Andrew Martin.

15 May,
1832.

5381. Have you reason to suppose that any of those countries can materially increase their produce, and what countries?—I should say there has been no increase in Piedmont, nor is there likely to be any material increase, as the production is rather discouraged by the prohibition to export of raw silks.

5382. How do you obtain those returns?—I got those returns in Italy, and by conversing with the first silk merchants in that country; I am not aware of any official returns; there are returns of the exports, but I believe none of the production.

5383. It is as a general merchant in silk, that you obtained the information you now give, as to the produce of silk in Italy?—It is. In the Roman States I should think there is no increase; there might be an increase there, as they grow very good silk, particularly in Fossembrone, but they want capital, they cannot easily get advances from foreign merchants; they find it very difficult on account of the badness of the laws in that country, where the creditor is not sufficiently protected against the dishonesty of his debtor.

5384. The Committee understand that the exportation of raw silks is prohibited from Piedmont, do you consider that an injury to Piedmont?—There is in Piedmont a disposition amongst the silk merchants, who are not silk throwsters, to obtain the means of exporting raw silk; and I should suppose there is a disadvantage to Piedmont in not having free exportation of silk as I see that they smuggle a portion of their raw with some difficulty and some expense, which of course they would export freely, more willingly, if allowed to do so; I suppose they smuggle about seven per cent. or less of their crop in raw white silk, which comes from Novi mostly, and is mostly exported to England.

5385. Does that smuggling take place chiefly on the Milan side?—I believe they smuggle it to Milan.

5386. Do you know the cost?—My recollection is, that it costs about two francs per pound; but it is difficult, as I have nothing to do with those transactions, to ascertain the cost; I suppose from ten to fifteen per cent. The increase in Lombardy, and principally in Tyrol, seems to have been about 30 per cent. on the former growth in the last nine years, and seems to be likely to increase as much, and probably more, in the next six years, judging from the quantity of mulberry trees planted; there has been probably some increase at Naples in silk generally, but particularly in good silk; they reel a better sort of silk, they used to reel a very coarse sort of silk, not adapted for this country; now they have improved the nature of their silk, and probably there will be a great increase of the quantity of good silk they produce, though perhaps there will not be a great increase of the total quantity of silk produced; for it requires a greater number of cocoons to produce a pound of fine silk than a pound of coarse one; I cannot give any answer as to Tuscany.

5387. In accounting for the want of increase in the Roman States, you have spoken of the want of capital, are you aware that the Jews of Pesaro are a very rich body of men?—Yes, they are; but circumstances have taken place in the Roman States, which have deprived the country of that very resource, which was a very great one; there were some very rich Jew houses in Pesaro, but there has been a sort of persecution by the Roman government against the Jews, and most of them have emigrated and gone to Tuscany, in consequence of that persecution.

5388. If they have gone to Tuscany, they have carried their resources to that country?—I suppose they have carried their money with them; I should think that industry has by that means been reduced, but that it might have been increased if the laws had been better; I know that the reeling of silk is not confined to the merchants there, but that the nobility take pride in the reeling good silk; some propositions have been made to me, which I was obliged to decline, for I knew a case in which the Pope had given an indemnity to a man not willing to pay his debts not to pay for five or six years, and no foreigner will run the risk of that.

5389. Where do you include the silk of Ancona?—In the Roman States.

5390. Have you been accustomed to purchase the cocoons in Italy?—Never.

5391. Nor been accustomed to the reeling of silk there?—Never; my business has been the receiving the silk consigned to my house in London.

5392. As a silk merchant, you are necessarily acquainted with the state of trade in Italy, and the operations going on there?—I must be aware of the abundance or scarcity of silk, and the state of the merchants generally there.

5393. Without having any of that particular knowledge which a person engaged in

in the purchase of cocoons would have, have you a better and much greater knowledge than such a person would have?—I must have a general knowledge.

5394. You have stated that it is your opinion, that the Piedmontese are injured by the export of raw silk being prohibited?—I should think the Piedmontese grower is injured by not being allowed to export his silk to the most advantageous market.

5395. You say that about seven per cent. of the growth of Piedmont is smuggled out of the country in a raw state?—Yes, that I take to be the outside quantity.

5396. You conceive it is principally sent to England?—Yes; the best white silk is, I think, principally.

5397. Do you know for what purposes it is used here?—I have no acquaintance with the manufacturing business.

5398. Do you not know that they use it for Persian warps, and that they cannot make Persian without it?—I cannot give an opinion upon that subject; we sell our silk at the market price, without knowing for what it is to be employed; and the manufacturers, generally speaking, do not tell us for what they mean to employ it.

5399. Can you state how much organzine and tram is made in each country?—In Piedmont, the whole of the produce, except what is smuggled, is made into organzine and tram, or consumed for their own manufactory; in Lombardy, probably from five-eighths to two-thirds of the produce is converted into thrown; at Naples I should say very little is thrown, only a very small quantity for their own manufactures; they convert more silk into sewing silks for exportation. In Tuscany I suppose they throw part of what they produce, as they have themselves some silk manufactories; in the Roman States, I do not think they throw anything considerable for exportation; the great throwing is in Piedmont, and in Lombardy.

5400. To what countries do the Italians export silk, and in what proportions to France and England?—I believe that Naples exports one-third of its fine silk to France, and two-thirds to England; they export principally fine silk, the quantity probably is about 250,000 lbs. English; Piedmont exports about 650,000 lbs. English to France, thrown of course; 160,000 to Switzerland and Germany.

5401. Can you distinguish the quantities exported to Switzerland and to Germany?—I cannot; the account is taken at Milan, through which it passes to both countries, and there is no distinction made of the country to which it passes in my memoranda; 50,000 to England, 300,000 are used for the Piedmontese manufactures, which are increasing. Lombardy and Tyrol export about 1,200,000 to England, that is about three-eighths of the total produce of Lombardy, of which one-third is thrown in those States of that export to England; 750,000 to Switzerland and the Rhine, almost all thrown; 270,000 to Vienna, all thrown; 150,000 to Lyons, about half thrown and half raw; 70,000 to Russia, perhaps more; now this leaves about 600,000 lbs., which I suppose is consumed at home or sent elsewhere.

5402. To what period do those returns refer?—I should say 1829 to 1830.

5403. From what sources do you obtain this information?—We have documents sent by the principal carrier of Milan; I cannot say that this is perfectly accurate, but I might get it perfectly accurate; it is important for us to know what silk has gone in certain quarters, and we obtain the information as matter of business.

5404. What are the duties levied on the exportation of raw and thrown silks from France and Italy?—From France, raw is not allowed to be exported, but thrown is exported without any difficulty; to my knowledge I am not aware of any difficulty in exporting thrown, and I should say that I believe it is allowed to be exported.

5405. Of the best qualities, as well as the worst?—Of any quality; from Naples raw silk is exported free of duty, it was not five or six years ago; from Piedmont, the exportation of raw is prohibited; thrown is allowed to be exported at the duty of 50 centimes per lb., which I make equal to about five-pence and three quarters per lb. English; the duty on the exportation of silk from Lombardy is Austrian livres 241 and a fraction per hundred kilogrammes, which is equal to 8½d. per lb. English; Lombardy, on thrown, the duty is one half, or 120½, equal to 4d. 8ths.

5406. You say that you know that thrown silk is exported from France?—My impression is, that it can be exported without any difficulty.

5407. Is that silk grown in France, or Italian silk thrown there?—I cannot ascertain whether the thrown silk is Italian or French; I believe it is done without the least difficulty, I know that the exportation of raw silk is prohibited, but still

Mr.
Andrew Martin.

15 May,
1832.

it comes to this country ; there is of course a difficulty about that, but I am not aware of any difficulty about the thrown silk.

5408. In France they allow the transit of Italian silk ?—Yes.

5409. Do you mean to state that there is no law prohibiting the export of French thrown silk ?—I am not aware of any difficulty in exporting thrown silk, for I have received some without any difficulty ; my impression is that that can be exported, I may be mistaken.

5410. Have you any doubt that the thrown silks, which you get, or which are exported to your knowledge, occasionally from France, are the produce of French raw silks ?—I cannot say whether they are French raw silks thrown in France, or Italian raw silks thrown there.

5411. You are not aware of any law prohibiting French silk when it is thrown, being exported ?—I am not ; I believe there is no difficulty.

5412. You state that French raw silks come to this country sometimes as a matter of speculation ?—Yes.

5413. They must necessarily be smuggled out of France ?—They are, or exchanged for Italian raws.

5414. That must be attended with considerable expense, must it not ?—I should think so.

5415. When it comes to this country with this expense added to it, how do you find the price as compared with that of Italian silk of the same quality ?—It is difficult to judge ; those silks imported into this country were not known, and were sold not nearly so high as I should have expected ; I do not think that the purchaser did justice to the silk, that he paid so much for it as it was entitled to receive.

5416. Will you name the price of the Italian and the French ?—The silk was not identically the same ; my impression is, that they would have been worth more to manufacturers ; it is not uncommon that the manufacturers do not appreciate silk fully at first.

5417. So that a manufacturer buying Italian silk, and buying also French silk, the price for that was not so high as you think it was entitled to ?—Just so ; I suppose that it was not smuggled, but that it was exchanged for Italian silk.

5418. You do not think there was more expense attending the import of that silk than Italian silk ?—The act of exchanging those raws for Italian raws which were in bond, must have been attended with some expense. I suppose that a person must have fee'd some custom house officer for going out of the regular course.

5419. Do you know whether any difference exists at Lyons between the price of Italian throws and French throws ?—I cannot answer that satisfactorily ; but my impression is, that Piedmont thrown is worth more than French thrown ; and in this country we have received some French thrown which were not so well liked as Piedmont thrown.

5420. Are French throws well known as an article of trade in London ?—Yes ; the quantity coming is very small.

5421. When you say French thrown, you mean silk thrown in France ?—Yes ; and probably from French silk.

5422. Are you acquainted with the extent of manufacture of silk goods at Milan ?—I am not.

5423. Are you acquainted with the extent of manufacture of silk goods at Como ?—I am not.

5424. Can you state the extent of manufacture of silk goods at Turin and Genoa ?—I think I stated it to be about 300,000 lbs. which they consumed.

5425. Are you informed that every State of Italy has a peculiar manufacture of silk goods of its own ?—Not sufficiently to give any interesting information upon that subject.

5426. Have you reason to suppose that from any part of Italy manufactured silks are exported to England ?—I should suppose, but really my answer is not worth taking down, that some velvets may have been imported into England from Genoa.

5427. You have stated the production of silk in Italy to be 4,000,000, how do you know that, if you do not know the extent of the manufacture in different places ?—The silk is produced and employed afterwards to be manufactured into stuffs, or into goods ; the production of silk goods from the cocoon, and afterwards its manufactory into stuffs, are two very distinct processes. Silk is first reeled from the cocoons, then that silk is thrown, and afterwards it is woven into stuffs ; a man
may

may know the production of cotton in America without knowing the sort of goods that are made from it, and I cannot give any information whatever of the process of manufacture.

Mr.
Andrew Martin.

5428. Can you state what have been the variations of prices of raw and thrown silks in Italy and in England?—I have a few memoranda of the prices in different years from 1819 to 1832, those prices of course are approximated.

15 May,
1832.

5429. From what source are those prices taken?—From the price currents of the respective countries; Lombardy organzine 24 to 28 deniers; in 1819 it appears that the price was here about 57s., and the duty then was about 14s. 8d.; 1823, 42s.; in January 1824, 36s., that was the time when it was expected the alteration of the duty would take place, which took place in July; then the duty was reduced to 7s. 6d., and the price became, with the duty 30s.; there was already an impression that some change would take place. In February 1825, 45s.; the price then got up 15s. after the reduction of duty. In November 1825, when the duty was reduced to 5s. the price was 31s.; that fall was probably owing to the crisis, to the reduction of duty and to the unsettled state of trade. In 1826, it was 28s.; in 1827, 29s. 6d.; in 1828, 29s.; in June 1829, when the duty was reduced to 3s. 6d. it was 26s.; in November 1830, 24s. 6d.; in 1831, 21s. 9d. I will state the prices of Lombardy organzine at Bergamo, for the same size 24–28 deniers; in 1823 it was 23 livres; in 1824 it was 21½; in 1825, 29; in 1826, 25; in 1827, 26; in 1828, 26; in 1829, 22½; in 1830, 22, and in 1831, 20; I believe about the same periods I have referred to as to England. As to Milan raws, 4 to 5 cocoons, in 1819, 39s.; in 1823, 28s., the duty was then, I believe, 5s. 6d. per lb.; in January 1824, 24s.; in July 1824, when it was reduced to 3d., it was 18s.; in February 1825, 26s.; in November 1825 it was 22s. 6d.; in 1826, 21s.; in 1827, 21s. 6d.; in 1828 the same, 21s. 6d.; in 1829, 17s. 6d.; in 1830, 17s. 6d.; in 1831, 16s. 3d.; in 1832, 17s. In Lombardy the price of the same raws was in 1823, 18½ livres; in 1824, 17; in 1825, 23; in 1826, 20½; in 1827, 22½; in 1828, 22½; in 1829, 17½; in 1830, 19; in 1831, 16½.

5430. What is the exchange of the Milan livre?—About 34 Milan livres are equal to 20s., and 100 lbs. of Lombardy produce 70 lbs. English.

5431. The great decrease of price appears to have taken place in the last three years, is there any thing in the nature of the crops accounting for that?—The crops have not been very abundant, but the production has increased materially, and that of course has reduced the price; but prices had been nearly as low in Lombardy in 1823 and 1824.

5432. Can you inform the Committee what have been the prices at Lyons?—I understand that the Cevinnes silk, or I believe Alais silks, are worth three francs per kilogramme, or 12 per cent. more than the best Milan raws at Lyons; those silks are probably peculiar to France. It appears there is no such silk reeled in any other country; as to the prices at Lyons and London, my information is very imperfect. I have the prices of December 1831 in both places, which I will state; the Lombardy organzine in December 1831, of 24 to 28 deniers, was worth 28½ francs, with 12½ per cent. discount. In London, the same article was worth 22s.; I have two prices current, one from Lyons, and another from Messrs. Durant of London, about the same date, which I will give in if it is wished; Italian trams of 24 to 28 deniers were at Lyons 28½ francs, with 12½ per cent. discount, and in London, 20s.; the best Milan raw of three to four cocoons, 26 francs; in London 17s.

5433. Are you speaking of silks of precisely the same quality?—I should suppose they are nearly of the same quality; in the silk trade they would be considered to be of the same quality, or nearly so.

5434. You spoke of Lombardy silks, of from 24 to 28 deniers, as being worth in Lyons 28 francs, was that the English pound?—The French pound; it seems from a very rapid calculation, that the prices, if they are correctly taken, would be dearer at Lyons than in London; I have had lately some French thrown silk sent to my house from Lyons to be sold in London; as I could not get a price which would have repaid the French silk merchant, he ordered me to send it back to him, and it has been reshipped to Calais.

5435. What are the duties paid on the import of Foreign raw and thrown silk into France?—The duty on silk derived from India, is 55 centimes per kilogramme, equal to about 2½d. per lb. English; raws from other countries, 156 centimes, equal to about 7d.; throws 242 centimes per kilogramme, equal to about 10½d. English.

Mr.
Andrew Martin.

15 May,
1832.

English. In the last season they proposed to reduce it to 5 centimes on raw, and 10 centimes on throwns.

5436. Are the French, buyers of Bengal silk in this market?—I do not think they are to any extent, they have been; they have tried it, and two houses in London had a large order from several houses in Lyons, who united to make a large purchase of Indian silk in this market, I believe in 1826 or 1827; at that time India silk was extremely cheap in this country, the merchants in Lyons thought it would be a good time to make a trial of Indian silk; they bought about 300 bales of Bengal silk through two houses in London, and forwarded to Lyons; but I understood that that speculation did not answer, that they lost considerably by it, though Indian silk was that year almost as low as they had ever been in this country; the throwsters were not in the habit of using that silk, and refused to work it, it might have been prejudice or want of skill, but they made more waste than was expected; and upon the whole, I think it was a losing speculation.

5437. Did your mercantile transactions with respect to the exportation of raw and thrown silks from Italy necessarily include any knowledge of the reeling of silk in Italy?—I do not think it is necessary to have seen the operation of reeling silk to be a good judge of silk, of course every man who goes to Italy interested in the silk business, wishes to see the reeling of silk, and every one desirous to increase his own information; but there are gentlemen in London perfectly qualified to judge of the goodness of silk (silk brokers) who have very probably never seen it reeled in their life, the manufacturer finds it out also; he knows what are the defects of silk, without having seen it reeled, though the man who has sent it reeled may be better able to state from what the defects have arisen.

5438. You do not know what are the advantages the throwsters in Italy may derive from having the silk of their own reeling?—I should think there is always some advantage in winding silk which has been recently reeled; besides a man who has reeled his own silk, knows better what are the real qualities of the silk; even a good judge of silk may be mistaken in silk when he has not reeled it himself.

5439. Therefore it is a great advantage for a man to reel his own silk?—I should not say a great advantage, but it is an advantage undoubtedly.

5440. How are Switzerland and other places on the Continent supplied with silk, and of what kind?—Switzerland and Germany are mostly supplied from Piedmont and Lombardy, and nearly all the silk exported to those countries is in the thrown state; the quantity of raw is very small indeed; there is no duty in Switzerland on silk imported into Switzerland in the raw or the thrown state.

5441. Are there any duties on the importation of silk into Austria, Russia or Germany?—I am not able to answer that question; I should think if there is it is small; I have no doubt I should be able to get that information for the Committee in a short time.

5442. Has any improvement, in your opinion, taken place in the quality of raw silk in Italy since 1824?—I should think there has been improvement in Lombardy, and particularly at Verona and Tyrol, at Naples also there has been an improvement, that is they reel a much larger proportion of fine silks than they used to do; they originally used to reel very coarse silks in long skeins, which made them unfit for the consumption of this country; but within these few years they have begun to reel silks on the Piedmont system; silk worth probably 30 to 50 per cent. more than the coarse silk they reeled, and the quantity has been increasing gradually; they have reeled into fine silk the cocoons they used to reel into coarse silks.

5443. There has been no improvement in the finer silks of Italy?—I should think they have improved, generally speaking, in Lombardy; the quantity of good silk produced in Italy is much larger than it was in 1824.

5444. Do you suppose the quantities, which you say have been given by carriers from Italy, can be depended upon?—I believe the account is correct; it is the quantity, I apprehend, on which the duties have been paid, but my statement is only one approximating to the truth.

5445. Can you inform the Committee what is the price paid for throwing silk in Piedmont?—I find from my documents this statement, which I shall be able to correct if I get better and more recent information; the Piedmont price, including waste, which generally varies from three to six per cent., was for 22 to 24 deniers from 4s. 3d. to 4s. 6d. per lb. English; and from 26 to 30 deniers, 3s. 9d. to 4s. per lb. English. In France, including waste, the organzine of 20 to 22 deniers,

4s. 6d.

Mr.
Andrew Martin.

15 May,
1832.

4s. 6d. per lb. English; 24 to 26 deniers, 4s. 4d.; of 28 to 30 deniers, 3s. 9d.; this, I understand, leaves to the throwster about 3d. per lb. English profit; they throw the silk for the manufacturer, and I understand those prices leave about 3d. per lb. profit.

5446. Can you state of what that consists, how much in wages, and how much in machinery, and other things?—No, my information is derived from Frenchmen who I believe are able judges; I did not ascertain the throwing myself, except having seen the mills.

5447. Can you state the prices in Lombardy and in France?—In Lombardy, at Milan, the prices were, not including the waste, which varies from three to six per cent., that is about eight to ninepence a pound on an average, for organzine 28 to 32 deniers, the price appears to be about 2s. 3d. per lb. English; for throwing 20 to 22 deniers, 2s. 5d. In abundant years, of course, there is more raw to be thrown, and the throwster tries to take advantage of it in those years of abundant crops; for the first eight months after the silk is reeled, prices are generally about 2d. per lb. dearer; and I understand also, that from 2d. to 4d. per pound more is paid only for second rate silks, as they are more difficult to work, and then there is more waste.

5448. Is all the information you have given to the Committee respecting throwing, information you have received, and not practical information?—No, practical information; I have visited the mills, and obtained a good deal of my information from the throwsters on the spot.

5449. You have stated the price of raw silk in Italy averaged 18½ livres in 1823?—I stated, that that was the price at that particular time; I believe I have, since 1823, at least generally stated the prices in Lombardy in September, a time when there the silk is sold generally at the fairs; the price was about 17 livres in September 1824; I was myself in Italy at that time, and saw the fairs.

5450. In 1825, when the 5s. 6d. duty was taken off the import, it rose to 23 livres?—That might depend upon the crops and various causes, as England is only a part of its market. The abundance of the produce has a great effect upon the price, the crop in 1823, had been abundant, in 1824 very abundant; so that the price was of course lower, which is generally the case; in 1825 the crop probably was not so abundant, and prices had risen in England, and of course the prices partook of it in Italy.

5451. In 1823, before the reduction of duty from 5s. 6d. to 3d. the price of raw was 18½ livres; when reduced to a penny, in 1827 and 1828, the price was 22½ livres, and has been so lately; the difference has been a gratuity given by this country to the Italian grower, has it not?—I suppose that is the deduction of the Honourable Member; I cannot give an opinion upon that subject; it is evident that if the Italian received for one pound of silk 17s. nett in 1823, and he received 23s. nett in 1825, he received 6s. more per pound for his silk.

5452. Have you reason to suppose, that the import of Italian thrown silks has been more profitable since the duty was reduced than before?—I conceive it has been more profitable to the Italian immediately after the reduction of duty in 1824, but for a short time.

5453. Might not that have taken place whether there was any alteration of duty on the thrown silk or not?—Certainly.

5454. Has the alteration of the law which took place in 1824 to 1826, and down to the present time, had the effect of increasing or decreasing the capital which is employed in the manufacture of silk?—I am utterly unable to answer that question.

5455. You sell silk to manufacturers?—I do.

5456. Do you consider them to be as prosperous and as worthy of credit now as they were five or six years ago?—I should think that the great manufacturers are rather better off; I am afraid the smaller ones are worse off, that is what guides me in giving credit.

5457. Do you think there has been an increase of capital among the large manufacturers?—I do not think I can give a more detailed answer than my last answer.

5458. To what charges is silk subject in the shape of commission to the manufacturer?—None; brokerage is paid by the merchant.

5459. Suppose you sell silk, what is the charge for commission?—Two per cent. and two per cent. *del credere* charged to the Italian merchant.

5460. Is there any charge beyond that?—No, I am not aware of any other,

Mr.
Andrew Martin.

15 May,
1832.

in the shape of commission and *del credere*; there are charges of course of landing the goods and putting them in the warehouse; there is the brokerage.

5461. What is that?—Five-eighths per cent. we sell to a broker and charge that to our correspondent in Italy.

5462. What is the credit on silk, or the discount?—Five months or $2\frac{1}{2}$ per cent. discount if paid in fourteen days.

5463. The credit was longer, was it not?—Yes, it was ten months formerly; it has been reduced gradually.

5464. There is very little credit given upon silk is there, now, is not cash generally paid?—No, I should have expected that there would have been more cash paid than there is, owing to the great advantage of discounting at half per cent. per month, I am surprized at finding that so few pay cash.

5465. The temptation is not sufficient to produce the money?—So it appears. I should say when the discount takes place, the profits of the merchant in London are reduced necessarily.

5466. You say the extent of credit was gradually reduced, are you able to state the periods at which such reductions took place; for instance, you state that there was a period when the credit was at ten months, can you fix the date when it was reduced?—I cannot precisely; I believe it was reduced first to eight months, and then it was reduced from eight to five after the crisis of 1826, that may not be the last reduction, but I believe there was a reduction at that time on account of the failures which had taken place at that time among the purchasers of silk; the silk merchant, finding that the losses exceeded the *del credere* they received, they reduced it to five months, and my impression is, that it must be reduced still further, as it is at Lyons; at Lyons there is $12\frac{1}{2}$ per cent. discount; but if a man takes the credit of, I believe, three months generally, they do not sell to him again.

5467. The first considerable reduction took place in or about the year 1826?—That is my impression; I think there has been a reduction within the last ten years, from ten to five months, which has taken place gradually; I think it was reduced from ten to eight and from eight to five.

5468. The year 1826, being the year in which the trade was thrown open to the foreigner?—The failures took place in the year 1825 and 1826, after the mad speculations entered into in England, and that accounts, I think, for the rise in price; after the reduction of the duty the prices rose.

5469. Do you consider that the foreign throwster has imported during the last four or five years at a gain or at a loss to himself?—It is almost impossible to give a positive answer, some men reel their silk and throw it, others purchase it, and generally speaking, we silk merchants do not know the price they have paid for their silk, they merely send the silk to London to be sold at a fixed limit, or at the best price we can get; if I judge from their complaints, they have been losing money for several years, for two or three years.

5470. Do you consider, that during that period it has been most to the advantage of the Italian to import raw or thrown?—I should say, to import raw decidedly; the quantity of raw imported is doubled, and of the quantity of thrown there has been a great change in the proportion, and there were much more throws imported 20 years ago than raws; now it is reversed.

5471. Having stated that you conceive it has been more to the advantage of foreigners to import the silk in a raw than a thrown state for some years past, do you not consider that the duty upon the thrown has, in point of fact, been paid out of the pocket of the foreigner, and is at this time?—I should think in part; I believe it will be found generally, that duties fall in part on the consumers of the country, and in part on the importers; I do not suppose the whole of the duty is paid by the foreign throwster; I should think duties in general are divided and supported in part by the foreigner and in part by the consumer in this country.

5472. Did the merchants make a reduction of credit from the losses they sustained, or did they make it at the request of the trade?—I am not aware of any request of the trade having been made to the silk merchants to reduce the credit.

5473. Was it in consequence of the losses they sustained?—That is my impression.

5474. Were you residing in England at the time?—I should think I was; I have been residing in England since 1824, but I have been occasionally absent.

5475. If

Mr.
Andrew Martin.

15 May,
1832.

5475. If you were not absent for any length of time, of course you were here at the time spoken of?—I think I have been here at one or other of the two changes that have been made, one from ten to eight, and another from eight to five months; but I cannot say which.

5476. Were you engaged in the silk trade before 1824?—No.

5477. You say the great manufacturers are better off, and that the little ones are worse off; do you mean that the prosperity of the richer house has been purchased by the ruinous state of the little ones, or by increased profit?—I am utterly unable to answer this question; I answered as to my impression, that I should be inclined to trust the great manufacturers more than the smaller ones; I am afraid the smaller ones have been suffering of late years.

5478. The trade of Spitalfields has got into fewer hands, has it not?—That appears to me to be the probable effect of the alterations of the silk law.

5479. You mean that it is getting into the hands of large capitalists?—Yes.

5480. Did you reduce your credit at the end of last year?—I was not in England at the latter end of the last year, but I think my house did; there have been exceptions of course, there are certain houses we should be happy to trust still.

5481. Was that owing to the failures which had taken place?—To the apprehension of failures, not only on account of the state of the silk trade, but on account of the political appearance of things at that time, and also to the fear of the cholera.

5482. Are you aware that during the last two years, a larger proportion than usual of thrown silk has been imported into England; can you by any means account for that?—There may have been some increase of importation when the duty was reduced to 3*s.* 6*d.*; and since that, the expectation of a fresh reduction of duty might have produced some importation also; that was the hope of the Italian certainly, he hopes a reduction of duty may enable him to sell some thrown in this country at a profit.

5483. Had you any knowledge of the silk trade before 1826, and for how many years?—From 1824.

5484. Were there many failures before 1826?—I should say a great many at the end of 1825 or the beginning of 1826; it was in those years that the great failures took place at Macclesfield.

5485. Have there been many failures since?—There were a great many after the speculations of 1825; after the reduction of duty, men of small capital probably, set up mills in Macclesfield and bought our silks, but did not pay for them; they bought them at very high prices, and made I understand enormous losses; I understand some other men at Macclesfield bought those very silks extremely cheap and made large profits.

5486. Do you know that the manufacturers now give less credit than they did five or six years ago?—I am not aware of the manufacturers' business.

5487. Have you had an opportunity of looking into many bankrupts' estates?—Not myself; one of my partners has been more in the habit of attending to those things than myself.

5488. Since the manufacturers sell for cash, do not bankrupts' estates yield little or nothing for the creditors?—Fortunately as I did not trust much of late, I cannot say what is the case; fortunately I have had no losses lately.

5489. Is it a complaint of your house that the bankrupts' estates pay very little?—I am not aware of that, as I have had but little to do with those matters of late.

5490. Do not the larger brokers very often guarantee to the merchant payment for the silk they sell?—I should say very seldom, if ever, in my experience.

5491. The very dear silk you have spoken of as belonging to France is particularly adapted for marabout, is it not?—I am not aware positively of that; I understand it is, but I must say again that I am no judge of the manufacturing business.

5492. Supposing that to be the case, the Lombardy silk being adapted to marabout, should you not make your comparison with some kind of Italian silk adapted for marabout?—I must leave that question to the manufacturer, I do not understand the manufactory; I do not know whether silk is adapted for that particular kind of manufacture or not.

5493. The best fine white silks adapted for marabout, sell at how much more than Lombardy raw?—I really cannot answer that question, for I do not know positively what sort of silk is adapted for marabout.

5494. Do you know the difference between white Novi and Lombardy?—There

Mr.
Andrew Martin.

15 May,
1832.

is very little Lombardy white silk produced, Milan produces very little, if any, white silk, which is nearly equal to Novi; it is very seldom mentioned.

5495. How much more does the best white Novi silk adapted for marabout sell for than the Lombardy raw?—This will be answered by the price current, having no reference to the colour of the silk, which has some influence without doubt; in most times Novi silk, the best white, is quoted at eighteen and nineteen shillings, the best Bergamo sixteen and seventeen shillings, that is two shillings.

5496. To what countries are the best raw and thrown silks sent, and in what proportion?—I find that Piedmont sends to France about 650,000 pounds, which I have stated already; England receives a very small proportion of Piedmont thrown, which are considered to be very superior, whilst France imports very large quantities of Piedmont, about one-fifth of her presumed consumption, whilst England takes a very small proportion, not one-ninetieth part of its consumption, and Switzerland and Germany takes much more Piedmont silk thrown than England does (three times as much), and France eleven times as much Fossembrone; and Naples send their best raws mostly to England; Naples sends twice as much to England as to France; Milan sends about three-eighths of its produce to England, one-third in the thrown state, one third in the raw state, and sends very little to France, except in one particular year, when the crop was bad in France, and then they bought the very best Lombardy silks, and the value of those silks has been thought to be superior to what it was thought before; they have been obliged to use them when their crop was very short, and they have given higher prices than they used to give before.

5497. Speaking generally are the Piedmont organzines imported into France of a coarser kind than the French organzines?—I understand there is a great deal of thrown silk imported into France which runs from 30 to 34, and from 36 to 40 deniers, that is hardly saleable in England, while in France they obtain high prices for those numbers, those which are generally imported into France are of very superior quality.

5498. Is this the case generally with the Piedmontese organzines, are they generally of a coarser kind than the French organzines?—I cannot answer that question; there are a variety of sizes manufactured in Piedmont, and it depends upon the demand and the quantity manufactured, but it is a remarkable thing; that they import into France 30 to 40 deniers, and pay larger prices for them, while we import generally from 20 to 30 deniers only in England.

5499. What effect would be produced, in your opinion, on the price of thrown silk by a reduction of duty from 3*s.* 6*d.* to 1*s.*?—I should suppose that the price of foreign thrown silk would be lowered, but not to the extent of the whole difference.

5500. Has France any silk superior to the silk of Italy?—I understand that they have a peculiar sort of silk called the Cevinnes or Alais silk, very superior in certain respects to any silk almost produced; it has more elasticity, and has peculiar qualities rendering it fit for certain articles; I understand the quantity produced there is from one-sixth to one-seventh of the total production of silk in France; there is another sort of silk for which I believe the French are superior, almost to any other country, the Provence silk from which they make their trams, which are considered to be the best in the world on account of their peculiar elasticity, but the remainder of the silk of French growth is probably equal to second rate Lombardy silk.

5501. What do you estimate to be the total production of France?—I conceive it to be 1,800,000 pounds English.

5502. Have you reason to suppose there will be any difficulty in obtaining those fine silks in the thrown state in England?—I cannot answer that question decidedly; I do not suppose there would be any difficulty; my impression is, that there is no difficulty in exporting throws from France; I have not imported any into England myself, but it has been sent to me without any apparent difficulty, but I shall be happy to clear up that point.

5503. As a merchant, have you received any of those superior silks of France?—I have received some raw white silk, which I suppose came from that quarter.

5504. What is the quantity of raw and thrown silk imported into France?—I understand the quantity imported into France is about 1,200,000 pounds English, making the total consumption of France about 3,000,000; of those 1,200,000 pounds imported, about 700,000 may be in a thrown state.

5505. When you state the sizes of raw silk imported from Piedmont into France being

being of 30 to 34 deniers, are you aware that also in this country raw silks of Italy of that size, such as the Turin and Vertua sell at very high prices?—I am aware of that, but they are raw and not thrown.

Mr.
Andrew Martin.

5506. You are understood to say, that you have no practical knowledge of what relates to the manufacturer or the throwster, either with reference to this country or to foreign parts?—Yes, just so.

15 May,
1832.

5507. Consequently you are to be understood, that the statements you have made with reference to prices and to profits have been made upon hearsay only, and such information as you have been able to collect in a general manner, but you do not offer them to the Committee with any means of being able to vouch for their accuracy?—My impression is, that my information is generally accurate, that is the impression my mind has received, but I am very far from stating that it is perfectly accurate, the subject is so important, and the time given to answer those questions so short, that I should request to be permitted to get accurate information on which I can depend, at present I believe I can depend upon that which I gained at the time I was in those countries, as coming as near as possible to the truth.

5508. You have received this information as a merchant, and you believe it to be as correct as any information you have received?—Yes, I can only say, that as a merchant I should act upon that information as correct.

Jovis, 17^o die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. Andrew Martin, called in; and further Examined.

5509. THE Committee understand that you are desirous of adding to the Evidence you gave on a former day?—I have received some Evidence from Lyons, from a high authority as a merchant, stating the present prices of throwing there, which I believe may be depended upon. He states that the price for throwing there may be taken to be 6 francs per half kilogram of organzine, 20 to 22 deniers, (waste 10 per cent. included,) which I find to be equal to 4s. 4½d. per lb. English; this calculated at the exchange of 25 francs per pound sterling, and at 110 lbs. English for 50 kilogrammes. The throwing of organzine, 28–32 deniers, is 4 francs and 80 centimes, (waste 5 per cent. included,) equal to 3s. 6d.; tram, 22–24 deniers 5 francs, (waste 8 per cent. included,) equal to 3s. 7½d. per lb. English; tram, 30 to 34 deniers 3 francs and 75 centimes, (waste 5 per cent. included,) equal to 2s. 8½d. I got, by the same friend, a statement of what they considered to be the importation into France. I stated it already at 1,200,000 lbs. English, from a document which was laid before the French House of Deputies in March last, and which was, I believe, official. The statement of this Lyons merchant shows the great difference of the quantity of raw imported in 1829, when the crop was rather indifferent in France, and the price of cocoons very high. The French at that time imported a large quantity of Italian raws, and that quantity imported in a year of an indifferent crop in France may perhaps be useful to arrive at an approximate valuation of the French crop, which I believe cannot be ascertained officially. When I was in France I was led to believe that the quantity was about 1,800,000 lbs., but my correspondent does not state it in his letter; he only gives the quantity of foreign silk entered for home consumption in France. He states it to be, on an average per annum, from 1824 to 1831, of thrown silk, from 340,000 to 350,000 kilogrammes, equal to about 770,000 lbs. English; and the raw, in 1827 to 1828, was upon an average per annum 130,000 kilogrammes, equal to about 286,000 lbs. English. Now, in 1829, when the crop was deficient in quantity, and the price of cocoons very high, they imported 392,000 kilogrammes, equal to about 860,000 lbs. English.

Mr.
Andrew Martin.

17 May,
1832.

5510. How many pounds English is the kilogramme?—Two pounds and two-tenths of a pound nearly.

5511. Are you able to inform the Committee what the crop has been in France in 1830 and 1831?—I stated, that my belief was, that the crop in France had been for the three last years past about 1,800,000 lbs. weight. With the permission of the Committee, I should like to correct my statement as to my impression that the

Mr.
Andrew Martin.

17 May,
1832.

prices were higher in Lyons than in London in December last, which arose from an erroneous calculation. I stated, that, from a Price Current of Lyons, in December 1831, the price of Lombardy organzines, 24 to 28 deniers, was $28\frac{1}{2}$ francs, which I take to be for the half kilogramme. Now, calculating the exchange at 25 francs, and the weight at 110 lbs. English for 50 kilogrammes, I find that this is equal to 20 s. 8 d. per lb. English. To compare it with the price in London, there is to be deducted from that the discount given at Lyons, which is $12\frac{1}{2}$ per cent.; but in this country the purchaser would have $2\frac{1}{2}$ per cent. discount; so that I deduct 10 per cent., and that 10 per cent. amounts upon 20 s. 8 d. to 2 s. 1 d. which leaves 18 s. 7 d.

5512. What was the price in England at that time?—In London I find the Lombardy organzines quoted at 22 s. at that time, duty included.

5513. In what way do you make $28\frac{1}{2}$ francs equal to 20 s. 8 d.?—Calculating the exchange at 25 francs per pound sterling, and 110 lbs. English for 50 kilogrammes. Perhaps I had better state the date of the two Price Currents I have referred to. The quotation from Lyons was dated the 14th of December 1831, and the quotation from London of Messrs. Durant is dated the 8th of December 1831.

5514. Are you able to state to the Committee what the quotation of Piedmont organzine is?—I cannot at present, but I hope I shall be able to ascertain it in a short time.

5515. Would it not be more correct to put the Piedmont organzine in comparison with the French organzine, than to put the Lombardy organzine in comparison with the French?—I am not able to answer that question, not having sufficient knowledge of the qualities of French organzine.

5516. Upon the 18 s. 7 d., which is the cost price at Lyons of the Lombardy organzine, what is the import duty from Lombardy into France?—I have stated the import duty into France to be 242 centimes per kilogramme, equal to about $10\frac{1}{2}$ d. per pound English.

5517. Do you not conceive that the disturbances which were taking place at the time of your quotation at Lyons, might have produced an effect in lowering the price very considerably?—I should think it must have affected business.

5518. And may not the disease which was running through the Continent have had the same effect?—It might.

5519. Do you mean to state that the price at Lyons was 18 s. 7 d., minus the 10 d. of Italian duty, and therefore that 17 s. 8 $\frac{1}{2}$ d. was the price at Lyons; and in the same way in London, 2 s. was the price, which, taking off the duty, would leave 18 s. 6 d. as the price, exclusive of duty; so that, in point of fact, the same silk was at Lyons 17 s. 8 $\frac{1}{2}$ d., and in London 18 s. 6 d.?—That is the price which the Italian receives, without deducting charges for carriage and selling; but I do not mean to say that it is what the manufacturer pays. It appears to me that it may be taken in two different ways; one, the nett proceeds to the Italian; and the other, the costs to the manufacturer, which I believe will be found to be different.

5520. Do you think that the Lyons manufacturer does not get his silk at 17 s. 8 $\frac{1}{2}$ d.?—No, he gets it at 20 s. 8 d., less $12\frac{1}{2}$ per cent. discount, viz. 18 s. 1 d. nett.

5521. In your opinion, can there be a different price for silks of the same quality in Lyons and in London, beyond the cost of the transport from one place to the other?—I should think not, except there was a greater consumption of one sort of silk at Lyons than in London; for instance, I suppose that is the case from Piedmont. It appears to me that the Piedmontese must find a greater advantage in sending their silk to Lyons than to London, as they do not send it to London. I suppose it is that the price is higher; at the same time there may be other causes; for instance, the Piedmontese may be under advances to the Lyons merchant, who enables him, by those advances in money, to reel his silk. I should not think that can be the case to any great extent, because houses in London would be very happy to make advances to houses in Piedmont; I have done it myself, but we do not find that there is that demand here for Piedmont which seems to exist at Lyons; and therefore it seems likely that the Piedmontese get a better price for their silk at Lyons, or find a greater sale for it there, than they do in London; but there may be other circumstances which have the effect of attracting more Piedmont silk to Lyons than to London.

5522. Is it not absolutely essential in some branches of manufacture, that they should have the Piedmontese silk?—I am not sufficiently informed to give any opinion of the manufacturing process.

5523. Can

5523. Can you state to the Committee whether the French organzine, or the Piedmont organzine of the same size, sells at the highest price in the Lyons market? —I cannot.

5524. Can you state which is the best article?—My impression is, that the Piedmontese is superior to the French; but I am not sufficiently acquainted with French throws and their prices to give a positive opinion.

5525. You stated that the Italian would have one price paid to him, and the manufacturer would pay another; who would receive the benefit of that difference? —I mean to say that, for instance, here, when we sell the organzine at 22s., the manufacturer pays 22s., less 2½ per cent. discount; that is the cost of the silk to him; he has nothing to do with the duty; but the Italian does not receive those 22s., he receives those 22s., less 3s. 6d. duty, and all the charges of bringing his silk to London, and the charges also of the merchant, and of the brokers who sell his silk in London; therefore whilst the manufacturer in London pays 22s., less 2½ per cent., which leaves about 21s. 5d., the Italian receives only 22s., less 3s. 6d. duty, and besides the charges for bringing his silk to market and selling it; therefore the Italian, after deducting charges paid in London, receives only about 17s. for the thrown, with costs to the manufacturer here 22s., with 2½ per cent. discount, or 21s. 5d. nett; the Italian bearing besides the charges from Italy to London, which are not included in this calculation.

5526. You have been asked about the distress at Lyons in December last; was not the silk trade in England greatly depressed in October, November and December last?—I should think it was.

5527. Have you any means of accounting for the Italian throwster sending his silk here under those disadvantages?—I should state, that I believe that the import of raw has been more profitable to the Italian than of the thrown, generally speaking; and the import of raw from Lombardy appears to me to have been of late years about twice the quantity of thrown.

5528. Are you aware that it appears by the official returns that the quantity of thrown silk introduced into this country from Italy, has very considerably increased within the last two years?—I should think it has not increased so much as that of raw since 1824. The proportion will, I believe, be found about two-thirds of raw and one-third of thrown; now if it was more advantageous to them to send thrown than raw, I suppose that they could send more thrown than they occasionally do. There may be mills in Italy which want a market for the surplus of their produce; they may make a profit on what they send to Vienna, and Elberfeldt, and the Continent at large; but if those countries cannot take the whole of the produce of the mills, they may perhaps at times want to realize it even at a loss, and for that purpose send it to England. There are, I believe, somewhat similar instances in this country of manufacturers who send to the Mediterranean markets their old or surplus stocks, in order to realize it.

5529. You are understood to say, that the Italian throwster throws silk chiefly for Vienna and other markets, not that of England; but that occasionally, when he has miscalculated the demands of those markets, and there is an over production, he sends that additional quantity to England, and sells it at a loss in this market, rather than keep it on his hands?—That is very nearly my impression; I suppose there are cases in which a throwster in Italy, to keep his mills in activity, may go on working, and he may perhaps find himself saddled with organzines, which he may wish to turn into money immediately; and if the market in Lombardy is slack, he may be more inclined to try the London market.

5530. Do you think that if it was more advantageous to the Italian to send thrown silk to this country, he would be able to throw a greater quantity than he does?—I should think he would, for the production of raw silk is greater than what he throws, as he exports in the raw state a large quantity.

5531. You have stated, that there are advances made by Lyonesse manufacturers to the Piedmont throwsters; are you aware of any advances made by English merchants to throwsters in Italy?—I know instances; my house itself has made advances to the Piedmontese throwsters some years ago; and there may be other instances of advances being made, but I believe it is not very generally the case.

5532. Are those advances made by the manufacturers at Lyons, or by merchants?—I should think by the merchants; the merchants at Lyons are in the same case as the merchants in London; the silk merchants in London are ready to make advances of a portion of the value of silk on receiving it, or on having advice of its being sent to them. I suppose the question refers to advances for
678. reeling

Mr.
Andrew Martin.

17 May,
1832.

Mr.
Andrew Martin.

17 May,
1832.

reeling before they have any pledge in their hand; that may be the case, and there are several houses at Milan to whom I should be happy to make advances, if they chose to avail themselves of that facility.

5533. Do you conceive that advances are made to a greater extent by the Lyonese merchants than by the English?—I think the Lyonese make advances to the Piedmontese, and I do not think they make any advances of any importance to the Milanese.

5534. Is it in anticipation of the manufacturer being able to dispose of the manufacture, that the merchants are induced to make those advances to the throwster at Piedmont?—It is in anticipation of being enabled to sell the silk at Lyons, and of course it supposes the manufacturers will be in want of silk. The silk merchants want to get that silk consigned to them, in order to gain a commission upon its sale to the manufacturer.

5535. Is it not for the purpose of securing the crop?—It is for the purpose of having the silk of that crop consigned to them.

5536. Is that owing to the rivalry of the merchants at Lyons?—Yes, I presume it is so in many cases, and also generally as an accommodation to the Piedmontese.

5537. Is not a large quantity of the silk produced in Italy sold at the fairs in Italy?—It is generally the case. In years, however, in which the crop is not abundant, or when the price of cocoons is considered to be high, of course the demand of the producers of the silk being often higher than what the purchaser is inclined to give, in such a case only a few contracts may be made at the fairs; but generally speaking the large sales are made at the fairs, where there is a general meeting of both sellers and purchasers; and this settles, in some measure, the price of silk.

5538. Can you state the date of those fairs?—At Brescia about the middle of August, and Bergam at the end of August. The cocoons are generally gathered in the north of Italy in the beginning of June, and a great proportion of the silk is reeled before the end of August.

5539. Is it not sent to those fairs after being reeled?—It is, and there it is purchased, either what is ready or what is to be delivered later.

5540. How is the price of cocoons regulated between buyers and sellers?—Cocoons are bought like other goods. I wish to add, if the question applies to the terms of the contract between buyer and seller, that I believe that the prices in Lombardy are not generally fixed immediately; but it is agreed, that the cocoons are bought at a price to be settled later, according to certain aggregates of prices, or to the price to be obtained by some particular person.

5541. At those fairs is the silk sold generally in a raw state?—There is generally more business done in raws than in throws, as the new raws are then coming in.

5542. Have you been in the habit of purchasing cocoons yourself?—No.

5543. If individuals make their own bargains for cocoons, may not the prices vary very much?—They may vary.

5544. Do not the merchants, who attend at those fairs generally, purchase the silks, of which some are sent to England in a raw state, and some are thrown in the mills in Italy, and are they not both purchased upon the same terms?—I presume so; of late years, as the market of England is very important for Lombardy, some of the first sellers of silk in Lombardy have been in the habit of not selling their raw silk in Italy, but regularly sending them to London; their mark is known, their silk is liked, and in some instances they would rather refuse a high price at Milan, than not send it to England in order to keep up the reputation of their mark.

5545. Can you state, whether a person purchasing silk to be thrown in Italy has any advantage over a person purchasing silk which is to be thrown in England?—I do not think he has any advantage in purchasing the raw silk, for there are a great many men in Lombardy that are silk merchants and throwsters at the same time, who have part of it thrown there, and send part of it to England to be sold here; it is generally consigned to England by the Italian merchants.

5546. Will not a man, who sends thrown silk and raw silk to London, naturally use the better sorts of silk for his own throwing rather than send them here?—I should think that a man who means to throw silk will naturally take the silk that will give the least waste; but at the same time, if I was a merchant in Milan, and

if

if I thought that I could make more profit by sending my raw silk to England than by making it into thrown, I would do so.

5547. Is not that silk, which the throwster in Italy has an opportunity of selecting when it is made into organzine, the best?—I should say, that there is a probability that the silk which is of superior quality will make a better article; that silk which is reeled with care is not so liable to break, and is likely to produce a better article; but of course that raw silk of better quality must be paid dearer.

5548. Supposing that in the English market there is a demand for that superior kind of Italian silk, is there any difficulty in that silk being obtained in the English market by the English manufacturer upon the same terms upon which it is obtained by the Italian manufacturer?—I should think there is no difficulty except the possibility of the case, in which some men reel their own silk in order to use it themselves.

5549. If they reel for the purpose of throwing it themselves, and if they will not sell it to the English merchant because they want it themselves, does not that show that they see an advantage in keeping it?—It is very likely.

5550. Are the cocoons ever brought to this country?—There has been one instance, for a sort of experiment.

5551. Did you make that experiment?—I did not.

5552. Is not the silk that is thrown immediately after it is reeled, of a better appearance than that which is thrown after it has had the voyage from Italy to England?—I do not think I could distinguish it myself.

5553. Is there anything else you wish to explain to the Committee with reference to your former Evidence?—I have given the parity in English money and weight of organzine at Lyons, but I have not given the price of trams. I find the trams, 24–26 deniers, quoted at Lyons, the 14th December 1831, at 29 to 28½ francs; 28½ appears to be equal to 20s. 8d. per lb. English, subject to 12½ per cent. discount. I find the same article quoted in London from 19s. to 20s., subject to 2½ per cent. discount. I find the raw best, 9 to 10 deniers, was quoted at Lyons, the lowest price 26 francs, which upon the same basis, formerly stated, would be equal to 18s. 10d. English money, and from this deducting 12½ per cent. discount at Lyons, is reduced to 16s. 6d. On the 8th December 1831, the best Bergam was quoted in London from 16s. to 17s., reduced, by deducting 2½ per cent. discount, to 15s. 7d. and to 16s. 7d. I might add, that the comparison is not perhaps very well selected, and I think that the comparison of Piedmont organzine would be much better than Lombardy organzine, of which there is so little consumed at Lyons. I ought also to state, that the quotation at Lyons for best raw of Italy, probably applies to a superior quality to what is quoted in London as best Bergam raw. I was asked the other day what was the time at which the credit had been altered in England; I find that it was in March 1826, after numerous failures in the silk trade, that the present credit of five months, or 2½ per cent. discount for cash in fourteen days, was established. Before that time, eight months credit was granted, or 4 per cent. discount. The credit had been previously ten months, and was, I believe, reduced in 1821, to eight months, or 4 per cent. discount.

5554. What was the discount when the credit was ten months?—My impression is, that it was one half per cent. per month, and I understand it was 5 per cent. when the credit of ten months was not taken. In my last Evidence I stated, that I thought I was positive that raw silks could not be exported from France, but that I was not aware of any difficulty in the exportation of French thrown, as my house had received some sent from Lyons without any apparent difficulty, whilst I was aware that those who consigned raw silks from Lyons found difficulty in exporting them. I have not received an answer from Lyons yet, but upon inquiry in London, I have found that by the French tariff of 1822, both raw and thrown silks are prohibited, and it is now my impression, that that is the case at the present time.

5555. Is it your opinion, that the agitation of this question from time to time is injurious to the trade?—I think very injurious; our experience since 1824 has been, that every time there has been any agitation of an alteration of duty, it has unsettled business for several months; and even this Committee has unsettled business materially since the month of March. I speak here of my business as a silk merchant.

5556. Do you think that the business has been in a worse state since this

Mr.
Andrew Martin.

17 May,
1832.

Mr.
Andrew Martin.

17 May,
1832.

Committee was formed than it was before the question was agitated?—I am unable to answer, for I do not know what are the profits of the manufacturer.

5557. Do you not know, that in point of fact the people in Spitalfields are better employed now, and have been since this Committee was formed, than they were before?—I am not aware. I mean to state, that since the Committee has been agitated, the silk merchants in London who had the prospect of an active sale in March, which seemed the general opinion after the India sale in February, have found their sales less active, and that it has been attributed to the agitation of the question; and that is my opinion.

5558. Then your answer to the last question has merely a reference to the state in which the silk merchants and the silk brokers find themselves?—Yes; and the whole of my Evidence has been intended to be confined, as much as possible, to my impression as a silk merchant.

5559. You know of course that the silk merchants were not the complaining parties, at whose instigation this Committee was formed?—I am not aware of the merchants having made any complaint.

5560. Can you state what is the state of the trade now?—I cannot state what is the situation of manufacturers, but I say that I found the demand for silk almost entirely suspended in March last.

5561. What has it been during the last four weeks?—It revived a little, but I know that in March, since the Committee was instituted, we have found it more difficult to sell our silks.

5562. Were you compelled in March to take a lower price, in order to force a sale of your commodity?—There was no demand at that time.

5563. Did you submit to a reduction in the price of silk in the month of March?—I found sales more difficult.

5564. Did you sell any silk in the month of March?—I think I did.

5565. Did you sell that at a lower price than you did in November?—I cannot, and I do not like to state prices from memory; but I shall be able to furnish the Committee with the price currents at that time. I must add, that in November I was in Italy, I was not in England. What I have stated is this, that I believe that at the end of February the merchants expected an active sale in March, and that at the beginning of March, after this Committee originated, the demand has slackened, and we have not had those active sales in March which we expected.

5566. Did you sell any silk in February?—I think I did.

5567. From the time of your sales in the month of February down to the latest sale you made, has the price increased or diminished?—I cannot, and I should not like to state prices from memory; but I repeat that in the beginning of March, our prices became flatter; we found it very difficult to effect sales; in the month of April there was a tendency to improve, and we did more business; and until of late, things were again paralysed by the agitation of political questions.

5568. Is not the month of March the month in which you generally make your largest sales?—I should not say that; January and February may be rather better months, when no unfavourable circumstances affect the demand for silk.

5569. But you anticipated an improvement in the month of March, which did not take place?—Yes.

5570. Immediately after the appointment of this Committee, was it not generally apprehended that the duty would be taken off immediately?—I should suppose that the expectation in general was, that the duty would be reduced.

5571. And that produced an immediate effect upon the sales?—We experienced less demand, and I may conceive how a manufacturer would, if he could, postpone purchasing, on account of the possibility of a reduction of duty.

5572. Do you speak of price, or quantity, when you say that the sales decreased?—When I speak of the sale decreasing, I speak of quantity.

5573. When this improvement took place in the month of April, had not that apprehension in some measure subsided?—I understood, and it was the opinion of eminent silk brokers, who act as intermediaries between the silk merchants and the manufacturers, that the fresh demand in April arose from manufacturers having effected sales of their goods for the spring trade.

5574. Do you happen to know that this Committee was formed in consequence of complaints from the throwsters and the weavers, of the distress of the trade?—I have heard so.

5575. Do you not know that one part of their complaint was, that the throwsters and

and the workmen are depressed, because they have not a sufficient protection against foreign thrown silk?—I understand that that was their motive.

5576. Then upon what ground could they form an opinion, when this Committee was formed, that there would be a reduction of this duty?—I think that in general, what we have seen in England since 1824, would lead to that conclusion, for we have had the duty reduced first from 14s. 8d. to 7s. 6d., and then again reduced to 5s., and then again reduced to 3s. 6d., and we have never seen it increased; and I should suppose therefore, from these precedents, that the expectation was, that (if the throwsters' interest might allow of its further reduction) it would be desirable to have it reduced; for if the manufacturer could get his silk cheaper, he would be able to produce his article cheaper.

5577. When the throwsters are complaining of the want of sufficient protection, upon what ground do you suppose that they expected they should have further cause of complaint given to them, by having the protection they have removed?—I believe the impression of the trade was, that the result of the inquiry would rather be a reduction of the duty than an increase.

5578. What do you mean by the trade?—A general impression is conveyed to us, through the brokers, and through what is transacted in the market. I find that after this Committee was appointed, our sales were more difficult, and attribute it to an anticipation of the reduction of the duty among our purchasers.

5579. Are you quite sure that the French raw silk has been as high as 26½ francs the kilogramme?—In the Price Current of Messrs. Tournu, Bossan & Co. at Lyons, on the 14th December 1831, I find the best Italy raw silk, 9–10 deniers, quoted from 26 to 27 francs, to be 26. I may add, that I find at the bottom of that Price Current, that the discount of Lyons on those prices is 12½ per cent., and the payment to be made in 30 to 40 days. If the Committee will allow, I will deliver in those two price currents.

[*The Witness delivered in the same.*]

5580. You have stated that the Italian throwster carries on a losing trade with this country, and that the Italian throwster sends some throws to this market every year; does he then content himself with a certain loss upon those throws every year?—I think it would be better to ascertain that from an Italian throwster himself; my impression is, that they have been often losing money upon their throws of late years.

5581. You have stated, that the thrown silk trade is a less profitable one than the trade in raw; then how do you account for the smaller importation of raws the two last years in comparison with thrown?—I think I have not stated that the throwing trade is less profitable; I said that I believed the imports into this country of raw silk had been more profitable to the Italian than the import of thrown. It appears, errors excepted, in looking over an official Return of imports into this country, which has just been handed to me, that the importation of raw from Italy in 1830–31, was 3,000,000 lbs., and in 1828–29, 2,250,000 lbs.; and the import of throws seems to have been in 1830–31 about 820,000 lbs.; in 1828–29, 675,000. I should think from this account there has been a reduction in the import of raw, and an increase of thrown. With respect to the latter part of the question, I confess I am unable to account for it; there are a variety of causes which may influence the import into the country in particular years. I wish to add, that the last reduction of duty here may, in a great degree, have acted as an encouragement to the import of thrown silk into England.

5582. Is it reasonable to suppose that a losing trade will increase?—No.

5583. Do not you think, that the events which happened in July 1830 had an effect upon the sales in the autumn of that year?—I should think it likely; England probably, at that time was considered the safest market, and I speak not only of Lyons, but the Continent generally; for I suppose, if the people of Lombardy gave up entirely sending their silk to Lyons, as it does not exceed 150,000 lbs. English, that would not have made any very material difference; but, I believe at that time, the state of France created an anxiety for the tranquillity of the Continent altogether, and that England was considered a country where property was safer than the Continent.

5584. Do not you suppose, that the apprehension of war, and of the cholera, in the North of Europe, may have diminished the demand for silk in Russia and Prussia, and upon the Rhine?—It may possibly at first. As to the cholera, I understand

Mr.
Andrew Martin.

17 May,
1832.

stand that at Vienna, when it was daily expected, there was no disposition to buy, but when it made its appearance business resumed its activity.

5585. You account for the increase here in July 1830 by the French Revolution; how do you account for the increase in February, March and April?—It is very difficult to form any judgment from the imports of one month or two months.

5586. Do you consider that the Italian throwsters are increasing their trade?—I should think not; though I am not able to judge of the cost of throwing, nor to give an opinion upon the throwing trade, yet, from my intercourse with the Italian merchants or throwsters (for many of the Italian merchants are throwsters), my impression is, that I have heard them complain of prices of thrown in England more than of the raws; and I have heard them state that they considered the trade with England as not likely to increase for thrown, and that under the present duties they were under apprehensions of the superiority of machinery which they supposed to exist in England.

5587. Were the increased importations of raw silk into England last year of Piedmont organzines, or were they chiefly of Lombardy organzines or trams?—The quantities imported from Piedmont of thrown I take to be small; I think there is no great increase.

5588. Have you any interest whatever in this question other than as a merchant?—None whatever, to my knowledge; and I hope I have shown that my only object has been to get at the facts as much as I could.

5589. You have put in two Price Currents; are they to be considered as authentic documents?—As far as a Price Current can be. I give them merely as those which I found most readily, of not too distant a date, and without meaning to state that the proportion of price they establish between London and Lyons is constantly the same.

5590. You have stated, that in your opinion the increased importation of silk into England did not consist principally of Piedmont; must it not then have consisted of Lombardy?—There may have been a general increase altogether.

5591. Do you import thrown silks from any other country besides?—A trifle from Modena.

5592. Do you import any thrown from Constantinople?—Not to my knowledge.

Mr. William Stone, called in; and Examined.

Mr.
William Stone.

5593. YOU are a partner in the house of E. Durant & Company?—Yes, I am.

5594. Your house are extensively engaged as silk brokers?—They are.

5595. How many years have you yourself been acquainted with the silk trade?—I have been acquainted with the trade for 17 years as a silkman, and partly as a manufacturer for seven years, and as a broker for ten years.

5596. In the course of that 17 years, have there not been great alterations in the silk trade in this country?—There have; there has been a considerable increase in the consumption of the article.

5597. And the trade has extended very much into the country?—It has.

5598. In what parts of the country has it extended?—In Lancashire, at Sudbury, and various places, but more particularly in Lancashire.

5599. In your character as a silk broker, have you not almost daily intercourse both with the merchant and manufacturer?—I have.

5600. Have there not during the 17 years that you have been acquainted with the trade, been very frequent alternations of good and bad trade?—There have.

5601. Do you recollect the periods of bad trade, and can you name them to the Committee?—It is rather a difficult question to answer, as to a particular period; but there have been considerable fluctuations in the trade.

5602. Have you known it at any time to have been as bad, or worse than it has been during the last few months?—I have known it quite as bad.

5603. Have you not reason to believe that it was worse at some former periods within your recollection, than it has been within the last few months?—I think it has been worse at other periods.

5604. Taking the period of nearly six years which has elapsed since the French manufactured goods were admitted, have you reason to believe that the trade has been during that time as good as it had been in the previous six years?—I have stated that for ten years I have known the trade as a broker, and previously to that I knew it as a silkman; and consequently my means of general information as to

Mr.
William Stone.

17 May,
1832.

to former periods of the trade were not so good as they have been for the last ten years.

5605. Will you have the goodness to state, taking the period of ten years during which you have been acquainted with the trade as a broker, whether the first or the last five years was upon the whole the best trade?—If the question refers to the point of consumption merely, it has been an increasing trade; but if it be considered, on the other hand, that the material has become amazingly depreciated in value, it is possible that the trade may not have been on the whole a profitable trade. When I state that I have known it as bad as of late, I particularly refer to my own experience while a silkman; I know that the trade was then getting exceedingly bad in that particular department.

5606. When do you speak of?—The seven years previous to the last ten.

5607. From your intercourse with the silk merchants, have you reason to believe, from what has been stated to you, that the Italian throwster has found this a profitable market?—I can only answer that question from hearsay and observation, but not from experience; but upon the broad scale, I think it has been a losing business.

5608. Have you reason to suppose that the Italian throwster has been receiving more or less since 1829?—Estimating it by the whole mass of thrown silks imported, and the prices at which they have been sold since 1829, I am of opinion that he has been a considerable loser,

5609. Do you believe that the Italian throwster has any advantage over the English throwster in the purchase of his material in Italy?—Of course a man who is upon the spot has certain advantages, but upon the whole, taking it upon the broad scale, I conceive that the English throwster has quite as good a market here for selecting his silks as the Italian throwster has.

5610. What are the local advantages to which you have just alluded?—A man being upon the spot, and well knowing the character of the silk, and judging pretty accurately of the result; those are advantages which I think are of some importance, but this selection of the silk is a matter of judgment, which is to be attained in the country by experience and attention.

5611. Would not an English merchant or an English throwster, having an agent there for the purchase of silk, have the same advantage?—If a man here were to employ an agent upon the spot to select a particular silk, undoubtedly he would have the same advantage, subject to a charge for that person.

5612. Can you estimate in money the advantage which you consider the Italian throwster has?—Independently of the duty, I should think it cannot amount to much, because we import silks here that upon the whole expense of waste do not exceed 3 or 4 per cent., and it might be a trifle less in Italy, but it could not be more than 1 or 2 per cent.

5613. At what period of the year do you generally receive the first silks in England?—In August.

5614. Have you ever been in Italy?—No.

5615. Do you think you can judge of the local advantages, never having been in Italy?—I think it may be estimated, that if the whole loss in waste, &c. does not exceed 3 or 4 per cent. here, that must be the utmost extent of the local advantages.

5616. Can you state at what period you generally receive the first parcels of Italian thrown silk?—The raws in August, and the thrown shortly afterwards; being the produce of the new crop, it must take time to work it; I should think the importation of the thrown might commence after one or two months, or three months; probably three months.

5617. The question refers to your experience as a broker, at what time you generally receive the first parcels of raw silk and the first parcels of thrown silk?—In the middle of autumn, or towards Christmas, we receive usually the first parcels of thrown silk; a good deal depending upon the state of this market, the usual course is to give a sufficient time for throwing.

5618. So that in fact you have Italian silks thrown in England, in the market as soon as you have Italian silk thrown in Italy?—Yes.

5619. You have been intimately acquainted with the throwing trade of this country, first as a silkman, and subsequently as a broker?—Yes, I have.

5620. During the last ten years, has there been a considerable increase in the number of mills and in the quantity of machinery; and where has that increase taken place?—I believe they have increased considerably in Lancashire particularly;

Mr.
William Stone.

17 May,
1832.

cularly; also at Derby and other places, I believe, speaking from the result of what I have seen, and the operations going on.

5621. Have there been any new mills erected since 1826, and where, if any?—I cannot state particularly whether new mills have been erected, but I should think there has been an increase since 1826 in Manchester.

5622. Do you know whether any have been built at Macclesfield since 1826?—I do not know it positively.

5623. Can you inform the Committee what has been the state of the throwing trade during the last five years, as compared with the previous five years?—I believe there has been an increase; whether profitable or not, I cannot possibly so enter into the balances of the parties as to state.

5624. Can you state what has been the price paid to the English throwster for throwing any particular kind of silk in each year?—I am not prepared with any information of that sort, but can probably get it. I can state what I used to pay formerly, also what are the prices now paid.

5625. Do you recollect what price was paid to the throwster during the seven years you were a silkman?—From 10s. and upwards for fine organzines.

5626. Can you state what was the price paid in 1821?—I cannot recollect.

5627. Can you state the price paid in 1823 and 1824?—Not from memory.

5628. Do you recollect the state of the throwing trade in 1825?—In the year 1825 there was an immense demand both for the raw material and the thrown; there was an immense business going forward in 1824 and 1825.

5629. Do you recollect the state of the throwing trade in the spring of 1826?—That was the period of the result of the crisis; it was then in a bad state.

5630. Do you remember the price of throwing in the spring of 1826?—No, I do not.

5631. Have you any means of knowing the price paid for throwing in 1829?—No; I have not the means of knowing it, except by report, because it is not our business; it is the business of the dealers.

5632. Can you inform the Committee the state of the throwing trade in 1830?—At the beginning of 1830 it was exceedingly prosperous, I presume from the advances that took place in the thrown article.

5633. Have you reason to believe that the trade of the throwster was a good trade?—It can be only by comparison; I suppose it must be good on the whole, or else men would not persevere in it.

5634. Do you remember whether there was any difficulty upon the part of some manufacturers at Spitalfields to get their silk thrown?—There has been considerable difficulty.

5635. Is it within your knowledge, that with respect to certain silks of very fine quality, they could not get any person to throw them, and they were obliged to wait some months?—That was undoubtedly the case.

5636. Will you explain to the Committee how the present duties on thrown silk affect Spitalfields, and how they affect Manchester?—The effect must be a tax upon Spitalfields, inasmuch as they are the large consumers of the article.

5637. In your experience as a broker, what is the proportion of the foreign thrown silks which you have sold in Spitalfields, compared with what you have sold at Coventry, Manchester and elsewhere?—Taking the proportions in 1831, I find it to be in London 2-3ds, in Manchester 1-8th, in Coventry 1-12th, in Norwich 1-12th, in Macclesfield 1-17th.

5638. In the manufacture of what articles are the foreign thrown silks used?—In London for broad goods, and at Coventry for ribbons; at Manchester for broad goods, and at Norwich for mixed goods, such as bombazine goods; and that may also apply to Manchester.

5639. Are they not employed generally in the manufacture of a finer description of articles, such articles as are imported from France?—Certainly they are.

5640. In your opinion, is the price paid for thrown silks in England determined by the competition at home, or by the competition from abroad?—Both must have their influence; the thrown abroad, if it is brought into this country, must have a considerable influence upon English, and the English upon foreign.

5641. Which do you conceive is the chief cause?—The large proportion of English must be the basis, or at least the chief determining cause, whatever the proportions may be.

5642. Have you not seen that the price paid to the English throwster has been falling

falling within the last two or three years, and at the same time the remuneration to the Italian throwster has been diminished?—The difference of prices shows that.

5643. And therefore have you not reason to believe that it is a competition of that kind which has brought down the price to the Italian as well as the English throwster?—There is no doubt that the two must operate together.

5644. What, in your opinion, would be the effect of lowering the duty upon foreign thrown silk to 1s. per pound?—The immediate effect to the English throwster must be detrimental, beyond doubt.

5645. Supposing 2s. 6d. taken off the duty, what effect do you think that would have upon the price?—It would have a tendency to lower the price.

5646. To what extent, to the full extent or less than the full extent?—I think it would be a mixed question, the result of which could not be shown immediately; it must be the effect of time to prove what the ultimate result would be as to the price, but the immediate consequence must be a tendency to deprive the British throwster of the supply of raw silks; if, as is the fact, silks in a thrown state are received under a duty of 3s. 6d., if you reduce the duty, the immediate tendency must be an increase of foreign thrown silk.

5647. Will the Italian continue to send thrown silk here unless he derives a profit from it?—I should think certainly not.

5648. It has been stated to this Committee, that the price paid in Italy for throwing silks is 3s., and by others it has been stated at 4s.; and they have been informed, that the price paid for throwing in England now is from 3s. 6d. to 4s.; do you concur in the latter statement?—I think that is very fairly stated.

5649. Then the difference being 1s. a pound, would not a duty of 1s. leave the Italian throwster a bare remuneration?—I think it must be a matter of figures. The question is, whether a shilling will give a sufficient protection to the British throwster at the different rates that have been stated. The price paid to the British throwster is said to be from 3s. 6d. to 4s., and exclusive of waste, the medium will be 3s. 9d. The price paid to the Italian throwster is said to be 3s. including waste; then there is the waste to be deducted, which will reduce it to 2s. 6d. paid in Italy, and 3s. 9d. in England, not losing sight of the protection that the Italian throwster derives; the figures will show the difference, and prove whether it is a protection or not. I think that taking those relative figures, the shilling is not a protection.

Veneris, 18^o die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

John Benjamin Heath, Esq., called in; and further Examined.

5650. CAN you, in relation to the growth and produce of silk in France, give the Committee the grounds upon which you formed your opinion, stated in your former evidence?—I can only, in confirmation of my former evidence upon that subject, state to the Committee the source from which I derived the information. I procured a return of the production at Lyons in July last, and I have since had it confirmed by correspondence; I stated to the Committee, and here is the point upon which my evidence has been, I believe, misunderstood; I stated to the Committee that the average import of France from 1825 to 1830, both inclusive, was 540,000 kilogrammes, which according to the usual mode of calculation, namely, 51 kilogrammes for 112 lbs. gave 1,186,719 lbs.; and that, comparing notes with other gentlemen since I was before the Committee, I find confirmed within a fraction. Then with regard to the produce of France, from the same source, I got the particulars in France. The average in three years, 1829, 1830 and 1831, was 1,000 bales of 200 lbs. each, weighing 826,000 kilogrammes, which, by the same mode of calculation make 1,750,000 lbs. English.

5651. In your evidence you have stated the growth of silk in France to be 1,750,000 lbs. English weight; and the document furnished by Mr. Doxat on his examination, showing the importation of silk into France to be upon an average 1,073,000 lbs., which, added together, would show the consumption of France at no more than 2,823,000 lbs., whereas an official statement published by the French Customs in 1830, of the exports in 1829 of silk goods of French manufacture, 678.

T T 2

(exclusive

Mr.
William Stone.

17 May,

1832.

John B. Heath,
Esq.

18 May,
1832.

(exclusive of goods made from waste silk) exhibits the weight of silk consumed in the manufactures of that kingdom exported to amount to 2,882,000 lbs.; now placing this 2,882,000 lbs. by the side of 2,823,000 lbs., it will appear that the whole of the silk, which you assign to the whole manufacture of France, is absorbed by that portion which is exported; and I presume as the consumption of silk goods is very considerable in France, and must form a large feature of the manufacture of that kingdom, does not it appear you have formed an erroneous estimate of the quantity of raw silk produced in France?—The estimate is none of mine; the particulars of the quantities I have stated to the Committee are such as I procured upon the spot, and I have every reason to believe they are correct, particularly as since I was here I have seen a printed document in the hands of Mr. Morrison, in which my statement is corroborated. With regard to Mr. Doxat's statement, how he can possibly say that the quantity of silk goods exported from France, weighs precisely so much, I am unable to state, because I do not know any thing of the details of the manufacture, or the quantity of silk it takes to make a piece of goods; but I should add further, that in the quantities I have given of the imports, I have taken the average of six years, and I have taken an average of three years for the production; now Mr. Doxat's document, of which I have an extract here, only goes to show what was done in 1829, and therefore, with all submission to Mr. Doxat's opinion, I do not see how my evidence is at all invalidated by it.

5652. Is that information obtained from private sources or public official documents?—I have already stated I obtained it at Lyons in the course of communication with some of my correspondents there. I was extremely anxious to ascertain, whether there was a probability or not of the French Government taking off the restriction that exists upon the exportation of French thrown silk. I took a great deal of information upon the subject, and I found that many of the data I received were collected for the purpose of being submitted to a Committee that was appointed by the Government of France to examine and investigate the question; therefore I have reason to believe that the information is correct.

5653. Is the whole of the silk which is grown in France sent to Lyons?—To the different places where the silk manufacture takes place, I know of no other than Lyons and St. Etienne.

5654. You know the manufacture of sarsenets at Avignon?—Yes, I have heard of it, as well as of others in different parts of France, I cannot tell the particular places. I should add further, that I have since understood, though I have no personal knowledge of the fact, that a great deal of manufactured silk has been imported into France from Germany and Switzerland. I repeat, I do not know the fact, but it may throw some light upon the subject.

5655. You have referred to the names of other merchants who have given you their estimates of silk produced in France, will you give the variations in their estimates, and their names?—I must decline to give their names; all that has passed has merely been to say, "from the documents you have, what is the estimate you form of the import or the export of this or that." I took no notes, it was a matter of mere conversation.

5656. You have referred to a printed document you saw in the hands of Mr. Morrison, and stated, that the growth of silk in France was 1,600,000 lbs. in 1824; do you think that the growth of silk in France has only increased 150,000 lbs. since that time?—I have already stated, that the return I saw was founded upon the average of three years.

5657. How was it you obtained that information from which you derive a return of 1,750,000 lbs.?—I have already stated, that I obtained it at Lyons from notes, conversations and documents.

5658. It has been estimated that the looms of France are 60,000; now giving 70 lbs. to a loom for consumption, there would be 4,200,000 lbs. of silk?—I have already said that I do not know any thing of the details of the manufacture, and therefore any questions of that nature can only obtain for answer, that I know nothing about it; I never heard how many looms there are in France.

5659. Have you been accustomed to purchase the cocoons in Italy, and to concern yourself in the reeling of the raw silk?—I never purchased a cocoon in Italy.

5660. Have you been concerned in the reeling of the raw silk in Italy?—Never personally.

5661. Have

John B. Heath,
Esq.

18 May,
1832.

5661. Have you any knowledge of the different results of throwing one kind of raw silk from another?—Not from personal observation.

5662. Do you know any thing about the advantages resulting to the throwster in Italy, from throwing the raw silk of his own reeling, compared with the throwing of the raw silk purchased at the fairs of Bergamo, Brescia, and other places?—No, I do not; I know nothing about them.

5663. Are you acquainted with the extent of the manufacture of silk goods at Milan?—I am not aware there is any manufacture of silk goods there.

5664. Are you acquainted with the extent of the manufacture of silk goods at Como?—I never saw a manufacture at Como.

5665. You might know the fact notwithstanding?—I do not.

5666. Are you enabled to state to the Committee the extent of the manufacture of silk goods carried on at Turin and Genoa?—I know that silk goods are made at Turin, and velvets and other stuffs at Genoa; but I cannot state any thing as to the extent.

5667. Are you informed that every state of Italy has a peculiar manufacture of silk goods of its own, some to a greater extent than another?—I have no precise knowledge upon the subject, I know that silk stuffs are made at Turin, Genoa, in Tuscany, and some at Naples, particularly in the royal fabric at San Leucio; but I have no precise data.

5668. Have you obtained any information respecting the quantity of silk consumed by the several manufacturers of Italy, including those carried on in the kingdom of Naples?—No, I have not.

5669. You have been understood to state, the Italians are pursuing a losing trade in thrown silk sent to this country, can you state whether they are pursuing a profitable trade in raw silk consigned to this country?—What I stated with respect to thrown silk was this, that the persons who had sent thrown silk for sale to the London market, for the last four or five years, had lost money by it.

5670. Can you state whether the Italians are pursuing a profitable trade in raw silk consigned to this country?—More so in raw than in thrown.

5671. Have you any correspondents who send you raw silk as well as thrown silk for sale?—I have.

5672. What do you consider to be the reason that the Italian raw silk has paid the Italian better than thrown silk has?—Because the prices of raw silk in this market have been higher of late years than those of thrown, in proportion.

5673. Previous to 1830 and 1831, was the exportation of thrown silks to England profitable to Italians, or not?—It has occasionally been profitable; I am not an importer on my own account, I merely receive it to sell upon commission; I am not generally acquainted with the cost of it, further than examining from time to time the quotations sent to me.

5674. How do you account for the increase of thrown, and the decrease of the raw material, during the last two years?—I have already answered that on a previous day; I said then, I cannot account for it; but I can give an opinion upon the subject at least as far as regards the importation of thrown silk into this country, immediately after July 1830; I stated then, that a considerable quantity of silk which was lying in the warehouses at Milan and other places, not destined perhaps for this market, was, upon the alarm of the revolution, and the fear that property might not be safe, sent here more as a matter of security than speculation.

5675. The throws were principally of Lombardy growth, which were not generally sent to France?—There were Lombardy thrown and Piedmont throws also.

5676. Was there more Piedmont than Lombardy?—I had more Piedmont silk in my warehouse at that period than I had had for some time.

5677. How do you account for their not sending an increased quantity of raw?—This is a repetition of a question asked before; these occurrences took place at a time when the stock of raw silk was exhausted, it was the beginning of a new crop, and it was natural that the stock on hand should consist chiefly of thrown silks.

5678. Presuming the quality the same, that is, the thrown to have been made from a portion of the same filature, and that you have also received some in the raw state, what is the nett difference of price between the raw and the thrown which the Italian expects to realize from your sales?—It is impossible to answer that without reference to my books.

5679. When the thrown silk is from the parties own filature or reeling, does not the Italian expect, and do you not stand out for a higher price?—It depends upon the quality of the silk; if it is a filature that is well known in this market, of course

678.

T T 3

I do,

John B. Heath,
Esq.

18 May,
1832.

I do, but then the person purchasing it has an additional advantage in the result; the silk makes less waste, and reels quicker and better.

5680. The Italian throwster therefore may be supposed to consider it an advantage to reel his own silk, because, year after year he continues to do so, and experience proves his own reeling to be the most valuable to him?—I have no doubt the Italian throwster finds an advantage in reeling his own silk, but in many cases the proprietors of filatures are not throwsters, and on the other hand many proprietors of mills do not reel silk.

5681. As your house are consignees, it is not supposed that you can know anything about the cost, and not having any reeling or throwing operations of your own, your opinions of profit and loss to the Italian can be but conjectural?—I do not see that at all, because I have stated whenever I have made a calculation I have taken the price current of the day, furnished to me from different places in Italy where the silk is sold, I have stated I know nothing of the details of the filature and the cost of reeling silk.

5682. To have an intimate knowledge of the properties of silk, does it not require great attention and long practical experience?—Yes, it does.

5683. If the knowledge of silk is not easily acquired, is it not difficult to distinguish the profits or losses of the Italians, skilled as they are in their own natural product of silk, and is it not likely when they, that is the Italians, repeat their consignments to this country, they find their account in so doing, while you may be fancying they are losing their money?—It is impossible to answer that series of questions in one breath, there are three or four questions in one.

5684. If the knowledge of silk is not easily acquired, is it not difficult to distinguish the profits or losses of the Italians, skilled as they are in their own natural product of silk?—I should say that a mere knowledge of the article of silk has nothing to do with the latter part of the question; I have stated it requires the experience of years to be a good judge of silk, which is one of the most difficult articles to understand thoroughly.

5685. And is it not likely that when they, that is the Italians, repeat their consignments to this country, they find their account in so doing, while you may be fancying they are losing their money?—If they did not find their advantage in it, they would not send them.

5686. In order to understand thoroughly the local advantages enjoyed by the Italian throwster over the throwster of Italian silk in this country, should not a skilful knowledge of silk be required as well as the experience of reeling, buying, selling and throwing the silk of Italy?—No doubt of it; and in answer to a question of the same nature, I stated that the observations I made were matters of opinion, and not founded upon practical knowledge of the filature or throwing mill.

5687. In answer to the question put the other day, How do you account for so many English throwsters failing? you answered, That it arose from their want of capital, did you not?—Not in that way, certainly; I was asked why I thought so many throwsters failed, and I stated I did not conceive there was any article so susceptible of variation in price from the caprices of fashion, and from the circumstances of the times, as silk; and many throwsters who have set up mills have done so without any capital whatever; as long as the throwing remunerated them they went on, but the moment any reverse came, they, having nothing to go back upon, and not being able to wait till a re-action took place, consequently failed.

5688. Do the commission throwsters fail also?—I do not know what is meant by commission throwsters.

5689. One who throws silk for hire?—If it does not remunerate him, and he has no money to draw upon, he naturally fails.

5690. Do you know whether persons employed in that way have failed?—Those of whom I have some knowledge, have been persons who have dealt with me, and it is upon the investigation of their affairs after failure, that I have formed that opinion.

5691. Have those persons been partly commission throwsters?—I dare say they have, but I have no knowledge of the fact myself.

5692. You stated in your last examination, that the production of silk in all Italy is from 5 to 6,000,000 of Italian pounds, will you state the quantity in English weight; and having understood from your evidence, the information you have given has been obtained from some Italian Custom-house returns, cannot you arrive nearer at the mark than within 20 per cent., or a fifth part?—I should state that

that the details, as far as I can give them, are already in the evidence I have given; the only really official part was, that which concerns Lombardy; with regard to the Roman States, Naples, and Sicily, it was from information procured, but not from official documents.

John B. Heath,
Esq.

18 May,
1832.

5693. You have apportioned in your estimate 335,000 lbs. as the consumption of Berlin and Vienna, are you aware that that statement must refer only to the silk passing through the Milan Custom-house, destined for those places, and that you must have omitted the other silks sent direct from their places of growth to Berlin and Vienna, the latter place being understood to consume more than you have assigned to both those places?—I must have been misunderstood, because I stated distinctly as to the exports to Berlin and Vienna, that it was merely that from the Milan Custom-house in 1831.

5694. How have you been able to ascertain what other silks are the growth of parts of Italy, about which you can obtain no accurate returns, so as to arrive at a conclusion that the whole production has been from 5 to 6,000,000 of pounds?—With regard to the export from Piedmont, there is no difficulty in obtaining it; and I estimated that at 1,250,000 lbs.

5695. Upon being questioned by an Honourable Member on your last examination, respecting the quantity you place down as exported from Lombardy to the English market, namely, 2,250,000 Italian lbs., which is equal to 1,575,000 lbs. English weight, this statement appears correct, for by adding 175,000 for the export from Italy to England through the out-ports of Italy, we arrive at the fact, that about 1,750,000 lbs. English weight is imported annually upon an average into England. It is also pretty well known that France is accustomed to import from Italy about 1,000,000 of English lbs., which makes the quantity to France and England two millions and three quarters English lbs.; considering therefore the consumption of all Europe besides, and the quantity necessary for the manufactures carried on in Italy, about some of which you have spoken this morning, does not it appear you have underrated the production of silk in Italy?—I have no reason to alter my opinion, I am certain that the official part of this statement is correct; the computations have been made of the quantities exported at the different ports, and a calculation of the weight of each bale made.

5696. Is silk adapted to make organzine of the size of 18 to 22 deniers, imported in its raw state, in large quantities from Italy?—There is a large quantity.

5697. What proportion is brought of that fine quality, comparing it with the whole quantity of raw silk imported from Italy?—A great deal depends upon the season; sometimes it is reeled finer than at others; I cannot state any proportion; the greater proportion imported is in the middling and coarse sizes.

5698. Do not the best raw silks imported come from the throwing districts in Italy, when you have put aside some of the Fossebrones?—Undoubtedly they do; the throwing districts of Italy and Lombardy, I should say, produced the largest quantities.

5699. Does not your house receive some of the most accredited thrown silks of Italy?—I believe so.

5700. Do you receive much thrown silk of 18 to 22 deniers size?—I receive a certain proportion; of late years I have not received much.

5701. What proportion of that size do you receive, compared with the quantity of raw which would result to that size, when thrown into organzine?—It depends upon a variety of circumstances; there is no rule by which I can state what qualities my correspondents will consign to me.

5702. What do you conceive has caused a reduction of the importation of that fine description of silk?—I do not think it is quite so current of sale. One of the chief places of consumption is almost entirely stopped; I mean Norwich, where they used to consume a considerable quantity of the finest silk of 18 to 22 deniers. We sell very little at that place now.

5703. What has caused that decrease?—The article for which it was used is bombazine; it has gone very much out of fashion, and the manufacture has decreased very considerably at Norwich; I take it that must be the cause.

5704. You have given in evidence the prices of throwing silk in Italy, inclusive of the waste, can you state the price exclusive of the waste?—I could give the price in Italian money, I have not it here; the waste varies according to the goodness of the silk.

5705. You have spoken of the price in Italy of throwing organzine of the size of 18 and 22 deniers; is it not a fact, that very little of that size in organzine is thrown

John B. Heath,
Esq.

18 May,
1832.

thrown in England?—I cannot state the precise quantity, but if the raw silk, calculated to make that size, comes to England, it must naturally be thrown.

5706. Do you know whether much of that size does come?—I conceive a considerable quantity.

5707. Is it fair to compare the price of throwing fine organzine in Italy, with that of throwing coarser organzine in England?—I do not know whether it is fair or not; I have given different prices for the different sizes.

5708. In the English market the marks upon the bales go a great way, and you gentlemen consignees are in the habit of estimating the value of the silk by the marks. That the Committee may understand what those marks are, will you inform them what they are supposed or intended to represent?—All I shall be able to answer is, that I scarcely ever recollect having sold silk without its being examined previously by the buyer, and in nine cases out of ten samples taken away and tried before it is purchased. Some brokers are so very particular as to require a sample from each bale in a parcel. I have silk, the marks of which is very well known to be that of the very best filature; my house has received the whole of that for years past, it was marked with the initials of my firm, three letters, when there were three partners, and now with two.

5709. Will you state the custom of your trade as respects credit and charges upon silk from the consignors' hands to your own, and the mode in which this trade is generally conducted, so that the Committee may form an idea of the consignee's or silk merchant's business?—Our business is to receive silk from Italy consigned here for the purpose of sale, and when we have sold it we render an account of the sales, deducting the charges, which include the commission, and the *del credere* for the buyer, whom we in most cases trust for five months.

5710. Then do the silk merchants sell the silk consigned to them, or is the business done by a broker?—The business takes place through a broker, we do not sell to the buyer directly.

5711. What is the brokerage?—Five-eighths per cent.

5712. Do the brokers ever guarantee their buyers, and receive an extra commission for so doing?—It used to be done more formerly than now; the remuneration was and is one per cent.

5713. Do brokers ever buy silks upon their own account?—They are better able to answer that than I am.

5714. You conceive they ought not?—Most assuredly they have sworn not to do it.

5715. Do they ever sell silk on their own account?—I give the same answer.

5716. Do you ever sell them silk in their own names?—Never, except for the principal, where the buyer does not wish to be known.

5717. Do they not often buy silk in the first instance from the merchant, and then seek buyers for it?—I am not able to inform you distinctly upon that subject.

5718. Is it not a notorious fact that they do so?—It does sometimes happen that a buyer for three or four bales will buy the whole parcel of six or eight to get them a trifle cheaper, taking upon himself the risk of placing them afterwards.

5719. Then he sells for principal?—No; suppose a broker could not find a buyer, after he has taken them upon himself, and return them in a reasonable time allowed for the delivery, the invoice would be made to principal, and he must take them.

5720. Do you not know that those transactions have gone to a great extent?—I do not know it; I have heard of it, and I can only say that I regret it.

5721. Have you any knowledge of the quantity of waste silk imported into this country?—No.

5722. You said the produce of Italy was 5 or 6,000,000 lbs. of raw?—Yes.

5723. And that they export of that silk about 1,500,000 lbs. of raw?—I have given the details already.

5724. Then if the waste imported into this country be from 6 to 700,000 lbs., the quantity of silk thrown in Italy is not much more than 4,000,000 of lbs.?—I do not know that fact; I have not stated any opinion as to the weight of thrown silk, except in Piedmont. Waste silk comes from other countries besides Italy; I have received some from Spain myself. It has occasionally come from India.

Mr. Thomas:

Mr. *Thomas Stone*, called in; and Examined.

5725. YOU are a manufacturer in Spitalfields?—I am.

5726. What is the name of your firm?—Stone & Brooks.

5727. How many years have you been engaged as a silk manufacturer?—More than six years; I ought to say that I am not immediately concerned in the department of the manufacture of silk, I manage more the cash department; I mention this, lest any question relating to the manufacture of the article should be asked me, and I should not be able to give any answer to it. I may also add, that being suddenly called to examination to day, I have not brought with me some documents which are necessary to give answers in detail.

5728. Are you engaged solely in the manufacture in London, or do you employ any persons in the country?—We employ throwsters; we have no weavers in the country, they are all in London.

5729. What are the articles you are in the habit of making?—Broad goods.

5730. Describe them?—Gros de Naples, some satins, and some broad figured goods, and likewise some velvets.

5731. Can you give the Committee any idea of the proportions of each?—The figured goods are small in comparison to the others; I may mention, that altogether, we have about 700 looms going.

5732. Do you use the Jacquard looms?—We do.

5733. What number of looms have you of the Jacquard description?—I should say between 40 and 50, but I cannot answer the question precisely, not being much in the manufactory.

5734. What wages do you pay for the manufacture of gros de Naples?—For what is called the three double, $6\frac{1}{2}d.$; and for the three single $5d.$ a yard.

5735. What price do you pay for the manufacture of satins?—It depends very much upon the count; I do not know that I can give a full answer unless I had the document with me.

5736. The figured goods you are in the habit of making, are figured gros de Naples?—Yes.

5737. What price do you pay?—One shilling a yard is the price now, I believe.

5738. Is that a rich article?—No, we do not make very rich figures.

5739. Have you any means of knowing the price paid in Manchester for that article?—No.

5740. What do you pay for making velvets?—It depends upon the count, from 3s. up to 4s. per yard.

5741. What has been the state of the trade in Spitalfields since you have known it, generally?—I should say latterly it has become much worse than it was when I first knew it.

5742. You began at what time?—About six years ago.

5743. That was prior to the introduction of the French goods?—Yes, I began rather prior to the introduction of French goods.

5744. Was the trade good after the introduction of French goods?—For a time it was.

5745. Did it continue so during the years 1827 and 1828?—To the best of my recollection the trade became worse at the commencement of 1827.

5746. Do you recollect the state of the trade in 1827?—I think I may say it was not so good as in 1826, still I should not call it bad.

5747. What was the state of it in 1828?—In 1828 it was much as in the year 1827, to the best of my recollection.

5748. And in 1829?—1829 was with us a bad year; I speak as far as we are concerned.

5749. You make that an exception, was it generally so?—I did not know much about what other persons were doing, I confine myself very much to my own department of business; as regards ourselves it was a bad year.

5750. Are the wages you have now stated as being paid by your house, the same wages as have been paid since 1826?—No.

5751. State what alterations have taken place?—At the latter end of 1825, the house I belong to gave $11d.$ for three doubles, for which we now pay $6\frac{1}{2}d.$

5752. Was the singles in about the same proportion?—The price was about $9d.$; in 1829 they were very likely $9d.$; in 1826 I have a memorandum that they were $8d.$; the double in 1826 was $9d.$, and the single $8d.$; then in 1829 (1828 I have

1832.

not got) the doubles 7*d.*, and the singles 6*d.*; in 1830, 7*d.* and 6*d.*; in 1831 6½*d.* and 5*d.*, which is the same now.

5753. Has the reduction been in the same proportion upon the other articles?—I believe precisely in the same proportion, except velvets, they have not been so much reduced.

5754. What was the price of the manufacture of figured gros de Naples in 1826?—I think it was 1*s.* 6*d.*; we did not make any figured goods in 1826.

5755. When did you begin to make them?—I could not answer that correctly without I had some other papers. I believe about three years ago.

5756. During those six years has the manufacture of silk goods increased very considerably in the country?—Very considerably, I think.

5757. In what place?—Lancashire chiefly; and there are other places where the manufacture of broad goods is carried on, for instance, at Sudbury in Suffolk.

5758. What effect has the increase of silk manufacture in Lancashire and other places had upon the wages of Spitalfields?—I should say the effect has been injurious; our operatives are working at prices that will scarcely allow of their subsisting, with the additional labour, probably of four hours in a day more than a man was accustomed to work some years ago.

5759. Do you know the price paid at Manchester for the making of these single and double gros de Naples?—Not from any documents. I have heard it said as low as 3½*d.* for singles.

5760. Are they of equal qualities with those made at Spitalfields?—As far as I may judge, I have seen some patterns of singles from Manchester that were pretty much the same as our goods of that description.

5761. Is it within your knowledge that some Spitalfields manufacturers have removed and established themselves at Manchester?—A gentleman who lived next door to us has gone down to Manchester and settled, but he was not the principal but his son: I do not know of any other persons out of the Fields, but it is very likely some have gone.

5762. And you attribute the fall in the rate of wages in Spitalfields to the competition at Manchester?—I think it has greatly to do with it. I do not attribute it entirely to that, other circumstances have borne upon it, particularly the introduction of French goods, and the bringing French goods into this country illegally, all these have borne upon the reduction of wages.

5763. Is it your opinion there have been, during the last six years, as many weavers employed in Spitalfields, speaking of the average, as there were in the previous six years?—Certainly not.

5764. Can you state the reduction in the number?—I have information from persons who are in the habit of visiting the poor in the Fields, and it is supposed about one-third of the looms are now unemployed.

5765. Can you state what number of manufacturers there are now in Spitalfields?—Not from any certain knowledge; I have heard that out of about 147, or some such number, 47 have been obliged to quit business; the fact is, they have been ruined; that would leave about 100, but I merely give it as what I have heard, not from any positive information.

5766. Are not several of the manufacturers in Spitalfields now throwsters?—Yes, some of them are.

5767. More than there were when you first went into business?—That I do not know.

5768. Is it not the practice of manufacturers in Spitalfields to pay cash for their silks to a much greater extent than was the case formerly?—I should think it was; as regards our own house we always do it. I never allow a bill to be drawn upon us for silk.

5769. Have you reason to suppose that the manufacturers upon the whole have more capital in the business than formerly?—That is a question I am unable to answer; some of the manufacturers who have been established a long time have abundance of capital, many of the others I should think have very little, but it is mere matter of opinion.

5770. Has not the tendency of the business during the last six years been, to throw the business into the hands of a few manufacturers in Spitalfields?—That would appear from what I have already said, as so many have gone out of the business.

5771. Did they go out of the business from having made their fortunes?—No, they were ruined, as I have stated before.

5772. Do

Mr.
Thomas Stone.

18 May,
1832.

5772. Do they manufacture satins at Manchester?—I should think they did, but I am not sure.

5773. Have you ever been at Manchester?—No.

5774. Do they manufacture velvets?—I believe not; I think that manufacture is confined to the Fields; I know they make satins in other parts of the country.

5775. What was the state of trade at Christmas last year in Spitalfields?—There were very great complaints of trade then: as far as regards our own manufacture, I should say we were going on pretty much as usual.

5776. Was there any improvement in the month of January or February?—There were a good many sales made in January and February.

5777. Did you as a manufacturer anticipate an improved trade this spring?—Yes, we expected a good trade this spring.

5778. Did the establishment of this Committee affect the trade in Spitalfields?—Yes, it had its effect for a time; there was an opinion that the duty would probably be taken off silk, and there was a great talk among the buyers that such would be the case, and they were sparing in their purchases.

5779. How long did that effect continue?—I should say some few weeks, not long, for there soon became a demand for goods; and as far as we are concerned, we had a good sale for goods.

5780. Is it not the fact, that in the last month, the saleable goods in Spitalfields were generally sold?—As far as we are concerned, I should say our stock was very much diminished by that time; we did not retain more than 3-11ths of it.

5781. But for recent political circumstances, would you have had reason to expect a good trade during the summer?—We hoped for a good trade, and acted under that impression at the latter end of last year, and laid in a considerable stock of silk.

5782. Do you know the price of raw and thrown silks in February?—I do not recollect precisely; in February I know pretty nearly what they were.

5783. Had the establishment of this Committee any effect upon the price of raw and thrown silk?—I do not know that there was much effect produced; I am not able to answer that; we had not occasion to purchase in that month.

5784. Up to what period was it you had sold this large proportion of your stock?—I think about the end of March we had diminished our stock considerably.

5785. Have you reason to suppose that this is the case with the other manufacturers at Spitalfields?—Yes, we are pretty much affected in the same way.

5786. But trade was particularly brisk a fortnight ago?—Rather longer ago than that; about a month ago trade was very brisk.

5787. You have been a manufacturer for more than six years, but you had been acquainted with the trade prior to that?—No, I was not the least acquainted with the trade.

5788. Have you understood there have been other periods of distress in Spitalfields?—Yes.

5789. Will you have the goodness to state what, in your opinion, is the effect of the duty upon Italian thrown silks upon the manufacturers in Spitalfields?—I think it is injurious to them, inasmuch as it puts them in a worse situation than the foreign manufacturers.

5790. In what state does it place them in comparison with the manufacturers of Manchester?—The Spitalfields manufacturer has to throw his own silk by sending it to the throwster, while the manufacturer at Manchester, in many cases, has a throwing mill of his own.

5791. The question referred to the effect of the duty upon the two branches?—If we purchase foreign thrown silk, we pay duty upon it; and the manufacturer of Manchester, if he throws his own silk, gets it without.

5792. He does not get it thrown for nothing?—No, he must have an outlay for that.

5793. Is it your opinion that the duty falls upon Spitalfields chiefly?—It is.

5794. Can you recollect what may have been the average amount of claims you have had to make upon the Italian merchants, for damage done to thrown silk on the passage from Italy to England?—They are very trifling (the amount I cannot recollect, they are so trifling); we should think it hardly necessary to keep it in memory.

5795. What proportion of foreign thrown silk might you use in your manufactory?—I cannot state it precisely, but not a very great proportion; we have thrown most of our trams, having used very little foreign thrown trams; some foreign

Mr.
Thomas Stone.

18 May,
1832.

organzine, generally Piedmont; but the article in most use with us is English thrown organzine.

5796. Have you had your silk thrown in the West of England, or the North of England?—In both places.

5797. Can you inform the Committee the prices you have paid in each of the six years for throwing?—I could by the books; but I can state that what we are paying now for trams, is 2s. 3d.; we have not thrown any organzine a considerable time past.

5798. You purchase Italian organzine?—Yes, some of it; but we purchase a good deal of English thrown organzine.

5799. Can you state the price you paid for trams in 1831 or 1830?—In 1830 and 1831 the price was about 3s. 6d.; but I cannot state the precise months, there have been several alterations.

5800. Is it within your knowledge that the throwsters were very well employed in the year 1830?—Yes, I think they were; there was a time that they were very well employed, and I think it was in 1830.

5801. Had you any difficulty in getting your silk thrown?—Yes, we had; we wanted to make arrangements with more than one, to get a certain quantity thrown per week; I am speaking of a particular time, I do not say it was the latter end of 1830 or the beginning of 1831; but there was a time when we wanted to make arrangements with the throwsters for a supply of so much per week, but we tried in vain.

5802. How long did this difficulty of getting your silks thrown last?—I should think, stating it from memory, about four months.

5803. Can you give any reason for it?—The reason I heard was they were all full of silk.

5804. Had they been before that time without silk?—I think that three months before that time they were very slack of business.

5805. There was a great depression in the previous year?—Yes.

5806. Therefore when the trade suddenly came upon them for a short time there was a difficulty in obtaining a supply?—Yes, there was.

5807. Was not there a very short quantity of foreign thrown imported in 1829?—There appears by a document I have seen to have been a small quantity.

5808. Would not those two reasons account for the briskness in the beginning of 1831, the shortness of the supply and the throwsters being out of employment previously?—No doubt they would have their effect.

5809. During that time, when the English throwsters were so well employed, was not the price of Italian thrown silk very high in this market?—Yes, I think it was.

5810. You have stated, that the mills have not been adequately employed previously to that period?—Yes.

5811. If the hands had been dispersed through the parishes, and been sent to their homes, would not there be some difficulty in re-collecting them to commence work again?—Not any great difficulty.

5812. It might have occasioned delay?—Yes, it might, if they had done it; but I should say, that the information that I have received from time to time has been to the effect, that there has been no difficulty in getting hands.

5813. You have probably understood, there were periods of distress among the throwsters prior to 1826?—No, I cannot state it.

5814. Can you state to the Committee any information you possess as to the import of silks from France?—No; I really do not know any thing upon the subject as to quantities; I know that they are imported, and I believe they have a very injurious effect upon our trade.

5815. Of the two circumstances to which you attribute the reduction of wages in Spitalfields, namely, the imports from France, and competition from Manchester, which of those causes has been the most injurious?—I should say competition in our own country.

5816. Explain that?—Because when we are told by all the buyers and parties we have to do with, that they are making goods in the country at a 1d. or 2d. per yard lower than we are in the Fields, there is the greatest difficulty, or rather impossibility for the work people to get a better price for their labour than we are paying at the time, however low it may be, and there is an equal difficulty for their masters to get a better price for the works, however necessary that may be.

5817. Have you not understood, that the hands employed in the silk manufacture at

Mr.
Thomas Stone.

18 May,
1832.

at Manchester were previously employed in the manufacture of muslins?—I have heard that they had been employed in the cotton trade.

5818. You know nothing of this yourself?—No; I have stated that I have never been in Manchester, and I know nothing of it.

5819. Have you any reason to suppose there would be any difficulty in a man transferring his labour from one employment to the other?—Very little, from what I have heard.

5820. That being the case, do you not conceive, that the wages paid for weaving gros de Naples in Manchester, must be governed by the price for weaving cotton goods?—I have always heard that it has its effect.

5821. Do you believe the manufacturers in Spitalfields can continue to pay higher wages than the manufacturer pays at Manchester?—Yes; he would be able to pay higher, but the low wages at Manchester makes it necessary that the wages at Spitalfields should be as low as possible.

5822. How much higher do you believe the Spitalfields manufacturer can afford to pay them than at Manchester?—It is generally considered there is at least a penny difference.

5823. And consequently, whenever the wages fall at Manchester, they must also fall at Spitalfields?—It has its effect beyond a doubt.

5824. Can you state that is positively the case; can you state that the wages are never high at Manchester when they are low at Spitalfields?—I never heard of it.

5825. If higher wages than those you have mentioned be paid in Spitalfields, they must be paid out of the profits of the manufacturer?—Yes, or out of his losses.

5826. Do you not know that they are a different description of goods manufactured at Manchester?—They are the goods we have spoken of, but I have seen patterns of goods to be compared to our singles.

5827. Do you not know that the great bulk of goods manufactured at Manchester are manufactured of a lower description of silk?—I believe the Manchester singles are made of Bengal silk, and ours are the same; we may use more China.

5828. Did you make, six years ago, what you call Manchester singles with Bengal silk in Spitalfields?—In 1826 we made many singles.

5829. From Bengal silk?—Yes.

5830. Such things as they make now at Manchester?—Yes; they may have been a little better.

5831. Have you any doubt that the manufacturers of Manchester can make goods as well as they are made at Spitalfields?—Judging from what I have heard, more than what I have seen myself, I should say they can make as good.

5832. You have been asked, if the hands at Manchester cannot readily change from the making of cotton goods to silk goods, and that if they could earn more at making silk goods, would they not therefore make silk goods in preference to the cotton goods, and you have stated they certainly would?—I have heard that they do change from one to the other.

5833. You were asked if the wages of the cotton trade must not govern the silk trade?—I do not recollect that that was put to me.

5834. Could the wages of the silk trade in Manchester be higher than the wages of the cotton trade there?—They are a little higher; and that is an inducement for them to leave the cotton trade.

5835. They have left the cotton trade because it was depressed?—The reason they left the cotton trade was, because they got a little more wages in the silk trade.

5836. Do you know there are some branches of the cotton manufacture at Manchester in which a man will earn a guinea a week, and a man in the very next house will earn only 7s. a week?—No, I do not know it.

5837. Supposing the price of 22s. for foreign thrown Italian organzine to be the price of the day inclusive of the duty of 3s. 6d. and the duty to be reduced to 2s.; do you consider the price of the thrown silk would then be 20s. 6d. to the manufacturer in Spitalfields?—I think it probable it would be a little higher than 20s. 6d.

5838. How much higher?—It is a mere question of surmise on the part of any body, and my information is such, that it would not make my opinion worth having.

Mr.
Thomas Stone.

18 May,
1832.

5839. When the duty was reduced, would not the price of Italian raw and thrown be nearer to each other?—I should think they might for a time.

5840. Would not the Italian seller thus be enabled to maintain a higher price for the raw?—Certainly; if the price was better for the raw, he would maintain it for a time at a better price, that follows.

5841. You think only for a time?—It would find its level; there would be reason for its finding its level.

5842. What reasons?—Such as the price of throwing.

5843. Surely the Italian having 1*s.* 6*d.* less duty to work it at, he can give a better price for the raw, and thus a better price would be maintained for the thrown without the benefit to the manufacturer?—I should think the market price for the raw would be a fair one in Italy; and it would not be greatly affected by the alteration of the duty, it might a little, but not to any great extent.

5844. Were you at all acquainted with the silk trade before 1826?—I have said no; it was a very little while before 1826 that I became acquainted with the trade.

5845. You have no practical knowledge of the business of a silk manufacturer, except what you have obtained in the last six years?—No, none whatever.

5846. Nor of manufactured goods?—No.

5847. You know that the weavers of Spitalfields are much distressed?—Yes, very much.

5848. Have you had opportunities of seeing them at their own houses?—Occasionally.

5849. Can you devise any means by which this distress can be mitigated or relieved?—I should merely be inclined to suggest what appears to me very likely to mitigate the distress; the causes of it I have said to be the admission of French goods both legally and illegally, and likewise competition in our own country; if you were to remove part of the causes, if that could be done, we should have less distress.

5850. What part of those causes?—If the prohibition of French goods were again granted, no doubt there would be much more labour for our own weavers; again, if smuggling was prevented, there would be much more labour for our own weavers, and certainly if there was less competition in our own country, there would be more labour for the operatives in Spitalfields, but I would not recommend the relief of the latter to be obtained at the expense of the former.

5851. Do you suppose the larger quantity of French silks to be admitted legally or illegally?—From what I have heard I should think illegally.

5852. Do you think smuggling can be prevented without total prohibition?—I should think it probable that it might.

5853. Do you think with prohibition it could be?—I have my doubts of this. I know an instance where some silk goods were brought to a manufacturer, a native of France, that he might distinguish whether those goods were French or whether they were English, and he could not say that they were not French, and it would follow, that if they were French they must have been smuggled into this country.

5854. He did not know?—No, he did not know, though he was of French extraction, and had been concerned in manufacturing silk in this country many years.

5855. Can you distinguish the French silks?—No.

5856. Then you think total prohibition would be an advantage to the silk trade of Spitalfields?—It would lessen the distress, as there would be more labour for the hands.

5857. In the event of a prohibition, there would be smuggling?—There is great probability there would; there was smuggling before, and most likely it would continue.

5858. Do you believe from your experience of any absolute facts you are acquainted with, that a greater quantity of smuggling has taken place since the prohibition has been removed, than previously to the law being altered?—I could not say from any thing that has come directly under my knowledge that that is the case.

5859. Do you not believe that smuggling, like any other matter of trade, is determined by the profit; and that so long as smuggling is profitable, it will continue?—I am afraid it will.

5860. Under the state of the law, which compels any person in whose house goods might be found, to prove that they were of English manufacture, and in the event of his not being able to do so, that they should be condemned as French,

and

Mr.
Thomas Stone.

18 May,
1832.

and he should suffer severe penalties; do you not think that would be sufficient to deter persons bringing in any quantity of goods illegally?—That would follow from the last question and answer; if he was detected, and he was to suffer large penalties, and forfeit the goods, it would not be profitable.

5861. Do you know the state of the law at present as regards smuggling?—It is generally considered a very illegal thing to smuggle, but it is done.

5862. In the event of a seizure of French goods, would not the person have to prove either that they were manufactured in England or that he had paid the duty upon them?—I suppose he would have to do that if the thing was fairly brought to the test; but there have been cases where that has not been the case, but the person has submitted to the fine.

5863. Suppose that you were to import legally 20,000*l.* worth of French goods, and then sell 18,000*l.* worth of those out of your warehouse, and the next day you import 18,000*l.* worth illegally, if the officers were to come and take the whole, how would he be able to prove which goods had not paid the duty; the Custom House officer would be immediately nonsuited upon the mere showing of the Custom House receipt that you had paid the duty upon the 20,000*l.* of goods; the possibility of ascertaining the identity of those goods would be lost; they had passed through the Custom House as gauzes, or any other articles, and you would only have to take care to import the same sort of goods; is not that so?—Yes, I dare say it is quite correct.

5864. If foreign manufactured silks were prohibited, would not the consequent increased demand of labour relieve the silk trade from the effects of the present injurious home competition to which you have referred?—It would have this effect; there would be more employment generally in the silk trade.

5865. Was there the same degree of distress existing when you entered into the business?—No, certainly not; the wages were different, and the distress less.

5866. Was it much less?—A good deal less.

5867. Did you, when you entered the silk trade, take a business that had been already established?—I did.

5868. Of whom did you take that business?—Of Mr. Levesque.

5869. Was not Mr. Levesque in the fancy and figured branch of the silk trade when he parted with his business?—No, he was making no fancy goods.

5870. Was not the description of commodity he made, superior to any thing you make now?—Perhaps generally his goods would be considered as superior, but we make some goods equally as good as he made.

5871. What is the reason you did not continue to make that superior commodity for which he was celebrated?—The trade that he carried on was amongst the retail customers at the West end of the Town, and it soon became unpleasant to me to carry it on; and therefore I took in a partner, and our trade was quite altered.

5872. Have you any reason to believe that the persons who used to purchase that description of goods from Mr. Levesque, are able now in any house in London to supply themselves with that description of commodity?—There is a change in the article; at that time the goods were mostly shot soft, and without they give an order to that effect, they would not obtain such goods.

5873. You mean that the shot soft commodity was superior to any thing you make now?—It was a dearer article, and cost us as manufacturers more, but it is a matter of taste, for many people say that the goods shot suple are preferable.

5874. Was not it a more sterling commodity, inasmuch as it really seems to be what it was?—Yes, so far as regards a sterling commodity, it was, no doubt.

5875. The commodity now made in Spitalfields is not actually so good as was then made, if you speak of sterling quality?—No.

5876. You have already said he had a connexion for the disposal of his goods you did not choose to follow up?—Yes.

5877. Do you think that those persons he used to supply, do sell the superior commodity in English manufacture that he then made?—I should think not; because there is no order given for that description of goods so far as I know; the taste is altered.

5878. Is it not because they supply themselves with a superior commodity from France?—I should think not altogether so; if any body would give us an order for such goods, we should be glad to make them.

5879. If they can get that commodity from France in a better and more saleable article than you can make here for the same price, is it not likely they will buy from

Mr.
Thomas Stone.

18 May,
1832.

from France?—If they can get the goods cheaper in a legal way, or if they choose to submit to the degradation of getting them in illegally, they certainly will prefer them from France.

5880. Do you not know that the parties your house used to supply, do purchase principally French silks?—I do not know it from personal knowledge; and I should say, I believe a good many of those silks which you are assuming to be shot soft because they are of a superior kind, perhaps are not shot soft but shot suple.

5881. The question refers to the superior commodity that used to be made in Spitalfields, that is not now made except in a more trifling degree?—As far as our own manufactory is concerned, we do not make that description of goods to the extent that Mr. Levesque did; we have altered our trade, and therefore we have been obliged to make a different description of goods.

5882. How long did you carry on a similar description of manufacture after you took the trade of Mr. Levesque?—About six months.

5883. Did you not in fact pay him a premium for his trade?—I did.

5884. What was the object of paying him that premium if you intended so soon to abandon it?—His business was considered valuable; then you are to take into account there was all the material for carrying it on, and those who were considered competent judges by myself, thought the sum he named was a fair one; the real object was to get into a business at the time that was ready made, and at a fair price, taking the materials all ready for one's hand.

5885. You wished to come into a trade where every thing was furnished to your hand, and where you had a certain connexion?—The connexion had its influence.

5886. Did you abandon the connexion or did the connexion abandon you?—I abandoned it completely.

5887. Was it because they declined to give you orders?—No; it was because I found the trade exceedingly troublesome, I had not been accustomed to trade, and it was particularly troublesome, especially as to the credit they took.

5888. What was the credit?—Generally what is called six and six months credit, which came to about 14 months.

5889. Was it houses of respectability at the West end of the Town, that Mr. Levesque formerly supplied?—Yes.

5890. Was Mr. Levesque remarkable for his attention to his business?—I believe he was very attentive to his business till he became ill; I have heard he has been in his manufactory many hours in a day, and constantly till he became very ill.

5891. What description of goods was it which Mr. Levesque made, of which you gave up the manufacture?—During the latter part of the time Mr. Levesque was in business he made what are called rich three-doubles, and that description of goods we still make, but they were then what is technically called shot soft, now that description of goods is shot suple.

5892. Why is it not now made?—The demand for it does not exist, they prefer suple.

5893. Is that description of goods not sold in the shops?—I think not; I am not very well acquainted with what is sold at the West end of the Town, but I think very few of that description.

5894. You do not think that the reason for those goods not being made in Spitalfields is in consequence of their being introduced from Manchester or France?—No; I think it is because there is an alteration in the taste; we made them for some time, till we found the demand ceased, and that if there were two or three sorts of goods on the counter, the shot suple would be selected if they were equally good.

5895. You have spoken of making single gros de Naples, did Mr. Levesque ever make single gros de Naples?—I think not.

5896. You used English thrown silks?—Yes.

5897. What quantity of velvet can a man make in a week?—A good workman would make about six yards of velvet.

5898. He would earn about 18 s. a week?—Yes.

5899. Have not the finer branches of silk goods been generally manufactured at Spitalfields?—Yes.

5900. And the finer fancy articles?—Yes, I believe what you call the rich fancy goods.

5901. Do

Mr.
Thomas Stone.

18 May,
1832.

5901. Do you not know that there is a prejudice in favour of French fashions, and that the introduction of fine fancy French goods had been the means of affecting the trade in Spitalfields?—I have heard there is a prejudice in favour of French goods, and that is supported by some other things I have heard.

5902. It has been stated to this Committee that that has been one means of driving the Spitalfields manufacturers to a lower article that brings them more into competition with Manchester?—It has reduced price which would have that effect.

5903. Do you not happen to know that the French people receive orders for the goods sent here?—Yes, I have heard so.

5904. Does not that give them an advantage over the manufacturer here, who makes them at his own risk?—It does.

5905. You have said that Manchester comes into competition with Spitalfields; do you not happen to know that the principal part of the China and Turkey silks are used at Manchester?—Yes.

5906. And that a quantity of waste is mixed with them?—Yes.

5907. If it should happen that the competition of Manchester or Sudbury should greatly interfere and press upon the profits and wages in Spitalfields, would not that be a reason why we should not increase that competition, by admitting the foreign article?—I have already said that I think the prohibition of French goods coming into this country, would be a benefit to the manufacture of Spitalfields, and to the country at large.

5908. Do you conceive that the introduction of foreign manufactured silk goods has a prejudicial effect upon the general labour in the silk trade in this country?—As far as it prevents our people being employed; every piece of French goods takes a certain time to make, and as there must be a certain time employed upon it, so far you injure the people here.

5909. Do you not know that the best profits, and the best wages, are upon fine articles?—Yes, I have reason to believe that the best profits are derived from the best articles.

5910. The 700 looms you employ are upon commoner goods, and therefore those finer articles do not interfere so much with you?—Not so much.

5911. But they do in some respects?—In some cases they do greatly.

5912. You stated before, that in the commencement of 1830 the thrown trade was brisker?—I said I believe that was the time.

5913. At that time was not the duty reduced; and do you think it was a remunerating price for the throwster?—The duty was reduced in 1829, when the throwing trade became brisker; there is no doubt that the throwster's trade was a good one at that time.

5914. Do you apprehend that the throwsters get a remunerating price at present?—All I have heard would tell me no; I am not a throwster myself, nor do I know any thing about the particulars of their business.

5915. Connected with the trade, it can hardly be otherwise than for you to know that there is a great deal of distress existing amongst them?—No doubt; and I should say the present price is not a remunerating price.

5916. If they only get half the money they used to get, and are doing a great deal more business, it may be attended with a loss instead of an advantage?—In some cases I have heard there is a loss.

5917. The more a man may do the worse it may be?—He has got his mill and machinery, and it is necessary for him to go on with business a little, that he may not make a very great loss by that machinery standing idle.

5918. It may be necessary for him to go on with machinery, though it is not a getting business?—Yes.

5919. But if it is a losing business, the more he does, the more he must lose?—Yes, unless a greater loss would arise from the machinery doing nothing.

5920. Is not there a great deal of capital embarked among the throwsters?—I believe there is.

5921. They employ a great many women and children?—No doubt of it.

5922. If the trade is not a remunerating trade at the present time, a reduction on foreign thrown silk must put them in a worse condition?—No doubt of it.

5923. Would not it have a tendency to destroy all the capital embarked in such mills?—It would destroy some of it.

5924. And have a tendency to throw them out of the trade?—Yes, and the hands must seek employment elsewhere.

Mr.
Thomas Stone.

18 May,
1832.

5925. Do you happen to know, during the Milan Decrees, there was a great want of foreign thrown silk; that our manufacturers could not get it to manufacture?—I do not know much of it; I have never known a time since I have been in business, when we could not get foreign thrown silk.

5926. If our throwsters were destroyed and we had to depend upon the foreign throwster, would it not put us very much in his hands?—We should be in his hands if our own throwsters were destroyed, there can be no doubt about it.

5927. You said you gave up your connexion at the West end, from the necessity of giving six months' credit?—I said that it was a troublesome business.

5928. Has that been the case with other manufacturers besides yourself?—I do not know that it has.

5929. You do not know that other manufacturers have objected on that account?—No, I do not.

5930. Do you believe that the other manufacturers do give that credit?—I should think, if they have much to do with the West end of the Town dealers, they must give that credit.

5931. Therefore you think they do it?—Yes, I should think they must.

5932. You have given up the West end of the Town trade?—Yes.

5933. Your buyers were formerly from the West end of the Town?—Yes, chiefly so.

5934. To what buyers do you sell now?—Buyers from the city principally.

5935. Persons who pay you cash principally?—Yes, principally.

5936. You began business some time before the legal importation of French goods?—Yes.

5937. And previous to Mr. Levesque leaving business, he had discontinued the manufacture of fancy goods?—Yes.

5938. Do you happen to know why he discontinued the manufacture of fancy goods?—I should think the same reason that would induce any other manufacturer, because he had not the demand.

5939. Do you know whether he was influenced in doing it by the smuggling from France?—I do not know that he was.

5940. The articles he manufactured at that time are not now in demand?—No, not at our house, or else we should make them.

5941. Have you reason to believe that the same sort of goods are imported from France?—I do not know from any personal knowledge; I have heard that they are to a great extent.

5942. You have spoken of the discontinuance of the manufacture of an article here, shot soft; is not the introduction of suple in consequence of the French having used it?—I have said, that I conceive the goods shot suple are now preferred, and I believe this description of goods first came from France.

5943. You gave up a particular trade in which Mr. Levesque was employed, because you did not like his connexion, or the credit he gave?—I did not like the mode we were obliged to carry on the business altogether; it was very troublesome, and I should say did not pay quite so well as another kind of business.

5944. Was not the demand ceasing?—Yes, in part, certainly, but that was not the reason that influenced me.

5945. But that was one reason why Mr. Levesque gave it up?—No; that is, as to the fancy article; I believe there was a want of demand.

5946. You say, that as far as you are concerned, figured silks are not now made?—No, I do not say that, because I have already said we have some looms employed on those goods.

5947. Since 1826, have you not constantly seen figured silks in the shop windows of all the principal houses in the metropolis?—Whenever I have happened to pay attention to the subject, I have seen figured silks.

5948. Do you not know, from the common observation that every man makes, that the ladies do wear a great deal of figured silk?—No doubt they do.

5949. Have you a concern at Sudbury?—No, we have not.

5950. You have said, that Mr. Levesque was in the habit of giving credit for six and six months?—Yes.

5951. That system is almost discontinued?—With us it is discontinued altogether; we have not a single dealer with us that pays in that way.

5952. Is it discontinued generally?—I believe there are some manufacturers who have been established a long time, who make it answer to give the credit agreed upon, whether six and six I cannot tell.

5953. The

Mr.
Thomas Stone.

18 May,
1832.

5953. The practice, in general, in Spitalfields, is to sell the goods to be settled at the end of a month, with bills at two months?—It is what we call one and two months' account.

5954. How do you reconcile that with saying more capital is required?—I have said no such thing.

5955. The manufacturer, instead of having his capital in his book, as book debts, is now enabled to buy his material upon cash, and throw his own silk, or is enabled to have mills of his own?—He has his capital at command, and he does with it as seemeth good to him.

5956. The capital is differently disposed of to what it was formerly?—Yes.

5957. You stated, you preferred the system that has been recently introduced?—Very much.

5958. You prefer short credit to long credit?—Yes; and the mode of doing business is much less troublesome.

5959. Will you state what you mean by the mode of doing business?—Now we can sell, perhaps 50 or 100 pieces to one purchaser, while we have had to send up to the West end of the Town, it may be three or four times, about as many pieces, *i. e.* three or four.

5960. You mean to say, formerly you sold to a great number of houses to a small amount, and now the whole is absorbed in one house to a large amount?—No, I do not mean to say that, but that there are many people to whom we now sell many pieces to at one time.

5961. How many persons are there in the city of London who could come and buy 150 pieces of silk, and pay you ready money in one purchase?—A very great many in the city of London, but not a great many in the silk trade.

5962. Are there many purchasers in the city of London who can buy 150 pieces of silk in one purchase, and pay ready money?—When I said 150 pieces, I did not say we sold that number very frequently, but our mode of doing business, and that we like, is selling largely to a few houses.

5963. How many manufacturers in Spitalfields possess throwing mills?—I do not know.

5964. Can you not buy the throws cheaper than you can buy the raws?—Certainly not, in a general way.

5965. Did Mr. Levesque assign any reason to you for giving up his business?—His health was very much injured; he had made a very good fortune, and thought fit to retire.

5966. Do you not think that one reason was an apprehension that the change in the laws would be injurious to the silk trade?—It might have influenced him, but the other reasons were the chief ones; his health had become very much injured.

5967. You state that at present, instead of selling to a variety of persons you sell very large quantities to one?—I did not exactly express myself so; I said we sold large quantities at a time, but not to one person in particular.

5968. Selling very large quantities to one person, do you find as many purchasers of small quantities as there were before this new system sprung up?—As far as the West end of the Town customers are concerned, to which I apprehend the question applies, we have nothing to do with them, they do not deal with us.

5969. You were understood to say there is an alteration of the system that has sprung up of late years?—I said that as applicable to our own house.

5970. And it was understood to consist in this, that you found now that the demand came upon you in a large quantity from one individual purchaser in a greater degree than it used to do formerly?—I did not confine myself to one, two, or three or four purchasers.

5971. But a small number?—Yes.

5972. Instead of a considerable number of small purchasers?—The connexions that Mr. Levesque had at the West end of the Town did not consist of many, but it was that kind of business that three or four journies might be made to the West end of the Town about three or four pieces; whereas now we can often sell 40 or 50 pieces in a few minutes.

5973. It is more convenient supposing you sell the same quantity of silk to one individual, rather than selling the same quantity to a number of different persons residing in different places?—Certainly.

5974. Is that what you mean by the advantage of this new system?—I have endeavoured to express myself as distinctly upon that subject as I can; I have

Mr.
Thomas Stone.

18 May,
1832.

stated that the former kind of business was very troublesome, and therefore we gave it up, and that the present business we do is a very different kind and far less troublesome.

5975. What has become of those more numerous purchasers of that class with whom you used to have dealings?—I have stated that the class was not very numerous, but they continue to deal with some of the persons in the Fields who choose to go on upon the same system.

5976. You do not know that they buy from those large houses, that you in the first instance supply with your goods?—I dare say that they do.

5977. Do you suppose that those persons find an advantage in the system, by means of which, instead of purchasing directly from one of the manufacturers, they are obliged to purchase through the medium of a warehouseman, who of course must have his profit upon the transaction?—If I understand the question right, it is this; do I understand it is preferable to these dealers at the West end of the Town to deal with the large warehouseman or with the manufacturers?

5978. Yes?—I should say that they have found it to their advantage, or they would not have done it.

5979. Do you consider that it has been completely a matter of option on their side?—As far as I know the business, I should say it is matter of option.

5980. Because, so far as respects yourself, it has not been completely matter of option, because you have declined that mode of dealing, and found it more preferable, and more for your own interest to carry the dealing on according to this new system, that is to say, by a channel that takes it through the hands of the warehouseman?—The answer I gave was, though not in these words, because I chose it, and that was an option.

5981. Do the warehousemen give six and six months credit?—I do not know.

5982. You said Mr. Levesque's business was in the West end houses?—Yes.

5983. And he made a large fortune?—Yes.

5984. What reason had you for giving it up?—I have given an answer to that as distinctly as I can.

5985. Do the West end houses buy French goods in small quantities?—They buy according to their demand.

5986. Can you recollect about the number of customers that Mr. Levesque had upon his books?—I should not think that Mr. Levesque had, among his principal customers in London, more than twenty.

5987. How many may you have about?—I should think we have, of our principal customers, from fifteen to twenty.

5988. When you spoke of houses buying occasionally 150 pieces of silk, you did not mean to confine that to two or three houses?—No, nor did I wish that number to be taken for what frequently occurs; but it was the mode in which we do business, it being preferable to me.

5989. Whatever number of persons you choose to give credit to, they visit you in their rounds in Spitalfields almost every day?—Yes, whenever they think proper. Our door is open, and we are always glad to see them.

5990. When goods are taken, he that comes first gets the goods?—Yes, those that are out earliest in the morning.

5991. And, when trade is bad, and there are many goods, he who gives you the most money gets the goods?—Yes, we sell them as well as we can.

5992. If the system to which allusion has been made had not been more profitable upon the whole, you would not have adopted it?—It was much more pleasant to me. The trade we now do is much more pleasant than the trade we formerly did; and that had great influence with me.

5993. If a stranger was to come to your house, and offer to purchase 50*l.* worth of goods, and even to offer you a check for the amount, you would not sell them, would you?—Should not we? We should be very glad to sell them.

5994. Can you state whether the goods now manufactured in Spitalfields are of as good a quality as they were some time ago; for instance, when you commenced business?—As far as our manufacture is concerned, we make more low goods than was generally made before the time alluded to; certainly, as far as Mr. Levesque was concerned; I never knew that he made that description of goods to any extent.

5995. What has made you increase your manufacture of low goods?—The demand for them.

5996. That

Mr.
Thomas Stone.

18 May,
1832.

5996. That is to say, if all your looms were employed in making rich goods you could not sell them?—No, certainly not to advantage.

5997. You have stated that the making rich goods is most profitable?—I should beg to state, that if we sell rich goods at a fair price, inasmuch as there is more capital employed, it would yield a larger profit; one piece of rich goods sold fairly, would yield a larger profit than a piece of low goods.

5998. If rich goods were much in demand, would not the competition of the manufacturers bring the rate of profit down to what generally exists now?—Yes.

5999. Do you mean the rich goods are not used now to so great an extent?—Yes.

6000. Who supplies the market?—We do in part: we do not discontinue making them by any means.

6001. In point of fact, are you not constantly interfered with by superior articles that come from France?—We have reason to believe that we are.

6002. Can you, by possibility, make these goods that come from France?—Yes, no doubt we can.

6003. Equally good?—Yes; except probably some few.

6004. Do you consider that the greatest number of looms are employed by the largest capitalists in Spitalfields?—I should think, perhaps not; but some of the large capitalists may not choose to do a large wholesale business; they may be content with a small business at the West end of the Town, and find it profitable to them; they have had the connexion a long time, and they have the means of giving that credit; in short, they may find it answer their purpose.

6005. Are there not as large or larger capitals in Spitalfields employed in a small number of looms?—That would follow as matter of course to those who, possessing large capitals, choose the business.

6006. If the trade is profitable, how do you reconcile that with the fact, that the largest capital is not employed in the largest number of looms?—They may prefer going on with their West end of the Town customers.

6007. Do they prefer going on with a trade less profitable?—It may be more profitable; I mean to say, that my objection is such as I have stated.

6008. The change was rather a matter of taste?—There was no absolute necessity, we did not like that kind of business.

6009. The class of persons at the West end of the Town, who used to take the long credit, have been considerably diminishing?—I do not know how they do their business now, whether they give that long credit or not.

6010. It appears by the official papers, that a considerable quantity of plain goods is imported from France; and in the last six months, upon plain goods it should seem that the duty paid was 21,000*l.*, whereas the duty paid upon the whole was not above 80,000*l.*, were you aware of that?—No; I was not aware of that.

6011. You have stated, you buy a portion of the Italian raw silks, and get them thrown, and you principally buy British thrown organzine; is it not important to you who buy the raws, that the throwster, who supplies you with British thrown organzine, should have a good supply of raws, from which you can both make your selection?—No doubt it is important that both should have a good supply of raws, otherwise the throwster could not send out good organzine, nor we procure good trams through him.

6012. Is the selection of Italian thrown organzine in this country great?—Yes; there is a great variety of organzine.

6013. Italian thrown?—Yes.

6014. Which do you prefer, the Italian thrown or the British thrown?—The British thrown for our own manufacture.

6015. Do you use much Piedmont organzine or Lombardy?—Not a great deal, very little Lombardy; and not a great deal of Piedmont.

6016. When you commenced business, had you any Jacquard looms?—We had none going at that time.

6017. Has the Jacquard engine much increased in Spitalfields?—I think not, but decreased; I speak from what I have heard of it in former times.

6018. Had you, at any period, more than 50 Jacquard looms at work?—Never, that I know of.

6019. Is there a greater degree of profit obtained by working a Jacquard loom than by working the common engine?—When you take into account the expenses of the Jacquard, it is pretty much the same profit.

6020. You say labourers used to earn 1*s.* 6*d.*?—Yes.

678.

x x 3

6021. At

Mr.
Thomas Stone.

18 May,
1832.

6021. At the same period the price for working plain was 11 *d.*?—Yes.

6022. In working the figures could a man obtain better wages?—Yes, I think he could; when using the Jacquard loom more skill is required, a man ought therefore to be better paid, and is generally paid more; labour and skill find their value.

6023. What is the earning of a workman at this time, a fair average workmen, working plain at 6½ *d.*?—Taking the necessary deductions into the account, I should think a good workman, upon the three doubles, would make 4½ yards at twelve hours a day.

6024. Four yards and a half a day?—Yes.

6025. That is about 15 *s.* a week?—You must take into the account the necessary deductions he has to pay for; I should take the necessary deductions at about 3 *s.* or 3 *s.* 6 *d.* a week, from which I exclude rent and coals.

6026. You are speaking of the deductions from his labour?—Yes, turning on the cane, twisting in, and quilling, &c.

6027. He must work pretty hard to do that?—A good workman would make the quantity working at twelve clear hours a day.

Lunæ, 21° die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQ. IN THE CHAIR.

Mr. William Stone, called in; and further Examined.

Mr.
William Stone.

21 May,
1832.

6028. CAN you inform the Committee what have been the prices of Italian raw and thrown silk of the same quality in this market during the last 10 years; stating the price of raw and the price of thrown, and the amount of duty in each year, and the nett proceeds to the Italian throwster.

[The Witness delivered in the following Statement, which was read.]

A TABLE showing the Comparative Nett Proceeds of One Pound English of ITALIAN RAW and ORGANZINE THROWN SILK (not dyed) Imported during the Years 1822 to 1831
(both inclusive), the Amount of Duty and Charges incidental to Import deducted.
QUANTITY BERGAM RAW, 4 to 5 Cocons; ORGANZINE ranging between 22-28 Deniers.

1s. 6d. Net Profit to Italian Throwster.

Mr.
William Stone.

21 May,
1832.

Mr.
William Stone.

21 May,
1832.

6029. The whole of this Paper is drawn up on silk of the same quality in every year?—Precisely; taking the price currents at which they make up their accounts.

6030. By whom are these accounts or averages made?—By Messrs. Grandolfi & Co.

6031. You have stated the expenses on the raw silk to have been different in different years; what were the expenses in 1822?—The expenses were 8*s.* 7*d.*

6032. Of what does the 2*s.* 7*d.* in 1828 consist?—Of the charges made in coming from Italy here, including the Austrian duty, the charges and expenses of carriage, insurance and commission, and every expense attending the sale.

6033. Can you give us the items?—It would be rather difficult for me to give you the precise items; I will give you the principle on which it is done; it is done on a bale or certain quantity of foreign raw silk reduced to English pounds, that is 240 pounds, which is the usual size of a bale of raw; the price is taken at 26*s.* 5*d.*, the duty at 5*s.* 6*d.* amounts to 66*l.* 13*s.* on the 240 lbs.; the small charges 2*l.* 6*s.*, interest at six months at 4 per cent., taking it on the supposed and usual average of the sale, 1*l.* 7*s.* 7*d.*; the sea insurance, fire insurance, brokerage, commission, *del credere*, makes up a charge of 16*l.* 12*s.* 10*d.*; land carriage in Italy and export duty makes 13*l.*, making altogether 99*l.* 19*s.* 5*d.*, and that divided by 240 will give the net charges 8*s.* 3*d.*; that is the principle on which this is done.

6034. Are those of 1830 and 1831 calculated in the same way?—Precisely; if there is a variation of duty of course there would be a variation of so much, and the commission would be less according to the value, it must be varied because there is an *ad valorem* commission charged.

6035. Are we to understand that deducting the amount of duty and commission, that 2*s.* 4*d.* in 1831 will bear the same proportion as the 8*s.* 7*d.* did in 1822?—Exactly.

6036. On what denomination of raw and thrown are the averages made?—This is taken from a four to five cocoon, and the average of the thrown is 22 to 28 deniers.

6037. Is it Milan or Bergam?—It is not of the least consequence.

6038. Can you give us the particulars of the expenses on a bale at the present rates of duty?—On the present duty of 3*s.* 6*d.* per pound, the price 23*s.* 1*d.*, it amounts to 43*l.* 6*s.* on a bale of thrown; the small charges on that are 2*l.* 6*s.* the interest at six months would be 18*s.* 5*d.*; sea insurance, fire insurance, brokerage; commission, *del credere*, would be 14*l.* 10*s.* 10*d.*; land carriage in Italy and export duty 9*l.*, leaving the charges to be deducted 5*s.* 10*d.*

6039. How is the difference of the charge in the land carriage in Italy from 13*l.* to 9*l.* accounted for, have they made an alteration?—I cannot explain that; I think the name that I have given will satisfy every one that it is perfectly correct.

6040. Is the raw silk at Milan of a four to five cocoon, of no greater value than raw at Bergam of the same size?—I take the average of Bergam and Milan raw of a four or five cocoon; there may be various qualities of this description, but I do not think it affects the question; there was a question put to me bearing on this point, which was, whether the Italians had lost money in their throwing trade, and I stated, I believed they had, although I had not the means at hand of answering the question.

6041. Do you conceive that 2*s.* 3*d.* is not a remuneration to the Italian throwster for throwing the silk?—According to the figures that have been given to this Committee.

6042. Does this 2*s.* 3*d.* include waste?—Yes, certainly, this includes every thing; in addition to that, I think I may fairly state to bear out my opinion, that the price of the raw taken from the 1st of August 1830 to the close of the year, of the finest class, say 3–4 cocoons, (it would not be until the following year that the result would be known; they cannot arrive in the market until towards Christmas); I find the averages of the raw 19*s.* and the organzine 24*s.*, and deducting the charges on the same principle as we have done it before, it leaves to the Italian throwster 1*s.* 6*d.*

6043. Do you mean that on the whole sales in 1831?—Yes, only 1*s.* 6*d.*; I have made it out on the finer qualities in this instance, the result of which would be 18 to 22 deniers.

6044. Do you state that on the same authority, Messrs. Grandolfi?—I only gave

Mr.
William Stone.

21 May,
1832.

gave the authority on the charges. I take the value of the article from my own knowledge as a broker.

6045. Is it your opinion that the Italian only receives 1 s. 6 d. for throwing silk in Italy, when he has to pay here a duty of 3 s. 6 d. ?—It is. The answer applies to the last two years. It must be borne in mind that 3-4 cocoon is the finer article.

6046. Is there any difference of charge in bringing raw and thrown silk from Italy?—There is a certain difference: as far as I can explain it, it will arise in the duty. The difference of the charges is, that on a bale of thrown silk it will be 13 l.; and, on the bale of raw, it will be 9 l. These are the actual nett charges to the Italian from his own door. It is fair to suppose that any stock of thrown silk that would be on hand from the 1st of August to the 30th of December, would have the advantage of this market; the stock was exceedingly small; that bears on the question put to me, whether for the last two or three years it had been a favourable or unfavourable result to the Italian throwster.

6047. Do you conceive it is unfavourable to the Italian throwster because he is in closer competition with this country. So long as he pays 3 s. 6 d. duty, and the price of throwing is not more than 4 s., he receives only 1 s. 6 d.?—I meant to explain. The price given for this class of throwing is said to be 4 s. by the Italian.

6048. Do you know what is given as the estimate for throwing silk of this quality in England at the present time?—I should think this quality, of the best class, might be done for 3 s. 9 d. or 4 s. a pound, exclusive of waste. The waste should be taken probably at four per cent. or five; that would make about 1 s.; and consequently it would be 4 s. 9 d. to 5 s.

6049. If then the Italian now only obtains 1 s. 6 d. per lb. when he is in close competition with England, supposing the whole duty of 3 s. 6 d. to be repealed, in what situation would the Italian be then?—It would put him in a better situation of course: 3 s. 6 d., added to 1 s. 6 d., would make it 5 s.

6050. His situation would be very much improved?—No doubt of it.

6051. The English throwster consequently would be fighting constantly against him, and ultimately be compelled to throw as cheaply as the Italian, to reduce the price of throwing to 1 s. 6 d. per lb.?—Supposing that to be the case, of course he would.

6052. Can you state whether the imports for the present year, of Italian thrown silk, are considerable or otherwise?—They are not; they have fallen off considerably, it was put to me from August to August, which is the silk season, and I think the only fair principle upon which you can arrive at a conclusion; it applies to Italian silk, and is from August to August. If you do not follow this principle, you may, as I think has been the case in 1831, possibly misconceive the question. You may get two seasons of a crop of thrown silk into one current year; therefore we always take it from August to August.

6053. That is the way on which you have formed these averages?—No, it does not apply in that case. From 1st of August 1829 to 1st of August 1830, I find the import of bales to be 3,376 of raw silk, and I find the import of organzine to be 568; that is 17 per cent., which is the lowest per centage we have had for a long time. From 1st August 1830 to 1st August 1831, we received 4,819 bales of raw, and of organzine 3,032, leaving a per centage of 63, which is a very great increase. Taking the import of raw up to the 1st of May 1832, it is 3,018 bales, the import of thrown is 594, reducing the per centage to about 19 per cent.

6054. Do you think that you have now in, all the silk of the season?—Nearly so. There may be some still to come, but nothing of any moment. There is evidence that the stocks are very low in Italy, and I believe they are.

6055. How do you account for the large difference in exportation?—By the very great advance which took place here in the thrown silk.

6056. About what time?—In August 1830.

6057. Did the prices of the thrown silk in the latter part of 1831 decrease?—In nearly the whole of 1831, the prices diminished considerably. I account for the importation by the circumstances that occurred in 1830; you will observe that we had the whole of the supply of the raw, and at the back of that a very large increase of thrown, which must have been brought here by the state of the market. A question was put to me, whether I did not know there was great distress at that time for the thrown article; and whether the manufacturers here were not obliged

Mr.
William Stone.

21 May,
1832.

to wait for their supply of thrown silk; that was the fact, and that induced this large importation of thrown silk.

6058. That being followed by the lowering the price of thrown silks they have ceased to send?—Yes.

6059. Were the bales in 1830 and 1831 of the same weight as the bales of the present year?—As far as my remembrance goes, some of the bales in 1830 and 1831 were lighter, inasmuch as I think there was an increased supply of Piedmont silk, but not to any very great extent.

6060. You stated that in 1830 there was a great demand by the throwsters, do you not know that for many months before they had been in great distress for want of employment?—I have no doubt that was the fact, from looking at the import of the thrown from 1829 to 1830.

6061. You say that in 1830 there was a great demand for silk to be thrown?—Yes.

6062. And that induced an increased supply afterwards?—Yes.

6063. Previous to the commencement of the year 1830, do you not know that the throwsters were mostly unemployed, and in great distress for want of work?—I believe they were very much distressed.

6064. And many of them ruined?—Many of them failed, certainly.

6065. Were the throwsters doing well or ill in 1831, when there was this large importation?—In 1831 I think they were doing very badly.

6066. That would be a necessary consequence of the large importation from Italy?—Yes.

6067. Did the throwsters in 1830 get increased prices?—Yes.

6068. What did they get then?—In many cases in the latter part of the year they got an increase of nearly cent. per cent.

6069. You have stated, that at this particular time in the year 1830, the throwsters, including waste, got 3*s.* 9*d.* for throwing?—That was exclusive of waste; it is so stated for the throwing of tram.

6070. What did the English throwsters get in the year 1830, when you say they were distressed?—I should think their terms would be pretty much their own.

6071. I wish to know the exact price in 1830, that the English throwster got for throwing silk?—I think the price got up from 2*s.* 6*d.* to 3*s.* 9*d.* for the working of tram, and in the same proportion for the working of organzine; it is more particularly applicable to tram.

6072. We import a very small quantity of tram, do we not?—In 1829 to 1831 tram was a large feature.

6073. Are not our throwsters mostly employed in tram rather than organzine?—I think they are not.

6074. Do we not import more organzine than tram?—Yes, we do.

6075. I want to know what you paid in 1830 for throwing organzine and tram in this country?—For tram in the latter part of 1830, I conceive it to be about 3*s.* 9*d.* I am now giving the best evidence I can without any documents before me.

6076. What is it now?—Two shillings and three pence.

6077. What was it on organzine?—I cannot at this moment state; I think it would be increased though not so much.

6078. You must have some idea of what the prices were?—I have no doubt it increased considerably.

6079. You have given as a reason, that the very extraordinary price was the inducement for a large importation; you should tell us what the extraordinary price of the English throwster was?—At the close of 1831, the prices of the throwster, I apprehend, so far from being high, would be low.

6080. What were they?—I can only answer that question by analogy.

6081. State what you suppose to have been the price of organzine and tram in 1830?—I should think the price at the close of 1831 would be 2*s.* 6*d.* for tram, and for organzine 4*s.*

6082. Very nearly what the prices are at this moment?—Exactly so.

6083. How could 4*s.*, which is the price paid now, be the great inducement for this importation?—It would be too late to operate.

6084. How early in 1830 was it that the very high prices were obtained here?—Taking the probable time it would operate, in about July 1830; the price of the foreign thrown silk was very high.

6085. What

Mr.
William Stone.

21 May,
1832.

6085. What did they get for throwing here?—I can only do it by analogy; we approximate so near in price, it would be as 17*s.* 6*d.* to 26*s.*

6086. State what you conceive at that time was the price for throwing organzine and tram in England?—I have no doubt it was very high, though I have not the exact figures before me; I have the figures of the foreign thrown silk before me.

6087. You have no power of answering the question?—Not authentically.

6088. I understood you to state generally, that the Italians got less in proportion for their organzine than the raw material?—I did.

6089. And then you say that at this particular period, foreign thrown was very high?—It was.

6090. Then they must have had a larger price for their thrown?—Yes; I said it was fair to suppose, that towards the close of 1830 the Italians would be reaping the advantage; it was on a very bare market that the prices got up to what I have stated, and induced this importation.

6091. And July 1830 was the time that you say the English throwing fetched the highest price?—I infer that to be so.

6092. As you have stated that about July 1830 the English throwsters got a good price, and as you have stated that the high price of English thrown has been the cause of the very large importation of foreign thrown, I should like to know about what time this rush of foreign thrown came into the market in consequence thereof?—It came into the market at the beginning of 1831.

6093. Nearly a year after?—Not a year after; about a fair time to allow it to come in.

6094. How many months in 1830 did the high prices of thrown silk continue?—The first alteration that took place was in October from a reduction by the price currents; there appears to have been a little reduction to the extent of 1*s.* upon the price of thrown, from 26*s.* 28*s.*, to 25*s.* 27*s.*, that is in foreign thrown.

6095. As you cannot tell the price of English thrown in July 1830, I should like to know the exact price the foreign throwster got at that time; was it the extraordinary high price of foreign thrown that induced this large importation?—Yes, it was; if we make the calculation for three or four months, you will find the temptation very strong for him to send to this market.

6096. You have stated in 1829, at one period of that year, that it was 5*s.*; be good enough to state to the Committee in what months it was that the nett proceeds to the Italian throwster were 5*s.*?—From the 1st of January to the 1st of July.

6097. Be good enough to tell us what were the variations in the price of thrown silk in 1830?—In the beginning of 1830 the prices were 23*s.* 24*s.*, 22*s.* 24*s.*, 22*s.* 24*s.*, 23*s.* 24*s.*; in March 22*s.* 24*s.*, 22*s.* 23*s.*; in April 23*s.* 24*s.*, 23*s.* 24*s.*, 22*s.* 24*s.*; in July 23*s.* 25*s.*, 23*s.* 24*s.*, 23*s.* 24*s.*, 25*s.* 26*s.*; the variation was from 23*s.* to 26*s.* in July alone; in August it is 25*s.* 26*s.*, 24*s.* 26*s.*, 24*s.* 25*s.*, 26*s.* 27*s.*, 26*s.* 27*s.*, 25*s.* 26*s.*, as high as 27*s.*, and that for the coarser size; in September there was no variation; in October the prices were from 24*s.* 26*s.*, 24*s.* 25*s.*, or an average of 25*s.* or 24*s.* 6*d.*

6098. You have stated that up to the 5th of July 1829, the foreign throwster got 5*s.*; you have then stated, that from July 1829 he got 3*s.* 4*d.*, and then you have stated that in 1830 he got about 3*s.*?—That was a part of my reason for supposing that he lost money.

6099. And in 1831 he got 2*s.* 3*d.*; so far from the high price the foreign throwster got in 1830 being an inducement, it appears that he got less than he did in 1829?—The principle of 3*s.* is taken for the whole of the year. If I give you the prices from February the lowest price is 22*s.* 6*d.*, and the highest price on organzine is 26*s.* 6*d.*

6100. You have stated in what you have given in, that in six months from July 1829, the average was 3*s.* 4*d.* and in 1830 the average was only 3*s.*; therefore there is a fall in the price instead of an increase?—That does not follow; if the price of the raw in 1829 should be 18*s.* 6*d.*, and the price of the raw in 1830 should be 17*s.* 6*d.*, that makes 1*s.*; and if the price of the thrown should correspond with it, I think it would bear itself out.

6101. The fall is from 18*s.* 6*d.* to 17*s.* 6*d.* on the raw, and on the thrown from 25*s.* to 24*s.* 1*d.*?—In 1829, the whole of that year, the raw is 18*s.* 6*d.*

6102. You have arrived in your estimate at the conclusion you have given in evidence that the high price of foreign thrown silk in 1830 induced the Italians to send in an increased importation in 1831; and you have also stated that in one year they got 3*s.*, and in another 3*s.* 4*d.*; now they must have got 4*d.* less in 1830 than

Mr.
William Stone.

21 May,
1832.

than they did in 1829?—I did not exactly state that; I stated that we had received our supply of raw; and in addition to that, the high price of thrown in this market induced a further supply of thrown silk; I think that was my statement.

6103. The Italians are guided a great deal by the information they receive from the merchants; do you believe that the merchants would induce the Italians to make an enormous large importation, merely from a casual briskness arising from a want of trade in this market?—Yes, I think they would, and they would be very fairly borne out in doing it.

6104. How do you account for the great increase of thrown in the year 1830–31, the nett price of the thrown silk to the Italian having diminished?—The way in which I account for it is this; in the autumn we received our principal supply of raw, and advices would go out that this market was favourable to the introduction of foreign thrown silk, which foreign thrown silk we should not get without sufficient time; I believe it will be found that the bulk came at the commencement of 1831.

6105. Do you know that the price in August 1830 was 25s. to 27s.?—Yes.

6106. And at that time advices went out that increased the importation?—Yes.

6107. Do you not know that there was a great increase even in the year 1830?—I do not.

6108. It appears by official documents, that a great increase of the importation of Italian thrown silks took place in the year 1830, and a further increase in the year 1831. I want to know, as these foreign silks take some time in preparation for this market, and it also requires some time for them to receive information of the state of this market, how it does happen that any high price in July 1830 would have caused the increase of importation in the same year?—It appears by the principle upon which I take this data, that from August 1829 to August 1830, which is the season, the importation was only 568 bales of foreign thrown silk.

6109. When did that terminate?—It commenced the 1st of August 1829, and terminated 1st August 1830.

6110. Where did you take that account from?—From ships' reports, which we have access to, and which have been given in evidence before by one of the witnesses.

6111. You have stated, that this great importation took place from August 1829, when the fact is, that the great importation was from July to December in the year 1830?—I do not object to that.

6112. Have you, in your hand, a return of the number of bales imported from the ships in the year 1830?—I have got the gross number.

6113. But not in the different amounts?—No.

6114. If I understand you, you mean this, that the prices were remarkably high in the months of July and August 1830, and that that caused a great importation in the following six or seven months, which increase swelled the accounts to the amount you have mentioned?—Yes, that is my position.

6115. What was the price in August 1830 for thrown silk?—Twenty-four shillings and one penny the average.

6116. That is the average of the year, is it not?—I beg pardon, it is 25s. 7d.

6117. How long would goods, ordered in that month, be in coming to England?—They would be here towards and the beginning of next year.

6118. Suppose you ordered silk in August, how many days does the transit from Italy here take?—I am not acquainted with that, the mere transit would be 30 or 40 days; then they have got to work it.

6119. If I sent out an order on 1st August for thrown silk, supposing the silk to be ready, how long would it take to execute that order?—I imagine you would get it in October; but I am not sufficiently prepared to answer that question.

6120. In the month of August 1830 the price was 25s. 7d.?—Yes.

6121. The price in the preceding three months was 25s. 4d., which gives a nett profit to the Italian throwster of 3s. 4d., according to the same calculation, 25s. 7d. ought to give him a nett profit of what?—There is an alteration of the duty from 5s. to 3s. 6d.

6122. Are you correct in that?—I think so, with all due deference; in 1829 the duty was 5s. and it was reduced to 3s. 6d.

6123. Therefore the duty was the same at the period I am alluding to; you make your calculation from 1st January to 1st July?—Yes; then there was a duty of 5s.

6124. In

Mr.
William Stone.

21 May,
1832.

6124. In the same period in 1829, the duty was still 3*s.* 6*d.*?—In the latter part of 1829 the proceeds were 3*s.* 4*d.*

6125. The duty being 3*s.* 6*d.*?—Yes, exactly so.

6126. In August 1830 the duty was 3*s.* 6*d.*, and the price of thrown silk 25*s.* 7*d.*, therefore the proceeds ought to be about 3*s.* 7*d.*?—In the latter part of 1829 the average of the raw is 18*s.* 6*d.*, the thrown 25*s.* 4*d.*, leaving the proceeds 3*s.* 4*d.* In the next year we take the whole of the year, raw 17*s.* 6*d.*, a shilling less; and thrown, 24*s.* 1*d.*

6127. What would the nett proceeds to the Italian manufacturer be in the month of August 1830, when the price of thrown silk here was 25*s.* 7*d.*, the price of raw being 17*s.* 6*d.*?—It would leave the Italian 4*s.* 6*d.*

6128. And that you conceive would be a sufficient remuneration to induce the Italian to send here a great quantity of thrown silk?—According to the evidence we have it would.

6129. Can you state to the Committee what was the price the Italian obtained here in June and May, the two months preceding in the year 1830?—In April the price was from 22*s.* to 24*s.*, that is the extreme; then 23*s.* and 24*s.*, and 22*s.* and 24*s.*, which makes an average of 23*s.* 4*d.*; the operation is this, it leaves only nett proceeds of 2*s.* 4*d.*, consequently there was no temptation for the Italian to send his thrown silk here; in April and May you have the quantity of raw; in August the prices got up to 24*s.* 7*d.* The position which I put was this; you received the full complement of raws, and at the back of that the state of your market tempted them to send an additional quantity of thrown; that is the way I accounted for the additional quantity of thrown; and I wished to account for the answer I gave, that the Italians must have lost money.

6130. I ask you again, how could this high price in August, 1830, be an inducement for their sending an increased importation in 1830?—It came at the latter end of 1830, and the beginning of 1831. That is not the importation you have before you; that is what is entered for home consumption.

6131. Was not there an increased importation in the year 1830?—It must have been the latter part, after August.

6132. Were not the prices of British thrown silks high about December 1829, and January 1830?—If they were high, no doubt they fell immediately after.

6133. Why should not the high prices at the close of that year cause a similar effect, occasioning an increased importation as the high prices at a subsequent period?—The close of 1829 and the beginning of 1830 does not show it, it leaves 3*s.* 4*d.* It went down from 5*s.* to 3*s.* 4*d.* For the whole of 1830, it went down to 3*s.* Whatever English throws might be, the average of foreign does not show that to be the case.

6134. When I asked you whether the prices of British throws were not high, I understood you to say, yes?—The price of raw is considerably higher. I supposed it was the case as to thrown; but it does not appear to be the case on further examination.

6135. Have you any doubt that the English throwster has had more employment since 1826 than he had before?—I should have very little doubt that such was the case.

6136. Can you state what effect the transfer to the North has had on the throwing mills in the West of England?—That of depressing them, decidedly.

6137. Can you state how it has produced that effect?—It is exceedingly difficult to state how it has been produced, but I will give you a reason, from which you may infer that it must occur from the transplanting of the throwing mills to another part of the country; inasmuch as this was shown by one of the witnesses examined here the other day, a most respectable man, of the name of Wilmott. He had been in the trade for a number of years, is a most respectable man, and always did his work remarkably well. He had also been in the habit of throwing an article of Turkey silk, and was fully employed formerly. Our importations in former years we thought good at 400 bales: since that we have got up to 2,500 bales in the year; and yet this man has not been able to get work to employ him. It must have gone to some other parts. I can account for it in no other way.

6138. The silk you have mentioned is used frequently at Coventry, is it not?—Yes.

6139. How long have you known Mr. Wilmott?—Seventeen years, or thereabouts; and I believe, for the early part of that period, he was fairly and fully employed in Brussa silk.

6140. Did

Mr.
William Stone.

21 May,
1832.

6140. Did you know his place or his mills?—I know that he lives in the West of England; and our house has received Brussa singles from him for some years past.

6141. Are the Brussa silks thrown into organzine?—No, into singles and trams.

6142. If competition has brought the price down to 3*s.* 9*d.*, you think that is as low as they can come?—I fully concur with you in thinking that there is enough competition in this country.

6143. If deprived of all the Italian raw silks, would not that militate against the prosperity of this country?—The immediate effect would be injurious to the throwster of Italian silk.

6144. Did you not state that you believed they could throw in Italy for 2*s.* 3*d.*?—I said that the prices were fairly stated at 2*s.* 6*d.*; it being added that the Italian selected the very best silk for his object.

6145. You have never been in Italy?—Never.

6146. Do you believe there would be any difficulty in their throwing a much greater quantity of silk in Italy than they do at present?—I do not see any difficulty in their increasing their mills.

6147. Have you calculated how much the throwster has, clear of all expenses, for throwing Brussa?—I have not.

6148. Is there any analogy as to the uses in working between Brussa and Italian silk?—None whatever.

6149. The manufacturers of Coventry, who chiefly use this Brussa silk, now employ throwsters elsewhere?—I have no doubt they do.

6150. Do you know whether the cost of throwing is more or less at Mr. Wilmott's than elsewhere?—I do not know; but I believe Mr. Wilmott's prices are quite as low as those of any body else; that is my impression.

6151. Your reason for supposing the throwing trade is transferred to the North is, that the manufacture of silk has gone there?—Wherever it may be I do not pretend to say, whether in the North or not.

6152. Is what you have stated with respect to the West of England true also as regards the mills near London?—It would apply to them if they are unemployed, and to all other mills in the same situation. It must be the increased mills or the increased means of throwing.

6153. Can you state how many manufacturers in Spitalfields are throwsters?—I cannot; several.

6154. But more of them are throwsters than were throwsters formerly?—I should think the increase of the throwsters of late years in London is very moderate.

6155. Are not the large Macclesfield and Manchester manufacturers generally throwsters as well?—They are generally.

6156. Do you not know, that silk has been sent from Manchester to the West of England to be thrown?—Yes, for that very reason; the extraordinary difficulty of getting work done induced them to send from Manchester to the West of England.

6157. In what year was that?—In 1830.

6158. You do not mean to say that that was the only reason?—I think so; that was one of the rare cases.

6159. Have you any authority for saying that?—No authority beyond matter or opinion or belief.

6160. You have never known it done at any other time?—No.

6161. Has the price of English thrown silk been generally higher or lower than foreign thrown silk for the last three or four years, of the same quality?—Of the same quality latterly, I think it has been higher, the English higher; it must come under the term description; the quality must be matter of judgment or opinion.

6162. Is that owing to the English having improved in their mode of throwing silk or the Italians having deteriorated?—I think owing to the English having improved, and also very much improved in their selection of the material.

6163. Has the foreign thrown deteriorated, or is it nearly the same?—The quality of Italian thrown silk has I think of late years remained stationary, in former years I think it improved.

6164. Has the quality of Italian raw silk improved of late years?—I think it has.

6165. Do you speak generally of Italy?—Yes, I do.

6166. The

Mr.
William Stone.

21 May,
1832.

6166. The thrown silk of Piedmont is estimated the best, is it not?—Yes.
6167. Has that maintained its high character?—I think the higher class of it has maintained its high character the same as heretofore.
6168. Do the higher classes of Piedmont thrown silk come to this country?—I think the very fine classes do not; the higher classes that would be useful for the manufacturers of this country do not arrive in sufficient quantities.
6169. You have stated that Italian raw silk has improved, but that Italian thrown silk has remained stationary?—I have.
6170. Can you account for that?—It may be accounted for in this way, that their better classes of raw are making their way to this market.
6171. What is the state of the market here at this time, with respect to the supply of raw and thrown silk?—It is very moderate.
6172. Of what?—Of Italian; I supposed the question referred to Italian solely.
6173. Is it moderate in raw or both?—In both.
6174. Do you mean as compared with former years at this period, or only one or two years?—I think it is rather scarce at this time; I cannot fix my mind on a particular period; I was going to say more scarce this time two years; it is getting into the same position it then was in.
6175. Are prices looking up?—They are rather that way than otherwise.
6176. Do you consider at present that the supply is rather bare?—I do.
6177. More so than usually at this period of the year?—It is.
6178. Do you attribute that to increased consumption, or deficiency in the supply?—The supply up to this time has been small.
6179. Was the crop bad?—It is so reported, and it may have arisen from that cause; still we do not place reliance on the accounts given to us; the result has shown that the supply is small that we have received from last August, compared with previous years.
6180. Are there plenty of inferior raw silks in the market?—A fair supply; a better supply of inferior raws decidedly than otherwise.
6181. A greater proportion of inferior raws?—Certainly, at this moment.
6182. Can you state what proportion of Piedmontese and Lombardy thrown silk comes to this country?—I cannot do that; there are gentlemen here much more capable of doing that than myself.
6183. Can you inform the Committee to what uses the Bengal silks are applied generally?—Principally to the manufacturing of coarser goods; principally for bandannas, sewing silks and stockings, hosiery, and a variety of things of that sort.
6184. I believe some part of it is thrown into organzine?—Yes.
6185. Can you state what proportion of Bengal silk is usually thrown into organzine?—I cannot tell you exactly; there must be a good proportion of it thrown into organzine; for instance you cannot make the best bandannas without organzine.
6186. Is one-fourth of the whole of the Bengal silks applied, in your opinion, in that way?—I should think there can be no doubt of that; I mean into organzine.
6187. Do you not know that there are other organzines used with the Bengal?—I am not aware of that; they use Bengal organzines with other silks; that is the more usual course.
6188. Are not the superior Bengals, some of them, equal to the Italians, or the inferior Italians?—Some of them to the inferior, and much more suitable to some objects than the Italian.
6189. And to a considerable extent the Bengals and the Italians can be applied to the same purpose?—To a considerable extent they may; I conceive Bengal silk to be extremely beneficial to our manufactures in this country.
6190. Do you undertake positively to say, that the Bengals are applied to the same purposes as the Italian?—I never said so.
6191. However Bengals may be substituted for inferior Italians, do you imagine they can be to an extensive degree used as a substitute for Italians?—It would be a very inferior substitute if they were.
6192. Are you aware that they are used?—They are used as a substitute for Italian beyond a doubt to a great extent, and can be; but then it is mixed with Italian.
6193. What quality in deniers is the Bengal in organzine thrown into?—Into all sizes.
6194. What is the finest?—Some as fine as 28 deniers.
6195. What quantity do you suppose the Bengal of 28 deniers?—A very small quantity.
- 678.

Mr.
William Stone.

21 May,
1832.

6196. What is the average quantity?—I should think 50 deniers.

6197. Is the price paid for the organzining of the fine Bengal silk as high as that paid for Italian?—There are some of the finer classes of Bengal silk, but to a very limited extent indeed, that would bear such a construction.

6198. Has the quality of the Bengal silk improved of late years?—I think not.

6199. It is not true, if it has been stated here, that they require but one-third of the labour that some of the finer Italian silks do?—I think the very finest quality of Bengal silk requires a good deal of labour; but taking the standard at 50 deniers, there is no comparison between that and the Italian.

6200. The labour of throwing and weaving is much less?—The labour I believe in the weaving must be the same, but that is a practical question applicable to a manufacturer, not to myself.

6201. It has been stated by some witness, that in the coarser Bengal silks to the throwster and the weaver, there is not a third of the labour required?—It depends on what it is applied to; it is self-evident that the working up of coarse Bengals must require less labour than the working up of fine Italian silks.

6202. The quantity of raw silk consumed is not an exact criterion of the quantity of labour employed?—Certainly not.

6203. What is the average in deniers of the Bengal silk imported into this country?—I can only speak from supposition; I should suppose between 60 and 70 deniers; probably near 70.

6204. To what of our fine manufactures is Bengal silk applied?—To the working of broad goods for instance.

6205. In any large proportion?—Not in any large proportion, nor so much as it was by any means since the introduction of China silk.

6206. Is China thrown into organzine?—Yes.

6207. Chiefly?—A very considerable portion of it.

6208. What is the quality in deniers of that?—I should think from 40 to 50 deniers; it is an exceedingly useful silk, and likely to be highly beneficial to this trade; for it is an increasing article, and will, I have no doubt, be extended very largely indeed.

6209. Where is the Bengal silk chiefly thrown?—Usually in Macclesfield and Manchester.

6210. Are you aware of any efforts made to improve its quality in Bengal?—I am not aware of any.

6211. Do they make any satins or velvets or silks of Bengal?—I believe not.

6212. Any of the richer articles of dress?—I think not; in waistcoating and such articles it is exceedingly useful; it makes exceedingly rich goods, and may be very beneficially employed.

6213. When you speak of the benefits to be derived by the silk trade from the use of Bengal or China silks, you speak of these coarse silks?—I do.

6214. It can but little interfere with the Italian silk, in the use of making superior articles of consumption?—I think it may materially interfere.

6215. Be good enough to tell the Committee what is the average of deniers used in the Italian organzine?—Probably 28 deniers.

6216. You spoke of the very finest Bengal of that size only in very small quantities?—Certainly; you coupled China with Bengal, and a quantity of China silk is thrown into organzine which is applicable to standard goods—to goods the consumption of which we have a considerable call for, mixed with Italian silk; it will very much affect the consumption of that article.

6217. They are used for the shutes while the Italian is used for the warps?—The reverse.

6218. In making the coarse gros de Naples, and those common things principally the production of Manchester and its neighbourhood?—Of Manchester, no doubt, and very largely used in Spitalfields too.

6219. You have been trying for some years to improve the quality of Bengal?—We have.

6220. You think you may improve it still more?—I hope so.

6221. At present the quantity you receive of a quality that interferes with the Italian is very small?—Certainly.

6222. You think the Chinese will more interfere?—It has, and does beyond a doubt.

6223. Has not the quality of Chinese silk improved since the free trade to India?

Mr.
William Stone.

21 May,
1832.

India?—The quantity of Chinese silk of the finest class has greatly increased of late years.

6224. Has the price decreased at the same time?—Certainly.

6225. Can you give the general average of Chinese in deniers?—I just now stated, from 40 to 50 deniers, taking, probably, four-fifths of it.

6226. So that, if you were to estimate the increase of the trade, as far as regarded employment, in pounds weight, it would be necessary to have nearly two pounds of Bengal or Chinese for one of Italian?—That might apply to Bengal, but I do not think it does to China.

6227. If a bale of Chinese will average about 80,000 yards, and a bale of Bergamo would be 160,000, it takes nearly double the quantity?—To work it in labour; the labour part of it; it might abridge labour to a certain extent.

6228. Therefore you would not infer the prosperity of the silk trade from the amount of pounds weight of silk consumed in the trade, but from the fineness and nature of the works into which the silk was used?—The relative bearings should be brought upon it certainly: all I meant to convey was, that the working of China silk is not so light as the working of Bengal; for instance, it occupies a great deal more machinery and time and expense to work Chinese than it does to work Bengal.

6229. So that those districts in England principally employed in making the coarse description of commodity we have been making for the last few years may be in a state of prosperity, while Spitalfields, where you are used to consume Italian silks in making velvets and figured articles, may not be in a state of prosperity?—Certainly, it may be so.

6230. Is not that the fact?—I should think it is the fact.

6231. Does not the same observation apply to Coventry?—I can hardly venture to go so far as that, but I think it a very probable case that it may.

6232. Bengals are said to be thrown for bandannas; are they, in point of fact, thrown for bandannas?—I believe they are; I am in the habit of selling a great deal of Bengal organzine for bandannas.

6233. Are they not used unthrown for bandannas?—They may, for aught I know to the contrary.

6234. To what use are the China silks applied?—Principally to the weaving of plain gros de Naples.

6235. Is it not very important to the English manufacturer, that the supply from China should go on increasing?—Most important, I think.

6236. Is it an article of more importance than Bengal silk, for the uses to which you have alluded?—To the uses I have alluded I think it is; they are both useful in their respective operations.

6237. But for the fine manufacture the China is of more importance than the Bengal?—For the working of plain gros de Naples, it is.

6238. Are fine raw Italian silks necessary to work up the Bengal organzine and China, at Manchester and other places?—Certainly; it is absolutely necessary to have a supply of Italian silk.

6239. Are you acquainted with French thrown silk in this market?—I have seen them; they are an article of rare occurrence.

6240. When you say French throws, do you mean silks thrown in France or of the growth of France?—I believe both, as far as my judgment will go.

6241. How are you able to determine on the one and the other?—It is only on my own opinion, as matter of judgment.

6242. How do you arrive at a conclusion?—By comparison, knowing the qualities of other silks.

6243. Do you perceive any superiority in the French silks?—No, I do not; I think rather the other way.

6244. You have no doubt the silk you are alluding to was French silk?—No doubt of it.

6245. Were they silks approved of by our manufacturers?—They were not.

6246. If French thrown silk, or raw silk, either of them, be prohibited in France, must not the export of it be attended with some additional expense more than that which would be necessary to convey Italian silk to this country?—Certainly.

6247. If it comes at the same price as Italian silk, to what conclusion can you arrive, but that it must be cheaper at Lyons than Italian silk?—If it does come.

6248. Have the relative qualities of what you received been higher than Italian?—I think not.

678.

z z

6249. How

Mr.
William Stone.

21 May,
1832.

6249. How are you aware that the silk you saw was of French growth?—Only from my own judgment.

6250. Have you ever been at Lyons?—Never.

6251. Why might it not have been Italian silk thrown in France?—It might have been; I do not say to the contrary.

6252. On what does your judgment proceed?—On general observation.

6253. Have you seen a great quantity of raw French silk?—Not a great quantity, a few bales; the import has been very small indeed.

6254. Are they smuggled?—If they are prohibited, they must come out in a contraband way some how or other, either by changing them for Italian silks in the depôt, or they must come out in some other way, as the Sardinian silk does.

6255. Is the quality of the French silk so different to the Piedmontese, so as to be able to discover it as a merchant?—I did those that were shown to me.

6256. Do you conceive this was of the finest description of French silk?—That I cannot tell.

6257. As you have never been in France and are not acquainted with the general quality of French silks, how can you feel competent to give an opinion on merely seeing a small quantity?—I do give that opinion.

6258. Was there any particular mark or sign about it?—I would remark, that it was done up as Piedmont, which of course drew my attention to it; it was shown to me as a Piedmont organzine, and I at once told the merchant that I believed it to be French, and he admitted it was.

6259. Are these likely to be of the best or worst quality?—I think of the best.

6260. To what uses were they calculated?—Calculated as a substitute for Italian organzine.

6261. To what extent was this?—To the extent of a very few bales.

6262. To the extent of how many?—Not many.

6263. The quantity of French organzine was quite trifling?—To the extent of about 20 bales; it was mere experiment.

6264. What silks are used here for the purpose of being thrown into marabout?—I believe white silk.

6265. What is the price of that now in the market?—I believe it is 19s.

6266. And subject to what?—A discount of $2\frac{1}{2}$ per cent.

6267. Have you ever seen any foreign marabout in this market?—Never.

6268. You know nothing of the silks used in France for the purpose of making gauze ribbons?—Nothing more than samples shown to me; we have had a very few white French raws.

6269. I think you stated that Italian thrown silks had been exported from this country lately?—They have.

6270. To what ports have they been exported?—I believe Russia, to a small extent, not exceeding 50 bales in the whole.

6271. Have they any throwing mills in Russia?—Not that I am aware of.

6272. Have you known instances of silk being sent from here to Lyons?—I have.

6273. Have you known instances of Italian silk being sent from Lyons to London?—That is the usual course.

6274. And the price cannot be different at London and Lyons for any length of time beyond the cost of conveying it from one place to another?—There is a question rests there; the home growth of France, which must materially assist them in their prices, not being allowed to be exported, that must of course have its effect, it is possible that the market may be under us from that cause; the importation of Piedmont silk in a measure counteracts that conclusion.

6275. The price of Piedmont silk cannot be different in the two countries?—Certainly not.

6276. Have you any doubt that the price of Piedmont silk determines the price of French of the same quality?—I should think so.

6277. Are you sure of that?—I understood the question was, whether the importation of Piedmont silk, of a similar quality, regulated the price of silk in France. I think it does.

6278. It has been stated here, that the Piedmont fetches a higher price than the French?—So it may, but it must be in relative proportion.

6279. It has been stated here, that the silk sold at Lyons to the French being wanted to mix with their own, frequently fetch higher prices than their own silks, though of inferior quality?—That is a very likely thing indeed.

6280. If

Mr.
William Stone.

21 May,
1832.

6280. If so the Italian silk cannot always regulate the price of the French?—It cannot always; the question is, whether it would regulate a similar quality.

6281. Having never been at Lyons you cannot know from practical experience?—I never wish to go to Lyons for such an object as that, or to Italy either. It must be a matter of opinion, acquired by experience, and general knowledge and information.

6282. If Piedmontese silks be used for the making of velvets, as you well know they principally are—Not principally.

6283. But for the making of satins?—And gros de Naples.

6284. If Piedmontese silks be used for any purpose for any article of fashion, and that article ceases to be used, Piedmont silk will not be required?—Not for that article.

6285. And they might not interfere with the French silks, if the supply of French silks of native growth was sufficient for the supply of the Lyons market?—Such a supposition is self-evident, but they do import and use it.

6286. How do you arrive at the fact, that the importation of Piedmont silk into Lyons regulates the price of the silk of the growth of France?—Because it is imported and used.

6287. Is it used in large quantities at Lyons?—The importation appears to me to be exceedingly large.

6288. What is the importation?—Six hundred thousand pounds.

6289. If the growth of France should be equal to 7-8ths of her consumption, and that it should serve for 7-8ths, and she have no necessity at all to use silk of a foreign growth, do you mean to say that the mere transit of silk through Lyons, at a different price would have any influence on the French market?—No, I do not; it would be very light indeed.

6290. Supposing the silk of France to supply 7-8ths of a year, and to be 2s. a pound less, and the French grower having no opportunity to dispose of it to an Englishman, would that circumstance advance the price of the whole of the growth of France to the price of the silk passing in transit through Lyons?—It might not, taking it in the position in which you put it.

6291. Does the largest quantity regulate in general the price of the smaller quantity?—I think it does.

6292. It is more than probable, that the smaller quantity, passing through Lyons, if the Lyonese require it, must drop to the price of the French, rather than that the French be lifted up?—I think that a small quantity passing through France would be of little consequence one way or the other.

6293. The silk goes to Lyons, and might be there bought for any of the markets in Europe?—I believe it may.

6294. The French silk remains there without any such opportunity of so disposing of it?—Certainly.

6295. If the growth of France was equal to the consumption of the French manufacturer, he would not use the other material while he can obtain the cheaper?—Certainly not.

6296. Do you not think such a thing is quite possible?—I think it must turn on the relative qualities. If you were to take half of the French growth as an inferior quality, it would be a distinct question by itself. If you put it on equal qualities, I doubt the position extremely. I think the Piedmont silks form a large proportion of their best qualities.

6297. The French growth being more than the consumption, in such a case what would be the operation on the market in Lyons?—That they would not use Piedmont silk in that position.

6298. At the same time that the growth of Italy must be smaller than is required for the other markets of Europe, what would be the effect; would not the silk of Italy get higher in price, because the demand was greater than the supply?—Certainly.

6299. If the reverse of that position is applied to silk of French growth in Lyons, would not that have a tendency to reduce the price?—Certainly.

6300. In such a case how can prices be equal?—In such a case I do not see how they can.

6301. When you stated just now that the price of Italian silk regulated the price of French silk of the same quality, your answer supposed that the French did actually every year import the silk from Italy?—Yes, and consume it.

6302. The question put, supposes the French manufacture to give for the similar quantity

Mr.
William Stone.

21 May,
1832.

quantity of Piedmontese silk a less price, because of the large quantity produced in France; in that case, the silk would be sent to England, if the price here was higher than in Italy?—If I were a seller, and possessed of two articles, I would sell them alike, and endeavour to approximate the price to the qualities as much as I could.

6303. Then you mean that the prices of Piedmontese silk in Lyons would be the average price of the same silk in England, making allowance for the difference of carriage?—If Piedmont silk was cheaper than Italian, we should import Piedmont.

6304. The duty being in England 2*s.* 6*d.* more than it is in France on the import of Italian thrown silk, must not the price here be permanently to the manufacturer 2*s.* 6*d.* higher than to the French manufacturer?—Certainly.

6305. Would it not extend the consumption of goods manufactured in England, if the duty was lowered here to the price paid by the Frenchman?—Certainly it would.

6306. It would increase the demand for labour, and improve the condition of the weaver?—Certainly, in Spitalfields, I think so.

6307. In two ways; by lowering the price of the material to the manufacturer, and shutting out the goods now legally or illegally brought in from France?—I should think so.

6308. You stated the other day that you consider a duty on thrown silk a tax on Spitalfields. Will the Italian throwster, with reduced duty, supply Spitalfields with foreign thrown silk cheaper than the manufacturer can now buy Italian thrown silk, with the duty of 3*s.* 6*d.* per lb.?—In the present position, the Italians are supplying this market at a considerable loss; and I have no idea that will continue, it cannot possibly in the nature of things. If you take off a duty, your prices may still remain where they are. If you do not take off the duty, the prices of Italian thrown silk must advance, or else not come into the market at all. You must supersede the use of them; and that you must do by importing the raw and throwing it here.

6309. Will the Italian throwster, with reduced duty, supply Spitalfields with foreign thrown silk cheaper than the manufacturer can now buy Italian thrown silk?—The answer I have made was, I think, applicable to that. At present, the Italians must be losing, consequently you must improve the proceeds to them, either by taking off the duty or raising the price, or else they will not send it. The manufacturer, it is possible, may not get it one fraction cheaper than at present.

6310. Would the manufacturer receive a benefit, supposing the 3*s.* 6*d.* taken off?—He might not, in the present position of things; for the future, it is quite a distinct question. The Italian throwster is carrying on, if I am correct in my showing, a very considerable losing trade, which he must stop. If you take off the duty, the question is, how much of that must go to him to induce him to keep on sending, before you arrive at that conclusion.

6311. Supposing the price of 1822 for foreign thrown Italian silk to be the price of the day, inclusive of the duty, and the duty is reduced to 2*s.* per pound, do you consider the price of thrown silk would then be 20*s.* 6*d.* to the manufacturer in Spitalfields?—The position must change: if the raw material goes down, I think they will have the benefit; at present, it is likely you will advance; but that you will not continue to receive throws without some alteration, I am convinced.

6312. Do you think such a reduction would throw them out of employment?—I think the immediate effect of such a reduction would be that, except it is counteracted.

6313. If you thought it would throw them out of employ, you cannot calculate at what price the Italian thrown silk would arrive here?—There would be a competition with the Piedmont organzine; that is, a feature of a million pounds weight of organzine; and what we have received from Italy is, at the utmost, four cwt. per year. If the prices get up in Lombardy, of course you would apply to Piedmont.

6314. When the duty was reduced, would not the price of Italian thrown and raw be nearer to one another, and the Italian be thus able to maintain a higher price for the raw?—That must resolve itself into a question of price of throwing; if the Italian can throw cheaper than the Englishman, they will keep their price; if they cannot, they will send the raw in.

6315. You gave that answer, alluding to the prices of raw and thrown which they bear when sent here?—That was the question put to me.

6316. The Italian having 1*s.* 6*d.* per pound less duty to pay, surely he can give a better price for raw, and thus the same price will be maintained for the thrown, without

Mr.
William Stowe.

21 May,
1832.

without benefit to the manufacturer?—No doubt the reduction of duty of 1 s. 6 d. is an advantage to the Italian throwster.

6317. Would not a large importation of Italian raw silk be better for the manufacturer than a large importation of foreign thrown silk?—If you exclude foreign wrought silk, undoubtedly.

6318. Would it be cheaper?—It would.

6319. And would it not be better to produce that large importation of raw silk by an increased duty on thrown?—That would have the effect of doing it; but you will recollect, that is a protection to the throwster, not to the manufacturer; it is a protection to the throwster and the manufacturer combined. If you should grant our trade a very grand thing—prohibition, then it might be quite another question.

6320. A duty of 5 s. on thrown would enable England to give a better price for the raw in proportion to the thrown, and Italy would direct its attention to supply England with good raw silk?—Yes.

6321. And an increased duty on thrown would consequently work better for the manufacturer than a reduced duty on throws, by the location of the market in England; and as the foreign thrown markets of Italy are already sufficiently acted upon by the various continental manufacturers, to the disadvantage of the English manufacturers, why advocate a reduction of the duty, which, in effect, seems to place the English manufacturer more in the power of the Italian?—There is a middle part of that question, that is not quite clear “it is quite acted on by the foreign demand,” I presume, for the article; if it is, it must be to raise the price of it.

6322. If you shut out the Italian thrown silks from England, would not that lower the price of thrown silk in Italy, and give the foreign manufacturer a great advantage over the English manufacturer?—I think so.

6323. By a small additional duty, just sufficient to save the throwing trade of this country, the manufacturer may retain to himself the material, and regulate the price of it relatively, with the price of his goods?—That resolves itself into a question between the throwster and the manufacturer; between the country and the London and the Coventry manufacturer without mills; the latter are placed between the country manufacturer with mills on the one hand, and the Frenchman on the other; they have two competitors, but it is far better that they should have the internal than the external competition.

6324. Whatever protection is given to the home throwster will raise the price of silk to the home manufacturer, as compared with the foreign manufacturer?—That is the tendency beyond a doubt, by the same principle as lowering the duty has a tendency to increase the quantity of foreign thrown silk, and of course to injure the British throwster.

6325. In proportion as the duty in England has been lowered, have the Italians got more or not; have not the profits of the Italians decreased in proportion as our import duty increased?—It has so occurred, but it has not arisen from the reduction of duty.

6326. It therefore shows that the causes which operate to affect the price of Italian silk have been quite independent of any alteration of duty here?—It shows so far as this, that your British throwster has made immense strides, whether at the expense of his working people, is not the question.

6327. Has the actual reduction of the duty on thrown silk in England affected the price of the thrown here?—The result has shown that it has not.

6328. Do you mean to say, that the reduction of the duty on the foreign silk has not lowered the price of the thrown here?—I do not mean to say it has not; it would be extraordinary if it had the contrary effect; the effect of taking off the duty now would be to lower the prices. I think there are circumstances to prove that an alteration must take place, and consequently that you must reduce it; still the tendency of taking off the duty must be injurious to the British throwster.

6329. Then you have stated that the foreign throwster is not selling to an advantage?—That is my opinion.

6330. Do you conceive that is not the case with the British throwster?—To a great extent it may be.

6331. Do you not happen to know they are in great distress, and hands are out of employ?—Generally, (I know there are very great exceptions to that) I believe so.

6332. Within the last two years?—Within the last two years.

678.

z z 3

6333. Do

Mr.
William Stone.

21 May,
1832.

6333. Do you mean to say when the prices are reduced from 5s. to 3s. 6d., and the proceeds on the labour reduced in the same proportion that the manufacturer can carry on a beneficial trade?—The throwster may, in the position you have put it, on your own showing; if you mean the operative, it is certainly otherwise.

6334. The broker gets a per centage for what he does?—Yes.

6335. You get a larger amount for the per centage for 200l. than 100l.?—Certainly.

6336. Do you not suppose that every man calculates his profits on the amount of his returns?—I do not, as a manufacturer; I think it is a very distinct thing. A broker might, or a commission man, or a warehouseman.

6337. Do you mean it is the general course for a man in trade, whether he be a broker, a merchant, or a salesman, not to calculate and aim at a certain per centage on his goods?—Yes, I do mean to say they aim at a per centage.

6338. Do you imagine that when a throwster, admitting he does the same quantity of business, is reduced from 5s. to 3s. 6d., must not experience a loss to that extent, either to himself or the person he employs?—No doubt, and to those he employs, unless it is counteracted by the capability of his mill.

6339. I ask you now, whether you do not believe that a great deal of distress to the throwster and his workmen has arisen from the reduction of prices, independent of the falling off of business?—I think so, certainly.

6340. If the foreign throwster requires a remunerating price, the British throwster does also?—Certainly.

6341. Do you not know, that there has been a great deal of distress in the weaving districts also?—I have no doubt of it.

6342. And much distress in Spitalfields?—No doubt there has.

6343. Do you think there is a depreciation of profits?—In some cases I think so; but I think men are making money there.

6344. Do you not suppose, generally, that there is a great depreciation in the profits of the working classes, both here and at Coventry, and elsewhere?—I have no doubt there has been considerable difficulty in carrying on the trade.

6345. Do you not know that there has been great reduction in the profits, and consequent distress?—I understand so, and I believe it.

6346. You have stated, that you have known the trade as bad, or worse?—I did.

6347. Can you state any particular period when the weaving business was worse than it is now, taking it in all its branches, and can you assign any cause for it?—I do not go so far as to state any particular department, but we have constantly known distress in Spitalfields, and have contributed to its relief: we have had soup societies, and a variety of other things, and an equal extent of distress as we have now.

6348. But for so long a period?—I am not prepared to say for so long a period, by any means.

6349. Have you known any period of very great distress which has continued so long either in Coventry or elsewhere, among the weaving branches generally?—I think, generally speaking, the complaints are very considerable, and I think there are very considerable exceptions as to the profits of the master; I think the workmen work exceedingly low, and must be suffering considerably.

6350. Do you ever remember any period in which the distress was so severe, and for so long a continuance as the present?—I never knew the country in so bad a state, as far as opinion goes generally.

6351. Do you not happen to know, the distress in former periods has arisen from particular circumstances, such as in 1818, when almost every branch of trade suffered, for instance, the watch trade at Coventry, which arose from peculiar circumstances?—I cannot tell the circumstances; that there have been these things I know; I believe the distress is exceedingly great at this time, and I think it is very likely there are men more capable of answering this question than I am.

6352. You have stated before, that you had known the trade as bad, and as much distressed?—I meant in my own department.

6353. It has been stated by several witnesses, that the silk trade, with the exception of those fluctuations that must take place in all large manufacturing trades, was generally increasing and prosperous up to 1826; do you believe that to be a true statement?—I believe there were a very considerable number of failures, but

but I think the trade was increasing up to 1826; the consumption of the article proves that.

6354. It is stated that though the trade did not decline to a great extent after 1826, it ceased to be so prosperous?—A considerable degree of distress occurred in 1828, but we have since got over it.

6355. After 1829, did not the distress increase?—I think the trade rather improved.

6356. What, since 1829! since the reduction of the duty?—I think 1830 was a very good silk year for the masters employed in it, who understood their business; 1831 I think a bad year.

6357. Then to what do you attribute all this distress, when the consumption of the article was increasing, and fashion extending; how do you account for it?—It is exceedingly difficult to account for it, as in the case of Mr. Wilmott, whom I mentioned; that man has been greatly distressed, but then the work has been done in the country; it may also apply to other parts; the country is in a bad state; labour is exceedingly low, 20 or 25 per cent. lower at Manchester than at Spitalfields at this moment, and consequently that most presses on Spitalfields.

6358. Do you not apprehend there are sufficient workmen to supply the whole demand?—I do.

6359. And sufficient competition at home?—Yes.

6360. Do not you think the introduction of a large quantity of foreign goods, put into competition with our own labour in our market, must have been one great cause of this distress?—I do believe that to be so; I believe if you could have shut out foreign goods effectually, trade would never have been in a more flourishing state than now, with the present rate of duties.

6361. You do not know of any practical advantages that the measure has produced?—Except that the taking off the duty has lowered the price of the material exceedingly, and extended the consumption of it very largely.

6362. If the raw material is sold at one half, and wages and profits are also reduced, must not the returns of the manufacturer, unless he sell double the quantity, fall off one half?—Certainly.

6363. Can any manufacturer get more than a fair and remunerating profit with this competition?—Certainly not.

6364. If his returns be reduced to one half, unless he can double the quantity he sells, must it not reduce his profits?—In the end, certainly it must.

6365. Do not you suppose that if the foreign silk was here, it must tend to distress, if not ruin a great many of the throwsters?—I think it would have that tendency.

6366. If that be the case, and supposing they are so ruined, and we imported foreign thrown silk to a large extent, would not that in a great measure put us in the hands of the foreigner?—I think that is a much more extended question; we are, for instance, in the hands of the foreigner for the raw material altogether; we do not grow it here, consequently we are in the hands of the foreigner; in the nature or order of things it will come here if you buy it; the Frenchman, your competitor, cannot get it unless he pays as much as you.

6367. It is said that our English throwsters have been the cause of the depression of the foreigner, must not that operate much worse?—It must operate badly.

6368. If you had not the competition of the foreigner, all these people you employ would be more prosperous?—Provided you worked the same quantity of goods.

6369. It has been stated by a gentleman who brought all the silk to our standard, the coarse and the fine, and who made out that it had declined three per cent., instead of having increased; do you believe that to be the fact?—That is a question beyond my understanding for the moment.

Mr.
William Stone.

21 May,
1832.

Mercurii, 23^o die Maii, 1832.

EDWARD STRUTT, ESQUIRE, IN THE CHAIR.

Mr. *William Stone*, called in; and further Examined.

Mr.
William Stone.

23 May,
1832.

6370. IS the throwing of silk a component part of the manufactory?—The silk cannot be worked into goods without being thrown; that is the usual course.

6371. Is it an advantage to the manufacture; and is it of importance to keep the component parts together or to separate them?—That must depend upon circumstances.

6372. Do you consider that the throwing of Italian silk can be preserved in England with a lower rate of duties upon the importation of foreign thrown silk?—That must depend upon the price that the British throwster can work it for, if I am to give an opinion whether the British throwster can work under less protection or not (I am not a throwster.) I should think that could be proved, even according to the evidence we have heard in this room. It is possible, and I believe it to be the case that one throwster is able to work for less than another; but I think it is fair and proper to suppose the competition to be such that the British throwster throws at the lowest possible price it can now be done for.

6373. Were you alluding to some one individual?—No.

6374. Was it the certain rate you allude to?—The rate stated in this room, which I said was fairly stated; viz. 3s. 9d. per lb.

6375. Supposing that to be the rate, do you think the throwing Italian silk can be preserved in England with a lower rate of duties on the importation of foreign thrown silk?—I think it can. I think the figures would show that certainly.

6376. Would reduced or augmented duties on thrown, act the best towards producing a larger importation of Italian raw silk?—An increase of duty on thrown silk must have a tendency to increase the supply of the raw material.

6377. As a protection to the throwster?—Certainly.

6378. Do you know the parties in Italy who send silk to this country under the marks D. S. and the initials of D. S. with an S. through the D.?—I know them by name. The one with the D., with an S. separate, we believe to be a man of the name of Starango who is since dead; and I think what I have heard bears out the opinion I gave the other day that the Italian has been losing money. It has been stated that letters have been received from the executors of Starango last week, that within the last few years he has reduced his property from 45,000*l.* to 30,000*l.*, which I believe to be the effect of his trade with this country.

6379. Do you believe the Italian merchant has been trading at a great loss the last few years?—Yes, in thrown and raw too.

6380. Do you state that those losses were on the thrown or the raw?—On his general trade, without any distinction.

6381. When did Mr. Starango die?—I cannot state the date; but the first letters were received, I believe, during the last week—within five or six weeks, or it may be less.

6382. The initial of D., with an S. through it, is whose?—Stainer.

6383. Is he dead?—No, I believe not.

6384. Are those parties silk merchants, residing in Italy?—Yes, they were.

6385. Do you happen to know whether they are considerable silk merchants, and many years accustomed to the silk trade in England?—I believe they were.

6386. Can you state the quantity each party is in the habit of sending annually to this market, from the 1st of January to 31st of December?—I cannot.

6387. Should you think 150 bales the annual average importation from each?—I think it is probable; but without returns I cannot state it; I never so particularly noticed the thing as to know what one man sends and what another.

6388. Do you think any parties might be selected, better able to demonstrate the working of the trade between Italy and England, than those men who have in their hands so considerable a part of the whole silk trade from Italy to England?—I think they are very excellent authorities.

6389. Can you state the quantity of thrown silk, compared with the quantity of raw, sent to England by those two Italian merchants during the last four or five years?—I cannot.

6390. Does

Mr.
William Stone.

23 May,
1832.

6390. Does your own house keep an account of the raws and throws sent to this market from Italy, according to the marks on the bales representing the Italian proprietor?—No, we do not.

6391. Do you know that those two Italian merchants have of late years increased their importations of thrown silk?—I do not.

6392. You not having had any experience in Italy in the reeling and throwing and buying and selling silk, may not it be possible that those gentlemen, finding advantage in sending thrown silks to England, notwithstanding the competition, conceive they may not have been pursuing a losing trade?—It is a possible case, but a very improbable one I think.

6393. You have stated that during the seventeen years you have known the silk trade, there have been periods of greater distress than the past winter; be pleased to state what period you refer to?—I stated it in my own particular department. If I recollect right I qualified it with that; if I did not, I beg now to qualify it in reading over the evidence afterwards. I have it still in my recollection that it appeared so; my experience, as a silk man, for the first seven years, did not give me that general means of information which the last ten years have done.

6394. Have there been any periods of distress within the last ten years?—There have been repeated fluctuations and distress, as far as my recollection and opinion go, without fixing on any particular period.

6395. Do you mean distress, or that fluctuation which exists in the silk trade from change of season?—There have been a number of failures, and we have heard of great distress in Spitalfields; we have heard of soup societies, and things of that sort, which indicates distress.

6396. Do you mean that in the last ten years, there has been distress to compare with the distress of the last year among the operatives generally?—I think it is probable, but will not undertake to say that has been the case.

6397. Do you think it ever continued half the time this has continued?—I think it is possible that may not have been the case; I will not undertake to say it has been half or a quarter of the time.

6398. You mean to say you have known periods of as severe suffering within the last 10 years, as the last winter?—I do not intend to convey anything so pointedly as that; my observations did not extend I think to the operatives; I think I was asked generally, and I remarked upon the state of the silk trade generally, as to the complaints we have heard; but not from my intimate knowledge.

6399. The question refers to the actual distress among the work-people in Spitalfields?—I do not know the fact from my own knowledge; I believe it to be the fact.

6400. Have you any idea of the number of looms now not in work in Spitalfields?—No, I have not.

6401. Did you ever know a month of May before, in which there were so many looms unemployed?—I cannot say.

6402. Do you believe there have ever before been so many hands unemployed as now?—I doubt whether there are now any good hands unemployed.

6403. Do you believe that there are any unemployed?—I have no doubt of that fact.

6404. You state that the throwing mills of this country have increased very considerably within the last ten years, are there more spindles now in work than there were on the 1st of January 1826?—I cannot state that; I have stated that I think there is more silk consumed, the consumption will show the importations and the sales generally, I meant it to apply that way; as to my personal knowledge whether there are more mills or not, I do not pretend to say.

6405. Do you form your conclusions as to the state of the trade, from the sales of silk, and judging from the pounds weight?—Certainly, from the consumption.

6406. Is it not the case, that one bale of Bergamo silk will find twice the quantity of work that one bale of Bengal will find, for the throwster?—Taking them generally, which is the fair way, certainly the Italian silk takes a great deal more labour than the Bengal.

6407. You have stated that the throwing trade has gone from the West of England to the North, can you say to what towns in the North it has gone?—I have said it was exceedingly difficult to answer that question; I instanced the case of Mr. Wilmoth, as a circumstance, to show the difficulty of ascertaining it; that the silk is worked in the country there can be no doubt; that it has increased in quantity there can be no doubt; the official reports show that to be the case.

678.

3 A

6408. Has

Mr.
William Stone.

23 May,
1832.

6408. Has any of it gone to Macclesfield or Congleton?—I should think it has gone of late years to Macclesfield and Congleton.

6409. Do you know the present state of those two towns, as compared with 1823?—No, I do not.

6410. Can you assign any reason for the throwing trade declining in Macclesfield and Congleton; are the wages high, or is throwing not well understood there, or what other reason can you assign?—I cannot assign either of those reasons; all I can say is, that the silk is increasing in consumption, therefore I take for granted, either the mills are capable of turning out a larger quantity of work, or it is done at Manchester or elsewhere; I can only do it from inference.

6411. Is the increase in the throwing mills at Manchester since 1826 equal to the decrease in Congleton and Macclesfield?—That I cannot tell.

6412. The Italian raw silk imported into this country is in great part thrown into tram, is it not?—A very large quantity must be thrown into tram.

6413. Until the last two or three years, were not the importations of tram very small?—Till the season of 1830 to 1831, decidedly so.

6414. Were not the importations of Italian tram very large during the year 1831?—During the season of 1830 and 1831, they were.

6415. You have stated that the account of the prices of raw thrown, &c. given in the list on your examination, was made up by Messrs. Gondolfi & Company; have not they since increased very much their importation of thrown, as compared with their importation of raw silk?—I am not aware of the fact, but from 1830 to 1831, I conceive, as merchants, their importations of thrown, it is fair to suppose, were equal to 63 per cent. on their raw; taking it as a general question, I can only answer it as a general question.

6416. Did not their importations of thrown silk in 1831, equal, or nearly so, their importations of raw?—I must answer that question in the same way as before, I have no other mode of doing it; during the season of 1830 to 1831, their importations of throws, I conceive to have been 63 per cent.; I do not know whether it was more or less.

6417. Was this alteration in the trade brought about by the advice given to them by your house?—I do not know that it was; but it was evident that the market would produce that result.

6418. It is usual for men to consult their brokers?—They would ask their broker, and he would answer them, let him be who he might.

6419. Did not they import one-third of the foreign thrown tram imported last year?—I cannot say, they may have done it for aught I know.

6420. You have given in an account, showing the average prices of raw silks and thrown silks into this country, from 1822 to the present time, and have deduced from it an account of the price per pound the Italian throwster got in each year for throwing; to enable the Committee, however, to arrive distinctly at the price he obtained for throwing, should not you have given the price of raw silk in Italy?—I have nothing to do with that, I took it merely on the principle of this market, what a man would have got for the one or for the other if he sent to this market.

6421. You do not know at what he purchases the silk?—Certainly not.

6422. So that where he seemed to be losing 3s. he might be losing only 1s. 6d.?—And on the other hand where he appeared to be getting 1s. 6d. he might be getting 3s.

6423. Do you know what were the prices in Italy?—I do not.

6424. You have stated that the nett proceeds to the Italian throwster in 1831 were 2s. 3d. per lb., that of course includes waste?—That includes waste, all he gets is 2s. 3d. to cover every thing.

6425. You have stated the price of throwing organzine in England to be 3s. 9d. per lb., do you include waste in that?—I do not include waste.

6426. Then whatever the loss by waste may be that must be added to the 3s. 9d.?—Yes.

6427. What do you allow for waste?—That depends upon the silk.

6428. It varies from 3 to 15 per cent., does it not?—It may, but I should doubt whether 15 per cent. is common now.

6429. Do you think 10 per cent. is common now?—No, I should take it upon the average of all the Italian silk put together, it would not exceed six to seven per cent.

6430. You have stated, that within your knowledge some English throwsters did well last year, was there not something peculiar in the circumstances of that trade

trade so as to take them out of the general rule?—I am not aware of that exception; their local advantages may have been such, but I am not aware of any peculiar advantages.

6431. Out of your extensive connexion how many throwsters, can you say, did well last year?—In my extensive connexion I should hope most of them did well; but I should also have added, I believed 1831 to have been a bad silk year; and so I think still.

6432. What do you mean when you say a bad year?—A bad year as to profits.

6433. Did any of them work organzine?—No doubt of it.

6434. Did any advantage, supposing there to be an advantage, arise from the working of the lowest Italian silks?—I think that is one cause of the ruin of the throwster, working bad Italian silk in this country.

6435. Bad Italian silk does come to this country?—Certainly it does.

6436. There is but a small proportion of the silk imported you would call good, is there?—There is a pretty fair proportion, and it has been increasing of late years.

6437. What proportion do you think?—I should think, perhaps, two-fifths would be of the highest quality.

6438. Do not those silks waste very little?—They do.

6439. Cannot a throwster turn off a large quantity of this silk from its working freely?—Yes.

6440. And it is an excellent article when finished?—Yes.

6441. Do you think the throwsters, who have worked upon the common run of Italian silks, have retained a remuneration?—I doubt it very much.

6442. Have there not been a great many failures among them?—There have.

6443. More than in any preceding year?—Not more than in 1826, nor so many I think.

6444. Do not the districts, where the Italian plan of throwing is understood, generally speaking, produce better raw silks than those districts where they are ignorant of throwing?—I think they do, as it applies to Lombardy.

6445. You have stated, that if the duty on thrown silk should be continued at their present rates, the quantity imported will decrease; how do you reconcile this opinion with the fact, that since the reduction of the duties in 1829, there has been an increased importation of organzine, and that trams have, for the first time, been imported to any extent?—I explained that, or endeavoured to explain it, from the circumstances of this market; in 1830 the prices were very high, they afforded a considerable temptation to the Italian to send his thrown silks here, which applies equally to trams; since that period they have considerably decreased as it regards tram; as the question has been introduced, I believe 706 bales were imported, they have fallen to 62 bales during the present season.

6446. Do you think there would have been more if the duty were increased?—Certainly not.

6447. Must not that depend upon whether it is profitable to him or otherwise?—If I am asked whether the tendency of the reduction of duty has been a greater inducement to him to send silk, the thing is self evident.

6448. If in consequence of the duty the importation of foreign thrown silk should decrease, do you think the importation of raws would decrease also?—No, I think they would not decrease.

6449. If there should be a diminished importation of thrown silk, and an increased importation of raw, would that not give additional employment to the English mills?—Certainly.

6450. Are the best filatures of foreign thrown silk better than the generality of English silk?—Yes; the best of the thrown silks of Italy as compared with the generality of thrown silks of England, certainly are better.

6451. Do you attribute this superiority chiefly to the silks which are used, or to the operation of throwing?—To the silk they are thrown from.

6452. Then at all events the Italian throwster has the advantage of having the best silk to throw?—He has an opportunity of buying the best silk, certainly.

6453. Will you explain the business of a silk broker, and the sources of his information?—As an agent between buyer and seller.

6454. Is it not necessary to be a sworn broker to practise in your trade?—According to the rules of the City of London it is.

6455. Are you a sworn broker?—That is one of the questions I decline to answer.

678.

3 A 2

6456. Is

Mr.
William Stone.

23 May,
1832.

Mr.
William Stone.

23 May,
1832.

6456. Is it any part of the broker's business to deal in silk for his own account?
—Certainly not.

6457. Do you buy any silk from the Italian merchants for principals?—Yes.

6458. Do you arrange for the throwing of this raw silk for the principal with the throwster?—Yes, frequently.

Mr. John Hall, called in; and Examined.

Mr.
John Hall.

6459. IN what business are you engaged?—A silk throwster and silk manufacturer.

6460. How long have you been in the silk trade as a throwster?—About fourteen years.

6461. Were you engaged in the silk trade before that period?—I commenced business under the firm of Haycock, Sawyer & Hall at Christmas 1806, as manufacturers of ribbons.

6462. As a throwster, what description of silk do you now throw, and where have you your mills?—My mills are situate at Coggeshall, in the county of Essex; the article I generally throw is Italian organzine.

6463. Do you throw any other silk but Italian organzine?—Occasionally; but I do not wish to enter into the explanation of other silks.

6464. Do you throw the Italian silk on your own account or for others?—I throw on my own account.

6465. In the purchases you make of raw, what advance do you consider necessary on the raw to remunerate you for the wages, waste, and other expenses attending the throwing?—That is a question which embraces so many sizes, that before I could give you an answer it will be necessary to fix upon a particular size, say a 30 denier silk, 5s. upon cost.

6466. How much do you throw in a week?—Five cwt. is my usual average; 400 of organzine, and 100 of tram; that is what my machinery is calculated to do regularly.

6467. What is the total amount of wages for throwing that quantity?—Five shillings per lb. would cover all expenses attending it, and leave a profit to the throwster.

6468. Does that include waste?—It includes waste, wages, expenses, brokerage, exchange, interest of investment, and every thing from the first cost of the raw, say 17s., and sold at 22s.

6468.* It includes profit also?—Yes.

6469. And tear and wear of machinery?—Yes, every thing, as I before stated.

6470. If 1s. 6d. were taken off the duty now payable of 3s. 6d., would that prevent your throwing?—I think not; for I commenced under the protection of 14s., made a large investment with my late partner, Thomas Sawyer, above 10,000l.; afterwards we were reduced to 7s., and we said we should be ruined, but we found ourselves exactly in the same situation. It was then reduced to 5s., and from that to 3s. 6d.; and at 3s. 6d. duty I find myself in a better situation than I was before; therefore, if 1s. 6d. was taken off, my opinion is, the demand would be increased, and no injury arise to the throwster.

6471. Has the reduction of your expenses arisen from the reduction of wages paid, or from other economical arrangement in the manufactory?—A great and principal reduction in my annual expense arises in the first instance from a reduction of about twenty per cent. on wages; in the second, by making less waste; and lastly, by the reduction in the prices of coals and candles.

6472. What are the class of persons you employ in your mills; are they grown up persons or children?—I begin with girls about nine years of age; and many have continued with me ever since the mill was established.

6473. Are there any men?—Only one for each room, to overlook and keep them in order.

6474. What are the range of wages from the time they enter, until they are able to do full work?—I begin with children at 1s. 6d. to 2s. a week; I bind them for three years, advancing them every year.

6475. That is 3s. at the end of three years?—Yes; then I go on with a second binding at 3s. 6d., 4s. and 4s. 6d., that is taking the highest I give.

6476. Do you employ any boys?—Very few, only to clean the work.

6477. Are the overlookers paid by piece work, or by the week?—I pay by the week.

6478. Do

Mr.
John Hall.

23 May,
1832.

6478. Do you consider that you would actually require a protection of 2 s. per lb. on organzine silk?—I think so; for in the first place there is a duty on the other side, which would require 1 s.; in the next place the silks in the raw state, after having been conveyed from Italy to this country, makes about 1 s. difference in point of waste and condition, which would give the Italian throwster an advantage over me. In every other respect I should say I want no duty, because my organzine, from the same filature, will sell for 1 s. per lb. more than that of any Italian throwster.

6479. Would it be worth more than that of other home throwsters?—I do not say that.

6480. Are you speaking of 30 denier silk?—Of any size.

6481. Have you frequent opportunities of comparing our silk with that of the foreign throwster; and do you consider your own better?—Yes, better cleaned, and better worked generally, in consequence of better machinery; it makes less waste after it has been dyed.

6482. Do you consider that your capability of throwing at the rate you mention, is confined to your own mills; or do you consider that other mills in the county of Essex throw on the same terms?—Certainly they could; I know one that does; I do not know any other.

6483. What one mill is that?—The owner's name is Mr. S. Brown, in Colchester; his manager was many years with me.

6484. Do you work by water or steam?—By both.

6485. That is included in your expense?—Yes.

6486. Has Mr. Brown steam or water?—Only steam.

6487. You say you should consider 5 s. as a remunerating price for organzine; what would you charge for tram?—I should require 4 s.; but I would rather throw organzine at 5 s.

6488. Do you mean the 4 s. tram of 30 denier silk?—Yes.

6489. What difference would 22 denier make in the charge?—Twenty-two denier 7 s.; 26 denier 6 s.; 30 denier 5 s. It would require 2 s. a pound more to leave an equal remuneration to the throwster.

6490. Are you enabled to state what proportion of the silk is thrown in England at 22 to 26, and what proportion at 30?—No.

6491. Can you state what in your view are the component parts of the 5 s.; can you give the Committee any idea how much is for wages, how much for machinery, how much for capital, and how much for profit?—I cannot dissect it correctly.

6492. Do you charge interest upon the whole outlay you have laid out?—No, I have lately worked it down to what I consider a healthy price, so as to meet the present bad times.

6493. Do you consider it now worth 2,000 l. or what amount?—I beg to decline answering that question.

6494. At what period did Mr. Brown erect his machinery at Colchester?—In 1826 he commenced.

6495. Did he erect it himself or was it erected for him?—He bought an acre of freehold ground and built the mill upon it.

6496. Does he throw at the same prices as you do?—I know his wages are as low, and living in a more populous town, I should say lower than mine.

6497. Is he throwing silk at the present time in this mill, which he himself erected?—He does, I have heard about 800 lbs. on the average per week, he works night and day, and so do I.

6498. With respect to that mill, you have charged yourself with what you consider a fair rent for the mill at the present time?—Yes; I charge it according to what I think it would sell for.

6499. Do you think you could erect a mill now with all your experience, at the amount at which you value this mill, at the present moment, sufficient to throw the quantity you do at the same rate, and yet have a profit?—If things are permitted to remain as they are, I would invest 10,000 l. in another mill, double the size of my present one.

6500. Would you erect another mill at Coggeshall?—No, but I would erect one in a situation where I should have more hands.

6501. What do you charge for throwing 30 denier?—I should be happy to do it at 5 s. a pound.

6502. Do you obtain that price now?—I do.

678.

3 A 3

6503. Twenty-

Mr.
John Hall.

23 May,
1832.

6503. Twenty-two to twenty-four denier you should charge 2s. more for?—I should.

6504. What should you charge for 20 to 22?—I should expect 7s.; it would depend upon the quality of the silk.

6505. What is the size most used in the trade?—The size as much thrown as any is 26 to 28 deniers; I always find that very marketable.

6506. At what would you throw 26 to 28 denier?—At 5s. 6d. per lb. including waste, &c.

6507. Are you in the habit of seeing the best foreign thrown silk?—I am in the habit of seeing samples of foreign thrown silks of most descriptions by way of comparison only.

6508. You state that you would undertake to throw a silk which would be 1s. per pound better than any foreign silk?—Yes, from the same bale.

6509. Do you get that price for the silk you throw?—I believe I do, and more.

6510. What proportion of your silk is thrown on commission, and what proportion on your own account?—I have no commission work. I pay cash for all the silk I throw.

6511. What proportion of the silk you throw do you use in your own manufacture?—Last year I used only one third.

6512. Are the Committee to understand, that the 5s. you affix to the raw silk is partly a profit on the thrown silk, partly charges for throwing, and a profit for throwing, or is it simply confined to throwing?—For every expense and profit at the end of the year, to put me in a situation that I should be satisfied to go on.

6513. Having bought the raw silk, and sold the thrown at those prices, you have a remunerating profit?—Yes.

6514. Do you work night and day?—Yes, all the year.

6515. Have you a change of hands?—Yes.

6516. You state that you throw silk better than any Italian you see?—Any that comes under my notice.

6517. How do you account for the importation of Piedmont organzine?—Piedmont is a silk that we do not get the good raws; therefore I have no experience upon that; I am comparing 30 denier silk of good Bergamo Italian silk.

6518. You say that things remaining equally good as at present, you would expend 10,000*l.* in another mill?—I would.

6519. And yet you are compelled sometimes to take against your will silk of 22 to 26 deniers?—When I see the market runs upon those sizes, and I think I shall make a larger profit, I sometimes buy them, but they do not always answer my expectations.

6520. And yet you say you throw silk better than any person except Mr. Brown?—The proof is, that I can get a better price for the same filature than I see others are obtaining.

6521. Why should you who work so well, be obliged to take silk you do not want?—I am not obliged, but I do work it occasionally, expecting to make a profit.

6522. Why do you not always take that at 30 deniers; is not that always to be had?—Not always.

6523. Those silks of 22 deniers you cannot throw at less than 7s.?—Not to leave a satisfactory profit.

6524. You state that you would build another mill where hands are more plentiful, what is your object in that?—To make a living for my family.

6525. Do you expect to get wages at a lower rate?—No, I do not wish to have the wages lower, but to have a larger supply of hands.

6526. You could not get a change of hands at the same price?—Not in my present situation.

6527. Silk at 22 to 24 deniers you would not like to throw at 5s.?—No, I would sooner shut up than do that.

6528. You speak of throwing the best silk at 5s. a pound, would you like to throw the ordinary quality at 5s. a pound?—I should not.

6529. Every body can obtain this superior quality of silk you throw?—Every one can if he pleases; the market is open to them as well as to me.

6530. You have the same opportunity as every other man?—Yes, and every man the same as me.

6531. Do you ever throw on commission for others?—No; if they will give me my price I should prefer that work.

6532. Do

Mr.
John Hall.

23 May,
1832.

6532. Do you mean to say you always buy the silk and sell it, and that it is not sent to you at a certain payment for throwing?—All the silks I purchase I buy *bond fide*; a broker may say at the time, I can obtain a customer at such a price for it in organzine; if it is satisfactory I agree to sell it.

6533. There are persons in the habit of purchasing silks, and sending to be thrown at a certain price; have any persons sent you silk to be thrown, and given you those prices?—I have not thrown for hire.

6534. Has any weaver sent silk to be thrown by you for which you have received that payment for the throwing?—I have no manufacturing customer that I recollect.

6535. Do you not take silk on commission, the terms being working, and the waste?—I agree to buy the raws, and take a price for the organzine; say the former 16*s.*, the organzine 21*s.*

6536. Have you paid brokerage in that case?—Yes, of course; for I have bought the silk myself, and have to sell it again; and brokers will not sell without brokerage.

6537. That broker gets double brokerage?—Yes, but not from me.

6538. That is included in your 5*s.*?—Brokerage upon the thrown silk is.

6539. Is any of your own silk now in your agent's hands for which you cannot get customers?—I have not an ounce of silk which is not at my mills or at the dyers.

6540. You are a throwster, and depend upon your throws?—Yes.

6541. Is it not important to have a good supply of Italian raw silk, from which you should make a selection for your throwing?—I think so; the better the market is supplied, the better chance of getting a good article.

6542. To secure this, is it not desirable to throw impediments in the way of those good raws being used by the throwsters in Italy?—It is.

6543. Do you consider the duty now levied on organzine one of the greatest impediments to a good market?—That is a question I am not capable of explaining what are the impediments; I am quite out of the way of importing throws.

6544. You are desirous of having a good market, and plenty of choice, in order to have a good selection?—Yes.

6545. Do not you now get on an average about 3*s.* 9*d.* and 4*s.* for that you charge and get 5*s.* on?—Others may; I have no commission work.

6546. Can you state what is the nett amount per lb. remaining to you for throwing, whether 3*s.* 6*d.* or 4*s.*, or what?—The nett amount for throwing must depend upon the waste, which varies from three to five per cent.

6547. At how much do you estimate the actual expense of throwing divesting it of brokering and profit, and so on?—I should say 1*s.* 6*d.* the pound for bare wages.

6548. Eighteen pence upon the nett wages?—As near as I can average it.

6549. Do you mean to say you get 1*s.* 6*d.* per lb. profit over the capital employed, and over wages and other expenses?—Certainly not; I should say 1*s.* 6*d.* more for waste and interest of investment, leaving 6*d.* per lb. for profit.

6550. Do you mean to say this 1*s.* 6*d.* is the whole of your expense?—For one portion of expense as near as I can recollect.

6551. You charge 5*s.*?—Yes, the whole may make 4*s.* 6*d.*, and that will leave 6*d.* profit.

6552. What is the other 1*s.* 6*d.*?—Coals, candles, brokerage, rent, &c.

6553. In point of fact, without any of those contingencies or extras, you can throw your silk, as far as labour is concerned, at 1*s.* 6*d.*?—I can, merely wages to hands employed in that department.

6554. You say there are other expenses, bringing the expenses to 3*s.*?—Yes, carriage, overlookers and other charges.

6555. In this 3*s.* you do not include the interest of capital?—No, I have before stated that charge, with waste, investment, &c.

6556. Are there other mills in Essex?—Yes.

6557. Have you ever heard of any parish in Essex lending money to London manufacturers to assist them in building a mill in which their pauper poor might be employed?—No, not in Essex; I know of one in Suffolk, that of Mr. Duff's. I have heard they gave him the ground, and carted the material to build his mill, in order to find employment for the poor of the parish.

6558. Have the goodness to say whether any of your hands receive parochial relief?—I do not know that I have a hand that receives parochial relief.

678.

3 A 4

6559. Do

Mr.
John Hall.

23 May,
1832.

6559. Do the parents of the children you employ receive parochial relief?—I have no doubt they do in many instances.

6560. Is there any understanding between you and the parish officers of your own and any other parish; and do you receive any thing from the parishes as a part remuneration for employing them?—Nothing from any parish.

6561. Do you never, in giving relief to the parent, take into consideration the wages received by the children?—Invariably.

6562. Have you reduced the wages of your children?—About twenty per cent. the last two years.

6563. You have stated that you give to the poor and to the sick parents of these children; do you ever give to a healthy parent?—The four overseers, of whom I am one, give according to the scale fixed by the magistrates; they have what they are entitled to, sick or not.

6564. So that in the end the earnings of the children are taken into consideration, and then you give what you consider a sufficient support for the family?—Yes.

6565. Is that the general rule in your parish?—It is; and I should think in all parishes.

6566. When the parents are employed, and their children are employed, do they receive any parochial relief in addition?—I do not employ the parents, I employ the children.

6567. Do you know of any instance where the parents are employed, and the children are employed, in which they receive additional relief from the parish?—Yes.

6568. You have reduced your wages twenty per cent., and the parents, many of them receive parochial relief?—Yes.

6569. Do any of the parents of the children you employ receive parochial relief?—I have just stated they do.

6570. As you have stated that you live in a small parish, where you have only 4,000 inhabitants, and also you have stated that you have reduced the wages twenty per cent., and the parents of many of these children receive parochial relief, yet you have a difficulty in getting hands, and in getting them at so reasonable a rate as they do in other places?—The supply is not sufficient for my demand.

6571. You state that the parents of the children you employ are principally agricultural labourers; when they have full employment, are they in the habit of having parochial relief?—No.

6572. It is only where they have not full employ that they receive parochial relief?—Yes.

6573. Is there any means of employing the number of children but for your mill?—No.

6574. But for your mill they would be all idle and on the parish?—Yes, I believe so.

6575. Do you employ all the members of any one family?—I think not; I do not know that I do.

6576. Do you employ one, two, or three orphans, of one family?—I have only one instance where I have two orphans.

6577. Do these orphans receive any thing in addition to the pay you give them?—They reside in the poor-house, and are sent to me by the overseers at fair wages.

6578. Do you pay the parish their wages?—No, I pay the children.

6579. What are the average wages you pay?—The average is 3 s. a week.

6580. You say if it was not for that mill a great many children would be out of employ and thrown upon the parish?—I believe so; so I found them when I first went to Coggeshall.

6581. You think it of importance that the throwing trade should be kept in this country?—Yes, I think so.

6582. Suppose your mill was not there, you would have to increase the relief to the parents?—Yes, very much.

6583. Would it be increased in nearly the proportion that you pay to the children?—In many instances to the full; others might leave the place.

6584. Are there any of those persons you employ in the country who can subsist upon the wages they receive from you?—I believe the majority do subsist upon the wages they receive from me.

6585. Do

Mr.
John Hall.

23 May,
1832.

6585. Do you mean to say that any of them can live on 3*s.* a week?—Yes; 3*s.* a week, in our parish, will keep a child if lodged by its parents.

6586. How many hours a day do those children work?—Eleven.

6587. Different children come on at night?—We do not work children at night, but grown women.

6588. What wages do you give them?—Half as much more as by day.

6589. What is the average you give to the women?—The women average 5*s.* per week.

6590. Are the children bound to you by the assent of the parish officers?—No.

6591. Have the parish officers no knowledge of the fact of their being bound to you?—No, an Act of Parliament exists, called Mr. Hobhouse's Act, which requires that every person who enters a mill to work, shall have their names entered in a book, and that shall be signed by the contracting parties, and those contracting parties are compelled to fulfil the contract, which are, the parent, the child, and myself.

6592. Are the parish officers cognizant of the agreement which the children enter into?—They never wish to know any thing of the kind, and never ask it.

6593. Do the parish officers know you take them in that way?—They may have heard of it.

6594. You say that in the 3*s.* you have referred to, you do not include interest on your capital?—I divided the whole of my expense into three portions, making 4*s.* 6*d.*; it is in the 18*d.* after the wages.

6595. Are you a manufacturer of silk goods?—I am.

6596. Of what kind of silk goods?—I manufacture gros de Naples, velvets, and ribbons.

6597. Are you at all acquainted with the manner in which the same kind of work is got up at Coventry?—I am aware of the wages paid in Coventry, and the system by which business is conducted there, having been engaged in a concern in Coventry 20 years, and in the habit of going backwards and forwards to take stock, and give directions what to manufacture.

6598. Can you state what are the prices you pay now, and what are the prices paid at Coventry?—I pay two-thirds of the Coventry prices.

6599. What description of looms do you use?—I believe the most improved that are known of, they are called the rack and pinion system, a power-loom.

6600. Are the goods made in your looms as good as those at Coventry?—Better, with the same material.

6601. And made at two-thirds of the wages?—Yes.

6602. Are any of the same kind of looms used at Coventry?—I believe an attempt was made to introduce them a little time ago; Mr. Merry sent down one, and the next day the place was burnt; I am not aware of any other, except one Mr. John Herbert has; whether it is at work or not I cannot tell, it is the same as Messrs. Ames & Atkinson's looms.

6603. Are the Committee to understand, that you can afford to sell the same kind of goods for one-third less than the people at Coventry can?—By no means; there is only the reduction of labour; the material costs me as much; it may make five per cent. difference upon the goods when manufactured.

6604. Are you acquainted with any Coventry manufacturers, and can you state why they do not introduce the same kind of looms there?—I know many, and there are parties in Coventry at the present moment writing in the Coventry Herald, and other papers, to excite the men against machinery of all kinds, which they call the poor man's enemy, although his best friend; it is the interest of some of the manufacturers in Coventry to bolster up the old system of manufacturing, called undertaking, whereby they keep totally clear of all machinery; if the improved looms are once fairly introduced, the trade will get into the hands of men of skill and capital, who will only supply the market according to the demand.

6605. When you were connected with Coventry, were you acquainted with those looms you now use?—Part of the time.

6606. Why did you not introduce those looms into Coventry?—Because we feared that they would have been destroyed, and our persons insulted; the times are now altered, and no doubt the competition with France will compel them to accept the best looms.

6607. How many years is it since you introduced those looms?—About five.

6608. Are they using them now in other parts of the country?—Only at Ames & Co.'s factory. A gentleman of large capital, in Manchester, has promised to see

Mr.
John Hall.

23 May,
1832.

mine at work; if he approves of them, he has a large factory ready to place them to steam power; I could supply them to any extent.

6609. Perhaps you would like to sell the manufactory as well as the looms?—I am desirous of doing so at a fair price.

6610. Have you not advertised the factory?—I have, in order to attract observation to those looms.

6611. Is not this your advertisement “To broad silk and ribbon manufacturers; To be let on lease, 40 miles from London, rent 80*l.* per annum, and all taxes and repairs, except broken glass, paid by landlord, a factory, consisting of three floors, 130 feet by 24; warping room 30 feet by 30; good warehouse and lobby, 30 feet by 30; carpenters’ shop and store room, containing 30 rack and bar looms in full work, at two-thirds the prices paid in Coventry; 70 broad looms, all complete with new reeds and harnesses; five warping mills, winding engines of 500 spindles; the whole of which may be rented, or bought at a low price; also 20 cottages at 2*s.* per week if required, for further particulars” and so on?—Yes, that is my advertisement; I have another factory, same size, adjoining my house.

6612. This is the way you took to give publicity to your bar looms?—Yes; I think that would give publicity to them.

6613. Is not this factory in the same place as the throwing mill?—The mill, unfortunately, is a mile distant from the factory, they are in different parishes.

6614. Notwithstanding you say the advantages you possess are five per cent. beyond those of Coventry, on the manufacture and the whole cost of the goods, yet you are disposed to get rid of that factory; are the Committee to understand that?—Yes, I am disposed to let it, if any person will agree to my terms. I have another very near of equal size.

6615. Then the Committee are to conclude that it is not a very profitable concern?—The manufactory is not very profitable to me, because I have to pay an agent five per cent. for disposing of my goods, besides the attention my mill requires will not allow me time to attend properly to the manufactory.

6616. As far as regards labour you have the advantage of Coventry, you have the advantage of using those looms without any danger of life or limb, and yet you are desirous of giving it up?—Yes, as I am so fully employed with another business which engrosses my whole attention.

6617. Did not you state a little while ago, that if things remained as they are you should like to expend 10,000*l.* in erecting another throwing mill in another place?—Yes.

6618. How many years were you engaged in travelling through the country for orders previous to your residence at Coggeshall?—Twenty years.

6619. Did you reside at Coventry?—Mr. Haycock, the senior partner, resided there till the day of his death in 1812, and was succeeded by Mr. Thomas May as manager.

6620. If you did not reside there, what was the fear you had of your life?—When there is great excitement in Coventry, I have known my late partner, within the last 12 months, go into Coventry at night and compelled to leave the town before daylight in the morning; when a reduced price for weaving is proposed, they insult all the masters who first sign it.

6621. Your partner, Mr. Haycock, resided there?—Yes.

6622. And he resided there during the whole of the time you were travelling about the country?—No, he died in 1812.

6623. In what way did you conduct the manufactory at Coventry after he died?—By a confidential servant, Mr. Thomas May, who was 40 years in the concern.

6624. And you were travelling about the North of England?—Previous to 1826, not since.

6625. Does it occur to you as possible that from your being travelling about the country your business did not succeed so well as that of others?—It did succeed equal to most others; I always had a first rate connexion, which is known to all the trade.

6626. Did not you abandon it?—I left it to take the management of the throwing mills, our manager having joined Mr. Brown of Colchester.

6627. Mr. Sawyer was very glad to get rid of it, was not he?—No; for Mr. Sawyer is as largely engaged in the country trade as ever.

6628. Was he concerned in the throwing mill?—Yes.

6629. Was not he very glad to get rid of that?—That is best known to himself, I proposed to separate, in consequence of the bad debts he made in selling silk; we agreed

Mr.
John Hall.

23 May,
1832.

agreed to divide the concern; I took the mills and manufactory, and he the London warehouse and Coventry manufactory.

6630. But he wanted to relinquish that concern?—I have no reason to think so, as the proposition for a dissolution of partnership originated with me.

6631. Are the goods you now manufacture at Coggeshall the same kind of goods as are now manufactured at Derby and Congleton by power?—I have no acquaintance with any mills there, and cannot answer that question.

6632. If you can do it with two-thirds of the labour, you do it with less hands?—Those looms are calculated to make twice the quantity of goods that the old looms can.

6633. If your labour is reduced two-thirds, is it not by having fewer hands to do the same work?—Fewer hands can do as much work.

6634. That system would not require the whole of the hands of course?—Unless there was a greater demand.

6635. Would not a fall in price increase the demand?—That is my opinion.

6636. What description of ribbons do you make?—Only black ribbons.

6637. Do you use any of the thrown Italian silk?—I use all English thrown.

6638. What effect on the price of ribbons would the repeal of the duty paid on Italian organzine have upon 100*l.* worth of black ribbons, what per centage cheaper could you afford them?—If the whole 3*s.* 6*d.* could be saved to the manufacturer it would make full five per cent. reduction.

6639. Are not many of those ribbons used as shoe strings?—I believe not; they use doubles.

6640. Is any of your thrown used in black ribbon?—Yes, all the warp.

6641. You do not make coloured ribbons?—No.

6642. Why do you not make colours?—I cannot manufacture sufficient to keep a stock, I have only 30 looms, and situate as I have been sometimes with hands, it is impossible for me to carry the business to the extent I otherwise might if in Coventry.

6643. Is there not a great advantage you have by throwing your own silk, and selecting the silk most suitable for your purposes of manufacture?—I do not think it is, in the present state of the market.

6644. Have the goodness to describe your loom, the way in which it operates, and the advantage there is in using it, over the common loom?—The rack and bar loom will make double the quantity of goods in the same period that the original loom can.

6645. And produce it well?—I believe better, so the best judges have acknowledged, with less material.

6646. Have you ever applied the Jacquard machine to this loom?—I have; but I do not make fancy goods at present.

6647. Do you believe that steam power can be beneficially applied to the manufacture of fancy ribbons?—I do.

6648. Do you not employ horse power in your ribbon manufactory?—Only in the winding part.

6649. To what use are the sort of ribbons you make applied?—The narrow ones are used for bindings, strings to dresses, and the broad ones to trimming bonnets, &c.

6650. You think five per cent. would occasion an additional number of black strings for bonnets, and strings for dresses to be used?—Five per cent. would not; 10 to 15 per cent. may be saved, which will secure the American market.

6651. Did you ever express a desire to remove your throwing machinery to France or to Manchester?—I may in conversation have said, that if we are to be ruined here, we must have permission from Government to go somewhere else.

6652. What reason had you to think you should be ruined?—Because I hear the manufacturers say they shall all be ruined by the smugglers, and if they are ruined, I must cease to throw silk or remove to a better market.

6653. What effect do you think the taking off the duty of 3*s.* 6*d.* on foreign thrown organzine would have upon your mill property?—I think if the whole 3*s.* 6*d.* was taken off, the mills in this country would not be able to work at all, but that is only my opinion.

6654. Would not that be destructive to a great deal of property, and throw many hands out of employ?—I think so, but that is my own opinion.

6655. When you spoke of the apprehension of ruin, did you speak to the manufacture having been established at Manchester?—No, by the great distress created

Mr.
John Hall.

23 May,
1832.

in the trade, owing to houses in the city of large capitals being so deeply engaged in the smuggled trade as they notoriously are.

6656. Do you mean to say that if the manufacturers of silk goods in this country were ruined, you would not have a demand for your goods?—The demand for thrown silks would cease.

6657. Do you know anything of the ribbon trade of Coventry?—I have been in the habit of having them manufactured under my direction.

6658. Do you think if there is a want of labour and fear of being ruined, it can very much benefit them to have an influx of foreign manufactured goods brought into the market?—Certainly not, if they can be kept out.

6659. Must it not tend to depress the prices?—I should think so; all we have to do is to meet the evil and beat them out of our market.

6660. Will not the English manufacturer stand a fair chance of being employed by having his material as cheap as that of the French?—I fear that he never can have, the French producing the silk in their own provinces, and in consequence of the very low wages that are paid in France in the mills, they possess great advantages over us.

6661. Do you know what wages they pay?—I hear by report that the wages are very low, not exceeding half of what we pay.

6662. What do you pay for a gros de Naples of three singles?—Four pence a yard.

6663. What do you pay for weaving three doubles?—Five pence a yard.

6664. Is that done in the best kind of work?—I could not boast; I think Spitalfields would make it much better; if I had to begin a broad silk manufactory I would begin in Spitalfields in preference to any other part of England.

6665. They pay a penny more in Spitalfields, and it is a penny better?—I may fairly say two pence.

6666. It is not always desirable to do things in the cheapest way?—If I had my looms in Coventry and the best hands working cordially with them, I would defy France, and supply all the world with ribbons.

6667. Can you state the prices you pay at Coggeshall for the two, four, six, eight, ten, and twelve ribbons?—In Coventry the goods are furnished by undertakers generally; the prices paid to the undertaker, who again employs the journeymen under him at very reduced prices, of which we know nothing; the price we pay the undertaker for the two-penny sarsenet is 2s. 4d., at Coggeshall we pay 1s. 8d.; four-pennies in Coventry 3s., in Coggeshall 2s.; six-pennies, 4s. at Coventry, in Coggeshall 2s. 6d.; eight-pennies in Coventry 5s., in Coggeshall 2s. 8d.; ten-pennies in Coventry 6s. 4d., in Coggeshall 3s. 6d.; twelve-pennies in Coventry 7s. 8d., in Coggeshall 3s. 6d.

6668. Are these articles as well manufactured by you as they are at Coventry?—They are and ought to be better. I observed when we first commenced, those employed by us were in correspondence with Coventry committees, they come with a determination to spoil their work, because they did not like a manufactory to be established out of Coventry.

6669. What reduction do you reckon on as between Coventry and you?—One and three pence, we take our scale as high as thirty-penny. I will state the whole scale if it is wished; fourteen-penny at Coventry 10s. 6d., at Coggeshall 5s. 2d.; sixteen-penny, 10s. 4d. at Coventry, at Coggeshall 7s. 4d.; twenty-penny at Coventry 13s. 4d., at Coggeshall 10s., there we come nearer, these require good hands; twenty-four-penny at Coventry 16s. 4d., at Coggeshall 12s.; thirty-penny at Coventry 20s., at Coggeshall 16s.; upon the whole round it comes to 98s. 8d. in Coventry, and at Coggeshall 66s. 4d.

6670. You admit that the quality is not so good at Coggeshall?—They are not all expert hands, the goods are not all so good as they would be if made by Coventry weavers in the same looms.

6671. Then you have no advantage over Coventry?—I should prefer working these looms in Coventry to any other place if they could be introduced with safety; but I have a letter from a friend there, stating that he dare not attach his name to that advertisement lest they should injure his person or destroy his property.

6672. Do you include in the prices you have stated at Coventry and Coggeshall, the expenses of winding, weaving, filling, and loom hire?—When I have stated that the business at Coventry is done by undertakers, the prices I have named include all the expenses. I get the profit upon the winding and warping here, and the manufacturer in Coventry gives that to the undertaker.

Mr.
John Hall.

23 May,
1832.

6673. Though you state in your advertisement that labour is one-third less, there is scarcely any difference?—There is a disadvantage, in the first place, for want of better hands, in the next by being out of the market.

6674. You actually get the work performed at a lower price, but in a much worse manner?—My own opinion is, that the manufacture of ribbons will not succeed out of Coventry, unless it gets into Manchester, and if it gets there, Coventry will be pauperized and ruined. The large capitals they have, added to their skill and industry, beat any thing, and whenever they begin with a new manufactory they will go on upon an extensive scale, so as to monopolize the whole market.

6675. Did you ever reside for any time in Manchester?—Three times a year for twenty years; I have spent a week or ten days each time, and am acquainted with some of the first manufacturers in the place; I have had an opportunity of observing their progress, and their ability to undertake the ribbon trade.

6676. Are the rack and bar looms the same as those called a-la-bar looms?—No, they are not.

6677. Will a rack and bar loom make a checked ribbon?—Every kind of ribbon, the most expensive that can be put to work, better than any others, they are steady and sure, the shuttles cannot fly back to injure the work as in the Coventry looms.

6678. You state, that you think that if those rack and bar looms were generally introduced you could defy France or any other country?—I think we should make ribbons for all the world.

6679. You are of opinion that if rack and bar looms were generally in use you could export ribbons to all parts of the world, and to France among the rest?—If they would take them, the prices would enable us to do so.

6680. When were the rack and bar looms introduced?—I think in 1825.

6681. Where were they invented?—By a person in St. Etienne; a late servant of mine saw them at work, and first gave the idea to Mr. Guilliotte, who could not get them to work; we bought one, and altered it until it was perfect, since which I have made several others that are preferred to Guilliotte's plan by experienced workmen, who have worked upon both.

6682. Why do we not now export to all parts of the world?—On account of the great difference between our labour and that of France and Switzerland. The rack loom will obviate this, better machinery will place us on a level, our capital will do the rest.

6683. On account of the dearness of labour you cannot export?—That is the greatest obstacle.

6684. If you procure the rack loom here, do not you think it probable that the foreigner will procure them?—Not to the same extent.

6685. Why not?—Because I do not believe they have got the same amount of capital to invest, they are expensive, and the first outlay alarms beginners.

6686. Do not you know that this is a French invention?—Yes.

6687. Do not you know that they have them in France?—In one manufactory.

6688. Do not you know that in all the silk manufactories in France they have abundance of machinery, that they possess large machines which they now have in the greatest abundance, and if so, what is your reason for thinking that any deficiency of capital would prevent their using that machinery which you have borrowed of them?—We have borrowed it of them, and have had it some years, but I never heard of its being in more than one factory, and I believe that is kept very secret; I do not know of any man in the trade, except a servant of mine, who has been over that factory.

6689. Are you not satisfied, from the ribbons that come here, that they are made by machinery?—With the Jacquard machine they are.

6690. Could you make them without machinery?—No ribbons can be made without machinery.

6691. Do not the ribbons which come in from France assure you they are made from machinery?—Yes, certainly, as I have before stated, with the Jacquard.

6692. Then what makes you think that the French should be deficient in respect of this machinery?—Because they have not used it to any extent, though it is answering the purpose of the person who possesses it extremely well.

6693. Have you ever been in France?—I have not, but I have had the best of information from those who have.

6694. What do you know of their capital?—Only from those who have been there.

678.

3 B 3

6695. Do

Mr.
John Hall.

23 May,
1832.

6695. Do not you know that they have large capital in Switzerland?—Yes, I have been informed they have.

6696. Have you ever heard of a person of very large capital at Basle?—I have not.

6697. Are you aware of looms similar to those you use at Basle?—I know they use the a-la-bar loom.

6698. Do they apply power to those rack and bar looms in France?—I believe not.

6699. Can it be applied in England?—Yes, they are better adapted for power than any loom yet invented.

6700. Do you think this country would have that advantage in the use of it?—I have stated it would, by getting a great export trade.

6701. You state that if the Manchester manufacturer took advantage of the ribbon trade, you think they would ruin Coventry?—I do, they possess so many advantages.

6702. What will be the effect of their taking up the plain goods upon the Spital-fields district, where they have been made?—As to plain gros de Naples, we all know the effect which has been produced by their supplying the market; that they have all felt the effect that it had; and I attribute a great deal of the distress in my own district and others, to the large supplies from Manchester, by men of large capital; I speak from my own knowledge of the immensity of goods which have been poured into the market, for a season; and I have seen perfect goods, cost above 2*s.* 2*d.*, sold at 2*s.*; I have seen them go down to 21*d.* and then to 18*d.*, and down to 14½*d.*, entirely from an over supply.

6703. Have they not sold at a loss?—At a loss of 30 per cent.

6704. Then Coventry must be between two fires; the foreigner making the fine goods, and Manchester the worst, or plain?—That is the reason I think they will be ruined, unless they improve their means of production without delay.

6705. You have been asked if the duty of 3*s.* 6*d.* were taken off the importation of foreign thrown silk, whether the mills of this country would not be ruined?—I think they would; I have before stated they would cease to work; it would drive capital to France, Italy and Switzerland.

6706. You were asked whether, if the English manufacturer was destroyed, your mills would not stand still?—They would; no use to throw if the looms stand still.

6707. Would not taking off the protecting duty of 3*s.* 6*d.* per pound on Italian silk be destructive to the English throwster?—It would; I have before answered that.

6708. What effect will taking off the 3*s.* 6*d.* have upon the manufacturer?—About five per cent., provided the manufacturer gets the benefit of it; but I do not believe that he would; instead of having his organzine at a guinea a pound, he would have to pay 25*s.*; it is the competition in England which keeps down the price.

6709. If you say the taking off the duty on the organzine would ruin the throwster, that is on the presumption that the foreign thrown silk will fall in proportion?—In case it falls 2*s.* 6*d.*; his having the first pick of the raws and cheap labour, we could not stand against him.

6710. If it did not fall, but maintained its price, are the consumers here benefited, or does the benefit go to the foreigner?—The profit would go to the foreigner, and the consumer no way benefited.

6711. You state that Manchester, you think, will take away the trade of Coventry; do you mean that they will apply power to the machinery at Manchester, and thus undersell them?—Yes, quickly; in the only profitable articles they at present make, plain ribbons.

6712. Why should they not apply power at Coventry?—If they would adopt the newest improvements cordially in Coventry, they are so excellently taught in the business, every hand would have regular employment, and no man in Manchester would dare oppose them.

6713. You think their real difficulty is, that they will not adapt the best machinery, whilst at Manchester they would be willing to do it?—If you can prove to a Manchester manufacturer the certainty of a fair return for his outlay, he goes to work directly.

6714. How many men do you employ in your manufactory?—I have about 70 men.

6715. Have

Mr.
John Hall.

23 May,
1832.

6715. Have most of those parochial settlements in the parish?—About half are parishioners. My good hands working on the rack looms, average 25*s.* per week; in Coventry, at the high wages, about 12*s.*; they have asked permission to work from 6 A.M. to 9 P.M., which would enable them to produce double the quantity.

6716. Do you mean to state that from six in the morning till nine in the evening they could make 50*s.* a week?—I believe they can on a double rack loom.

6717. Do they make that on the gros de Naples?—They do not make 10*s.* a week on them, when quill filler, &c. is paid.

6718. Have the goodness to state what is the article on which they can make the 50*s.* a week?—Twenty-four and thirty lutestring.

6719. How many hours a day must they work to earn 25*s.*?—They do not work above forty-eight hours during the week.

6720. Working four days per week they obtain 25*s.*?—They do.

6721. Is not that an article of limited sale?—Provided I had more time to attend to it, and could make it in all colours, I should have unlimited orders for it.

6722. How do you account for so many men being out of work?—I have gone to Coventry and found a good many out of work; I give them two guineas to go to Coggeshall, they have gone and staid a week, and they would stay no longer; they had a combination among them, and would rather keep those men out of employ, to keep up their bad machinery, than suffer them to work for me. I have tried that within the last two years; during the worst time of distress, I had many men from Coventry come to me, and the moment they had got enough to travel back they have gone.

6723. What wages had been paid in Coventry when you were concerned in the trade?—I think eight years ago the men would some of them earn 3*l.* a week, but 40 and 50 shillings, when working on gauzes or rich figures.

6724. Do you know the fact of those earnings?—We have paid those prices; and Messrs. Ames & Atkinson, and Mr. Cox, have paid the same, as I was told.

6725. What do the agricultural labourers earn in your neighbourhood?—About 9*s.* a week in winter, 12*s.* in summer.

6726. How is it you do not employ them, and give them 11*s.* a week?—I have tried them, they cannot become good weavers.

6727. Do you mean to say that men who earn only 9*s.* a week, come to you, and that when they can earn 11*s.* or 12*s.* a week, they will not earn the 11*s.* or 12*s.*?—They will spoil the work; we cannot take an agricultural workman into a ribbon manufactory to make saleable goods.

6728. You mean to state that you are compelled to give the Coventry men 25*s.* a week for work, and that you cannot get it done for less?—I have never tried to get it done for less. I give two-thirds of Coventry price; if I was to offer less all my good hands would turn out immediately.

6729. Are not the hands you have had from Coventry bad hands?—When we first commenced at Coggeshall, we had some very bad hands come no doubt, for the purpose of spoiling our work, and to try to make us put down the looms; at present I have several very good hands.

6730. Have you offered your rack and bar looms to Manchester?—I have a person in negociation with me, who has promised to come and look at them next month; and if they answer the description I have given, I may agree with him for a lot.

6731. What is the difference of cost of the rack and bar looms?—The price of an a-la-bar loom is about 80*l.*; a rack loom, 100*l.* to 120*l.* each.

6732. When you state that you give a certain price for labour, do you include the interest and wear and tear of the loom?—I do.

6733. You state that the rack and bar loom is in only one factory in France?—I believe so.

6734. Why have not they increased the number during the ten years they have had them?—My belief is that they are short of capital.

6735. France not using more of this machinery, may it not be presumed that the manufacturer there may not approve of it?—I know for a fact the person who uses them is always full of orders; the quality of Messrs. Ames & Co.'s figures proves nothing ever yet equalled them.

6736. You purchased those looms at 100 guineas a loom?—We paid Guilliotte about 1,200*l.* for ten looms, stamping machine, and warping mills.

6737. You have more than those?—I have thirty, inferior to none.

678.

Mr.
John Hall.

23 May,
1832.

6738. They cost you less probably?—They cost less to make than buy.

6739. What do you ask now for your looms?—For the whole concern together, 50*l.* per loom.

6740. When you were at Coventry, what was the highest rate of wages you ever paid to any one man?—I stated that on fancy ribbons we have paid to one man as much as 60*s.*, per week; I have paid more for wages than goods are now worth in the market.

6741. Whilst men were earning such high wages, was there ever distress among the weavers?—We employed a man at those prices only in February and ended in May, we had no machinery there, and sent them to what is called the right about, and there is considerable distress for a month or two, unless they can work at the harvest work; then they had the same wages again when the season returned; there was more briskness in the trade formerly than there is now.

6742. Those high wages were earned only by very few on very good articles?—Yes, on something superior, in fancy patterns.

6743. What was the average rate when you were paying thirty or forty or fifty shillings to particular men?—The average rate of wages would be only 15*s.* on the common articles.

6744. Why did not the men who made 15*s.* come to you and obtain their share of employ, in the line in which they were making the higher wages?—Because they had neither the skill nor the machinery; at times the briskness was such that manufacturers used to go down and send the bellman about to invite the weavers to dinner or supper at a public house at Nuneaton, for instance, to proclaim that a leg of mutton was provided and plenty of turnips, and when they got good hands there, used all the arguments they could to induce them to take their silk in preference to their old masters; we sometimes trusted them the value of a loom, 6*l.* to 8*l.*, so took it a little at a time.

6745. In what year was that?—In 1814 up to 1825.

6746. There were times in which you were slack also, what did you do then?—Then we left them to sell their looms, &c., to get subsistence where they can; if the masters owned the machinery they would be more regularly employed.

6747. Times have been altered since that?—I believe so; but having gone to Coggeshall for the last seven or eight years I have not known so much of this.

6748. During the prohibition they were better off?—During the prohibition there was no difficulty in making profits; money was in abundance; operatives scarce; we are now placed in a different situation. A lady can go from London to France one day and return the next clothed in French silks; once say they shall not have them at all, and every man will turn smuggler to please the ladies; therefore let the operatives open their eyes to their own interest, invite men to furnish them with good machinery, and we will beat them out of the market.

6749. There was no war at the time you speak of?—No, but there was prohibition.

6750. What do you think the ordinary workmen at Coventry now earn?—I should think on the ordinary machinery they can earn 12*s.*, working six days a week.

6751. Have you paid more than 60*s.* a week?—I dare say we have; in 1825 we paid 80*s.* per gross for very common twenty-two-penny gauzes; in my looms a man would make a gross per week.

6752. That is more than the goods would now sell for you say?—About the value of wages and silk altogether at present.

6753. Does not that prove a very great alteration in the state of the trade?—Yes.

6754. Did you ever pay a second man as much?—I could not enumerate the number without having our pay books here.

6755. Have you employed many at those wages at the same time?—As many as we could procure; good hands got all they asked.

6756. Do you make gauze ribbons at Coggeshall?—No, I do not.

6757. Do you know how many pieces of the different widths a man can manufacture in a week in gauze ribbons, twelve-penny for example?—So much depends upon the pattern; about six pieces in a bar loom with 12 shuttles.

Veneris, 25^o die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. *Robert Clay*, called in; and Examined.

6758. IN what branch of the silk trade are you engaged?—An importer of foreign manufactured goods.

6759. How long have you been in that line?—Since 1826, when the trade was opened.

6760. Before that period in what branch of the business were you employed?—Principally confined to French cambrics and kid skins.

6761. Since you were engaged in the French trade, have you visited Lyons, Saint Etienne and Chaumont, where the manufacture is carried on?—Yes.

6762. What kind of French goods have you principally dealt in?—In 1826 and 1827 in plain broad goods only; since then in ribbons; and in fact every description of manufactured goods.

6763. Are there many houses engaged in the import of French manufactured goods?—I should say very few direct importers from the manufacturers; there are numbers who buy goods in Paris, but very few engaged as direct importers from the manufacturers.

6764. How are the French goods purchased, are they purchased at Paris or from manufacturers?—It is very rarely that we purchase them, we principally order them from patterns, and samples produced by the manufacturers.

6765. In what manner are the patterns shown to you, are they shown in London, or do you go to Paris to see them?—We go to Paris or to the French manufactories; sometimes only to Paris, or at other times to Lyons, Saint Etienne and Chaumont.

6766. Are you yourself in the habit of going, or do you send an agent?—I usually go myself.

6767. When you go to Paris, do not the manufacturers from Lyons and Saint Etienne sometimes meet you there?—Frequently.

6768. Are there not many English purchasers of French goods that never purchase direct from the manufacturers at Saint Etienne?—Certainly, those that purchase of Paris houses; none of the Paris houses are manufacturers; I meant to say that there are very few, comparatively speaking, that are importers directly from the manufacturers.

6769. Will you state to the Committee what in 1826 and 1827 was the state of the trade in French goods imported by you, was it profitable, or in what state was it?—In 1826 there was a ready sale for every description of French goods; in 1827 the competition was greater, and of course the sale was not so ready.

6770. During those years were the profits good?—Exceedingly small at all times; I speak now of the articles of plain broad silks.

6771. In that year did you export to any considerable extent?—Yes.

6772. In 1828 what was the state of the trade as regards the imports?—In 1828 our trade became more general, instead of being merely importers of plain articles, it became more general; we imported ribbons and fancy silks.

6773. Did the prices received in 1826 and 1827 keep up till 1828?—Certainly not, they considerably declined.

6774. How was the demand for the various articles in that year?—Towards the latter end of 1828, the demand for plain silks considerably decreased.

6775. What has been the relative rate of prices between the English and French of goods of the same quality, as nearly as possible?—I am not able to answer that question; I am merely an importer, and I do not sell English goods.

6776. Then the reduction of price you mention was a reduction in the value of the same kind of French goods?—Certainly.

6777. What was the extent of reduction of price?—The same article that I first imported in 1826, which was the only article that I sold, plain gros de Naples, we then paid 5 francs and 25 centimes, and in 1827 they were reduced to 4 francs 75 centimes, nearly 10 per cent. reduction.

6778. What was the cause of that reduction?—I am not aware precisely; I imagine merely from the decline in the price of the raw material.

678.

3 c

6779. Of

Mr.
Robert Clay.

25 May,
1832.

Mr.
Robert Clay.

25 May,
1832.

6779. Of course not dealing in English goods you are not aware how far the competition of English goods had any effect?—No, I merely judge upon that subject from representations that have been made.

6780. Did you, in point of fact, find more difficulty in getting rid of your French goods in 1828 than you had done in 1826 and 1827?—Certainly in 1828 it was impossible to obtain a profit upon the plain silks.

6781. In 1828 what prices did you get for the same articles?—In 1828, in the early part of the year they were reduced about five per cent. more, to about 4 francs 50 centimes.

6782. Although you have not dealt in English goods have you had any opportunity of examining them to judge of the style and order in which they are got up?—We have certainly formed an opinion upon that subject, that the English are very slovenly in the finishing the goods, and in many instances we attribute the sale and the price of French goods more to the appearance, and the way in which it was got up, than to the intrinsic value; there is no question that the French are more particular in the way in which they turn out the goods from the manufactory.

6783. With respect to your customers that have purchased goods of you, what have been the qualities they have principally looked for in the French goods?—In the former years, 1826 and 1827, they were principally lower priced articles that we imported, and we gradually got to a richer article.

6784. In 1829 how were your purchases of silks?—Quite opposite to what they were in the preceding year; the article of gros de Naples, which was the principal part of our trade in 1826 and 1827, we did not import at all in 1829.

6785. Did you continue to buy any of that which had been reduced to 4 francs 50 centimes, in 1828 and in 1829?—To a very small extent indeed; not one hundredth part.

6786. What price did that which had been 5 francs 25 centimes in 1827, bear in 1829?—To the best of my recollection they were about 4 francs 25 centimes.

6787. Then in 1829, were your dealings more extended to the narrow fancy goods than they had been before?—Certainly.

6788. And a decrease in the plain?—Decidedly, or else I must have shut up my house.

6789. Then you began the fancy articles in 1828, did they keep up their price in 1829?—The price went on well established in 1829, they had been gradually decreasing from 1826 to 1829.

6790. In the narrows, what were the principal articles you imported?—Ribbons.

6791. What kind of ribbons have you principally been able to sell?—Principally gauze ribbons.

6792. Have you tried the sale of any other ribbons?—Of satin ribbons.

6793. How do they sell?—Like many other fancy articles, they sometimes bear a very large profit; and a month after they will be sold perhaps 40 or 50 per cent. loss.

6794. Can you state what quantity of each pattern, upon the average, you are able to sell?—My practice is to order the smallest quantity I can of each pattern.

6795. With respect to those fancy goods which you had began with in former years, had their price been kept up in 1830?—The prices were pretty well established in 1829, and I found very little difference between 1829 and 1830; in fancy articles they certainly decline, especially in gauze ribbons.

6796. Then are the Committee to understand that the trade in silk has been extremely various, subject to fluctuation?—Not much subject to fluctuations, but to a gradual decline ever since I have had any thing to do with it.

6797. Has it been a profitable trade generally, since you have had to do with it?—As far as I am able to judge, there is no business that returns the capital so seldom as that of the French trade, and few businesses that are so little productive.

6798. Can you state what is generally the quality of the goods you have bought; are they of a finer or of a coarser kind?—Decidedly of the best kind; all the low priced goods are prohibited in fact by the duty, and they are never imported.

6799. Are you aware of a practice existing of what is called jobbing; that is, sending a quantity of goods after they have passed the fashion for some time, to this country?—Jobs very frequently arise from our own orders; for instance, when I go over, I give orders to be delivered from three to six months, fixing the patterns, and fixing the quantities; for instance, at the present moment, I am going to-morrow, and I shall order goods as far as November; then many causes for jobbing arise from our rejecting those. After seeing 100 patterns of ribbons, it is very likely

Mr.
Robert Clay.

25 May,
1832.

likely that out of those 100 patterns, I may refuse from 20 to 30 patterns, depending upon circumstances; I speak of patterns either taken entirely, or rejected; I do not receive part of a pattern.

6800. What are the grounds upon which you are allowed to reject, after you have ordered the goods?—In giving an order, the manufacturer is always expressly tied down to deliver his goods by such a day; if he is after his time, we of course have the privilege of rejecting them; if they are not manufactured equal in quality to the pattern, we have likewise the privilege of rejecting them; those goods once rejected by the house that orders them, must unquestionably become job goods.

6801. Do you keep a pattern of all that you order, in order to compare?—Certainly.

6802. In your own experience, has the proportion been so high as 25 or 30 per cent. of all the orders you have given?—I rejected in the goods that I ordered in the spring trade, more than 25 per cent. in the fancy goods; it is not so with the broad silks, we reject very few of them comparatively.

6803. Do you consider that most of the jobbed goods that come over, arise from that cause?—No, not most; because many of those goods may arise from a sudden stop in Paris, and from the goods ordered in foreign countries; for instance, goods ordered for Germany or America, must come into this market if they are rejected; for instance, a ribbon may be exceedingly well manufactured, and very saleable, and on the 10th of May, or the 20th perhaps, it is not worth so much by 25 per cent.

6804. Has any considerable change taken place in the kind of ribbons manufactured in France since you began, for instance, in the cut ribbons?—At first, when I had any thing to do with the trade, there was only one good manufacturer in France for the cut ribbons, that was at Chaumont; there was only one man that I could trust an order to for the first rate quality, what we call Coupé ribbons.

6805. Have the number of those manufacturers increased?—There are now 20, 30 or 50 perhaps, that I could give orders to with as much confidence in Saint Etienne and Chaumont; they are now almost all become manufacturers of Coupé ribbons.

6806. Can you state whence that demand has arisen?—There is a great demand no doubt in this country, and a very great demand for America, likewise for Germany, but the best of all the goods come to this country and to the Paris market.

6807. Do you continue the same extent of business now as you did in 1827, although in a different article?—I certainly do consider to the same extent, but I am a dealer now in perhaps ten articles, when I was a dealer only in one then.

6808. What is the state of the market now as regards the sale of plain French goods and plain English goods?—I consider that there is no sale for plain French goods, there is no such thing imported; I mean that it is on so small a scale that it is scarcely worthy of observation.

6809. Then you think the English manufacture is now competing with the French in plain goods?—There cannot be a doubt of it, the English manufacturers have beat the French entirely out of the plain, it is only by a continued succession of novelties that we can sell any thing in French goods.

6810. When you speak of plain French goods, do you mean gros de Naples without the figure?—Yes, not figured.

6811. Then are the Committee to understand that the plain French goods have been beat out of the English market?—Decidedly; the plain French goods have been beat out by the English.

6812. Do you consider the watered silk plain or figured?—That is certainly plain, but the watered silk must be of a richer quality; and in making use of the word plain, I was then alluding to low priced articles, namely, the article of gros de Naples. In speaking of watered silks, there is a different name used, they call them de soie, that is a rich quality, those are still imported, and they have been this season by myself.

6813. What is the proportion of the fine silks imported in this year and the last year, as compared with 1826–27?—That is very difficult to come to any conclusion upon; this year there has been more than the usual quantity of rich plain silks imported; when I say rich plain silks, I mean watered silks, but it is from the peculiar circumstance that watered silks have become the fashion of the season.

6814. In the patterns of narrow goods, is it the quality or is it the novelty only that

Mr.
Robert Clay.

25 May,
1832.

that recommends them to this market?—The novelty, and having a great assortment; when we introduce a French pattern, the pattern is complete in all its colours.

6815. Have not you the same in England at Coventry?—I never heard of it.

6816. Do you mean to say that you as a merchant, going to buy French ribbons, have a better stock to look over than if you buy English ribbons?—As I do not order English goods, I am not capable of speaking upon that subject. With respect to the French goods I order them from a pattern, and I order them to be delivered at such a time.

6817. In 1831, what was the state of the trade in French goods imported?—I should say that in 1831 every man engaged in the trade to any extent must have lost money, especially upon broad silks.

6818. Did that arise from the high prices or from the large quantity imported?—From the great competition that exists with the English; the fact is, the moment we give the English manufacturer time to produce a pattern we can no longer sell ours, we merely sell ours from the novelty.

6819. You speak of fancy goods?—What we call armures.

6820. Are the Committee to understand, that if you give a pattern to an English manufacturer and ask for a supply, he will soon compete with the French article?—Since I have been in business there is no instance in which I could keep a single pattern at work at Lyons for three months, my only object is to bring in the quantity at once; I cannot bring in part the beginning of a month, and part at the end, if I do, it is copied here before the remainder arrives.

6821. Then are the Committee to understand that the English, by having the pattern, are soon able to copy and shut out the French goods?—No doubt of it.

6822. You do not order English goods yourself?—No; but I can only speak from experience, that in several articles which I have endeavoured to confine to myself, those articles have been invariably copied; till they were copied, I got a profit upon them, but the moment they were copied by the English, they have been sold for less than mine cost me.

6823. Was not that because they were more numerous in the market, and because the pattern was no longer a novelty?—I should say decidedly that it does not arise from that cause, but because the English produce them at a lower price, because the very article I am alluding to now, is manufactured by the English at the present moment.

6824. Do any of your customers deal in French as well as English goods; and are you able from them to learn what is the state of the market, although you do not yourself deal in English goods?—The very men that come into my house tell me that the English goods are decidedly lower than mine; that they will and can buy them so much under the prices; that they merely come to me for the assortment of such things as they cannot obtain. Those very men go to the English manufacturers, and say we cannot buy your goods; we can go to the French houses and buy them ten or fifteen per cent. under those prices. Now how can we come at the truth in such a case.

6825. Which statement do you think is nearest to the fact?—My decided opinion is, that there is a preference at all times given to English goods from their being cheaper.

6826. Is there ever an opportunity given to the manufacturers to make those goods at a cheaper rate by having sufficient time?—For the spring, but there is not for the autumn.

6827. In how short a time after the arrival of a French pattern have you known it copied by an English manufacturer?—I have frequently known a pattern copied before I have been able to deliver my own goods.

6828. What has been the effect upon your sale?—A competition instantly.

6829. Then are the Committee to understand that English goods have been made from the French pattern?—From the French pattern; any man here ordering a few pieces obtains a pattern of it.

6830. If you were aware of any English manufacturer preparing a pattern, would you order any of that pattern in France or not?—I should never order if I knew that it was in the course of manufacture here.

6831. In fact, your decided opinion is, that it is the novelty of the patterns that enables you to sell your goods; and that you cannot compete with the English manufacturer when he has no opportunity of competition?—In my opinion there

is

Mr.
Robert Clay.

25 May,
1832.

is not a doubt that it is novelty, and novelty alone, that sells the French goods; if that was not the case, why does an article decline 25 per cent. in a short time after it has been introduced, when it is of equal merit with one that has been selling five and twenty per cent. higher.

6832. Is not that the case also in articles not copied by the English manufacturers?—It is.

6833. You stated that those patterns can be copied by the English in a short time; why do not you then give them to be copied by the British manufacturers?—Because it would prevent the sale of my own goods.

6834. When you order a pattern from France, are you restricted from ordering that silk to be manufactured in England?—Certainly not.

6835. You give an order now for goods to be delivered in November, and you will have the patterns delivered to you by the French manufacturer; do you consider that you are at liberty to put that pattern into the hands of an English manufacturer to be made immediately?—Certainly, if I liked; but I never do it.

6836. Can you state what was the extent of consumption of French goods in the year 1830, in France?—In 1830, there is no doubt that the revolution in July stopped the home trade altogether in France; therefore the goods ordered by the French houses were compelled to be exported.

6837. Do you consider that that threw a great quantity of French goods into this market?—To a certain extent no doubt.

6838. What effect had that stoppage of the home trade upon the price of the French goods?—It has always this effect, that the manufacturer may be brought at a lower price than you can order them; for all fancy goods, generally speaking, become jobs.

6839. Then is it your opinion that a large proportion of the French goods so taken out of their original destination, and thrown upon England, were sold here at a loss to the manufacturer?—No doubt of it.

6840. What is the state of the silk trade now, in your opinion, with regard to French goods now in England?—In my opinion, at Lyons a very great decline has taken place; but from St. Etienne and Chaumont I think they have in all probability increased.

6841. At what relative price are the fancy goods imported this year, compared with the years 1827, 1828 and 1829?—There has been a gradual decline of price up to the year 1830; since 1830 the price has been very stationary; I speak of the price we ordinarily sell at.

6842. What are the kinds of goods coming in now; are they of the very best, or are they of all kinds?—So far as I am engaged in the business, the very best.

6843. Can you give the Committee an idea, since 1826–27 up to the present period, what is the decrease generally on plain goods, and what is the decrease of price on fancy goods, taking the same qualities in each year?—I partly answered the question before when I stated, that an article which in 1826 sold for 5 francs 25 centimes, had declined in 1829 to 4 francs 25 centimes, from 20 to 25 per cent. on plain goods; on ribbons from 25 to 30.

6844. Can you state, generally, what is the rate of duty which you consider you pay upon the imported value of French goods, stating the different descriptions of goods?—Upon plain goods I should say, the average rate of duty is 31 per cent.; on figured silks about 37½.

6845. Do you consider that that rate of duty can be collected at the Custom House, or does it lead to smuggling?—It certainly has led very considerably to smuggling; but there are other goods which pay a much higher rate of duty. The rate of duty upon what we call de coupé ribbon is also about 37½ per cent. I am speaking now of goods of the best quality; upon a striped gauze ribbon, the average duty is about 49 per cent.; upon velvets 45, upon crapes 47½, upon the article of tulle 100 per cent.

6846. What is the duty upon crape lisse?—That is no longer imported.

6847. What rate of duty would the de soie pay?—Thirty per cent.

6848. Are those rates of duty the rates now paid at the present prices, or are they the rates paid at the time the Act passed fixing those duties?—The present prices.

6849. Were they higher or lower at the time the Act passed?—Lower considerably.

6850. Then in proportion as the prime cost of every article imported is lowered, the duty consequently has become higher?—Certainly.

678.

3 c 3

6851. Has

Mr.
Robert Clay.

25 May,
1832.

6851. Has not the duty been once altered to meet that fall in the price of the goods?—It was altered, to the best of my recollection, in 1828 or 1829.

6852. To what extent did that meet the fall?—It placed them much upon the same footing that they were originally intended to be.

6853. Since 1828, in consequence of the reduction of the price of all the different articles, has the per centage again increased?—Certainly, especially on ribbons.

6854. What is the rate at which each of those different kinds of articles which you have mentioned can be smuggled into England?—The price of smuggling has generally been governed by the amount of duty paid upon each article; if the duty has been 40 per cent. the smuggler would perhaps demand 30; but if the duty is lowered to 20, the smuggler then is bound to lower his rate. I consider it possible, that plain silk goods might be smuggled over at from 20 to 22½ per cent., certainly not under 20 per cent.

6855. In what manner have you become acquainted with the rate at which different goods can be smuggled into England?—From offers that are continually made to me both in Paris and in Calais.

6856. Then you consider that there is a regular rate each year?—Certainly, and a regular insurance.

6857. What is the lowest rate at which you have known any of those goods smuggled?—I have never known of silk being smuggled at less than 20 per cent.

6858. What amount of duty do you consider could be collected fairly upon the importation of silk goods, so as to put an end to smuggling?—Twenty-five per cent. upon all broad silks; upon gauze ribbons I should say 30 per cent.

6859. Then if the duty on all broad silks was reduced to 25 per cent., and on all narrow goods to 30 per cent., is it your opinion that that duty could be collected, and that smuggling would be put an end to?—I have no doubt of it.

6860. Will you explain what tulle is?—It is a silk net, originally made in Nottingham, and it is now made in Lyons from a Nottingham frame; the only reason we can import it at all is, that it is a superior dress, the article itself is made better at Nottingham.

6861. Do not you import a great deal of it to sell to the people at Nottingham to work upon?—I formerly did, but not now, the consumption of tulle is very little now.

6862. Before you began the silk trade in 1826, you were extensively concerned in cambrics?—I was.

6863. What was the rate of duty you paid upon French cambrics per piece?—I merely speak from recollection, I think it was 11s. or 11s. 6d. for eight yards.

6864. At that time are you aware whether any smuggling existed of cambric?—To a very great extent indeed; I think the alteration took place before 1826.

6865. What was the reduction that took place in the duty upon that article?—From whatever the duty originally was upon plain articles, it is reduced now to 6s.

6866. Was not it a dozen years or more since it was reduced?—No, it is not a dozen years.

6867. Can you state what per centage the 11s. 6d. bore to the price of the article then, and what per centage the 6s. bears to the price of cambrics now?—It will be observed that at the time the high rate of duty existed upon cambrics they were only the low priced goods that were smuggled, the fine still paid duty; therefore it is a very difficult question to form an idea of the per centage that each paid at the time; there are so many different qualities of cambrics; you may have a cambric worth only 20 francs and one that is worth 100.

6868. Do you mean that the 11s. 6d. was paid as duty upon a piece of cambric of eight yards, whatever the value of it was?—Yes, and the same upon handkerchiefs.

6869. Would not the price of cambrics run from 3s. per yard here up to 20s.?—Yes, and the duty was the same upon each.

6870. Is the duty now the same upon cambrics of all qualities?—There is a distinction now made in handkerchiefs, but upon plain cambrics it is all the same.

6871. What is the range of price at the present moment of plain cambrics upon which the duty is paid?—I am not engaged in French cambrics now.

6872. Do you believe there is as great a variety now as there was then?—No doubt.

6873. Did

Mr.
Robert Clay.

25 May,
1832.

6873. Did the reducing the duty one half check or put an end to smuggling?—It put an end to it entirely.

6874. You believe that no cambric is smuggled now?—No question of it.

6875. Do you mean that when the duty was reduced to 6s., there was no smuggling of cambrics?—Never, after they were reduced to 6s. I consider it impossible.

6876. As far as you know, what was the state of smuggling in French goods in the year 1826, and what is the state of it now with respect to the same articles, first as to the kind of articles smuggled in 1826?—In 1826 I imagine that the principal articles smuggled were silk ribbons, gloves, lace and jewellery.

6877. Do not you apprehend, that the low French cambric has been almost entirely superseded by the manufacture of Irish?—There is no doubt of it at the present moment; but I am not conversant now with the cambric trade sufficiently to give an opinion upon it.

6878. Might not that be one cause why it would not answer the purpose to smuggle the low French cambrics?—I should conceive that it would never answer their purpose; formerly the Act ran, that you should pay such a duty upon a piece of cambric not exceeding eight yards in length or seven-eighths of a yard in width; the duty is now levied upon the square yard, which makes a very great difference indeed.

6879. Before 1826, in addition to cambrics smuggled, was there any smuggling in India handkerchiefs and bandannas?—To an extraordinary extent in bandannas.

6880. Can you state the amount of premium paid upon smuggling that?—It depended entirely on the facility of the smuggler; that is, the portable description of the article that he had to bring over; I should think upon bandannas, at that time, the premium would be 35 per cent.

6881. Since the importation of bandannas was permitted on a duty paid, have any been smuggled?—Certainly not.

6882. Are you satisfied that no smuggling exists?—So satisfied am I upon that, that there is no demand scarcely for the article; they are selling now at a lower price than what they used to sell for in India.

6883. Does that arise from the English competition?—It does.

6884. Were not the bandannas, at the time you speak of, when prohibited, commonly sold along the coast at from 50s. to three guineas a-piece?—Yes.

6885. So that their sale at that price could not have a very prejudicial effect upon the English manufacture of bandannas?—I should say it could have no prejudicial effect at that price.

6886. Do you know the price of them at the present moment?—I do not at present.

6887. Are not a great number of bandannas imported in the white, and printed here?—No doubt.

6888. Has not the entire alteration in the fancy, and in the patterns, superseded the sale of the Indian printed bandannas in this market?—No doubt; there is a large importation of English bandannas to France.

6889. Previous to 1826 were you acquainted with any men that carried on smuggling to any great extent?—Yes.

6890. Can you state the amount?—It is difficult to do that, the smuggling was generally carried on through two or three houses at Calais, and there is no difficulty in ascertaining the amount of goods that have been smuggled from Calais in any year, because they must be entered at the Custom House, and those returns must be open for inspection; and if they are not entered in the books of the Custom House they must be smuggled out of France.

6891. Comparing the extent of smuggling in silk goods in 1826, and in each year up to the present, what do you consider to be the comparative amount?—I should think the quantity of silks smuggled now into England is not five per cent. of what it was in 1826. I mean to say, that before the alteration of the duty took place there were 100 pieces smuggled where there are only five now.

6892. Have you any knowledge of what was the state of the glove trade then and what it is now?—I am not a glover, but I believe there is no smuggling in gloves.

6893. Did you, before 1826, know any house that ever smuggled to the extent of 100,000*l.* in one year?—I think I did.

6894. Have you any idea of any house smuggling to that extent now?—Certainly not.

678.

Mr.
Robert Clay.

25 May,
1832.

6895. In speaking of silk goods, do you apply your observations to French silk goods?—Yes.

6896. Were there any China silks smuggled?—Not China, but Italian thrown silks were no doubt smuggled before the alteration.

6897. You mean that thrown silk, which paid 14s. duty, was smuggled into this country?—Yes.

6898. How was it smuggled?—It came on transit from Italy, and was lodged in a *depôt* in France, and then shipped and smuggled into England.

6899. You say that no smuggling exists now in cambrics, and none in gloves, does any exist in lace?—I should think there must be smuggling in lace.

6900. What is the duty now on lace?—Thirty per cent.

6901. Are you able to state what rate of duty could be collected on lace, so as to prevent smuggling?—The duty on lace must be reduced at least one-half.

6902. What is the state of smuggling with regard to jewellery?—I cannot state.

6903. Do you know whether any is smuggled?—I believe there is, because I have received accounts from Calais giving me different items that are smuggled, and amongst them there is jewellery.

6904. Then are the Committee to understand, that by the Custom House books at the port of Calais, and other ports along the coast, by a return of the export of French silk goods to England, the amount might be ascertained pretty correctly of the smuggling that has taken place in each year?—No doubt of it.

6905. Could any individual obtain it, or would it be necessary for Government to apply?—It might be obtained by an application through a correspondent at any of the sea ports.

6906. In what manner would you propose to put an end to smuggling in French silks?—There is only one mode of doing it, that is to reduce the duty; reduce the duty upon broad silks to 25 per cent., and the duties upon ribbons, and there will be little or no smuggling.

6907. Would you propose stamping the French goods?—The idea appears to me to be absurd, if a stamp were required you could import them already stamped; you could have them stamped upon the other side.

6908. How is the duty now collected, is it by value or by weight?—Principally by weight.

6909. Would you suggest any alteration in the present mode, in order to produce the utmost amount of duty?—I think I should not; at the same time it is to be observed, that if you reduce the present amount to an *ad valorem* duty it stops the smuggling altogether; but the *ad valorem* duty is always difficult to collect; experience has taught us, that one man may put the value of 30s. upon an article and another man may put 20s.

6910. Might not a person versed in silk goods be employed at the Custom House with good effect?—I think it is impossible, and in my opinion it ought to remain as it is, a rate of duty; if you intend to do all that you can for the collection of it, if you wish to protect the interest of the British manufacturer, decidedly have a rate a duty, because it prohibits the lower classes from coming in; if you have an *ad valorem* duty it may enable me to import an article that I cannot now obtain a profit upon, because instead of paying a duty of 30 per cent. I shall have it perhaps at 20 or 10.

6911. Upon what do you form the opinion that smuggling has decreased at the present time, as compared with 1826?—From the accounts I have received from Calais.

6912. When you visited Calais or Paris, had you an opportunity of ascertaining the rate at which smuggling would be carried on?—There are regular places at Calais known to every person that goes over.

6913. Are there respectable houses that will guarantee the goods?—Yes; the most respectable men in Calais, and in Boulogne, are smugglers.

6914. Is it not then considered any disgrace?—It is considered no disgrace there; it is no affair of theirs; they sell the goods and they get the money for the

6915. Are there any respectable houses in England that smuggle?—Speaking of respectability, it is no disgrace to a man in France to smuggle; but perhaps an individual might not be considered respectable in England that did smuggle.

6916. You stated that there was one house which, previous to 1826, smuggled to the amount of 100,000*l.*, do you think there were many houses that did it to that extent?—I think not another.

6917. Or

Mr.
Robert Clay.

25 May,
1832

6917. Or to half that extent?—Nor to half that extent.

6918. Do not you know of several considerable houses who smuggle to a great extent now?—I do not know, nor do I believe there is any such house in existence at the present moment.

6919. Was that your opinion before the seizure of Leaf's?—No, it was perfectly notorious; but they were the only extensive smugglers at the time.

6920. Do not you know there are persons in France who will deliver the goods to agents here, through whom some of the large houses in the silk trade get their goods?—No doubt about it; but speaking of smuggling we draw our conclusions by comparison.

6921. Do you believe that there is not a house now that gets smuggled articles to the extent of 100,000*l.*?—I deny the possibility of such a house being in existence.

6922. Do you think it possible to put down smuggling by any means whatever, but that of reducing the duty to the expense of smuggling?—There is no other means of doing it.

6923. Do you think that any per centage beyond the rate of smuggling could be collected?—Certainly; five per cent. upon plain silks, and ten per cent. upon ribbons.

6924. Are the Committee to understand, that in order to put down smuggling, the expense of smuggling should be ascertained, and that that amount, with perhaps five per cent. more, might be fairly levied as a duty upon every one of those articles?—I have no doubt of it.

6925. Had not the house that you say smuggled to the extent of 100,000*l.*, before 1826, several very large seizures?—No doubt about it.

6926. When French goods were prohibited, was not it necessary to keep them concealed, and to be very cautious in the disposal of them?—No doubt of it.

6927. If French goods should be smuggled now, is there the same danger of detection, and the same facility of detection as when such prohibition existed?—There is no danger at all now.

6928. Do you think that prohibition, or the present state of the law, is most favourable to smuggling?—The present state, certainly.

6929. If prohibition should take place again, would the smuggling be put an end to, or go on?—It would be increased.

6930. What is your reason for that opinion?—The reasons, according to my ideas, are exceedingly plain; if you cannot obtain an article legally, you do it illegally by smuggling.

6931. Do you mean, that under the present state of the law, there is less risk in smuggling, but at the same time there is less inducement?—Exactly.

6932. When did you first begin to import French goods?—In 1826.

6933. Have your dealings increased or diminished during the last six years?—They have fluctuated a good deal; in the year 1830 they decreased more than one-third; last year, in 1831, we partially recovered.

6934. You are speaking of the amount of your return?—Yes.

6935. If the goods are lower in price, must not you have sold a much greater quantity to keep up your return?—No doubt of it.

6936. What is the state in this year?—It is the same up to the present time; my opinion is, that the silk trade altogether is upon the decline, as far as regards imports.

6937. Do you import any plain French goods, or are they chiefly figured and fancy goods?—No, low priced French goods; but many that are plain are rich, I mean watered silks.

6938. Have there not been many rich watered silks worn in this country this year?—No doubt.

6939. If you take an English and a French watered silk of the same richness, which sells in preference?—I do not sell English; as a general principle, the preference is given to the English manufacture; but in that particular article, I think the preference would be given to the French.

6940. How do they make watered silks in England?—It is merely a plain silk, pressed with an iron going over it.

6941. Do you import any rich plain satin to any amount?—Yes.

6942. Were silk goods smuggled to any extent previous to 1826?—I should say they were to a very great extent.

678.

3 D

6943. Do

Mr.
Robert Clay.

25 May,
1832.

6943. Do you know any thing of the manner in which smuggling was then carried on?—Yes.

6944. Was it not then very dangerous to have foreign silk goods in your possession?—I should imagine it was.

6945. Before 1826, were there not frequent prosecutions and convictions for smuggling?—I have no doubt of it.

6946. Do you happen to know whether the principal smuggling transactions were generally prosecuted?—I do not know; it is impossible for me to answer that question.

6947. Did you ever hear of cases in which persons of an inferior description and grade of life got caught where the principals were let off?—You cannot of course prosecute a man that has any thing to lose; of course a man that has any thing to lose will not keep the things in his possession.

6948. Do not you remember a case happening in the City of London, in which a porter of the name of Wright was prosecuted for a considerable amount of goods found in his possession?—Certainly not.

6949. Do you remember one since 1826?—Yes.

6950. What situation of life was he in?—A ticket porter.

6951. Was he condemned in any penalties?—Yes.

6952. Did he pay those penalties?—Yes.

6953. You have stated the amount of duties now collected upon broad plain silks to be 31 per cent.; will you state the price of some plain broad article you have lately imported, and the duty you have paid upon it?—In the article of plain gros de Naples, I have imported a few pieces. Those goods cost me, in Lyons, three francs, 90 centimes; the duty upon those was 33 per cent.

6954. Are the calculations you have given of the per centage of the duty, *ad valorem*, or upon the weight?—They are all upon the weight; and therefore the higher the value of the goods, the lower the rate of duty.

6955. Where are the watered silks you have imported made?—At Lyons.

6956. But you say that the Lyons manufacture has decreased?—Yes.

6957. Has not this large increase of the watered silk re-animated the trade?—When you speak of animating a whole manufacturing town by the operation of three or four manufacturers, it is extraordinary. I mean to say that the manufacturers at Lyons have decreased very considerably; and because there has been one article in demand a few months that would never revive the manufacture of a town.

6958. Have you any idea of the number of looms in the town?—No, the manufacture is very extensive, but the whole of my business in plain articles is done with about four houses; and in articles of a more fancy description, with four more, so that I have not absolutely twelve accounts at Lyons. They are the best manufacturers that manufacture goods for this country.

6959. Are not the manufacturers at Chaumont and St. Etienne very extensive also?—I consider them, generally speaking, very numerous, but small manufacturers.

6960. Do you consider that the quantity of French goods sold now, whether smuggled or legally imported, is greater or less than it was before 1826?—There cannot be a doubt that it has increased to a very great extent.

6961. Do you think that it is four or five times as much?—I think it is.

6962. Has not the general use of silk goods since 1826, greatly increased?—I should think generally it has, but not to that extent.

6963. You have stated that the smuggler's price is regulated by the amount of duty; has the smuggler then lowered his charge as the duty has been reduced?—Certainly.

6964. To how great an extent do you think the smuggler will lower his charge?—As far as I can ascertain from information at Calais, the lowest rate of premium that there would be any chance of being taken would be 20 per cent.

6965. What does that 20 per cent. include?—I imagine it includes all charges, from the time of shipping to the delivery.

6966. Should the price of silk goods rise again, would it not bring the rate of duty down again to the rate intended in the year 1829?—It would.

6967. Do you consider the disturbed state of Paris in 1830, and the cholera on the Continent in 1831, and the reform in England in 1832, have all had an effect in reducing the price of French silk goods?—I would rather decline answering a question so general.

6968. To

Mr.
Robert Clay

25 May,
1832.

6968. To what causes do you attribute the decline in the price of French silk goods?—To the decline in the raw material.

6969. To what do you attribute the decline in the price of raw silks?—The same cause that produces the decline of cotton.

6970. Did you not assign as a reason for the large importation of foreign silks into this country in the year 1830, the state of France in that year?—Not to the increased amount; but I alluded particularly to the quantity of goods that were bought at the low prices; there were a great many goods brought in from Paris in that year.

6971. You stated that when you first went to St. Etienne, there was only one house that made one description of goods; namely, the *de coupé*, fit for the English market, and that they have since improved their manufacture very much, what has induced them to improve their manufacture?—The article being in general demand.

6972. Do they find any competition in England?—I should suppose there is less competition of the English against that article than any other.

6973. But they were stimulated by the chance of sale in this country to improve their manufacture?—I conceive that every manufacturer is stimulated to improve his manufacture as far as he can, for his own advantage.

6974. Do you think that French goods have decidedly improved in value since 1826?—Decidedly.

6975. Have they not found it necessary to reduce their prices, and to improve their make, in order to keep a footing in the English market?—There is no question that they have been compelled both to reduce prices and to improve the manufacture.

6976. What is the description of French goods which, after being brought into this country, are beaten by English goods?—I should say all low priced goods up to the price of four francs, can be manufactured in this country decidedly cheaper than they can be imported from France.

6977. Do you mean to say, that the British public prefer new English fancy goods to new French fancy goods of the same kind?—Certainly not; I applied what I said to plain goods.

6978. In fancy goods do you not always import from France in the first instance, or would you take a pattern from England and get it made in France?—I have frequently done it, we frequently compose our own patterns and take them over with us.

6979. Why do you give them the patterns to make, in preference to the English manufacturers?—I have had nothing to do with the English trade.

6980. Have you ever taken a pattern from an English silk, and given it to a French manufacturer to make?—Never.

6981. You have stated, that the English can easily copy the French patterns; that they can make them cheaper than the French, and produce them very quickly; why then, as the English goods are the cheapest, do you not get the patterns, or at any rate only a small quantity of the goods from France, and have the bulk of the goods made in England?—The reason I do not do that is simply this, from France I have very little competition, we know very well that it can only come from a few houses, but if I give an English manufacturer an article it is dispensed throughout the trade at once; that circumstance causes a competition between those houses, and prevents you from obtaining a profit.

6982. Do you mean that if you give a pattern to an English manufacturer, it is shown about, and becomes quite common?—No doubt of it.

6983. Could you not enter into an agreement with the manufacturer to keep it to himself?—In all probability this might be done, but I do not deal in a single article that is not French; I have quite as much to attend to in my business, and it requires as much capital as I have to employ; I cannot engage in both; I do not interfere with the English trade, and I know nothing about it.

6984. If you thought it more to your advantage to deal in the English trade, probably you would deal in the English trade?—Probably I should, but I fancy I understand the French business tolerably well, and I know nothing about the English.

6985. How do you know the English goods to be cheaper?—Merely by competition, from my customers bringing the goods into my own house, the same patterns that I have imported two or three months before, they bring into my house at a much lower price than I can get them at.

678.

3 D 2

6986. What

Mr.
Robert Clay.

25 May,
1832.

6986. What description of articles do you refer to?—I am now alluding to what we call armures.

6987. Are those that are made in England made in Manchester or in Spitalfields?—I do not know; I do not know any thing upon this subject from my own knowledge.

6988. When you state that after you have imported French goods you frequently see them in the market imitated by the British manufacturer cheaper; does that arise from their being able to make them cheaper, or because the novelty was gone off?—There is no doubt the English can manufacture them cheaper than the French, with the duty paid.

6989. Does that observation apply to the fine articles as well as to the coarse?—In articles of fancy, I think the French most decidedly have a preference.

6990. Do you mean that they can manufacture them cheaper without the duty, or cheaper than they will come upon paying the duty?—I mean to say, that the French manufacture them decidedly cheaper than the English without the duty, but the duty being so heavy makes the French goods much higher.

6991. Do you think that there is a sufficient quantity of gauze ribbons introduced from France illicitly to lower the price of the French gauze ribbon to the fair dealers?—No, I do not; those are circumstances that are very prejudicial to every fair trader, and what you are always subject to; but my opinion is, that an article that has paid the duty is so much more valuable than the one that is smuggled, that 19 times out of 20 that article will sell at a higher price on account of the condition.

6992. Then, independently of price, is there not such a preference given to French fashions, the French goods would sell before the English?—I am decidedly of opinion that there is a preference given in point of fashion to the goods of France; there is one thing I wish to give an opinion upon, relative to the French ribbons; when we bring a set of ribbons in, the ribbon is complete in all its colours; the consequence is, that if a retailer comes into my house, he can buy a regular assortment in that pattern of every colour he wants; but if I understand rightly from the information I have received, he cannot do so in Coventry, they introduce only a few pieces at a time, and from week to week. Now if we introduce a pattern on the 1st of May, and again on the 24th, that pattern is not worth so much to us by 20 or 25 per cent.; and why should not that be the case with the Coventry goods. If a man that goes into a Coventry house can only get a piece of black or a piece of white, he says no, I must go and buy them where I can get a regular assortment.

6993. You stated that you thought a duty of 25 per cent. would be sufficient to prevent smuggling, and you stated that you thought they might be brought in for 20; to a person who is in a large way of business, would it not be worth his while if he could have those goods delivered to him insured against all risk, to receive them by making an advance of five per cent.?—Certainly not; it must be against his interest to do so.

6994. If he can get them five per cent. cheaper by having them introduced in that way, would it not be worth his while to save the five per cent.?—No, and I will state the reason; if a man smuggles his goods there is no certainty of the time when he is to receive them, for instance, if a smuggler ships 1,000*l.* worth of goods, and I send at the same time to an agent to ship me 1,000*l.* regularly, I shall receive mine probably in seven days, and perhaps in six or seven weeks they will receive the smuggled goods; and, independently of the time that has elapsed, there is a great difference in the condition of the goods, from the different mode of packing, and therefore my goods are worth nearly five per cent. more to me, exclusive of the time.

6995. Are they not worth more on account of the preference that is given to new articles?—Decidedly, and therefore that is another reason why you cannot smuggle under those circumstances.

6996. Is it not the case that a manufacturer at St. Etienne may sell 120 garnitures of gauze ribbon to you, and he may also sell 120 garnitures to an Austrian buyer, to an American, to a Swiss, and also to the home market in Paris, and that he will thus make no less than 700 garnitures of one pattern, and the whole quantity shall be so placed as not to interfere with the interests of the various buyers; is not that the case?—I think not.

6997. Do you think that the French manufacturers confine themselves to making the quantity ordered for the English market?—Generally speaking they do; but you

you observe the lengths that we ordered our ribbons, are not calculated for any other market; I want my goods of a different length from what they want them for Germany; the German wants them of a different length from what they have wanted for America; and therefore the manufacturer very seldom makes more than the extent of the order; I have never understood that it has been the interest of the manufacturer to manufacture another set on his own account, after he has manufactured for the order. If I discover that an article has been made for any other house than myself, any loss I sustain upon that pattern, would be reimbursed by that house.

6998. Is it not the case, that a great quantity of French goods made for the American market, and rejected there, are sold as jobs in this country?—Certainly not.

6999. If orders were given to the Coventry ribbon makers in the same way as you give them to St. Etienne, would there not be a regular assortment made at both places?—No doubt of it.

7000. You stated that previous to the reduction of the duty upon the thrown silk, from 14s. 8d. to 7s. 6d., a considerable quantity was smuggled; did you state that of your own knowledge?—My knowledge upon that subject arises from the information I have received from respectable houses at Calais; I have written over for the amount of goods that have been exported, and I have received an answer, extracted from the Custom House books.

7001. Were they smuggled in large quantities?—I do not know.

7002. Do you know whether they were smuggled in bales?—I do not know; I should imagine they must have been in small packages.

7003. What period do you allude to when those transactions took place?—I cannot state.

7004. In what year was it?—I cannot say.

7005. When was the duty reduced upon thrown silk?—I do not know.

7006. Does the smuggler enter at the Custom House at Calais the goods he proposes to smuggle to England?—Not the smuggler himself, but the agent.

Mr. William Stone, called in; and further Examined.

7007. HAVE you prepared the Statement you were requested to prepare?—I have; the numbers I am about to state are from the best sources I have, there may be some variation, but it will be but trifling. In 1828 the number of raws received in this market, under the mark DS, was 170 bales, and the number of throws under the same mark was 37; 96 bales of raw marked J, and 20 bales of thrown. For 1829 DS 165 bales of raw, thrown 3; J 79 bales of raw, none of thrown. For 1830 DS 123 bales of raw, and 33 bales of thrown; J 94 bales of raw, and 24 bales of thrown. 1831, DS 176 bales of raw, and 34 bales of thrown; J, 55 bales of raw, and 30 bales of thrown. 1832, DS, 20 bales of raw, and 14 bales of thrown; J 5 bales of raw, and 3 bales of thrown.

[The Witness delivered in the following Paper, which was read.]

Mr.
Robert Clay.

25 May,
1832.

Mr.
William Stone.

I will state that I have been employed for some time in the service of the French manufacturer at St. Etienne, and I have been in the habit of sending goods to the agent to ship to me, regularly, I shall receive nine probably in seven days, and perhaps in six or seven weeks they will receive the smuggled goods; and, independently of the time that has elapsed, there is a great difference in the condition of the goods, from the different mode of packing, and therefore my goods are worth nearly five per cent more to me, exclusive of the time.

6995. Are they not worth more on account of the preference that is given to new articles?—Decidedly, and therefore that is another reason why you cannot smuggle under those circumstances.

6996. Is it not the case that a manufacturer at St. Etienne may sell 120 gar-
mines of gauze ribbon to you, and he may also sell 120 garments to an Austrian
buyer, to an American, to a Swiss, and also to the home market in Paris, and that
he will thus make no less than 700 garments of one pattern, and the whole quan-
tity shall be so placed as not to interfere with the interests of the various buyers;
is not that the case?—I think not.

6997. Do you think that the French manufacturers confine themselves to making
the quantity ordered for the English market?—Generally speaking they do, but

Mr.
William Stone.

7008. Do you include waste in the raws?—I do not.

7009. Do not those quantities show those parties to have increased their trade in organzine, since the 3s. 6d. duty upon organzine came into operation?—From the year 1828 up to the present time it would appear that they have increased it. In the season of 1830 to 1831 the importation of raws of DS was 168, of throws 65; and the £ 99 bales of raw, and 54 bales of thrown. From the 1st of August 1831, up to the beginning of May 1832, for DS the raws are 128, and the throws 14 bales; for £ the raws are 39 bales, and the throws 3. I think this statement bears out the opinion I have already given, of the great falling off in foreign throws this season.

7010. Have you got the account of trams?—No; but in my last examination I stated, that the importation of the season, from the 1st of August 1830 to the 1st of August 1831, for trams of all qualities, was 706; and from the 1st of August 1831 to the 1st of May 1832 it has fallen to 62 bales.

7011. Can you give the same account with regard to trams that you have given with regard to organzines?—For 1830 we received trams of DS 16 bales, none of £. For 1831 we received of DS 54 bales, and of £ 2 bales; now the whole of this, except three bales, were received from August 1830 to August 1831.

7012. What do you consider to have occasioned that increase?—The price obtained for the article in the thrown state in this country during the summer of 1830.

7013. Does it not appear from this, that the parties are importing raws and throws in more equal quantities?—No; it is as 128 bales of raw to 14 bales of thrown in the one case, and 39 bales of raw to 3 bales of thrown in the other.

7014. As both those parties in the year 1830–31, sent the raws and throws in more equal quantities than they did in 1829, is it not a fair inference that the price

of

of the one may aid the price of the other, and that they find an advantage in sending thrown silk to England?—I do not think the facts bear out the question; I stated, in a former examination, that the markets in 1830 towards August onwards, induced a great importation of thrown, and it appears that these men commenced sending from that period to that time in 1831; to August 1830, DS only sent 2 bales, ~~if~~ nothing; and I suppose the strong inducement arising from the state of this market at the commencement of August 1830, tempted them to embark in the thrown.

Mr.
William Stone.

25 May,
1832.

7015. Is it not sometimes the practice for the broker to take the raw silk when thrown from the throwster, and sell it for the principal?—That was one of the questions that was put to me before, and I beg leave to submit that it is one of the questions that should not remain on the Evidence, nor any thing relating to my own business as a broker; as to other men's business, as brokers, they must answer for themselves.

7016. You said that the broker's commission is five-eighths per cent.; if the merchant is not satisfied with the person to whom you sell, do not you guarantee one per cent.?—I beg leave to decline answering that question.

7017. Is the silk usually sold on a credit of five months?—It is.

7018. If paid for in cash does not the merchant allow $2\frac{1}{2}$ per cent.?—He does.

7019. That is, if paid for within 14 days?—Yes.

7020. If the silk is then thrown, and returned from the throwster to the broker for sale to the consumer, is not a further guarantee for sale usual?—That I must decline answering.

7021. Is not the credit for thrown silk six months?—No, five months.

7022. What is the usual discount upon thrown silk?—Upon foreign thrown silk $2\frac{1}{2}$ per cent., upon English thrown silk 3 per cent.

7023. Do not the manufacturers in Spitalfields generally pay cash for their silk?—Generally.

7024. Was that the case formerly?—Not so much as it is now.

7025. Have you reason to know, that the manufacturers generally sell their manufactured goods for cash?—I believe they do.

7026. You have stated, that you think the duty upon foreign thrown silk is a tax upon the manufacturer in Spitalfields; upon the supposition of the continuance of the present duties, what will be the effect upon the manufacturers of Spitalfields?—I think the tendency will be to cause the trade to go into the country, unless it is counteracted by preventing the importation of foreign goods, either by prohibition, or any other method that may be thought proper.

7027. What will be the effect upon the commission throwster?—It depends upon the place where the commission throwster may be situated; if he is in the North the more trade there is in that part the better he will be circumstanced; if in the West it must be certain destruction to him.

7028. Do any of the commission throwsters live in the North now?—I believe a great many.

7029. Do the Manchester manufacturers throw their silk themselves or by commission throwsters?—Both ways.

7030. Is it your opinion, that the Manchester manufacturers have already injured the trade in Spitalfields?—The trade having extended there, of course they have obtained a portion of it, and so far it must be to the prejudice of the London manufacturers; but this is fair competition.

Lunæ, 28^o die Maii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. *Francesco Caffi*, called in; and Examined.

7031. WHERE do you reside?—At Bergamo, near Milano, in Lombardy.

Mr.
Francesco Caffi.

7032. How long have you been employed in the silk trade, and in what branch?—I have been from twelve to fifteen years in the silk trade, in reeling silk from the cocoons, in throwing, and as agent to a mercantile house in England.

28 May,
1832.

7033. Did you in Italy raise any cocoons yourself, or buy them?—We raised some ourselves, but the most part we bought.

678.

3 D 4

7034. Will

Mr.
Francesco Caffi.

28 May,
1832.

7034. Will you state whether those merchants who throw and sell, are generally those who raise the cocoons, or whether they generally buy them?—The reeler buys the cocoons in the public market, at the price of the day, and by private contract, to pay three or four months after; but some give the money in advance, it depends upon the condition of the person, whether he is rich or poor.

7035. Is Bergamo, where you resided, one of the principal places for throwing silk?—Yes.

7036. What is the general manner of buying the cocoons?—In open market; and by private contract, three or four months before the crop is ready.

7037. Do the landlords there frequently make advances to those who raise the cocoons, and what are the general terms?—Some advance one-third, and then they send the cocoons to the reeler, and after the price is settled, they give the remainder of the money to some labourers; they give half the price of the cocoons.

7038. Do you mean for the supply of the mulberry trees?—The landlord is obliged to keep leaves and seed.

7039. It is a sort of partnership between the labourer and the landlord?—Yes.

7040. What portion does the landlord get, and what portion does the labourer get?—Half each.

7041. What does the landlord supply?—Mulberry leaves and eggs.

7042. Does he supply houses?—Sometimes he does, sometimes not; there are some of the tenants who are proprietors and labourers at the same time, and do the whole.

7043. In what months of the year is the reeling done?—In June, July, August, and September; the crop in cocoons is over in June, and the reeling goes on till September, and sometimes till October, if the crop is good.

7044. Does the crop vary much in different years?—Yes, by the season, which is sometimes later, sometimes earlier; if there is a hailstorm or frost, it effects the general produce.

7045. Will you state who are the parties that reel the cocoons off, and what are the expenses charged for reeling?—There are a great many persons who reel for others, some reel for themselves.

7046. What is the expense of reeling?—The expense for reeling silk from three to four cocoons are from six to seven Italian livres; and from four to five cocoons, six livres.

7047. How many deniers weight will the first be, and how many the last?—The three to four cocoons will be 20 to 24 deniers, the four to five will be 24 to 28, and the five to six 26 to 32, depending on the quality of the cocoons.

7048. What is the value in English money of the Italian livre?—Seven-pence halfpenny.

7049. In what manner is the reeling paid for, and what is the amount by the pound?—The woman employed at the boiler receives one livre and five sous per day, with bed and board; and the girl who turns the reel gets thirteen sous per day, and the same board and lodging; the quantity reeled differs according to the season, for in June and July they work both earlier and longer than at a later period of the year. In June and July, and till the middle of August, they work from four in the morning till eight at night, and they then do perhaps a rubo per day; but later in the year, not much more than half a rubo.

7050. What is a rubo?—It is ten pounds, and a rubo of cocoons gives about two pounds of raw silk.

7051. Of Italian weight?—Yes; an Italian pound is not quite three quarters of an English pound.

7052. You say that the people work a certain number of hours in June and July, and receive certain wages; are they paid the same wages in those months in which they cannot work so many hours in the day?—In August, September and October, they receive one-third less.

7053. Have you any statement of the expenses, in addition to the wages of the woman and girl which attend the operation?—The other expenses are for rent, taxes, repairs, &c.

7054. To what do they amount in addition?—With the 25 sous, and the 13 (calculating 20 sous, to the livre) it will make, with other expenses, six to seven livres in all per rubo, differing according to the quality.

7055. Can you state to what it will amount per pound weight of 16 ounces, in English?—Four livres and a half, about 2*s.* 10*d.* English.

7056. The

Mr.
Francesco Caffi.

28 May,
 1832.

7056. The livre you speak of is always the Italian livre?—Yes; $7\frac{1}{2}d.$ English, or 20 sous of Lombardy.

7057. Will you state the cost in English money for an English pound of sixteen ounces?—At six livres for the rubo, it is equal to $2s. 6d.$ per English pound of 16 ounces; and $2s. 11d.$ when the rate is seven livres.

7058. Will you state what are the charges for throwing tram, and what is paid for winding, doubling, twisting and waste, and what is the duty?—Forty Italian sous per Italian lb., that is one shilling and three-pence.

7059. How much of that do you pay for winding?—Fifteen sous per pound.

7060. What do you pay for doubling?—Ten sous; and for twisting fine, five sous; other expenses, rent, taxes, &c. computed at five sous, to which, add profit five sous, making together 40 sous, equal to $1s. 3d.$ English.

7061. How much is the waste?—Nearly three per cent. on tram, that will be about eight sous on an Italian pound, deducting the value of the waste.

7062. That is all that is paid, except the duty?—Yes; the duty is nine sous, about $3\frac{1}{2}d.$ English; but the raw silk on export from Lombardy pays double.

7063. That will, together, be $1s. 9\frac{1}{2}d.$ in the money of this country?—Yes.

7064. How much would you add to make it up to the English pound?—Per English pound $2s.$, exclusive of duty on export.

7065. Are the Committee to understand that those 40 sous are for an Italian pound of 12 ounces?—Yes.

7066. Are the Committee to understand that the whole expense in winding, doubling, twisting and waste for an English pound, is three livres and four sous, equal to $2s.$?—Yes, 48 sous to an Italian pound, or 64 for an English pound of 16 ounces, exclusive of export duty.

7067. What are the expenses of throwing organzine?—The winding is the same, 15 sous, or $5\frac{1}{2}d.$; doubling 10 sous, or $3\frac{1}{4}d.$; twisting and throwing 13 sous, or $4\frac{1}{2}d.$; rent, water power, taxes and repairs 12 sous, or $4\frac{1}{2}d.$; making 2 livres and 10 sous, or $1s. 6\frac{3}{4}d.$ English; then there is profit of 10 sous, or $3\frac{1}{4}d.$; making a total of 3 livres, or $1s. 10\frac{1}{2}d.$ English.

7068. How much do you add for waste?—The waste in throwing organzine is generally five per cent., that is 16 sous per lb. Then there is the duty of 9 sous on coming out of Lombardy.

7069. What do you allow for the difference of weight to make it English?—One livre and 5 sous; making, with duty, 5 livres and 10 sous.

7070. That is equal to $3s. 2d.$ English, for the English lb. of 16 ounces?—Yes; omitting the Austrian export duty, which is 9 sous the Italian lb., or 12 the English; adding the 12 sous, or $4\frac{1}{2}d.$, the amount will be $3s. 6\frac{1}{2}d.$

7071. At what number of deniers do you calculate this silk?—At an average throughout the year of from 24 to 28 deniers.

7072. Do the throwsters for this amount guarantee against all damage and loss, and engage to return weight for weight?—Yes, they do; including the waste.

7073. Is the amount you have stated the average charge to the person sending the raw silk to the throwster?—Yes.

7074. May that be taken to be the general price throughout Lombardy?—Yes; we throw from July to December at 3 livres and 5 sous per lb.; and then from January till June we throw at from 50 to 55 sous.

7075. Do the throwsters throw all the year, or for how many months?—For eight or nine months.

7076. Why do they not throw the remaining four months?—Because the greater part of the raw silk is sent to France and England; but Switzerland takes only about 50 bales of raw.

7077. Are you aware what the charges of throwing in Piedmont are?—I think 10 or 15 sous more than in Lombardy.

7078. Why are they more in Piedmont than in Lombardy?—Because there the exportation of raw silk is not allowed; and they are obliged to give it to the throwster, and he gets high prices; besides that, it is better thrown in Piedmont than in Lombardy. There is some in Lombardy well thrown, but it is better generally in Piedmont, as they have particular regulations respecting the reeling and throwing of silk there.

7079. What laws are there respecting the throwing silk in Piedmont?—There are laws that require the silk to be reeled of certain qualities, clean and good, and every thing necessary to be done must be done to get it up well.

678.

3 E

7080. Have

Mr.
Francesco Caffi.

28 May,
1832.

7080. Have they public examiners?—Yes, there are such persons; but in Lombardy there are no regulations, every body does as he pleases.

7081. You consider the Piedmont silk as better thrown than that of Lombardy? Yes.

7082. Can you account for its being better done; because there is a better demand?—Piedmont thrown has always had a high character.

7083. Has there been any law in Lombardy passed in your recollection to prevent the exportation of raw silk?—There was, in about 1816; my father was charged by the throwsters to present a petition to the Emperor of Austria, who is King of Lombardy.

7084. Was he in the same business with you?—Yes, he was; and he was charged to present a petition to the Emperor of Austria, praying that he would prohibit the exportation of raw silk. It was complied with, and exportation prohibited; but afterwards the landlords and tenants petitioned the Emperor to remove the prohibition, because it tended to lessen the growth of silk in the country. Lombardy produces three or four times more silk than they are able to throw.

7085. How long did that prohibition continue?—Only a few months.

7086. Has there been any prohibition since?—There has been a great many petitions, but prohibition has not since been granted.

7087. What is the lowest price at which you have known organzine to be thrown in Lombardy?—Fifty sous at the poor mills, they must pay rent and keep the persons employed; thus they are obliged sometimes to keep on at a low price.

7088. You have stated that the mills do not work the whole year in Lombardy?—No.

7089. What becomes of the work people in those mills during those months?—They do nothing at all; we are obliged to give them a certain sum, 100 livres the part of the year they are not employed, in advance.

7090. Is that deducted from their wages?—At the end of every week they leave 2 or 3 livres when they are at work.

7091. What is the regulation on that head?—There is a law that allows them to advance during the time they are not working, 100 livres to each labourer, and 50 to the women.

7092. That money is repaid during the season when they work?—Yes; and if they go to another mill, the master who takes up that person is obliged to pay the advance.

7093. What is the reason that the mills do not work all the year round?—Because the raw silk finds a better profit from selling in France or England.

7094. The land owners were incorrect in their petition, when they stated that the mills could not throw the whole?—In part they were correct, because the crops differ very much; one year is as much as three years at another time.

7095. On the average, could the mills in Italy, if worked the whole year, throw all the silk produced in Italy?—No, not half.

7096. Must not the quantity thrown in Lombardy depend upon the price which thrown and raw silk bear in England and other parts of the Continent?—Yes, if Germany and France give good profits for them, they will send them there.

7097. Have you any idea of the quantity of silk thrown in Lombardy?—No, there is no account.

7098. You have stated that the mills throw from eight to nine months, and that they do not throw after that time, because the raw silk finds a better market; why does the raw silk find a better market at the expiration of that eight months, and not before?—There are a great many reelers; they are obliged to give the raw silk to the throwsters because they advance money.

7099. They advance money to the reelers for certain quantities?—Yes, and this silk is always thrown.

7100. If the price of thrown silk in Germany or England or France afforded a profit better than the sale of raw silk, would they not continue working all the year?—Certainly.

7101. In point of fact do they usually work more than the eight or nine months?—About two-thirds of the year.

7102. They could not work the whole year round?—Yes, if the price of organzine was better.

7103. If

Mr.
Francesco Caffi.

28 May,
1832.

7103. If they did so, do you think they would be able generally to throw all the crop?—No, only half.

7104. If they could get a better price for the organzine they would work more?—Yes.

7105. Has it always been the case that they worked only two-thirds of the year?—There are some years when organzine is in great demand in France and Germany, and then they have worked more.

7106. Have you a regular account of the sales of silk in the different parts of Europe at Bergamo?—Yes, every week.

7107. Is it your opinion that the quantity of thrown manufactured depends upon this price current?—Upon the orders we receive.

7108. Are you certain that the mills, if worked the whole year, could not throw the whole of the silk produced?—Quite clear they could not.

7109. Can you state the quantity of silk worked by the Italian mills?—No, we have no register.

7110. Can you state on an estimate or average, the quantity of pounds of silk produced in all Lombardy?—That will be about three millions of Italian pounds in all.

7111. Do you mean on an average of years?—Some years there are more, some years less.

7112. Of that quantity how much is thrown?—That depends upon the year, in some years more than half, in some years one-third; it depends upon the price and the demand.

7113. Does the quantity thrown depend on the crop in Italy, or does it depend also on the crop in France?—It depends partly on the crop in France.

7114. In what manner does the deficiency or excess of crop in France affect the exports from Italy?—Sometimes they get two-thirds of the crop of Italy when the crop in France is deficient, and when the trade is going on brisk; but when the crop is large in France, the demand is smaller, and we send more to England, or Switzerland, or Germany.

7115. Do you consider the prices you have named of 2 s. for the English pound of tram, and 3 s. 2 d. for organzine for the English pound, a remunerating price to the Italian throwster?—Yes, they would be glad to work all the year for that price.

7116. Do other branches of manufacture or agricultural labour receive the same profit as that which is gained by the labour in silk?—It is less than any other branch.

7117. Are the wages of labour in throwing silk larger than in any other business?—The earnings are nearly equal.

7118. Are the Committee to understand, that the quantity of silk thrown or raised will depend upon the relation it bears to other kinds of produce of the country, that if grain is dear there will be more grain raised; or if silk is dear there will be more silk raised?—Yes, but not in the same year, for it requires five or six years to raise the mulberry tree, they cannot gather leaves before three years ingrafted.

7119. Is there not some advantage to the throwster in working the silk fresh from the cocoons?—Yes, there is a little advantage, but it is not much.

7120. Does not the Italian throwster generally avail himself of that advantage in obtaining those sorts of silks?—That lasts only three or four months during the time of reeling; afterwards you must buy from the merchants.

7121. Do not they get them from the reelers?—The throwster is not the buyer, he receives the raw silk from the merchants, from private individuals for the most part.

7122. Do the mulberry leaves ever fail?—Yes, very often.

7123. On that depends the supply of the crop?—Yes.

7124. If the mulberry trees come out late in the season the crop is injured, is it not?—Yes, and if they come too early, the frost injures them, and if late, then they are injured by the heat.

7125. Of the three millions of pounds, can you state to what countries, and in what proportion the exports generally go?—It depends upon the crop in France, whether it is good or bad, how much is sent there, and the state of trade, whether it is going on briskly. If England calls for raw in preference to thrown, raw is sent; and as Germany, Russia and Switzerland order, so exports are made to those countries.

Mr.
Francesco Caffi.

28 May,
1832.

countries. Now we are sending organzine to Russia, there being a profit of 2 s. more on sending it to Russia than to England.

7126. Can you state, on the average, how many bales of each sort go to the countries you have mentioned?—No, I cannot.

7127. Can you tell, on an average, how many pounds weight of raw are sent to England every year?—No, I cannot, because there are a great many smuggled.

7128. Can you tell the total quantity that goes to France and England together?—No, I cannot.

7129. Have you any means of giving that information to the Committee?—From Italy.

7130. Do you know the amount of all the trade of Italy?—That of Piedmont is 2,000,000 lbs. Italian, that we know, for it is registered.

7131. Do you know the amount of the produce of all the other states of Italy?—No.

7132. Are you aware that in 1830 a very considerably increased quantity of organzine was sent to England, and if so, do you know the reason?—Because the Revolution of France made such an impression in Italy, they were afraid of losing it by sending it there. The Italians, generally, are sending in England, because they draw for three-fourths of the value, and they pay four per cent. interest, while the interest in Italy is six per cent.

7133. Could the same reason operate in 1831?—No.

7134. There was a larger increase then?—Then the manufacturing was not going on, and they were obliged to send here; if any one will look at the prices at that time, it will be found, there was a loss of 1 s. and 1 s. 6 d. a pound sending here.

7135. If that was the reason for sending the thrown silk here on account of the revolution, and the state of France, would not the very same reason operate to induce them to send the raw also?—No; because the crop was in June, July, August or September; we had it thrown at that time.

7136. Did you send any silk here in 1830 and 1831?—Yes.

7137. Is any silk smuggled out of Piedmont?—Yes, a great deal of raw.

7138. Is any smuggled into Lombardy?—Yes.

7139. What is the premium for smuggling from Piedmont at which silks can be conveyed out of the country?—From 10 to 15 per cent.

7140. Does that per centage depend upon the number of military there?—Yes; the police officers or custom house officers now form a cordon sanitaire, in consequence of the fear of the cholera morbus.

7141. What is the inducement to smuggle the raw silk of Piedmont into Lombardy?—Because they get a better price in Lombardy and England than they do in Piedmont.

7142. It is not for the purpose of throwing it there?—No, but to send it to other countries in a raw state.

7143. Do you know for what particular kinds of manufacture the raw silk of Piedmont is essentially necessary?—I am not acquainted with the manufacture of goods; but I know that it is for ribbons and crapes.

7144. Is it white or yellow?—White.

7145. Is the silk you speak of what is called Novi?—Yes.

7146. With regard to the raw article, what are the largest mills for throwing silk in Italy?—Mills to throw from 10,000 to 12,000 lbs. in the year.

7147. Do you mean mills that would throw that in the whole year?—Yes.

7148. Can you state what will be the rent of such mills?—From sixty to ninety pounds, depending on circumstances whether in a town or out of a town.

7149. Are they worked by water?—Yes.

7150. There is no steam power?—No.

7151. Have there been any improvements in the machinery of late?—There has been a little improvement in doubling the thread, and in winding; but the people are prejudiced against the introduction of machinery, but there are some now for doubling.

7152. Is the whole done by hand?—Yes, principally; some improvements in doubling have been introduced lately.

7153. Has any improvement taken place in the quality of silk within the last ten years?—Yes.

7154. To what is that owing?—It is owing to greater attention, and to taking better

better care in the working ; they get up a better article, and a better price being obtained, every one is endeavouring to improve the quality.

7155. Is there any improvement in the throwing of organzine?—No, only in the tram.

7156. Are the persons who own the mills generally men of capital?—Middling. To carry on the throwing four or five thousand pounds is sufficient capital for a large mill to make advances to the reelers, who are generally needy.

7157. Are there many reelers who are spinners also?—A few.

7158. You say a mill throwing off 10,000 to 12,000 lbs. a year, would let for 60*l.* to 90*l.* a year, does that rent include all the taxes?—The taxes and repairs are all charged separately, that was in the 12 sous.

7159. What additional charges are there on a mill (taxes, repairs, water power, &c.) paying a rent of 75*l.*?—Twelve sous a pound ; the profit and water power, and tax, and every thing is included in the 12 sous ; I have before stated, that includes superintendence also.

7160. Does France use large quantities of Lombardy organzine and tram, or does she chiefly import Piedmont organzine?—That depends upon the quality and fashion of the silk goods.

7161. She will take that which is most adapted for her trade?—Yes ; but for ribbons it is all Piedmont.

7162. Are all sorts of thrown silk sent to Russia?—Generally the best qualities.

7163. Very fine, and very good?—Yes.

7164. Are they finer than those sent to England?—No.

7165. Are not the best raws required for those thrown silks?—To make good organzine good raws are required.

7166. You spoke of some alteration made in the manner of throwing trams lately, was not that alteration made to adapt the trams to the English market?—Yes ; it was only in case England should want tram to be able to send it here, but there is no profit at all from the sending tram to this market.

7167. If you worked the mill the whole year round, you would not pay an additional rent for it?—No ; the mills are always let for a lease of nine years.

7168. So that in point of fact you might throw one-third more silk without any increased cost in rent?—Yes ; there is no alteration in rent, but some years some mills may have little or none to throw.

7169. Who are the parties ; are they men, women or children, who are employed in winding?—Women.

7170. Who are the parties who reel the silk?—All women.

7171. Do they do it in their own houses or in factories?—In factories.

7172. How much can they earn a week?—In June and July they do eleven pounds Italian per week from the cocoons.

7173. Do they work six days in the week?—Yes.

7174. A woman will receive, exclusive of her board, seven livres and a half, or 4*s.* 8*d.*?—Yes.

7175. Will you state at what you estimate the weekly expense of board and lodging for a woman who receives 4*s.* 8*d.* in cash per week?—Seven-pence or eight-pence a day, a great number living together.

7176. What does she receive for her 7*d.* or 8*d.*?—Breakfast, consisting of a piece of white bread and cheese, and wine, that is at seven or eight o'clock in the morning ; for dinner at twelve, two pieces of bread, soup, meat, and wine ; and at three o'clock two pieces of bread, and some fruit and wine ; in the evening sometimes they have Indian corn made into a kind of pudding.

7177. What meat do they receive, and how much?—Two or three ounces in the day.

7178. Of what meat?—Sometimes of mutton, sometimes of beef ; they have not always the same kind of meat.

7179. Would this be the ordinary food of a peasant?—No ; the silk workers must be kept well, because it is very tiresome to work from three or four in the morning till nine at night.

7180. This is better than the ordinary food of the labouring classes?—Yes.

7181. You know that this is the diet upon which they live for those three or four months?—Yes.

7182. Are the children who wind fed in the same manner?—Yes ; all the persons employed in winding, reeling and turning the cocoons, are fed in the same manner.

7183. If the board of a grown up person cost 8*d.* a day, what do you reckon the

Mr.
Francesco Caffi.

28 May,
1832.

Mr.
Francesco Caffi.

28 May,
1832.

the board of the girls to cost?—There is not much difference, the children are from eleven to twelve years old, sometimes more; they go in the place of the boiler alternately.

7184. Are they fed on Sunday too?—Yes.

7185. They do not eat meat on the fast days, of course?—No.

7186. Those are pretty frequent, are they not?—Yes, twice a week, Friday, and Saturday.

7187. They eat dried fish then?—Some dried fish, and some sweet food, with vegetables.

7188. When you state 8*d.* per day as the expense of keeping those people, do you not think that is over-rated?—I think not.

7189. Do you consider that it will cost 8*d.* a day to keep persons of this description in Lombardy?—Yes, nearly; but it depends on the price of corn, meat, &c.

7190. How long does this harvest (silk) generally continue?—June, July, to the 17th of August; in August, September and October, a reduction takes place.

7191. As the autumn advances, they gradually diminish the time of work?—Yes.

7192. They receive the same food the whole of the time?—Yes.

7193. Is the reeling considered an unhealthy or hard labour?—It is a very hard labour; we are obliged to keep the persons in good health, and they must be in a good temperature.

7194. Are women principally employed in winding?—Yes, and all by hand.

7195. How many pounds in the week will they wind?—One pound and one-third, about 15 ounces and half per day.

7196. How much do they receive per pound?—Fifteen sous per pound, or 5½*d.* English.

7197. At that rate, how much will their wages be per week?—Six livres and 10 sous, or 3*s.* 9*d.*

7198. Do they board themselves?—Yes, they take the silk to their own houses.

7199. This is a nett money payment?—Yes.

7200. How do you manage as to the waste?—They bring the silk on the bobbins, and return the waste; each is separately weighed.

7201. What waste is there in the winding?—Generally half the waste on silk is in winding and half in throwing.

7202. On an hundred pounds, how much waste is there in winding and throwing?—There is on an average from four to five per cent.

7203. How many months in the year does the winding go on?—All the year.

7204. As long as the silk mills are employed, the winders are employed?—Yes; in the winter we have warm rooms and fires.

7205. The winding is done at their own houses?—Yes.

7206. The simple machinery they use is provided by themselves?—Yes.

7207. What have they of machinery beyond their swifts?—They have very little, the value of all is not above 30*s.*

7208. Is the operation performed by one woman only, or do their children assist?—Sometimes the girls assist, but they seldom require assistance; a girl of 15 years can do it herself.

7209. Who are employed in doubling?—They are generally girls.

7210. Where do they double, in the factories or at home?—In the factories.

7211. How many pounds per week will one girl do?—Twenty pounds.

7212. What is paid per week?—They are paid 10 sous per pound, making 10 livres or 6*s.* 3*d.*

7213. That is about 1*s.* a day?—Yes.

7214. Does one girl earn 6*s.* 3*d.* in a week?—Yes.

7215. Have you paid that yourself?—I have.

7216. What number of hours do they work for that?—As they do it by the pound, they come early in the morning and stay late; they make generally fourteen hours.

7217. Is there any expensive machinery furnished by the people themselves for doubling?—No, they only have to keep it clean and in order; if it is injured, they have to pay for that.

7218. Does it occupy any portion of their time to keep their machinery in order?—No, only two hours on the Saturday evening, the proprietor has it cleaned at the end of the season.

7219. Are

Mr.
Francesco Caffi.

28 May,
1832.

7219. Are the twisting and throwing done by men principally?—Yes, there are some grown up lads, but no women.

7220. How many pounds per week will each man twist and throw?—Twenty pounds nearly.

7221. You speak of that on the average?—The average may be a little less.

7222. Is that owing to their being inferior kinds of silk?—It is owing principally to the season; winter is not so favourable for this work as summer.

7223. How much is paid in winter?—Thirteen sous per pound.

7224. That is 8s. 1½d. per week?—Yes.

7225. What number of hours do they work?—From six in the morning till 10 at night, 14 or 16 hours.

7226. What time do you allow for meals in that time?—They take what they like, about two hours a day.

7227. So that they would actually be at work 14 hours a day?—Yes.

7228. Do you consider that a fair average for wages, or a high average?—A fair average.

7229. They work by the piece, and have no board?—Yes, by the piece and no board.

7230. Exclusive of the three classes, you have a superintendent in each room, have you not?—Yes, and a scaleman.

7231. Is your superintendent hired by the year?—Yes.

7232. What wages does he get?—Six hundred livres a year to 700.

7233. Does he board himself?—Sometimes he has his board, but not always.

7234. What wages does the foreman receive who takes in and sends out the goods received?—Six hundred livres a year to 700.

7235. Do you include in the estimate you have given of 12 sous, you before referred to, the rent and water power, taxes, and every expense of that kind?—Yes.

7236. When you say that a man can perform this operation upon 20 lbs. in a week, do you mean that he can both twist it and throw it?—Yes.

7237. Are not twisting and throwing distinct operations?—Yes.

7238. Supposing the silk to be intended to undergo both operations, do you mean that both operations can be performed on 20 lbs. in a week?—Yes.

7239. Does the same man superintend the twisting and the throwing?—Yes.

7240. The doubling takes place after the twisting, and before the throwing?—Yes, there is six sous and a half for twisting.

7241. The twisting and throwing costing 8s. 1½d. for 20 lbs., how do you distinguish that from the doubling, inasmuch as that is an intermediate operation; are the Committee to understand, that the silk is brought into the mill after being wound, that it is then twisted, that it is then doubled, that it is then thrown, but that it is twisted and thrown by the same person?—Yes, who receives the amount I have stated for doing it.

7242. How do you account for the paying a superintendent 600 livres to 700 a year, which amounts to little more than 1s. a day, whilst a man throwing silk receives his 13 sous per lb. or 14d. per day, will you explain how this is?—Because the superintendent has only light work, moving about, giving out and looking over the silk during a couple of hours in the day, and another couple of hours a day taking the work in.

7243. Is he in the factory all the day?—No, only four or five hours.

7244. Is he answerable for the safety of the silk and every thing in the mill?—No.

7245. Who is responsible for that?—The men who throw.

7246. They are answerable for producing the quantity of silk?—Yes.

7247. Are the superintendents engaged by the year?—Yes.

7248. While the throwsters are only for the time they are employed?—Just so.

7249. Can you state in what manner the persons employed in the mills, while they are at work, are occupied when the mills are standing still?—They have a right to ask for the 100 livres in advance; but if they find work in any place they do not call for it, but they generally ask for the money, and the shopkeepers let them have things for their subsistence during that time, and they run into debt, besides the 100 livres, trusting to repay when they get into work again; the throwsters like to keep them a little in debt, as they are then sure of having them again when the season begins.

Mr.
Francesco Caffi.

28 May,
1832.

7250. Do the throwsters engage invariably to do the work by a certain day, when they receive silk to throw?—Yes; there is a stipulated time, one, two or three months, according to quantity.

7251. If they engage to deliver silk on the 1st of August, but should only deliver it on the 10th of August for instance, are they liable, in case of any change in the market, if the merchant loses by the market falling?—Yes, the throwster is liable; unless, as sometimes happens, the delay should arise from an accidental cause; such as a failure in the necessary supply of water.

7252. Would that be admitted?—Not by law, but a reasonable man would admit it.

7253. The law is imperative, if the party chooses to put it into execution?—Yes.

7254. Although the law is strict as to the penalty being paid in case of their being beyond the time, is it in point of practice often enforced?—Sometimes it is.

7255. Is it frequently called for?—It happens perhaps once or twice in a year.

7256. Who pays the carriage from the filatures to the mill and back again?—The proprietor of the silk, but that is trifling.

7257. You have been asked as to the respectability and wealth of the persons who throw silk; you state that some of them are persons worth 4,000*l.* or 5,000*l.* English, inasmuch as it is necessary that they should make advances to the reelers?—Yes, I said so.

7258. Are not some of them persons of very great wealth?—There are some of them that are.

7259. Are Bellarbio, Befani, Uboldi, and Brunati?—They are all persons of great wealth, and there are others also.

7260. Those persons, as well as many others, are persons of great wealth?—Yes.

7261. Do you think any of them are worth 100,000*l.* English money?—Yes, and much more; but then the persons mentioned are merchants and bankers as well.

7262. Are there not some who are only throwsters, and are people of great wealth?—But few.

7263. The persons of great wealth are generally merchants and bankers, as well as throwsters?—Yes.

7264. Frizzoni, Carissime, Piazzoni, and Caroli?—They are all wealthy.

7265. Are there many of considerable wealth engaged in the throwing trade in Italy?—Some such are reelers and throwsters.

7266. The persons engaged in the trade may vary as to their wealth; but, generally speaking, they are thriving opulent persons?—Yes.

7267. The trade cannot be very well carried on without?—No.

7268. Is the information you have given respecting the throwing mills confined to the mills of Bergamo?—And of Milan.

7269. Do your observations extend to the whole of the mills of that district?—Yes, generally, Bergamo, Bressia, Milan, Como and Brianza.

7270. Is it white or yellow?—White.

7271. Will you state what expenses are charged to you as a shipper by the English merchant or agent in London, for a bale of organzine 240 lbs. English, taking the value at 25*s.* (20 to 22 deniers)?—There is a printed statement I have with me, the duty is 42*l.*, the carriage from Calais to London 12*s.*, the London city duty of 1*d.* per lb., 1*l.* stamp, and other small expenses 2*l.* 6*s.*, assurance 1*l.* 1*s.*, insurance against fire 15*s.*, making the expense in London altogether 47*l.* 14*s.*; the interest at 4 per cent. for four months, upon the expenses 12*s.* 9*d.*, brokerage 5-8ths per cent. 1*l.* 17*s.* 6*d.* a commission and *del credere* 4 per cent. on 300*l.* 12*l.*, making 62*l.* 4*s.* 3*d.*, that leaves 237*l.* 15*s.* 9*d.*; two months interest, at 4 per cent. 1*l.* 11*s.* 9*d.*, that leaves 236*l.* 4*s.* nett, to be received in London by a bill at three months. The expense from Italy down to Calais, including packing, carriage, &c., is 137 Austrian livres; duty out of Lombardy 135, making together 272 Austrian livres, or 9*l.* 1*s.* 4*d.*, which, deducted from 236*l.* 4*s.* leaves 227*l.* 2*s.* 8*d.* nett.

7272. What per centage is the whole amount of those charges, including the two months' interest upon the sale price in London?—Nearly 25 per cent.

7273. What is the difference in charge suppose you send raw silk here?—A
bale

Mr.
Francesco Caffi.

28 May,
1832.

bale of raw silk of the same quality, consisting of 240 lbs., would be worth perhaps about 20*s.* per lb., or 240*l.*; the English duty is only 1*l.* sterling, freight from Calais 12*s.*, London city dues 13*s.* 6*d.*, agency and other expenses 2*l.* 6*s.*, sea assurance 1*l.*, ditto against fire 12*s.*, making 6*l.* 13*s.* 6*d.*; interest for four months about 4*s.* 10*d.*, brokerage at 5-8ths per cent. 1*l.* 10*s.*, commission and *del credere* 9*l.* 12*s.*, making 17*l.* 10*s.* 4*d.*; that being deducted from 240*l.* leaves 222*l.* 9*s.* 8*d.*; then there are the expenses from Lombardy to Calais, with duty out of Lombardy, 270 Austrian livres, or 9*l.*, packing, carriage, &c. 4*l.* 13*s.* 9*d.*, making 13*l.* 13*s.* 4*d.*, leaving 208*l.* 16*s.* 4*d.* nett.

7274. Taking the expense from Milan to Calais, duty included, at 13*l.* 13*s.* 4*d.*, and the expenses to and in London at 17*l.* 10*s.* 4*d.*, together 31*l.* 3*s.* 8*d.*, what per centage will that be on the 240*l.*?—About 13 per cent.

7275. Is there any difference in the expenses on tram?—There is only 1*s.* 6*d.* difference in the English duty in Lombardy, the expenses are all the same.

7276. The expenses and charges on the thrown in London would be 63*l.* 16*s.*, and on the raw 17*l.* 10*s.* 4*d.*?—Yes, as the account shows.

7277. It appears that if the duty and expense, and the charges upon raw amount to 13 per cent., and upon the thrown to 25 per cent., the difference will be 12 per cent., as against the thrown?—Yes.

7278. Of that 13 per cent., how much is paid to the Italian government, and how much to the English government?—The duty on raw in coming from Lombardy is upon the bale 9*l.*; and on the other to the English government 42*l.*; the duty on organzine in Italy is 4*l.* 10*s.*, on organzine in London it is 42*l.*

7279. By the statement you have now made, it appears that the Italian throwster has been sending silk to this country, paying only about 1*s.* 11*d.* for throwing his silk, do you conceive that he has been sending it at a loss to this country when he has received only 1*s.* 11*d.* for throwing?—The difference is not in the throwing, but in the price of the market.

7280. At 25*s.* as you have taken it, does he receive profit, or has he been selling at a loss?—He must calculate the price of the raw silk in Italy, and the price he gets here to ascertain that.

7281. Do you know the prices at which organzine and raw silk have been selling in this country, and whether those prices leave a profit to the Italian throwster?—The Italian throwster seldom sends.

7282. Has the Italian merchant been sending his silk here at a loss or at a profit?—At a loss for three or four years; it is not the throwster who sends it here, but the merchants generally.

7283. The Italian merchant, who has sent thrown silk here, has lost by it?—Yes.

7284. Does the merchant lose by the silks he sends in a thrown state to other countries as much as he loses by the silks he sends to this country?—Sometimes in Germany and Russia they get better prices; sometimes they have a great profit on the Continent, and sometimes not, it is now finding a better price in Russia; they have not sent here for the sake merely of sending, but hoping for a profit.

7285. Which is the best market to which you can send thrown silk at present?—Russia.

7286. What do you conceive to be the cause of this market being unprofitable to the importer of thrown silk?—Because the sale of raw silk is bad here.

7287. What is the cause of that?—They employ the raw silk here, and throw it themselves, probably cheaper than the throwster on the Continent.

7288. What would be the effect in the price of organzine and raw silk in this market, if the duty, which is now 3*s.* 6*d.*, was reduced to 1*s.*?—There would be more organzine sent here than raw; there would be a competition with the throwsters.

7289. Would that lead to a greater quantity of thrown being sent here than has hitherto been sent here?—Yes, till things come to a balance again; on the supposition that the prices of raw and thrown would form a relative value to each other, the price of organzine being now 23*s.* 6*d.*, by the reduction they will reduce it to 21*s.*, which is all the same relatively to an Italian to receive 23*s.* 6*d.*, if he has the duty of 3*s.* 6*d.* to pay, or 21*s.* at 1*s.* duty, he will save something certainly on the interest and commission paid in England.

7290. You are understood to say, that the duty of 3*s.* 6*d.* prevents thrown silk being imported into this country?—Yes; if the whole of the duty were taken off there would be a competition undoubtedly for a time.

Mr.
Francesco Cuffi.

28 May,
 1832.

7291. If the thrown silk be worth at Calais 21*s.* 6*d.* it ought to sell in London for 25*s.*, because you pay 3*s.* 6*d.* duty; if the Italian could sell his silk at 21*s.* 6*d.*, what would he give for the raw in Italy, to throw it and sell it at 21*s.* 6*d.*?—He must buy the raw at 18*s.*, the raw silk in Italy is always higher in proportion than the thrown by at least 10 sous.

7292. How do you account for that?—Because it is more in demand, the raw silk always bears a higher price in the Italian market; the reason is that raw is fit for any market, whereas, if once thrown it can be used only as thrown; for the same reason the raw is cheaper now in London than in Italy.

7293. Do you mean to say, that on the sale of raw silk in Italy there has been no profit?—There has been a loss; there has been so great a competition in the purchase of cocoons.

7294. To what extent do you conceive the throwing in Lombardy can be increased?—It will not be increased because there is no profit attending it.

7295. Supposing that by removing the duty in this country a profit on a fair competition in this country could be created, to what extent do you conceive the throwing in Italy could be increased?—They would not erect other mills till their own mills were employed all the year round.

7296. You conceive that one-fourth more might be thrown in those mills?—Yes.

7297. In what state is the manufacture of silks in Lombardy at the present time?—There are some looms at Milan, and some at Como, I suppose not 2,000 looms altogether, employed chiefly in ribbons and gros de Naples, and Levantines; they do not work regularly, they are only as a cloak to introduce the French and English manufactures which are prohibited in Lombardy.

7298. Are manufactured goods sent from France, Switzerland and England allowed to be imported into Lombardy?—No.

7299. How do they get manufactured goods into Lombardy?—They are all smuggled in.

7300. Do any go through Vienna?—They mostly go through Germany; they are smuggled in through Switzerland and Como.

7301. Do you get velvets from Genoa or Germany?—We get them from Germany, and also from Genoa, on asking for a license, and paying a very high duty; the custom house officers in Lombardy have power to go and search for smuggled goods; the silk looms there are a sort of proof that they manufacture at home.

7302. Do you mean to say, that the principal part of the silk goods used in Lombardy are smuggled?—Yes.

7303. They are not manufactured there?—Only a small proportion.

7304. They are entirely prohibited by the Austrian government?—They are.

7305. Will you state what agricultural labourers receive in Italy?—In winter they receive 30 sous or 1*s.*

7306. Is that without food?—Yes.

7307. In summer what do they receive?—In summer they get 2*s.* during they harvest and the mulberry season.

7308. What is the average, not immediately during the corn crops?—The harvest is three or four months, during the other months about 1*s.* 6*d.*; in most parts of the country there is a partnership between the landlords and the tenants.

7309. What do the workmen get in field labour?—One shilling, about.

7310. What do the stone masons get per day?—The best get nearly 3*s.*, the ordinary ones 2*s.* a day.

7311. They are not employed the whole year?—No, only during half the year.

7312. What do the carpenters who work at common house work earn?—Common workmen earn 1*s.* 6*d.* a day, and the best 2*s.* a day.

7313. Do those prices vary from year to year according to the price of corn?—No, in proportion to the demand for labour.

7314. Do they drink tea and sugar?—No, coffee.

7315. And wine?—Yes, for common wine is very cheap.

7316. Is bread much cheaper than in this country?—It is one-third cheaper.

7317. The climate is very superior to that of this country?—Very superior indeed, and the prices of provisions are high, when we have a great many soldiers among us, as at present; they are about one-third less than the prices here.

7318. Have you any idea of what the rent of an agricultural labourer's cottage would be?—They pay 40 Milan livres or 1*l.* 5*s.* for a room in Milan, and out of the

the town half the price; they pay in some situations in the country more than in the town; for a common cottage they pay about 2 *l.* sterling per four chambers.

7319. Have they little gardens attached to their cottages?—Yes, plenty of garden.

7320. How many years is it before a mulberry tree is fit to supply the worms?—About five or six years from the seed.

7321. Are they raised from seed?—Yes.

7322. What value per annum do you reckon a mulberry tree of seven years of age?—At seven years the leaves may be worth 1 *s.*, at 30 years may be worth 30 *s.*, varying according to age and season.

7323. How much silk will an ordinary sized tree of that age produce?—The value varies according to the crop, sometimes we pay 2 *s.*, sometimes only 1 *d.* for a rubo weight of leaves, and to produce a rubo of cocoons (which rubo gives two Italian pounds of silk) we require 100 rubo of leaves. Sometimes we are obliged to strip the leaves to take the shade off the growing crops.

7324. Have there been any mulberry trees planted lately in Lombardy?—There have been a great many the last five or six years, and now they think to put a duty on each mulberry tree, and on that account the planting of them is stopped, the corn being a more profitable produce than mulberry trees.

7325. What will be the duty on mulberry trees?—The tax is proposed to be about 3 *d.* each tree.

Mr.
Francesco Caffi.

28 May,
1832.

Mercurii, 30^o die Maii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. *Richard Baggallay*, called in; and Examined.

7326. IN what branch of the silk trade have you been engaged?—As a dealer in ribbons and broad silks.

7327. How long have the house in which you are concerned been engaged in that trade?—I have been 28 years, the house much longer.

7328. Does your trade extend over England and Wales, or other parts of the United Kingdom?—Over England and Wales.

7329. Had you, before the year 1826, considerable dealings with Coventry, and were you also importers of goods?—We had considerable dealings with Coventry, but were not allowed to import at that time, and of course did not.

7330. Is it your department to attend to the purchases principally?—To overlooking the purchases.

7331. You judge as to the qualities and prices of the different articles you buy?—Yes.

7332. After the alteration of the laws in 1826, permitting the importation of foreign goods, did you become an importer of those articles, and to what extent?—We commenced partially in the year 1826; I went myself to Lyons and Switzerland.

7333. Are the Committee to understand that you have visited Lyons and Switzerland annually, in order to make purchases of the article you imported?—Yes, twice during the year.

7334. You have selected the articles yourself, such as you thought would suit the English market?—Yes.

7335. Can you give the Committee any statement of the proportionate quantities of goods purchased in each year of British manufacture, and the quantity purchased each year of Foreign manufacture?—I can give a statement in the year 1827, the first year we imported any of importance, and I can give the effect of it on our British purchases each following year; we are obliged to order there one season for the following; we cannot do as we do here, order at the moment, but must give the orders three or four months before we can obtain the goods; we order by pattern in the autumn of one year for the spring of the following year.

7336. In what manner does the delay of three or four months upon the purchases affect you as to expenses?—The effect is, that we are obliged to order one season for the following, which is to us often of great injury if fashion changes; or, as it

Mr.
Richard Baggallay.

30 May,
1832.

Mr.
Richard Baggallay.

30 May,
1832.

occasionally happens, that if a death occurs in the Royal Family, there is a loss of 30 per cent. upon the goods in the fancy trade.

7337. You mean to say it is more convenient to you as a purchaser to buy at home?—It is more convenient in many respects; we can then see what we can buy; whereas by leaving orders we are obliged to take goods of inferior quality sometimes.

7338. Are you put to more expense in the ordering these goods?—Not to more expense, because a less expense than would take us over there to purchase would enable us to give the order.

7339. Do you incur an equal expense in purchasing English as French goods?—Certainly not; it would be impossible to go to Lyons in much less than six weeks to do any good there, while a week at home would answer the same purpose.

7340. That becomes an additional charge upon the price of French goods?—Yes, an additional charge, to the extent of five per cent., but the loss of time is of more importance than even the expense.

7341. The very ordering of the dealer at first is an inconvenience to the merchant dealing in French?—Yes, as compared with home.

7342. Will you state what effect the importation of French silks has had on British silks, as far as your own dealings have gone?—Our first dealings when we imported were in the year 1827, upon the article of plain sarsnet ribbons from Switzerland; our first year's importation, in 1827, reduced our Coventry purchases six per cent.; every 100 lbs. purchased in Coventry was brought to 94. In the year 1828 they were still further reduced 20 per cent. as compared with 1827, bringing them to 75.

7343. You purchased then less than you had done in the previous years?—Yes, in 1829 they were still further reduced by 30 per cent. on the 75, which I make 22*l.* 10*s.*, bringing down the purchases of that year to 52*l.* 10*s.*, as compared with the 100*l.* originally; during the years 1829 and 1830, we found the Coventry were improving upon the Swiss. I confine myself entirely to Swiss ribbons; we improved in 1829 and 1830; the result was in 1830, that Coventry increased 30 per cent. upon 52*l.* 10*s.*, bringing it back to 68*l.* 5*s.* In 1831, Coventry again increased upon the 68*l.* 5*s.* 12½ per cent., which I make 8*l.* 10*s.* 6*d.*, bringing it up 76*l.* 15*s.* 6*d.* On Monday last I took out, up to that period in the month of May, our purchases as compared with the last year, and I find they are increasing this year 20 per cent. upon the 76*l.* 15*s.* 6*d.*, which I make 15*l.* 7*s.*, bringing it up to 92*l.* 2*s.* 6*d.*

7344. So that the result is that you now, in your dealings with Coventry, are within about eight per cent. of what you were in 1827?—Yes.

7345. Are the Committee to understand that in 1829, of every 100*l.* of sarsnet ribbon which you sold, 52½ were English, and 47½ Swiss?—Yes.

7346. And now the proportion is 92*l.* 2*s.* 6*d.* of English, and only 7*l.* 17*s.* 6*d.* of Swiss?—Yes; and at this moment we order no plain Swiss at all, we think we can do better at home.

7347. Does that arise from the price of the Swiss ribbons having risen lately, or that of the Coventry falling?—The Coventry falling, not the rise of the Swiss.

7348. What has been the relative diminution of price, from the year 1827, of the sarsnet you imported, and also the Coventry?—I should say not above 10 to 12½ per cent. alteration on the Swiss, but the alteration in the British is considerable.

7349. Can you inform the Committee what was the price of a sarsnet of Swiss manufacture in 1827, and what the same ribbon would now cost?—I cannot speak positively, but probably there may be a difference of 10 to 12½ per cent. in the price of Swiss ribbons now, to what they were when first we imported them.

7350. What do you suppose to be the diminution in the English ribbon?—It is very considerable, perhaps 20 per cent.; but it is not only in the price, but in the manner in which they are made, and the material of which they are made; they are so much improved; when first we imported the Swiss, we imported them for their quality as well as their price; but we are now able to get at home what we conceive to be nearly or quite as good, and of less price than we then imported the foreign, paying the duty.

7351. Is the improvement in the manner of manufacture, or in the quantity of silk used in the ribbon?—Not being a manufacturer I cannot speak positively, but I think that it is probably from the more general use of the engine loom, and the improvement in the material.

7352. It appears that you imported the largest quantity of Swiss ribbons in the year 1829; was it not in that year that the duties were reduced to meet the fall
which

which had taken place in the price of the commodity, the duty being collected per pound weight?—I believe the alteration was in July; we are obliged to order them four or five months before we can get them, therefore my order would be given before my knowledge of that alteration.

7353. The duty being collected by the pound weight, if the prices fall, that duty will be relatively higher?—Yes.

7354. So that the duty at the present time may amount to a great deal more than 30 per cent.?—I can give the exact amount of duty; it will be 25 per cent., or rather more.

7355. Taking into consideration the bulk of the article, Swiss plain ribbons, compared with its value, the duty being only 25 per cent. when paid, it would be hardly worth while to smuggle them?—I never smuggled a piece myself, but I know they have been smuggled.

7356. Though the duty is so small, and the article so bulky?—They have been smuggled.

7357. Have you any idea what those ribbons could have been smuggled for?—I have an idea, I think they could be smuggled at $17\frac{1}{2}$ per cent.

7358. Including insurance?—Yes.

7359. You judge from the price at which they have been sold in this country?—Yes, I have bought them here; when I see articles sold for less than we can import them for paying the duty, I fear that they have been smuggled.

7360. Do you purchase any plain sarsnet ribbons in France?—No, we do not.

7361. Why not?—The Swiss make them cheaper and better.

7362. Do you import any plain satin ribbons?—Yes, and I can state their relative price; we purchase them from Lyons.

7363. What has been the proportion of purchases of those since the year 1826?—I have not that statement of plain satin ribbons with me, but I can give their relative value with the English; I consider the English narrow ribbons to be about $12\frac{1}{2}$ per cent. dearer than the French, I am speaking now without duty; then the wider widths are as cheap in Coventry as they are in France.

7364. Are they of the same quality?—As near as possible; we cannot make quite the quality; we cannot get the silk; they make it of their own silk.

7365. You attribute the inferiority of the English entirely to the difference in the quality of the silk?—Yes.

7366. Generally speaking, has the quantity of the plain satins increased or decreased?—Decreased latterly.

7367. Did they increase at the same time that the Swiss ribbon decreased?—They did increase, but not in the same proportion as the plain sarsnets; but they now decrease.

7368. Are your purchases of plain French now, more than they were in 1827?—Now our purchases of plain satin ribbons are very trifling; in the first instance, we purchased French satin ribbons; the increase was never so great as in plain sarsnets; they are now decreasing, and at this time we purchase very few plain.

7369. Will you state what changes have taken place in your purchases of foreign fancy ribbons?—In 1827, the Coventry were reduced from 100*l.*, $12\frac{1}{2}$ per cent., bringing them to 87*l.* 10*s.*; in 1828 $12\frac{1}{2}$ more, for which I deduct 10*l.* 19*s.* 6*d.*, leaving it 76*l.* 10*s.* 6*d.*; in 1829, $7\frac{1}{2}$ per cent., for which I deduct 5*l.* 14*s.* 6*d.*, leaving it 70*l.* 16*s.*; in 1830, we went rapidly on the increase in favour of Coventry, $37\frac{1}{2}$ per cent., which I take at 26*l.* 11*s.*, bringing it up to 97*l.* 7*s.*; in 1831, a further increase of 15 per cent., 14*l.* 13*s.*, bringing it up to 112*l.*; we buy therefore 12*l.* more than before the introduction of French ribbons.

7370. Are the purchases going on?—Yes, increasing.

7371. You refer to fancy ribbons and gauzes?—Yes.

7372. You import, in fact, none now?—Scarcely any.

7373. Have you a French and English room for goods?—Yes.

7374. Do you ever mix the goods, and expose them together?—We have had instances in which we have mixed them together; what we could not sell as French we put into the English drawer, and sold for more than we could as French.

7375. Do you mean that the English public bought them as English?—When people go into a French warehouse, and see the patterns of this year, perhaps they will not buy those of last year; but in the English warehouse they sell.

7376. You sold it as a new English pattern, instead of an old French pattern?—I do not say that we sold it as a new English pattern, we put it there, and it was sold; they might take it for the one or the other; we have sent a French ribbon

Mr.
Richard Baggallay.

1832.

Mr.
Richard Baggallay.

30 May,
1832.

pattern to Coventry, and had it made, and sold it as well and at as good a price as we got for the French.

7377. Do not you think that shows a great preference in favour of French fashion, when you sent down patterns of that to the manufacturers of Coventry?—I should say it shows the power of the people of Coventry to make the goods equal; that they have more originality of taste in France is, I think, very possible; I have no doubt about it myself.

7378. Can you state what is the relative price of the goods made at Coventry from the pattern you imported from France and sent down to Coventry to be there copied, and what you are charged in France, excluding the duty?—My inquiry leads me to this conclusion, that the rich gauze ribbons require the amount of duty to bring them to the same price as the French.

7379. What is the amount of duty?—The present duty is about 33 per cent. on the most saleable widths, and it requires that duty to bring them to the foreign price.

7380. What proportion of the goods manufactured at Coventry do you consider to be under the denomination of rich gauze ribbon?—I have no means of answering that.

7381. What proportion of the whole do you buy?—I cannot tell that.

7382. Can you state the relative prices of the lutestrings and satins?—In the fancy lutestrings I make the duty 25 per cent.; that is, upon the average, some would be more and some would be less; but I believe there are very few at the present moment imported.

7383. What is the difference between the Coventry price and the French price?—I should say that the Coventry are cheaper; independently of duty, I believe that we can purchase cheaper in Coventry than in France; this year we have not one French.

7384. If neither paid the duty, the Coventry would be the cheapest?—If I had weight for weight there would be a style and fancy in the French, which would induce the customer perhaps to buy them, but I have not imported one piece this year.

7385. You do not mean to say, that if the two ribbons were bought, the one from France and the other made at Coventry, a person would buy the one as soon as the other for the same price?—So much would depend upon the expense and style in making them.

7386. You say that the fashion and the style would be in favour of the French ribbon?—I think it would, there is more invention.

7387. You were understood to state, that they were lower at Coventry?—I get the same weight of ribbon, but not the same style and fashion of finishing.

7388. Do you mean that in mechanical execution we equal them, but in the style of taste and finishing we do not?—Yes.

7389. Do you mean to say, that a piece of 36 yards of nearly the same quality could be bought at Coventry for less than in France?—Yes; but there would be a style of pattern, something in the execution of the pattern, which would give a preference to the French.

7390. Since the importation of the French ribbons, have not the Coventry manufacturers much improved?—Very much indeed with regard to colours; I would say I consider the English colours decidedly more permanent than the French.

7391. Will you state the proportion of fancy satins?—The duty is from 15 to 18 per cent.; but we have done nothing in foreign fancy satins the last year, we get them now from Coventry.

7392. You have ordered none for the spring fashion of this year?—No, we have imported none since last autumn.

7393. What were the relative prices when you last imported?—I should think that the French would be from 15 to 20 per cent. cheaper than the English without the duty, but of this I cannot speak confidently, and the duty is from 15 to 18 per cent.

7394. Have you found your customers, in the course of the last and the present year, less anxious to purchase French goods than formerly?—I should say decidedly so, that they are more disposed to purchase the English.

7395. Is that from the goods generally being heavier, or on what ground?—When the duty is paid upon the wide French gauze ribbons we cannot sell them so cheap as we can the English wide widths, and they prefer the English.

7396. The

7396. The difference of price, selling the one and the other?—Yes.

7397. Is not the duty on narrow gauze ribbons very high?—It depends upon whether they are striped or figured; in striped gauze we cannot do any thing in foreign, as the duty is from 40 to 50 per cent., the figured gauzes are sometimes from 30 to 40 per cent.

7398. It requires that amount of protection to enable the Coventry people to compete with the French?—Yes, in figured gauzes.

7399. You say that you have frequently known ribbons to be copied at Coventry?—We have.

7400. Do you not find that they are too late for the fashion when they return?—I think if we had the pattern we could have it copied in Coventry in three weeks, and it would be more than three weeks before we sold the French.

7401. With what class of persons does your trade chiefly lie, with persons at the West end of the Town or persons in the country?—Our trade is principally a country trade; it goes all over England and Wales; of course we have some customers at the West end of the Town, but we do not seek after that trade.

7402. Are the Committee to understand that the prejudice in favour of French ribbons no longer exists in the country among your customers?—I think there is a certain description of persons who, when they saw a thing decidedly superior in taste would buy it, but that is a very small proportion.

7403. Not because they are French?—No, but because they are better.

7404. You do not think that because you said one was French and the other was English, persons would prefer the French?—No, I think not.

7405. At what time have you gone to France to purchase for your summer trade?—The month of February or March, occasionally in June, August and September.

7406. If you could have a pattern copied in three weeks, why do you not have it copied earlier in the season?—If I had sent a pattern to Coventry to be copied, it would have been all over the town before I could have introduced my own from France.

7407. Can you state what is the amount of duty paid now on each kind of ribbons imported, by the existing law?—On plain sarsnets it is rather more than 25 per cent. at the present value of the goods, the last price at which we could buy; the next I have is plain satins from twopenny to sixpenny, 22 $\frac{1}{2}$ per cent., on the wider widths 20 per cent.

7408. Can you state the relative price between the plain sarsnets manufactured in Switzerland of as near as possible the same quality as those manufactured in this country?—The Swiss are cheaper by 17 $\frac{1}{2}$ per cent.

7409. Do you refer to the price in Switzerland, or the cost price in your warehouse here?—I speak of the cost price in my warehouse here independent of the duty.

7410. What proportion of the 17 $\frac{1}{2}$ per cent. would you reckon for expenses?—On Swiss probably from two to three per cent.

7411. Do you mean covering the expenses of your journey?—Yes, I should not go for those alone, I conceive on the general average that would cover it.

7412. Will you state the relative cost of the plain striped ribbons?—Upon the striped gauze ribbons of a similar description to what are made at Foleshill, I make the present duty 50 per cent. on imported, and the value of those plain striped ribbons is about five per cent. dearer here than they are in France.

7413. Is there any reason then you can give for the distress at Foleshill?—The reason I would give is, that I believe at Foleshill they make by the single-hand loom, and there the distress is great; they are obliged to make it at Foleshill at the same price as they do at Coventry; unless they can produce them as cheap as they do at Coventry with the engines they use there, they cannot of course sell them; our first price in France would be only five per cent. cheaper than in Coventry.

7414. If the plain gauze ribbon is the same price at Coventry, or within five per cent., and at Saint Etienne, why does it require the 50 per cent. to protect it?—It does not require it, but when we import it we pay that.

7415. Are the gauze ribbons imported by the Custom House chargeable with the duty of 50 per cent.?—The duty we paid ourselves last autumn was 50 per cent.

7416. Is there any great quantity of that striped gauze brought into England?—Inasmuch as we lost 25 and 30 per cent. upon them we bring in no more, and I believe there are not many brought.

678.

7417. Do

Mr.
Richard Baggallay.

30 May,
1832.

Mr.
Richard Baggallay.

30 May,
1832.

7417. Do you believe that any are smuggled?—I cannot conceive when there is only five per cent. difference why there should be smuggling.

7418. Do you know at all, from your knowledge of trade, what proportion of those ribbons is made at Foleshill, and what at Coventry?—I do not.

7419. Are the hands employed at Coventry in the manufacture of this particular description of ribbon said to be in distress?—My information, when at Coventry a short time since was, that they were not in distress, but that at Foleshill they are; the way in which they accounted for it was, that the one used the engine, and the other the single-hand loom.

7420. Will you proceed with your statement of the relative duties and prices?—On figured gauze ribbons the duty we pay is from 33 to 40 per cent.

7421. Do you believe that the duty is collected on the whole brought into this country?—I should say I am pretty sure not.

7422. Do you think the duty being so high encourages smuggling?—The duty so far encourages smuggling that we have had some repeatedly offered to us.

7423. What amount of duty would protect against the smuggling?—The figured gauze ribbons I have stated require almost the duty to protect them.

7424. What amount of duty could you collect, looking to their relative prices in England and abroad?—That depends upon the rate at which they are brought in by smugglers.

7425. At what price can they be smuggled?—I have no doubt they can be brought in for $17\frac{1}{2}$ per cent.

7426. All above $17\frac{1}{2}$ per cent. is an encouragement to smuggling in your opinion?—Decidedly so, in my opinion, not a week passes but patterns are laid before us, and we are asked to buy.

7427. Can you account for why this article should cost 30 to 40 per cent. more in Coventry than in France?—I should say, from information given me, by the higher price of labour paid for these figured gauze ribbons in Coventry.

7428. Is the rate of wages paid for this kind of goods, figured gauzes, more in proportion than the payment made for other goods?—Decidedly, in Coventry; this is from information I have obtained on the spot.

7429. Can you state what is the proportion more than is paid for any other kind of goods?—No, I cannot.

7430. You have stated, that you think if the Government is to collect a duty, that duty must be reduced?—Yes, upon some descriptions.

7431. You have also stated, that you conceive, to meet the present high rate of wages paid on the manufacture of those goods at Coventry, from 30 to 40 per cent. duty must be collected?—Forty is an extreme case; it is no uncommon thing on the spot abroad, to buy a lot of goods on better terms than the usual price, in which case the duty may be 40.

7432. Are the hands, in your judgment, employed in other branches of the manufacture of ribbons at Coventry, distressed or not?—When at Coventry the last month, that was one of the inquiries I made, and I was told there has been distress here, a reference to our poor rates would show it; but for our manufacture of fancy gauze ribbons of late the wages have been much higher than for any other branch.

7433. What will the men, working at plain striped gauze, the cost of which is only five per cent. more than the French, earn per week in Coventry; and what will they make working at figured gauze, the cost of which is about 33 per cent. more than that in France?—I can state it as I received it from two of the principal gauze manufacturers in Coventry; the quantity made in the Jacquard looms is ten pieces of sixteen-penny width, eight pieces of twenty-penny width, six and seven pieces of twenty-four-penny width, four, five and six upon the average; five of thirty-penny; if the weaver employs a picker up, to whom he pays 14s. a week, and also 4s. for filling, making 18s.; he can make 36 yards per week in one loom, in which there are ten of sixteen-penny, he can make ten times thirty-six yards, by that he will make 50s., from which he will have to deduct 18s.; the payment for the twenty-penny is 6s. 6d., and he can make eight, making 52s., leaving him 34s.; for the twenty-four-penny goods, six and sometimes seven, take it at six, at 8s. 6d., that is 51s., leaving 33s.; in thirty-penny, four, five and six, taking it at the average of five at 12s., that will be 60s., leaving 42s.; it must, however, be remembered, that during the time of putting in fresh warps he does not receive any wages.

7434. How

Mr.
Richard Baggallay.

30 May,
1832.

7434. How many hours must he work for that?—They begin at six in the morning, and leave off at eight, taking their hours out for meals.

7435. Is it all done by piece-work, or by day-work?—By piece-work.

7436. There is none of that work done by the day?—No, except for the labour hired by the weaver.

7437. Can you tell how many looms the manufacturer who informed you of this employed?—The gauze manufacturer from whom I obtained this information, employed about 150 Jacquard looms, of which 80 were his own property; they cost from 25*l.* to 27*l.* each. The weavers in this employment are generally anxious to obtain a loom, and will in many instances pay off 10*s.* a week from their earnings towards the payment for it, the 150 were originally the proprietors, but the 70 have been sold off to the work people for that payment, which is never refused when they desire it. In this manufactory 200 weavers are employed; and at the time I am referring to they were constantly at work.

7438. These 70 you understand to belong to the weavers?—Yes, having been purchased out of their earnings.

7439. Why should the weavers be anxious to obtain these looms when they can come upon their masters' premises and work there?—He said when the trade is not very good their master may not happen to have work for them, and when it is, they can work for whom they please; and they prefer being able to work for whom they please.

7440. No additional wages are paid to those who work their own looms?—Not while they work I presume for the same parties; but when the manufacturers have not looms of their own then they employ these persons.

7441. You say that at the time to which you are speaking, all these looms were employed?—So I understand.

7442. Were you there exactly at the time when business is most active?—I was there towards the end of April; I should conceive it is more active in February and March, in preparation for the spring, than later.

7443. Can you state what was generally the state of employment at Coventry when you were there?—Another manufacturer informed me that they were constantly employed.

7444. Did you understand that these gauze ribbon weavers had been employed generally during the year; or do you speak only of their employment during the last month?—One manufacturer informed me that he had employed them all the year round, and that he could have taken on more hands; and another, that if by chance one gave up a weaver, another was immediately ready to take him on. The 150 looms, and the 200, were all employed on this manufacture.

7445. Can you state whether these looms were employed on original patterns designed in Coventry, or on patterns supplied from France?—Those I saw were patterns designed in Coventry; it would be impossible for me to say there was nothing copied.

7446. Were any further statements made to you by any manufacturers when you were at Coventry; and if so, state what they were?—It was said by one gentleman, "In this manufactory there are 200 weavers employed at this time; they are constantly at work; in ordinary circumstances four pieces are warped at a time, and when these four are made, the weavers may be out of employ for two or three days, or at the utmost fourteen, to prepare the loom for fresh warps; the time will, in some measure, depend upon the pattern used in the looms; generally two or three patterns will serve for twelve months, but one pattern has been kept in the entire year."

7447. You have mentioned another manufacturer, did he confirm what you have now stated, or did he differ?—He confirmed it generally, but I have here a statement of the price paid for clipping, 2*s.* 4*d.* for twenty-four-penny width, and 3*s.* 6*d.* for thirty-penny width, a piece for 36 yards.

7448. Is that clipping to be deducted or added to the weaver's wages?—It is to be added to the weaver's wages; it is the cost of the manufacture.

7449. Does the price of that vary in different patterns?—I think he informed me it was the same all round.

7450. Have you any thing further to state respecting wages?—I heard also the wages of the winders and the warpers.

7451. Did you receive that from the same authentic source?—Yes, from the first manufacturer I found that the warpers earn from 12*s.* to 14*s.* a week, and this work is usually performed by girls and women: the last manufacturer employs his

Mr.
Richard Baggallay.

30 May,
1832.

warpers by the year round, and pays them from 8s. to 8s. 6d. per week; when it is paid by the piece the hands earn from 20s. to 25s. per week.

7452. If employed by the year round, they earn from 8s. to 8s. 6d. per week; if employed when work is good they will be paid 12s. to 13s.; and if by the piece they may earn from 20s. to 25s.?—Yes, by the last manufacturer all the warpers are employed by the year.

7453. Have you the means of giving the particulars of the quantity of plain sarsnet ribbons made of different kinds?—Of two-penny 24 pieces at one time, of four-penny 24, of six-penny 20, of eight-penny 16, of twelve-penny 14, of sixteen-penny 10, of twenty-penny 10, of twenty-four-penny 8, of thirty-penny 6; the smallest quantity ever made are 24 of two-penny, 20 of four-penny, 16 of six-penny, 14 of eight-penny, 10 of twelve-penny, 10 of sixteen-penny, 8 of twenty-penny, 6 of twenty-four-penny, and 5 of thirty-penny; this I have in the manufacturer's own hand writing. If the weaver makes a length, that is 36 yards, a week, which in the wide work is hard labour, he would receive from his master as follows, deducting for filling, loom-hire and loom-standing: for weaving two-pennies 10s. a week, for four-pennies 16s., for six-pennies 16s., for eight-pennies 15s., for twelve-pennies 21s. 10d., for sixteen-pennies 20s. 10d. for twenty-pennies 27s. 4d., for twenty-four-pennies 26s. 8d., and for thirty-pennies 24s. The manufacturer makes the remark, "In the single hand loom the prices are nearly the same, but the weaver can make but a piece and a half, while the engine-loom can make six."

7454. Are the Committee to understand, that the quantities you have stated can, with ordinary labour, be made in a week?—Yes; he says it is hard work for the wider widths.

7455. Were they performing that when you were at Coventry?—Yes, they were.

7456. And receiving those wages from the gentlemen to whom you refer?—Yes; the manufacturer states; "in consequence of the combination amongst the engine weavers, the prices are kept up in a bad trade, but the single-hand weavers do not so combine, and the prices are frequently in the winter reduced to a sum too small for the maintenance of life on the coarsest food; 2s. 6d. a piece was paid last winter in the single loom, and 5s. in engine looms where the hands had work."

7457. Has any improvement been made in the engine loom at Coventry of late?—He states, "the construction of engine looms has been improving, as they make more pieces of a breadth at once than they used to do, this increase is in much greater proportion upon the wide ribbons;" and ascribes to that cause the greater advantages which the Swiss have in the narrower breadths.

7458. Have you any means of knowing, from your communications with Coventry, that the machinery would be extended in Coventry, but for the combination which exists there?—Only, as has been expressed, that there is an objection on the part of the weavers in Coventry to the use of new machinery.

7459. Can you state what have been the effects on the Coventry trade by the French competition, either in price or quality?—No doubt there is a decided improvement in the manufacture of goods by our own sales being confined to Coventry instead of going to Switzerland.

7460. Have you visited Congleton, or any places where ribbons are manufactured by power?—I have.

7461. Are you able to speak to the quality of ribbons manufactured by power-looms?—No, I am not; except the blacks the thing is not general. I heard the other day in Manchester that they were about establishing a power-loom there, for the manufacture of plain sarsnet ribbon.

7462. Have you imported any broad silks from France?—Yes.

7463. In what years?—In the years 1827, 1828 and 1829.

7464. Do you purchase broad silks of English manufacture also?—Yes.

7465. Are you enabled to state the proportions of broad silks of each manufacture?—No, I have not a statement of that kind made out, but for the last two years we have given up foreign broad silk entirely, doing better at home.

7466. In what year did you import most French silks?—In the year 1828.

7467. Do Manchester and Spitalfields now compete so as to shut out the French?—We can buy as cheap or cheaper the first price here than we can in France; we can buy as good gros de Naples in Manchester as we can in Lyons at the same price.

7468. Of what class do you speak?—I speak of the great bulk of the consumption from 2s. to 3s. a yard, and up to 3s. 8d. a yard.

7469. Do

Mr.
Richard Baggallay.

30 May,
1832.

7469. Do you mean that they are as cheap now here as they were at Lyons in 1829?—As cheap as they are now, I have had patterns very lately.

7470. What is the rate of duty now chargeable on the importation of French silks of that kind?—Thirty-three per cent.

7471. Is there much in your opinion imported through the Custom House?—I do not know, but I should think not many plain silks.

7472. Have you any opportunity of knowing whether any are smuggled?—I think some of the richer qualities are, but not of a price to 3*s*.

7473. Can you speak of the richer figured silks?—I cannot speak to them, we do not deal in them now.

7474. Did you in 1829 import any figured goods?—Yes.

7475. Why did you not keep on importing?—Finding there was a loss upon them.

7476. Can you give an opinion as to the price of those richer goods made here, and those made in France?—No I cannot at a price higher than 3*s*. 8*d*., I consider that a very high price.

7467. Do you ever purchase any English plain goods above 3*s*. 8*d*. a yard?—Yes, we do occasionally.

7478. What is the highest price of plain goods?—We sometimes give as high as 5*s*. 6*d*. a yard, but that is very rare.

7479. What would be the price of that description of goods at Lyons?—I cannot say that; we should not sell one piece in a hundred, or one in two hundred; that is not a gros de Naples, it is a ducape; I should say 3*s*. 8*d*. is a high price.

7480. Have you lately purchased any of these plain goods made in Manchester and Macclesfield?—Last week.

7481. Do they interfere with the Spitalfields?—No doubt they do; the silk trade of Manchester is one that has sprung up within the last few years.

7482. Have they been engaged in Manchester in making any rich goods?—Yes.

7483. How long have they been so engaged?—It is gradually going on; they make every year more than the preceding year, they are gradually improving in that manufacture, and working better goods.

7484. Are any of the manufacturers in Spitalfields employed in making the gros de Naples and lower priced goods?—They are obliged to make lower priced goods than they did before, to meet the market.

7485. Have they been employed in making goods of an inferior fabric than they did formerly in Spitalfields?—No doubt they have, to enable them to sell them at a lower price.

7486. You say that the Manchester manufactory has sprung up within these few years?—Yes.

7487. What has been the progress of it?—Taking some of the cotton weavers to weave silk.

7488. What was the quantity of silk weaving in Manchester?—Twenty years back they scarcely knew it, alluding to the article of broad silks for dresses.

7489. When were your first purchases of gros de Naples made at Manchester?—Perhaps a dozen or fifteen years ago, but I cannot speak particularly.

7490. The quantity of rich goods made at Manchester is very small, is it not, in comparison to the whole manufacture?—The demand for the inferior articles is of course greater in quantity, they make more of them.

7491. If the demand was for rich silks they could make them?—No doubt of it.

7492. May not the trade at Manchester be increasing without the trade in Spitalfields decreasing?—Yes, for the consumption is increasing greatly.

7493. Do you think that the trade in Spitalfields has much decreased?—I have no knowledge of that; I think that Spitalfields should have gone on increasing, but that they have given it away to Manchester.

7494. Is it not the fact, that the description of silk goods made at Manchester, generally speaking, is better calculated to interfere with cotton goods than with goods coming from France?—I do not see it so; I consider if I was to go to Lyons and buy the gros de Naples at three to four francs or four francs 25, I could go to Manchester and buy a better article at the same price.

7495. Is the gros de Naples made at 2*s*. at Manchester, such as a fashionable lady would wear?—No.

Mr.
Richard Baggallay.

80 May,
1832.

7496. Is not a greater proportion of the manufacture at Manchester of that description?—They make generally for the market.

7497. Do they make such goods in any quantity as fashionable women would wear?—They do not make a great quantity above 3s.

7498. Do you think there are two houses employed who make any quantity above 3s. a yard?—Yes.

7499. How many do you think?—I cannot fix the number.

7500. How many manufacturers are there who make silks altogether?—I cannot say.

7501. Do you think there are 120?—I really cannot give any idea of the number.

7502. What kind of silk is there made at Macclesfield?—Bandannas, black silk handkerchiefs, Persian sarsnets, gros de Naples; silk handkerchiefs used to be their trade.

7503. Do the French goods, so far as you have seen, come into competition with the Macclesfield?—Into no competition whatever.

7504. Have you been at Macclesfield lately?—I was through it lately.

7505. What is the state of trade there?—One branch of their trade, the bandanna trade, must be exceedingly good.

7506. Has the trade in fact increased?—I should think so, in the article of bandannas twenty to one; the Macclesfield manufacturers I am informed are constantly assisted by the bounty on exportation, they get a bounty on sending out bandannas, but the debentures are for different silk.

7507. They may purchase spun silk worth 3s. a pound, weave it into bandanna and get a bounty of 3s. 6d.?—Yes, I think so.

7508. Can you give the Committee any information as to the foreign velvets, the quantity made, and the extent of labour on that article?—I can give that only by a letter from Germany as to the quantity made and the price paid for it.

7509. You were requested to apply for information upon that subject, were you not?—I was; I wrote to a house at Crefeld on the Rhine; I have received a letter from the house of Regal & Company.

7510. They are a respectable house?—Very much so.

[The Letter was delivered in, and read, as follows:]

Crefeld, April 9th, 1832.

Dear Sir,

I have just received your favour of the 2d instant, and shall reply to the different questions you ask. In the article of broad velvets, we only make one piece at the time in a loom.

The price we pay for weaving depends upon the quantity of threads which are both in web and pail.

	s.	d.
For 3,500 threads we pay	1	9 per yard.
4,000	1	10 1/2
4,200	1	10 1/2
4,500	1	11 1/2
4,800	1	11 3/4
5,000	2	1 1/2
5,400	2	1 1/2
6,000	2	2 1/2

Our weavers are about making 18 yards between three and four weeks, according to the man. In ribbons we make of

No. 12	Eight pieces in one loom and we pay at the time	1	1 for 36 yards.
24	Six	1	7 1/2
30	Six	1	9 1/2
50	Five	2	3
100	Three	4	3
150	Three	6	9

A man makes 36 yards in two weeks, taking the average. The ribbon weavers live in the country, and those who make the narrow numbers are miserably poor, though they make 288 yards in a fortnight. We only use Italian silk.

Mr. Baggallay.

J. F. Scheibler.

7511. Do

Mr.
Richard Buggallay.

30 May,
1832.

7511. Do you know the quantity of velvets imported?—I do not; our importation of them is decreasing; the last year we bought considerably more in Spitalfields than previously.

7512. Is the quality here improving, or the price decreasing?—The quality is improving; we have many persons who will not buy the foreign velvets.

7513. How do the English velvets retain their colour, compared with the foreign?—Very much better.

7514. How is the comparative price at the present moment?—The German would be cheaper, but for the duty.

7515. What duty is paid?—From 45 to 47½ per cent.; and on ribbon velvets, 61; those we imported very lately.

7516. What duty did you pay on those?—I think 61½ or 62 per cent.

7517. What duty is paid on broad?—About 45 to 47½.

7518. Exclusive of the duty, what is the relative price of the velvets in England and Germany?—I cannot say precisely; but the objection is so great at the present time to German velvets, that I think those who have been over from Germany for orders, have got very few.

7519. Do you believe that there is any smuggling in velvets at that high duty?—I think it is very likely, I do not know it.

7520. Are you able to give any information on smuggling generally; what was the state of it before 1826, and now?—There must be much more than before 1826; before that time men would not smuggle the goods, because they might be followed; the foreign silks were prohibited, and no man would wish to have them in his possession.

7521. Were there not plenty of foreign silks sold before 1826?—No doubt they were sold, because we have constantly seen them.

7522. But not in such large quantities as now?—It is impossible to say; I cannot tell what is smuggled now; but those who smuggle can have it in their houses now; we cannot distinguish what have paid duty, and what have not.

7523. Can you state whether the manner in which the duty is now levied at the Custom House ought to be continued, or whether any other mode ought to be adopted to ensure the collection of the duty?—I think the best mode of duty is per pound weight, and not an *ad valorem* duty.

7524. What are the rates of duty which you think, as an importer, you could pay, and others would pay, to put an end to smuggling?—I cannot answer that question.

7525. Do you know the rate of insurance?—The last rate of insurance was, I believe, 17½ per cent.

7526. Are you aware what has been the rate of per centage since 1826?—No, but it has been since 1826 as high as 25 and 26 per cent.; I believe if they were brought in previous to 1826, they were brought in by private individuals, not for sale; individuals might bring them in in small quantities, but I should think not as matter of trade.

7527. Fifteen or twenty years ago the French goods were different altogether from the English, were they not?—Yes.

7528. The English have been gradually copying their colours and patterns, and style, until the articles manufactured in these two countries are very nearly assimilated?—Yes.

7529. They have been gradually assimilating since the trade was first opened with the Continent?—Decidedly.

7530. It will be now very difficult to distinguish a piece of goods made in England from one made in France, would it not?—I cannot give a better reply to that than by my former evidence, that we have bought foreign, and now buy English.

7531. Do you not say, that to a great extent the copying French patterns exists?—Not to a great extent; we have sent patterns to Coventry to be copied, but not to a great extent.

7532. Do you not believe that if the duty was reduced, the smugglers might yet be able, in a greater degree, to reduce the premium of insurance?—No, I think at 17½ per cent. the smuggler is reduced to the lowest amount at which he can do it, with a profit to himself.

7533. Does not competition in that, as in every other business, bring down the profit to the lowest amount?—Yes, I should think so.

7534. Can you imagine if French goods were again prohibited, notwithstanding their similarity, any respectable men would be so unwise as to deal in them?—I have seen lately so much what men will do for profit, that I cannot say.

Mr.
Richard Baggallay.

30 May,
1832.

7535. You are not inclined to think that persons in general would incur the risk, if the onus were thrown upon them, to show that they were English manufacture?—Yes, I think they would; we have had so much proof what persons will do, I do not think that it would be easy to distinguish the one from the other if the fag ends were cut off.

7536. You think that so long as there is a profit it will be done?—When we see what houses, called respectable, have done, I think they will do it again.

7537. You state, that the British manufactures are coming nearer to the foreign manufacture, would not therefore detection be more difficult?—Certainly.

7538. Are you aware of a large quantity of silk being seized in the year 1824, and a difficulty being felt in distinguishing them?—I am.

7539. Were they able to distinguish them?—De Ponilly, a Frenchman, who was over here was making goods in Manchester from the same pattern in every respect, so much like those he brought from Lyons, it was impossible to distinguish, there were French people over here making them.

7540. Did you see any part of those goods?—I saw De Ponilly's at Manchester, the whole was, I think, a cloak; a small parcel used to come up once or twice a week.

7541. Were not a large proportion smuggled?—No doubt of it.

7542. Since that period, have not the manufacturers of this country very considerably improved?—No doubt of it.

7543. If it was difficult to distinguish then, would not the difficulty be still greater now?—No doubt of it.

7544. You think that De Ponilly manufactured very few at Manchester, and smuggled the greatest part of those he sold?—That was my opinion; but that was only for a few months before the introduction of French goods.

7545. Do not you know, that he bought in warps and shute dyed in France?—I was not aware of that.

7546. Do you know Mr. Pellicar?—Yes.

7547. Did he ever inform you, when Mr. De Ponilly's goods were seized, that Government were completely imposed upon; that in point of fact the goods so seized were of French manufacture?—I have heard that Mr. Pellicar stated that.

7548. Are you aware, whether this particular silk, about which you have been asked, manufactured in Manchester by a French house, was a French silk dyed, wound and warped, and received into England by an Order in Council free of all duty?—No, I do not know that; I know he sold goods in London at the time. I once or twice called upon him in Manchester, there was apparently a warehouse for the selling goods, but I never saw any; I understood that he sent up a small parcel twice or three times a week.

7549. When you state the very great difficulty which existed in detecting the fact, as to the goods being French or English manufactured goods, you mean to state, that there was an exception to a general rule, and not a general rule to guide the Committee?—I think at that time the house of De Ponilly was an exception, not the rule; but I think now we should be troubled to know the difference.

7550. As a buyer in Spitalfields, have you had an opportunity of knowing the trade during the last few months?—I have.

7551. Has it, in your opinion, been very bad?—I should say not.

7552. Have there been large sacrifices made by manufacturers within your knowledge?—Not to my knowledge; if there had I think I must have known it.

7553. Have you known Spitalfields for as many years as you have been engaged in business?—I have.

7554. You have known distress formerly in Spitalfields?—Yes.

7555. Have you known it as great or greater?—I have known them in a state of greater distress than I believe they have been in the last year.

7556. Did you ever know the distress to be so severe, and for so protracted a period, as during the autumn and spring of this year?—Yes; I think I have known the distress in Spitalfields greater than during the last winter.

7557. Do you mean, in comparison to its duration, as well as its extent?—Yes.

7558. You have stated you do not know of any sacrifices being made by the manufacturers of Spitalfields?—No, I do not mean to say no sacrifices have been made; but I understood the question to be, whether the sacrifices have been as great in this year as in former; I meant that there have not been so large sacrifices made as in former years.

7559. Probably the goods did not accumulate late in the winter?—Probably not.

7560. If

7560. If the goods were not sacrificed they must have either been sold as they were made, or there must have been large stocks accumulated; in point of fact, was the trade of Spitalfields brisk through November, December and January?—My opinion is, that the manufacturers acted much more cautiously during the last autumn and this spring, than they have done in former years, the consequence of which was, that probably there was a less accumulation of stock.

7561. What do you mean by cautiously?—That they did not make beyond their consumption.

7562. Did not that occasion very great distress among the workmen?—I have not the means of knowing that, I think it is probable that a less quantity of goods was made.

7563. Did not the prudence which you take notice of on the part of the master manufacturers throw out of employment a great number of hands?—No doubt of it.

7564. What is the state of stocks in Spitalfields now?—I conceive they are not large.

7565. Do you believe there is a great quantity of silk goods now in the hands of the manufacturers?—I do not go into Spitalfields, but from my general knowledge of it I should say there are not large stocks.

7566. What has been the state of the persons to whom you sell goods during the last five years; has it been better or worse than formerly?—Since the year 1825 decidedly better; that is to say we have much less bad debts.

7567. You conceive the trade of the country, as connected with your trade, in a more healthy state?—Yes, than ever I knew it for the last twenty years; I do not mean to say there are such flashes and starts, but that the trade is more regular.

7568. You speak of the retailer?—Yes.

7569. Speaking with reference to the manufacturers, have you reason to suppose there is more or less capital among them than formerly?—There is a great accumulation of wealth in Manchester employed in the silk trade.

7570. Do you conceive the caution you just mentioned is evidence of a flourishing trade?—Trade is never so good as when conducted with caution.

7571. You referred to persons not giving such large orders as formerly; did you consider that a sign that trade was going on well?—The best proof in my opinion of trade going on well is, when there is never an excess of stock in the hands of the manufacturers or merchants.

7572. Have you reason to believe that the trade has been a beneficial one to the manufacturer of Manchester?—I presume so from the great increase; but the great competition necessarily destroys their profits.

7573. Have you known an instance of the failure of a broad silk manufacturer in Manchester?—I dare say I could find one, but not of any great importance; sometimes we hear of them privately; I heard of one last week, but in a very small way; I do not know of any one of any importance.

7574. What should you consider would be a proper rate of duty per lb. on importation to fix upon French goods?—That would require a long time to ascertain; it would require a different rate of duty, some would bear a higher and some a lower.

7575. What is your reason for preferring the duty per lb.?—If it is an *ad valorem* duty, it is more open to fraud.

7576. You contemplate a separation of the articles?—Yes.

7577. Do you consider that the wages in Spitalfields have been depressed by importations from France, or by competition from Manchester?—By competition from Manchester; I should think there have been very few importations of silk from France which have affected Spitalfields.

7578. Have not the hands in Spitalfields been principally employed in the manufacture of the superior branches of silks and velvets, and figured gros de Naples, and other articles of that kind; and have they made at Manchester many such goods in the years 1825, 1826, 1827, or even 1828, with very few exceptions?—Previous to the time spoken of, ten or twelve years back, the bulk of the silks were sold only to persons moving in the better spheres of life; now the lowest class of persons wear them, and the Manchester people are therefore increasing their manufacture, the great consumption being in articles of from 2s. to 3s. a yard.

7579. Do you not know, in point of fact, that the superior classes of society wear as much silk as they ever did?—I think, perhaps, there is as much silk

678.

3 G 4

worn

Mr.
Richard Baggallay.

30 May,
1832.

Mr.
Richard Baggallay.

30 May,
1832.

worn by them, but they do not wear silk so much in proportion as the lower classes do.

7580. If they do not wear silks made in Spitalfields, what silks do they wear, Manchester and Macclesfield being now making silks which, in your opinion, the superior classes will not use?—I hardly know where to begin the superior class; in former times gros de Naples at 3*s.* 9*d.* were considered tolerably cheap; there are as good now bought at 2*s.* 6*d.* I believe that Manchester makes goods, used by the generality of persons, both low and respectable.

7581. Have you, on your recent visit at Manchester, seen any fancy silks in the course of being manufactured there?—Yes, I saw some.

7582. Did you see any of a particularly good quality?—I saw some very good ones certainly.

7583. The greater proportion of silks used in this country are of the lower prices?—Yes, from 2*s.* to 2*s.* 6*d.* a yard.

7584. Have not the rich silks been principally manufactured in Spitalfields till within the last three or four years?—Yes, till the last few years.

7585. Have not the importations from France been of that description?—Decidedly, in broad silks which come in with the duty.

7586. These silks having been superseded in a great measure by silks brought in from France, how do you reconcile that with the statement that the competition in Manchester is that which has depressed Spitalfields?—Because Manchester has sprung up; they made only common goods; but of late years they have made a great many fine goods.

7587. Are there many goods imported from France of the kind manufactured in Spitalfields?—I do not think there are many.

7588. Are there many figured silks imported from France?—I think very few.

7589. What are the articles principally imported?—They have been principally crapes I believe.

7590. The Committee are to understand that the goods chiefly imported from France have been ribbons and goods not formerly made in England to any extent?—Yes, they are.

Mr. *John Dillon*, called in; and Examined.

7591. TO what house of business in London do you belong?—The house of James Morrison & Company.

7592. How long have you been engaged in trade in that house?—Thirteen years.

7593. You are wholesale dealers?—Yes.

7594. What articles in silks does your house embrace?—Nearly every article.

7595. What part of the United Kingdom do you do business with?—Every part of the United Kingdom. We have customers in, I believe I may say, every city or town in England and Scotland, and most of the towns in Ireland; besides selling for export.

7596. As a wholesale dealer, will you state what is your general mode of doing business?—Our general mode of business is, to buy of the manufacturers throughout the different districts in the country for cash, or at a very short credit, and to sell to the dealers throughout the country generally for cash also, or at a short credit.

7597. Do you do any thing in the export trade?—We sell for export.

7598. Do you deal in French silks as well as in British manufactured silks?—Yes, we have imported.

7599. Will you state the proportion of your purchases of English and French goods, making the distinction between broad silks and ribbons?—I have made a calculation of our purchases of English broad silks and silk handkerchiefs for five years previous to the admission of French goods, in order to show the quantity that we bought in Spitalfields at that time, and the quantity that we bought elsewhere, that is, not in Spitalfields; I have not stated the actual amounts, but taken the relative proportions, and I find, that from the 1st of August 1821 to the 1st of August 1826 we bought in Spitalfields 66*l.* 10*s.* 6*d.* in every 100*l.*, and at Macclesfield and elsewhere, 33*l.* 9*s.* 6*d.*

[*The Witness delivered in the Statement as follows.*]

From

Mr.
John Dillon.

From 1st August 1821 to 1st August 1826.

Bought in Spitalfields - - - - £.66 10 6 - - in every £.100.

Ditto at Macclesfield, and elsewhere - 33 9 6 - - ditto.

£.100 - -

Mr.
John Dillon.

30 May,
1832.

7600. You are speaking now solely of that portion of your business which is in silk?—I am speaking solely of that portion of our business which is in silks, and I am speaking of the five years previous to the admission of French goods.

7601. Your house does extensive business also in woollens and in other lines?—No doubt, but I am confining my attention not only to the silk branch but to the broad silk branch, as distinct from the ribbons. I have then taken a second series of five years, namely, from the 1st of August 1826 to the 1st of August 1831, being after the admission of French silks, and I find the proportion as follows: I may perhaps premise, that I here also take relative proportions instead of actual amounts, but that my calculations are founded upon very considerable amounts, several millions of pounds sterling. Our silk goods during this second term of five years, bought in Spitalfields, were in every 100*l.* as 53*l.* 6*s.*, those bought at Manchester, Macclesfield and other places in England, 44*l.* 2*s.* 8*d.*, those bought by ourselves in France 9*s.* 7*d.*; French goods bought by us in England 2*l.* 1*s.* 9*d.*; these will be found to make a total of 100*l.* It will be observed that the calculation just stated is of five years ending 31st July 1831. In all my calculations the year ends on the 31st July, because our books are made up annually to that day. A similar calculation has also been made for the nine months from the 31st of July 1831 to the 30th of April, the month which has just expired.

[The Witness delivered in the Statement as follows.]

	Five Years ending 31 July 1831.	Nine Months ending 30 April 1832.
	£. s. d.	£. s. d.
Silk Goods bought in Spitalfields - in every 100 <i>l.</i>	53 6 -	54 17 -
Ditto at Manchester, Macclesfield, } ditto -	44 2 8	44 16 10
and other places in England - - -		
Ditto in France - - - - -	- 9 7	- - -
Ditto French Goods bought in England - - -	2 1 9	- 6 2
£.	100 - -	100 - -

A similar calculation has been made as to ribbons. Previous to 1826 our purchases may be taken as all made at Coventry. I have therefore no Table similar to the first as to broad silks. Our purchases during the five years subsequent to the introduction of French goods from the 31st of July 1826 to the 31st of July 1831, are as follows:

	Five Years ending 31 July 1831.	Nine Months ending 30 April 1832.
	£. s. d.	£. s. d.
Ribbons bought in Coventry, and } in every 100 <i>l.</i>	88 8 6 ½	87 5 4
elsewhere in England - - -		
Ditto bought in France - - - ditto -	9 1 8 ¾	10 19 -
Ditto French Goods bought in } ditto -	2 9 8 ¾	1 15 8
England - - - - -		
£.	100 - -	100 - -

Veneris, 1^o die Junii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. John Dillon, called in; and further Examined.

Mr.
John Dillon.

1 June,
1832.

7602. HAVE you any thing to add to the answer to the last question that was put to you upon a former day?—In my last examination, I stated that the relative proportion of our purchases in French ribbons, to our purchases in English ribbons, for five years, had been 11*l.* 11*s.* per cent. and that our purchases during the last nine months have been 12*l.* 14*s.* 8*d.* per cent.; as from that it might have been inferred that our purchases in French ribbons were increasing, I wish to explain that that is not the fact; our purchases in French ribbons for the nine months are, in fact, our purchases for the whole twelve months, as we shall not again visit France; whereas we shall continue to buy English ribbons for the remaining three months.

7603. Then are the Committee to understand that the per centage this year will be below 11*l.* 11*s.*, which you have stated to be the average of the preceding five years?—It will not be above it; as far as I can judge it will be below that per centage.

7604. You say that you shall not visit France again this year; shall you make any purchases in this country of French ribbons during the present year?—I cannot say that we shall not, most likely we shall not; but if we do, the purchases will be very small in proportion.

7605. Can you state the proportion of your whole French to your whole English trade in silks?—I find some difficulty in giving an answer to that question, without stating actual amounts; I have taken our last purchases in silk goods to the amount of 1,000,000*l.*, and I find out of that million, we have bought of English goods 955,224*l.*, and of French 44,776*l.*; I make that four and a half per cent. upon our whole silk trade.

7606. Is that 1,000,000*l.* within the last five years?—Within a very recent period; it is the last million of our purchases.

7607. Of every hundred pounds of French goods which you have purchased in the aggregate of the five years from July 1826 to July 1831, what was the proportion purchased in each year?—Taking 100*l.* as representing our whole purchases of French broad goods during the five years from the 31st of July 1826 to the 31st of July 1831, we have bought in the following proportions:

							£.	s.	d.
In the Year ending	31 July	1827	-	-	-	-	3	16	3 $\frac{1}{2}$
—	-	1828	-	-	-	-	12	6	3 $\frac{3}{4}$
—	-	1829	-	-	-	-	44	8	4 $\frac{1}{2}$
—	-	1830	-	-	-	-	23	19	7
—	-	1831	-	-	-	-	15	9	5 $\frac{1}{2}$
							£. 100	-	-

The above refers to our broad silk purchases only; taking 100*l.* as representing our whole purchases in French ribbons, we have bought as follows:

							£.	s.	d.
In the Year ending	1827	-	-	-	-	-	8	12	10 $\frac{1}{2}$
—	1828	-	-	-	-	-	25	13	9 $\frac{3}{4}$
—	1829	-	-	-	-	-	26	5	3 $\frac{1}{2}$
—	1830	-	-	-	-	-	21	15	11
—	1831	-	-	-	-	-	17	12	1 $\frac{1}{2}$
							£. 100	-	-

It will be observed that our purchases increased up to 1829, and that from that period they have regularly decreased; I mean our purchases in French silks, broad and narrow.

7608. Can you state what were the proportions of every 100*l.* of your purchases of English silks in the same years, taking broad silks and ribbons separately, in the same

same manner as you have stated the French separate?—Yes, the proportions have been as follows :

Mr.
John Dillon.

1 June,
1832.

					Broad Silks, &c.			Ribbons.		
					£.	s.	d.	£.	s.	d.
Year ending 31 July 1827	-	-	-	-	19	9	6 ³ / ₄	20	5	6
— - - 1828	-	-	-	-	19	1	2 ¹ / ₂	19	12	3
— - - 1829	-	-	-	-	18	15	9 ¹ / ₂	18	19	11
— - - 1830	-	-	-	-	22	14	10 ³ / ₄	21	18	7 ¹ / ₂
— - - 1831	-	-	-	-	19	18	6 ³ / ₄	19	3	8 ¹ / ₂
					£.	100	-	100	-	-

Our purchases of silk goods during the five years last past, as compared with our purchases of silk goods five years before the admission of French goods, have increased in actual amount by some hundred thousand pounds.

7609. What descriptions of broad silks have you recently purchased in France?—We have made no purchases of broad silks in France for a very considerable time past. We have not bought because we could not sell them.

7610. Has the sale of English broad silks increased in latter years?—Yes.

7611. Are the Committee to understand then that your sale is entirely now in British broad silks?—Yes; the paper I put in on the last examination, will show that our purchases in French broad silks were at the rate, during the last nine months, of 6s. 2d. per cent. upon our whole silk purchases.

7612. You say that your purchases of French silks have decreased since 1829. The Committee have had in evidence, that the West End large houses have been increasing their direct importations; does that account for your decreased trade in foreign goods?—I should say not; my belief, from all I hear in various quarters, being that the demand for French goods is altogether decreasing, and has very considerably diminished, in consequence chiefly of the very great improvement in the English manufactures.

7613. What kinds of ribbons have you bought from France, how much in gauzes, and how much in other kinds?—I have made a calculation as to the different proportions of the various kinds of ribbons we have imported from France, I have taken our purchases of last autumn and the present spring; the months most likely to give a fair average, and assuming our purchases in French ribbons during that period to be 100l., the proportions will be as follows :

	£.	s.	d.
Gauzes - - - - -	56	1	6
Satins - - - - -	16	6	2
Lutestrings - - - - -	1	8	6
Petersham - - - - -	26	3	10
	£. 100	-	-

It will be observed that that makes our purchases of gauze ribbons in France 56 per cent., on our whole purchases of ribbons in France. By a report, from what I consider a very good authority, which we received yesterday from France, I perceive that the calculated proportion of gauze ribbons to the whole production of ribbons in France, is 55 per cent.

7614. Where do you get that report from?—It is on the authority of an agent of ours; a party very competent to form an opinion.

7615. Can you now give a similar statement with reference to your purchases of English ribbons?—I have made a similar calculation of our purchases of English ribbons during the same period. Taking our purchases of English ribbons for the last autumn and the present spring trade at also 100l. the proportion will be as follows :

	£.	s.	d.
Gauzes - - - - -	12	11	8
Satins - - - - -	31	13	-
Sarsnets and Lutestrings - - - - -	41	7	-
Petershams, &c. - - - - -	4	8	1
Galloons and Doubles - - - - -	9	-	4
Velvets - - - - -	-	19	11
	£. 100	-	-

Mr.
John Dillon.

1 June,
1832.

7616. What were the actual months for which the calculations were taken?—The proportion of the French ribbons are taken from the months of August, September and October 1830, together with January, February and March 1832. The proportions of the English are taken from the months of September and November 1831, and February and March 1832.

7617. Do you import ribbons from any other part of the Continent besides France?—Not now.

7618. Do you import velvet ribbons from any other part of the Continent?—Not lately; we are not able to do it, we can buy English cheaper; we once bought plain ribbons from Switzerland, but they are now in a great measure, if not altogether, superseded by the English article.

7619. When you state your belief that the consumption of foreign goods is on the decline, do you form your opinion upon your own decreased trade, or upon reference to official documents?—I form it on the whole taken together, but chiefly upon the information of our customers from various parts of the country, of whom I have made inquiries; all unite in opinion that the preference given to the French goods is very materially on the decline. That is information which I have not collected merely with a view to this Committee, but because it is to our interest to know what goods will sell, and what goods will not sell. Having directed my attention very particularly for some time to that subject, I give it as my opinion, collected from various sources, that that is the case.

7620. Are you aware that by the official returns of ribbons imported, there appears to be an increase, as it appears that the amount imported in 1829 were 121,953 lbs. weight; in 1830, 126,370 lbs.; and in 1831, 148,729 lbs.?—I am not aware of that.

7621. Does it not appear from this that the direct imports have not decreased?—Yes, that the direct imports have not decreased; of course I can know of none but the direct imports.

7622. Have you any means of knowing whether any large quantity have been smuggled or not?—I have not; but I should think that the smuggling has decreased rather than increased.

7623. As far as complaints go, have you not heard that smuggling has been upon the increase?—My opinion is, that it is upon the decrease so far as I have heard.

7624. Is the decline in your demand for French silk goods occasioned by the improvement of the English manufacture, or by a very great reduction in price?—I should think both.

7625. Taking all the different kinds of ribbons separately purchased by your house, can you state how much of each kind has been English, and how much French?—I have formed an estimate: the former Tables I have put in show the proportion of each kind French, and the proportion of each kind English; but as our English purchases have been considerably more than our French, somewhere about nine times as great, the proportion of course is affected by that circumstance. Taking, therefore, as before, our purchases of French and English ribbons together as one mass, and as being represented by 100*l.*, the proportions of each country, and of each sort in each country, will stand thus:

	ENGLISH.			FRENCH.			TOTAL.		
	£.	s.	d.	£.	s.	d.	£.	s.	d.
Gauzes	11	2	6	6	9	10	17	12	4
Satins	27	19	6	1	17	9	29	17	3
Sarsnets and Lutestrings	36	11	2	—	3	4	36	14	6
Pads, Belts, Petershams, &c.	3	17	10	3	—	7	6	18	5
Galloons and Doubles	7	19	9	—	—	—	7	19	9
Velvets	—	17	9	—	—	—	—	17	9
£.	88	8	6	11	11	6	100	—	—

7626. With regard to the prices of English and French gauze ribbons, do they bear any thing like a relative proportion?—I shall be prepared to show some samples of each, with a calculation of the prices.

7627. Are you able to state that this 11*l.* 2*s.* 6*d.* which you stated to be for English gauzes, and the 6*l.* 9*s.* 10*d.* for French gauzes, are relatively upon the same

same priced ribbon?—No, I am not prepared to state that the prices of the French and English gauze are the same.

7628. Can you give the Committee any estimate of the amount of the whole silk trade in England, and what the proportion of the whole French imported bears to it?—Any calculation I can make must be an approximation only. The whole silk trade of this country was estimated before the Committee of the House of Lords in 1821, at about ten millions. My own calculations, founded upon the extent of our returns in the several articles as compared with the whole business of the country in those articles (having some idea of the proportion of the one as compared with the other) would give the result of the silk manufacture of this country at six millions sterling. A party, better acquainted with the subject than I am, and who knows it in its mercantile relations as well as in connexion with our own business, I believe estimates it rather at seven than at six millions. With regard to the French goods imported into this country, if we had the returns of the duty paid in money at our Custom House, it might be assumed that the average duty paid was 37 per cent.; and thus, by means of the duty, you would arrive at the value of the import. The intention of the legislature I have understood was to make it 30 per cent. I have found that in practice (and that is confirmed by others with whom I have conversed) it has operated as a duty of 37 per cent. My own impression, or rather the result of my calculations, is, that the French annual import through the Custom House into this country, is from 450,000*l.* to 500,000*l.* sterling. As to the goods that come into this country, not through the Custom House, that is of course a still more difficult matter to estimate; but from what I have seen of the trade, it being impossible that any very large parcels of goods should be very frequently in this country without our knowing it, I can also of that form some estimate; and my impression is, that the quantity imported illicitly might increase the whole importation into this country to either 750,000*l.* or 800,000*l.*; that is including the importations through the Custom House.

7629. Are the Committee to understand, that you estimate the whole value of the silk trade in one year now, at between six and seven millions?—What I mean is this, that if the manufacturers' invoices throughout this country for one year were added together, their selling price to us, the warehousemen, would amount to six millions sterling.

7630. Can you abstract, in your comparison, the silk used in hosiery, sewing silk, trimmings and other weighty goods that have no reference to the ribbon and broad silk trade?—I could not do it on the spot; but I have the means of forming an approximation to that calculation, and I will endeavour to make it.

7631. Have you any means of knowing the proportion of ribbons made in France to the proportion of ribbons made in England?—I have understood that the ribbon manufacture of England is from 800,000 to 1,000,000 annually. In the report from France which I have previously quoted, I find it stated, that the ribbon manufacture of Saint Etienne and Saint Chaumont is from 30 to 32,000,000 of francs, and of Lyons from 1,000,000 to 1,200,000 francs, that is about 1,300,000*l.* sterling.

7632. From what data do you form that estimate in England?—From calculations made by manufacturers as to the quantity of raw silk consumed at Coventry, &c.

7633. Made at what period?—Within the last two months.

7634. From what you yourself judge good authority?—Yes, what I myself give credit to.

7635. And your authority for the amount of the French ribbon manufacture is a report of your agent received within a few days from the spot?—Received within a few hours.

7636. How did you obtain this information?—This is a report made by an agent of our's resident abroad, in consequence of certain questions sent to him, through me, by a member of this Committee.

7637. Since the year 1826, have your purchases of English silk goods increased or decreased?—They have very considerably increased.

7638. In what ratio?—Our purchases in Spitalfields in broad silk goods have remained nearly equal; they have rather diminished of the two, but inconsiderably; our purchases at Manchester and at Macclesfield have increased in the proportion of 11 to 8. I am now comparing the period subsequent to the admission of French goods, with a similar length of time previous to the admission of French goods.

Mr.
John Dillon.

1 June,
1832.

Mr.
John Dillon.

1 June,
1832.

French goods. Our purchases at Coventry in ribbons, in the last five years, as compared with the previous five years, have increased one-fourth.

7639. In what places in England are the goods manufactured, with which the French manufacturers come in competition?—Spitalfields, Manchester and Coventry, with the dependencies upon each; a considerable quantity of the goods sold in Spitalfields are manufactured at Sudbury and various other places, at factories belonging to manufacturers who reside in Spitalfields, and who sell the goods there.

7640. How many years is it since the Spitalfields manufacturers manufactured any portion of their goods at a distance from London?—I do not know.

7641. At what places are such goods made?—I believe that goods sold in Spitalfields are manufactured at Coggeshall, Sudbury, Andover, Taunton and Reading, and at some places in Derbyshire.

7642. Do you know whether, at the places where you have increased your purchases, the retail houses have diminished their's in proportion?—The retail houses do not visit the distant places of manufacture; the warehousemen are a sort of middlemen who buy the stocks and distribute them to the retail dealers; our increase cannot have affected the mode or extent of purchasing by retail houses.

7643. Was it not the case, that most of the manufacturers at Coventry had warehouses in Wood-street and other parts of London, prior to the year 1826?—Some of them have such warehouses now. I am not aware of any material decrease in that respect.

7644. Were there not a greater number prior to 1826 than there are now?—Probably there was.

7645. Was it not the practice for the retail houses of London to purchase more immediately from the manufacturers in Spitalfields, prior to the year 1826 than it is now?—I have understood that it was so, and that they have found it more economical not to do so now.

7646. Do you consider the public to be benefited by having an intermediate man between the shopkeeper and the silk manufacturer?—I do consider the public very considerably benefited, though I am certainly not prepared to say that that is the motive which induces such warehousemen to go into business, they have no doubt their own interest in view. A very short statement of the mode in which, for example, our business is conducted, will show, I apprehend, the extent and nature of the public advantage. We employ from 12 to 15 either principal or subordinate purchasers, who visit all the different markets in the kingdom, and as they purchase for ready money of the very largest manufacturers, the goods are brought in large quantities into our warehouse at the cheapest rates. If it were not for the existence of such houses as those in question, the retail dealers must, each of them, in his own person, visit all those different markets at a very great personal expense; he must buy small quantities at a much higher price than we buy them, and therefore the cost to the retailers, and through them the cost to the public must be very considerably increased. It is also of great advantage to the retailers, and they constantly express themselves as so feeling it, to find an assortment from all the markets of the kingdom under one roof. Such houses are, in fact, distributors only, and they distribute the goods of the manufacturers at a small rate of profit, which may be considered as a commission only. No doubt there is a great economy of time and of money in such a mode of distribution.

7647. Must not the sale price of the different articles be cheaper to the retail purchasers, and also the variety greater by that intermediate means?—Both results must happen in a very great degree.

7648. Would not a country draper, coming to London, find at your house all that he required, make his purchases in a few hours and go back again; so that a man might come from Bristol, for example, and make his purchases in one day, and go back again the following night?—He might.

7649. And seeing every article at the time he purchases?—Yes, we in fact hold the stocks of the manufacturers.

7650. When you talk of the public, do you consider the manufacturer and the artisan to form a part of the public?—Yes.

7651. Are they advantaged by your mode of business?—I apprehend that the manufacturers are; at least if I were a manufacturer, and had large quantities of goods to sell, I should feel benefited by large dealers, who bought those goods of me, and who paid me for them upon the spot.

7652. Is not the competition of the retail dealers in the market of the manufacturers

turers in a great measure shut out by this course, you being a middleman between the consumer and the manufacturer?—Yes.

7653. How is the artisan benefited by this mode of doing business?—I do not know that the object of going into business is to advantage any body except the individual going into that business. I should be extremely happy to see all the artisans of this kingdom well paid, and well off; but I do not pretend to say that I go into business for the purpose of benefiting the artisan, or that a mode of business is adopted for their benefit; at the same time I would say, that any system of business which encourages both production and consumption must be beneficial to the artisan.

7654. Must not the circumstance of there being large capitalists ready at any time to purchase goods when brought to market, promote a regularity in the sale, and enable individuals to obtain cash for their goods, and thus continue the employment of the men who would not be able to do so if they had not the great houses to purchase the goods?—Certainly.

7655. You are of opinion that your mode of business lessens the expense of distributing the goods to the consumer, and therefore you consider that any means of diminishing that expense must be beneficial to the artisan who is the producer?—If indirectly it has the effect of extending the production and the consumption of the article, it must have that effect.

7656. During the period to which you have alluded since the year 1826, have the English silk goods in your opinion improved in quality or deteriorated?—My opinion is, that the English silk goods during that time have very considerably improved in quality. In evidence of that improvement there are many articles of English manufacture which now successfully compete with French goods which were excelled by the French at the time of their introduction in 1826; this is particularly the case in the ribbon trade, so much so, that French lutestrings and satins (in which the French at first excelled) are now almost superseded in this country by the English. In plain gros de Naples the English have now almost, if not altogether, superseded the French. Even in the richer and better kinds of broad silk goods there is, I believe, a decided improvement. Some watered gros de Naples are, I understand, still imported; I inquired of a person here employed in the watering of silk goods,—a person who says he has watered at the rate of 1,200 yards per diem for the last two months; he says that he watered last year, as he calculates, two yards French to one yard English, and that he has this year watered one yard French to two yards English. That must be taken with some allowance, because some French goods are imported ready watered, but still it should be taken for what it is worth, and it confirms my belief that the English silk trade, even in its better classes, is making rapid strides as compared with the French. We have scarcely this season been enabled to import figured lutestrings at all. I am now speaking again of ribbons. We have only imported two patterns, and of satins very few either plain or figured. Our sales in French goods are almost reduced to the single article of French gauzes and to a few peculiar articles. I have already alluded to the Swiss sarsnets which are now superseded by the English; this is, I admit, in some degree a question of price as well as of quality, but I have no doubt of the great improvement, on the whole, of our manufacture in point of taste as well as of skill. Some very superior patterns have certainly been produced from Coventry this season.

7657. When you speak of the improvement of the manufacture in England, do you not also know that the French have greatly improved in the manufacture of goods since the competition with England?—I believe they have.

7658. You spoke of the watering of gros de Naples; and you stated that last year a man watering two of French to one of English, might not that arise from that description of goods not being previously prepared in this country, as we are always obliged to follow the French; and consequently, not having the goods made, they could not be so watered, and that this year we were prepared by having that description of goods made, and therefore had an opportunity of watering them when required; might not that be the reason?—I admit that it might; I do not draw my conclusion from that fact alone; I form my opinion upon all the facts taken together, and chiefly upon the assurances of our customers from various parts of the country.

7659. In what estimation are French goods now held throughout the country as far as you are able to judge from the opinion of your customers who visit you?—As far as I am able to judge from those opinions, the preference for French silk

Mr.
John Dillon.

1 June,
1832.

Mr.
John Dillon.

1 June,
1832.

goods has very considerably decreased, and is still diminishing. I have asked several of those parties who used formerly to purchase largely in French goods, and they say that their purchases in French goods are very considerably diminishing, and others have ceased purchasing altogether.

7660. How long has that existed?—Those are answers chiefly given me within the last three months, that is, during the present spring trade.

7661. Do you think this diminution in the preference of the French silk goods has begun within a few months?—No; my opinion is, that it has been diminishing from the year 1829, or that at least it has been settling into a preference for certain particular articles, in which perhaps ultimately the French may continue to excel us, and thus to retain a trade here.

7662. What are those particular articles?—At present they are gauze ribbons; for example, crape and gauze handkerchiefs, and various articles in which taste is more particularly required.

7663. In the articles you have just enumerated, does not the labour form a great proportion of the value?—I apprehend it does.

7664. Is it not therefore a more valuable description of manufacture for a country to possess, where they want employment for their people?—It may be so, but that is a large question; and I am stating facts rather than giving opinions.

7665. Can you state what are the causes of the supposed prejudices in favour of French goods by your customers?—Some persons have stated that there is a prejudice in favour of French over English goods; my own opinion is, that there is no such prejudice at this time; there may have been a prejudice in favour of French goods whilst they were prohibited, and I think it probable that a prohibition would restore that prejudice. There is a preference given to French goods in some articles, which appears to me to be well founded. In the articles of gauze ribbons, and other things, they display more taste. There seems to be more of taste, and more of the artist in their designs; but if English articles were made with as much taste, and as much skill as French ones, the English articles would stand on a par with the French, if not be preferred before them; I mean that there is generally no prejudice, at least I have found none in favour of French goods.

7666. And you think the preference is founded upon superiority of design in the French article?—Yes.

7667. Have the French articles any other superiority over ours?—I am aware of none.

7668. In colours, have the French any advantage over the English?—I believe they have not any advantage. It has been supposed by some, but that is matter of opinion, that the French colours at first are superior to the English; but I understand from those very competent to judge (from our customers and others), that they do not wear so well, particularly in plain goods; so much so, that some persons will, for that reason, not buy French goods at all.

7669. By design, do you mean a great variety of colours in the patterns, or a more elegant finishing of the pattern?—The design I should call the drawing, the picture as it were, as distinct from the canvas.

7670. May not a picture be either a variety of colours, or plain and simple?—I apprehend that the French excel in taste in contrasting the colours, and also as draftsmen in making the design.

7671. What is the proportion of your sale as to country and town?—Our London sales have been, during the last five years, about one-sixth of our whole sales.

7672. What proportion of your sales do you export?—I am not prepared to answer that question, we never export ourselves; we sell for export, so that without some labour I could not tell.

7673. Do the goods sold for export come under the denomination of town sales?—They do not; they are not included in my calculation of the one-sixth.

7674. Is the proportion of French goods in the whole, greater in the country than in the town sales?—My opinion is, that the proportion, in our business, is about the same.

7675. What do you consider the town and country trade in the common acceptation to mean?—It is generally supposed that the trade of London is a rich trade, and that the trade of the country is a poor or coarse trade; I think that position to be a mistake in both its branches. London is a very large place, containing upwards of a million of inhabitants, and the difference of proportion of rich goods sold in London, as compared with the rich goods sold in the country, is not so great

Mr.
John Dillon.

1 June,
1832.

great as is commonly supposed. Very rich goods, in very large quantities, are sold in country towns; those who have visited Dublin and Edinburgh, and the provincial towns of England during the race weeks, or the musical festivals, or the assizes, will have seen that very rich silks, and very expensive goods are there consumed. I do not believe that the highest classes in this country are those who wear the richest or most expensive goods; we sell very rich goods to the country towns. It is sometimes represented that one or two large houses, or one or two milliners at the West end of the Town, represent the whole silk trade of the country; I think they represent a very small part of it. Looking to the extent of our town trade, our business may be taken as a fair representation, I think, of both the country and the town trade.

7676. Is it not the custom for the higher classes in country towns to have their dresses from London milliners?—I dare say they often do, but I apprehend it can hardly be called the custom, from the numerous orders we have from the country towns to supply the materials, at the same time I have no doubt that they have to a considerable extent.

7677. Do not all the country milliners get all their goods from London?—No doubt they do their materials.

7678. Do not you supply many milliners with materials yourself?—We do, in some instances; but we rather supply the drapers who supply them; very few of the milliners come or send direct to London.

7679. Under the law at present, the duty is levied on goods by weight; are you prepared to state, what rate per cent. has been paid in the last year on each of the kinds of goods imported, according to the import value of the cost of the goods?—I am able to supply a calculation of the per centage of the various kinds of goods, according to the rates that they are charged by Act of Parliament. The duties we have paid during the last twelve months I estimate as follows: gauzes, striped and figured, at 27s. 6d. per lb., have come out from 32 to 50 per cent. on the cost.

7680. Do you mean on the cost, including all charges at the Custom House, or on the prime cost as invoiced at Saint Etienne?—I mean on the prime cost as invoiced to us, without the expenses. Figured silks or satins at 15s. per lb., have come out from 20 to 37½ per cent. on the cost; plain ribbons at 11s. per lb. have come out from 15 to 21¼ per cent.; crapes, plain and figured, at the rates of 16s. and 18s. per lb., from 25 to 50 per cent. on the cost.

7681. Are you aware at what rate any of those goods can be smuggled in?—No, I am not; I only know what may be considered as the gossip of the trade upon the subject; I have understood that they used to be smuggled at 15, with an insurance of 10 per cent., making 25 per cent. That has, I am told, been reduced to 20, perhaps to 15, but in so saying I am only repeating what I have heard at second or third hand, and I do not know that it is of any value as evidence.

7682. When you say, used to be smuggled, what period do you refer to?—When French goods were first admitted, that is, when the prohibition was removed.

7683. Are you prepared to state whether, in your opinion, any alteration ought to be made, and if so, what alteration in the duty in order to prevent smuggling in those articles?—It appears to me necessary that a reduction should take place, but I am hardly prepared to give an opinion as to the extent of that reduction. I have already stated, that in practice the duty comes out upon an average as high as 37 per cent., and that is much too high to protect the fair trader against the smuggler.

7684. In order to show the amount of protection necessary to put them on the same footing, can you state the cost price of ribbons in France, as compared with the cost price of nearly the same ribbons in England?—I will give the best information in my power upon that subject. I will first take gauzes. I have taken from our stock six patterns of gauzes French, and six patterns of gauzes English; these six patterns consist of the three numbers most in request in the two kinds of striped and figured gauzes. I have as nearly as possible taken similar articles in width and quality, and fair samples of price; I have prepared a statement exhibiting a comparison of the cost of each. I speak here of the cost at St. Etienne and the cost at Coventry, expenses being afterwards added to the French article.

678.

3 I

7685. Have

Mr.
John Dillon.

1 June,
1832.

7685. Have the goodness to deliver in that statement.

[The same was delivered in, and read as follows:]

French Number.	English Width.	STRIPED:		FIGURED:	
		Cost at St. Etienne, per 36 Yards.	Cost at Coventry, per 36 Yards.	Cost at St. Etienne, of 36 Yards.	Cost at Coventry, of 36 Yards.
12	= 20	10/	13/9	12/	18/
16	= 24	13/9	17/	17/9	23/
22	= 30	15/	21/	25/1	32/
		38/9		54/10	
	Add Expenses, 4 p' cent.	1/6		2/2	
		40/3	51/9	57/	73/

From the above it appears that a duty of 29 *l.* 13 *s.* 6 $\frac{1}{2}$ *d.* per cent. on the striped, of 29 *l.* 3 *s.* 7 *d.* on the cut, and an average duty of 29 *l.* 7 *s.* 8 $\frac{1}{2}$ *d.* per cent. on both, would raise the French to the English prices.

7686. Can you devise any means by which, if the smuggler is willing to bring such goods into this country at 20 per cent., the Government can collect 30 per cent.?—Generally I should say that goods will not continue to pay a large duty while they can be smuggled for much less.

7687. The price you have given at Coventry is at the present time when the silks which they use for the raw material are subject to a duty of 3 *s.* 6 *d.*?—Yes, these are purchases made in both cases for the present spring trade; and they are as fairly selected for the purpose of comparison as I could select them. I have brought with me patterns of the goods upon which the comparison was made (*producing the same*).

7688. Are you able to state the comparative weight of the two samples?—No, I have not weighed them.

7689. Have you made a similar comparison with respect to lutestrings?—Our purchases in lutestrings have been so few that I am not able to produce patterns. I have already said that we have bought but two patterns of French lutestrings for this season; and I have made this calculation which I will deliver in.

[The same was delivered in, and read as follows:]

COMPARISON of a Garniture of 36 Yards of French Figured Lutestring, with a similar Garniture of English.

	French Numbers.	Cost at Lyons.	English Widths.	Cost at Coventry.
		<i>s.</i> <i>d.</i>		<i>s.</i> <i>d.</i>
A Garniture of 18 yards each	16 & 30	46 2	24 & 30	48 -
Add Expenses, 4 p' cent. -	- -	1 10		
		48 -		48 -

By the above it appears that the French lutestring, when loaded with the expenses, but without any duty, costs the same as the English bought at Coventry; but I should in fairness add, that in taking the best comparison I could, the advantage of quality was certainly in favour of the French, but still the difference was hardly such as a customer would discover.

7690. Is there much difference in the style of finishing?—The superiority to which I have alluded was in that respect; so that of the two, I think the French would have been preferred, but not essentially to alter this calculation. With respect to satins, I have not the materials for making a calculation as in the other cases; but the result of a calculation, formerly made by our ribbon buyers, was to show

show that 20 per cent. upon figured, and 10 per cent. upon plain, is necessary, to equalize the prices of French and English satins.

7691. Does that include all widths?—It is a general average of all widths.

7692. In making the selection of these striped and plain gauzes, did you consider that you have selected patterns from Coventry of the same quality as those from France; or if not, in what way did they differ?—I attempted to do that, and have done it as nearly as our stock would afford the means. I believe of the two, that the quality of the French, taking the whole six pieces, is finer than the quality of the English; and I am aware that that would disturb the calculation, but on various other occasions when we have made a calculation, and also when our French silk buyer has made the calculation, a similar result has been arrived at of about 30 per cent.

7693. Have you known a French pattern, copied at Coventry, destroy the sale of the French pattern imported?—No, I have not. I know we have very frequently supplied patterns to Coventry, and have afterwards sold the goods made from those patterns, but I do not remember any particular case.

7694. In what respect has the opening of the French trade been beneficial to the English manufacturer?—I cannot answer that question.

7695. In what way has the alteration of the law affected you as a warehouseman?—I should say that it has not operated beneficially to the warehouseman. We have no interest in the promotion of a silk trade with France; we prefer a near market to a distant one; it is every way more profitable to us; our buyers visit Spitalfields every day, Coventry every week, and Manchester nearly every fortnight in the year; whereas we can visit Lyons but three or four times in the year. As the principle of a large business must be quick returns and economy of time and expense, a near market must always be more advantageous than a distant one. For the same reason that we prefer a Spitalfields trade to a Manchester, we should also prefer an English to a Foreign trade, in buying. The Foreign trade has not been with us, nor I apprehend with the general warehousemen of this country, a matter of preference, but a matter of necessity. The dealers have come to town expecting an assortment of goods, and we were compelled to keep French goods because French goods were in demand, and because our opponents in trade kept them. If the demand should cease or lessen, it would be a very desirable thing for us; we are in no way interested in the increase of the French silk trade, but the contrary.

7696. Are you able to state whether the profits upon the sale of French goods are more than on the sale of English goods, taking the average of any given period?—The profits are not greater; but I believe some persons can tell, to their cost, that the losses are. I have understood from those who have dealt largely in French goods, that they have lately lost rather than gained by the trade.

7697. Since the opening of the trade, have you been exposed to gluts of goods from Paris?—There have been occasionally large imports of goods from France.

7698. Have there been more frequently jobs of French goods than of English goods?—As far as my own experience goes, certainly not. One of the inconveniences of our French trade is, that it is a trade of orders; as to gluts from Paris, they may occasionally happen from peculiar circumstances in France; but the kind of goods of which our manufacturers are afraid, I understand to be new goods, and excellent patterns; and I should think they have little to fear from other descriptions of goods.

7699. It has been represented to the Committee, that after goods have been in fashion perhaps in Paris for one or two months, it frequently happens that large quantities are sent over here called job goods, and sold at a very inferior price; what has been your experience in that respect?—I remember but one large parcel of goods that we bought from Paris; I have already stated that goods of a superior and beautiful kind are what generally come from France; I apprehend that our manufacturers would have little to fear from the refuse of the Paris market at the end of a Paris season.

7700. Then of your own experience that has not frequently happened?—Of my own experience in our business, that has not happened, although I have certainly heard of such goods being in the country.

7701. Can you state whether there have been more failures in dealers in silk since the change of the law in 1826, than there were in the preceding five or six years?—The question of failures is very much embarrassed by the circumstances of the times; failures generally since 1826, in all branches of trade, have been

Mr.
John Dillon.

1 June,
1832.

Mr.
John Dillon.

1 June,
1832.

very numerous in this country, and have increased in their ratio. By a published return of the number of bankruptcies, I perceive that the annual number of commissions on an average of five years before 1826, was 1,129; and it has been estimated, that the annual number of commissions, on an average of five years since 1826, was 1,392; showing an increase of $11\frac{1}{4}$ to 14 nearly. I have in the above excluded the failures of 1826 from both these series; the commissions of that year alone were 2,583. Looking back to our transactions with the silk manufacturers for the last five years, I should say that there have been very few considerable failures amongst them; I only remember two or three failures of large manufacturers in Spitalfields within that period, and upon inquiring of one buyer who visits Manchester, he says that there has been only one large failure within the same period of a silk manufacturer with whom we have dealt; at the same time, I ought in fairness to state, that the silk manufacture appears to be concentrated into fewer hands. We now do the same business in Spitalfields with 60 manufacturers, which we formerly did with 100. As their number has decreased, it is fair to surmise that it has decreased by failures as well as of other causes; but I believe the failures have been amongst the smaller manufacturers, and not amongst the larger. Had the failures been caused by French competition, they would have been amongst the larger class of manufacturers, or those who make the richer descriptions of goods; but as the failures, or the persons who have gone out of business have been chiefly among the small makers, the change, I think, is owing to other circumstances; to a greater degree of competition for instance, particularly the competition with Manchester, and in a great degree to the fact that the large manufacturers of Spitalfields have themselves now embarked, as I have already said, at Coggeshall, Sudbury, and various other places; and also to the introduction of a system of cash payments. These things, and other causes that have been in operation, have, I dare say, very much concentrated the silk business; they have placed it in fewer hands, and caused the Spitalfields manufacture, and other manufactures (for it extends to the woollen and various other trades) to be carried on by a smaller number of persons, and by men of greater capital than formerly.

7702. Are not a great number of looms unemployed at Spitalfields at this moment?—I do not know; I know that we are buying largely at Spitalfields.

7703. Are you aware that there is any considerable stock of goods at Spitalfields?—I believe there are less stocks of goods at Spitalfields than usually at this time of the year.

7704. What you have said now relates to those of whom you buy; what is the state of the dealers in silk to whom you sell, have there been more failures among them of late?—Our own experience shows less failures. Taking the same periods of time that I have before given, from the year 1821 to 1825, and then the five years from 1827 to 1831, the number of persons in a connexion of several thousands who have stopped payment, in our debt, whether afterwards bankrupt or otherwise, have decreased, as from 23 to 21; and from various other circumstances, I am strongly of opinion that the drapers of this country to whom we sell are a more stable and solvent class of persons than they were at the previous period of five years before the introduction of French silk goods, that they are men of more capital than they formerly used to be.

7705. Do you mean to say, that your losses by the sales you have made have been less in the last five years than they were before?—I do.

7706. You have said that you pay cash in buying your goods, is that peculiar to your particular line, or has it become more general of late?—I believe that the payment of cash is not confined to our particular line, but even in our business I would remark, that the payment of cash, and the effects produced upon business by a cash system, have by no means been confined to the silk business, though it is of the silk I have chiefly spoken. We deal in articles of woollen, in lace, hose, gloves, and in many other articles, including the markets of Yorkshire and the West of England, Leicestershire, Nottinghamshire, Worcestershire and various other parts, and the same system of buying and selling for cash, or a short credit, instead of taking and giving a long credit, prevails in all those branches, and has produced the same effects upon them as in the silk trade.

7707. And therefore the answer you gave just now, as regarded the solvency of drapers generally throughout the country, relates also to those drapers being generally dealers in goods as well as dealers in silk?—Only that our staple article being silk,

Mr.
John Dillon.

1 June,
1832.

silk, our customers of whom I could more particularly speak, are that portion of the drapers that deal in silk goods, not for instance linen drapers.

7708. Do you attribute the more solvent and prosperous state of the drapers to the opening of the English ports to French silk goods?—No, that is too large an inference to draw. I state the fact, I believe that effect more to arise from the introduction of a cash system of carrying on business, so that the capital is more in the hands of the retailers than formerly.

7709. When you say you buy for cash, is it for bank notes at once, or payable by acceptances which have time to run?—Chiefly by money, in a very small degree in bills, but the answer is for cash as a system.

7710. Then you think that the opening of the ports has had nothing to do with producing this more solvent state of the dealers, but that it arises from the different systems of credit?—I do not see the connexion of the two things, or how the opening of the ports can have produced that effect; when I consider that the French silk business altogether is only 10 or 11 per cent. upon the whole silk business of England, I do not see how it can affect the solvency of the whole trade of this country, or its insolvency; it is the same thing to a dealer whether he retails French or English goods.

7711. Then this more prosperous state you consider to arise from a different system of credit?—I think it is chiefly to be attributed to that, at the same time I would say, I rather state the fact, and would leave it to the Committee to draw their own inferences.

7712. Is the present mode of carrying on business by cash favourable or not to speculation, or over-trading?—My opinion is, that a man will always be more prudent, and more careful with his own money, than with the money of other people; and that the healthiest mode of carrying on business is that of prompt payment through all its stages.

7713. Would not the effect of a transition from a system of credit to one of cash payment, be to prevent persons without capital continuing to carry on their trade?—The effect of any transition from one mode of conducting business to another mode, will be, whilst that transition is going on, to produce perhaps individual evil and suffering; for that reason I apprehend that the transition from a credit to a cash system, may have driven many persons out of business who had not capital to meet the new circumstances, this may account for many of the past failures; but when that transition has actually taken place it is a more healthy state of things, and is likely to produce great future benefit to individuals and to the community.

7714. It has been stated to the Committee, that there are certain great monopolists in London who buy large quantities of goods, and that although by buying those goods they may make the goods cheaper, yet they are injurious to the manufacturers; what is your opinion upon that subject?—I should find it extremely difficult to discover what injury large buyers can inflict upon manufacturers, unless the making large purchases and paying well for them be an injury.

7715. When great purchases are made, is not some inducement in reduced prices requisite?—I should not make a large purchase instead of a small one, unless some advantage were held out as an inducement; but whilst there is an open market, as there is in the silk trade, and competition amongst all the purchasers, who are very numerous, and many of them men of very considerable capital, the protection of the seller lies in the competition amongst the buyers.

7716. Can there be a combination among the buyers, those that are called the great houses in London?—Looking at the state of the silk trade for some years past, and as it now exists, I should say a combination is utterly impossible; the very fiercest competition has raged and is at this moment raging. I doubt whether in this country competition was ever carried to the height which it is at this time carried by the houses alluded to in the question; in the silk trade, as now conducted, combination has never taken place, and I think combination a moral impossibility; it is a contest of men of capital against men of capital.

7717. With so valuable a commodity as silk purchased at five months' credit, and sold so promptly for cash or bills with your indorsement, which the manufacturer gets discounted, may not a set of manufacturers go on for a long time supplying your establishment with cheap goods without doing any good to themselves?—It is quite evident that if a manufacturer buys his raw material at credit, and sells the manufactured article for cash, an effect like that referred to may take place.

Mr.
John Dillon.

1 June,
1832.

7718. Do you think it does take place in many instances, or in any?—Whether manufacturers conduct their business with benefit to themselves or not, I cannot answer; I apprehend they would not continue manufacturers if they did not.

7719. When failures of silk manufacturers take place, have you ever heard that the low priced cash purchases for the warehousemen have consumed the merchants' property, and reduced the estate to a cypher?—I cannot state the causes of the failure of manufacturers, they are, I conclude, very various, and known to themselves and not to me; one of the causes of the failure of manufacturers probably has been, that they have sold their goods for less than they cost them; but I only know that from the probability of the thing.

7720. May not their so selling their goods for less than they cost them, arise from their having made those goods in a very slovenly manner?—Yes. It may arise from their having bought their materials at a bad market and at long credit; it may arise from their having made their goods in a slovenly manner, or of an unmarketable kind; it may arise from various causes; but if they sell those goods for the most they can obtain for them in open market, and where there is a fair competition, I apprehend that (although I speak as a buyer) no person can fairly attach blame to a purchaser, and that he can in no way be stated as being instrumental to the failure of the manufacturer, when he evidently gives more for the goods than any body else would give, or he would not become the purchaser.

7721. Is it usual in the silk trade to buy goods by the pound weight?—No.

7722. You buy them for their beauty, their quality and their colour?—From a combination of all these, and from their being a marketable commodity, and offered at a price at which they can be sold with a profit.

7723. And therefore a good manufacturer would take care to manufacture such goods as he was likely to sell, and make a profit upon?—Certainly.

7724. Might not a manufacturer make his goods injudiciously?—He might even make them good, and yet injudiciously; and of course he might make them neither good nor judiciously.

7725. Have not some of those who have failed in your trade, failed because they have sold goods cheaper than they bought them from you?—Very many, I have no doubt.

7726. Do not, in point of fact, very few large buyers take the greater part of the goods manufactured at Spitalfields?—I can hardly answer that question as to the proportion; I should think there are from twenty to thirty buyers who constantly visit Spitalfields, and each of them buys as largely as he can, or as largely as his trade demands.

7727. Are those all of them large buyers, or some large and some small?—There is a great variety in those twenty.

7728. Are you aware that any respectable manufacturers in Spitalfields have sold their goods at a loss, of late?—I am not aware of any such circumstance; the largest lot of goods we have bought in Spitalfields in the course of the present season, and which I believe was the cheapest because it was the largest, I have very good authority for saying, was not sold to us at a loss.

7729. Are the manufacturers in any case bound to the warehousemen as to the prices, and not to sell to other people?—In no way whatever, that I ever heard of.

Lunæ, 4^o die Junii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. *John Dillon*, called in; and further Examined.

Mr.
John Dillon.

4 June,
1832.

7730. THE Committee have understood that your house are buyers in many other branches in this country besides the silk, what has been the state of those branches during the last six months as compared with silk?—The state of business generally during the last six months has not been good; political circumstances, and the fear of disease, operated considerably upon all branches; but for those circumstances there would, I believe, have been an extremely good spring trade, as we call it. I am asked to compare the relative position of our silk business during the last six months with our other business during the same period; I may observe

Mr.
John Dillon.

4 June,
1832.

observe that our silk business is little more than half of our whole transactions; our business is divided into eleven departments, of which the silk business, or that portion of the silk business which compares with the French trade, namely, broad silks in Spitalfields, broad silks, &c. at Manchester, and ribbons at Coventry, form three only; that is, three departments out of the eleven. Taking the six months just passed, and comparing them with the same six months of the last year, which is comparing an unfavourable with a highly prosperous year, I find that our purchases in the last six months have decreased about $9\frac{1}{2}$ per cent.; that decrease in the three departments of broad silks, &c. at Spitalfields and Manchester, and ribbons at Coventry, has amounted to $5\frac{7}{10}$ per cent.; whilst in the other eight departments, which are in articles not comparing with French goods, the decrease has been $12\frac{1}{2}$ per cent. It is evident, therefore, that whatever circumstances may have caused a decrease in purchases this spring, as compared with last spring, the greater decrease, so far as our business is concerned, has been in those departments which have not been exposed to foreign competition.

7731. When you speak of the three departments of your business that constitute your silk trade, do you include the English and French trade?—I do not include the French; in the calculation from which I have given my last answer, the French articles are excluded altogether.

7732. You have given the Committee a comparative statement of your business for the last six months, could you give a similar statement with respect to the preceding six months?—Looking to the sales of the whole of our departments during the previous six months, and comparing the relative prosperity of the three silk departments with the other departments, I find that the silks were then below the others in point of prosperity, and not above them; as in the six months of which I have previously spoken, the depreciation of the one was to the depreciation of the other, as five to four.

7733. What have been the consequences of the removal of the prohibition of East India bandannas?—I understand that one of the consequences has been, a very considerable increase in the manufacture of English bandannas; the fact at least is, that the English manufacture has very considerably increased since the admission of India goods; I also understand from those quite competent to give an opinion, and who know the fact, that the importation of India bandannas has very considerably diminished; I can of course only speak of sales of India bandannas subsequent to their admission; on that subject, I speak chiefly on the authority of a broker who is well acquainted with the bandanna trade generally, who says that bandannas and corahs are almost exclusively the only silk manufactured goods that are cleared by duty for the home trade; about 50,000 pieces of the former, and probably 5 or 6,000 of the latter, are annually consumed. There is, he states, no chance of quantities, such as used to come previous to the opening of the ports, ever finding their way here, as British made handkerchiefs have largely now entered into consumption. From China, very few India silks can afford to pay duties, and even then only when they are at ruinous prices to the importers, &c. That India bandannas were used in this country very largely, I know from popular report and the notoriety of the fact. With regard to our own sales of bandannas, I should state, that on reference to our books, I find we bought in English bandannas, three years previously to the 1st July 1826, about 54,000 pieces, and that we bought in the three years subsequent to the 1st July 1826, in British and in India together, upwards of 160,000 pieces; coming down to the two years ending the 1st July 1831, we have bought of India 27,000 pieces, and of British, 117,000; but I ought to add, that in this last amount of British, is included corahs, which are India cloth printed in England. The relative proportion of these last I am not prepared to give, but it may be collected from the statement which I have already quoted.

7734. Are any bandannas manufactured of Italian silk?—I do not pretend to know any thing about the manufacture.

7735. Do you know at what price the corahs are commonly sold at the East India Company's sales?—I do not, at least sufficiently to state it in evidence.

7736. Are you aware that a piece of bandanna, weighing 14 ounces, can be imported from Bengal in the private trade, and that it can be sold here at 15s. and pay the importer a profit?—I am not aware of that.

7737. You have spoken of the Manchester silk manufacture having rapidly increased; what do you consider to have been the effect of that increase upon Spitalfields?—There is no doubt that the effect of that increase upon Spitalfields

Mr.
John Dillon.

4 June,
1832.

has been to reduce the price of the article ; most likely also to reduce the profits of the manufacture in Spitalfields. Looking to the peculiar circumstances of Manchester, its large manufacturing population, and the fact, as I understand, that a very large number of the cotton weavers of Manchester who were working at low wages have turned their hands to silk ; the operation of these circumstances must further be to lower the wages of Spitalfields, or rather to equalize the wages in all the places in which the silk manufacture is carried on. They are at this time making at Manchester a large proportion of the article most in consumption, the gros de Naples ; they are not only making plain gros de Naples, but they are also making some progress in the figured gros de Naples. The competition between Manchester and Spitalfields may be illustrated by a fact which I will state to the Committee. Our Spitalfields buyer, in the course of last year, bought an article in small figures, for which he gave 3s. 9d. a yard ; about the same time our buyer at Manchester bought an article sufficiently similar to interfere with the sale of the former at 3s. ; we then were of course compelled, in our future purchases of the Spitalfields article, to reduce our price. We made further purchases of that article at 3s., but by that time the Manchester article was reduced to 2s. 7½d. These are patterns of Manchester figured goods. This one is an article we have received from Manchester since my last evidence. (*Producing five patterns.*)

7738. Was not one of the articles you have referred to called double and the other single?—No.

7739. Did you give 3s. 9d. in Spitalfields for a single?—I do not remember ; it was in 1831 ; the one article was sufficiently near to interfere with the sale of the other.

7740. It has been stated that there have been disputes raised by the assignees of manufacturers, and that actions in two or three cases have been brought for the recovery of goods supposed improperly bought, and that compromises have been made, have such occurred to your knowledge?—I have heard that such have occurred.

7741. Do you know that they have occurred?—Only by hearing them talked of in the trade, no otherwise.

7742. Were the houses that bought the goods in question what you considered large, or the largest houses in your trade?—Whether such transactions have taken place with the largest houses is a comparative question ; I do not wish to depreciate them ; they may consider themselves as large, but the houses I have heard named I do not consider as in the first class, or as the largest houses in the trade. We, for example, may be considered in the class of the large or the largest houses, and no such transactions ever took place in connexion with our house.

7743. From your information, do you suppose that there are many foreign kid gloves imported into this country illicitly?—I believe not ; judging from what passes in the trade, I should say that gloves are not smuggled ; and that is the opinion of all the parties with whom I mix, who are most competent to judge.

7744. Are French gloves more profitable than English?—No ; more frequently less so.

7745. Can you furnish the Committee with the prices of the five patterns you have exhibited to-day?—The prices are marked upon them. I should explain that they have not been selected with any view to cheapness or price, and that I do not put them in any way as samples of price, they are taken indiscriminately ; one of them arrived only on Saturday last, and they are merely produced in illustration of the fact that figured goods are made at Manchester.

7746. Can you furnish the Committee with a copy of the Report with regard to the manufacture of ribbons in France, which you stated you obtained from your agent at Lyons?—I can ; this is a Report which I have obtained in answer to questions forwarded through me by a member of this Committee to our agent at Lyons, who is a very competent and fit man to make such a report.

7747. Is he a general agent, or your own agent?—He is a general agent.

[*The Witness delivered in the same, which is as follows :*]

Mai-

Mai 1832.

Mr.
John Dillon.NOTICE sur la Fabrication des RUBANS, à ST. ETIENNE, à ST. CHAMOND,
et LYON.4 June,
1832.

Question No. 1.—What number of looms is employed in the manufacture of ribbons?

Answer.—St. Etienne et St. Chamond - de 21,165 à 22,850.
Lyon - 800 à - 900.No. 2.—Are any of them *single* hand looms, or are all *ENGINE* looms?St. Etienne et St. Chamond - 16,310 à 17,360, à *une seule* pièce.
- 4,855 à 5,290, à plusieurs pièces, ou à LA BARRE.
A Lyon - 800 à - 900 battans mécaniques à 4 pièces.

No. 3.—How many of the engine looms have the Jacquard apparatus attached?

St. Etienne et St. Chamond - 1,880 à 2,100; plus 80 à 100 à une seule pièce.
A Lyon - 800 à - 900, la totalité des mécaniques des rubans dans cette ville.

No. 4.—What are the prices paid to the workmen for the manufacture of each number of each kind of goods?

St. Etienne et St. Chamond.—Satins et taffetas unis la pièce de 12 aunes :

English No.	-	-	4	6	-	8	-	12	16	20	24	30	40	-	
French No.	-	1	1½	2	3	4	5	6	7	9	12	16	22	30	40
Centimes	19	20	25	30	35	40	65	95	105	130	150	180	205	230	
Gros grain et cordons, la pièce de 12 aunes	-						240	310	410	440	510	560	590	660	
Gazes rayées	-	-	ditto	-	-	-	-	105	130	150	180	200	240	290	
Ditto, découpées	-	-	ditto	-	-	-	-	130	160	190	260	310	340	390	

Les prix sont à-peu-près les mêmes dans tous les genres du même numéro, pour les métiers à une pièce comme pour les métiers à plusieurs pièces. (Voir la note, No. 9.)

La dévidage de la trame reste à la charge du maître ouvrier passementier.

Lyon: Rubans façonnées l'aune - - - - - No. 16 - - - - - No. 30

Dessin en 900, 100 à 120 coups tramés, 2 tats l'aune - 45 cents. 60 cents.

D° - " - 90 à 100 - ditto - 1 tat - 30 - 45

Cordons - - - - - Nos. 10 et 12.

Dessin en 900, tramés 2 tats l'aune - - - 60 cents.

D° - 600 " 2 d° " - - - 50 "

D° 400 et 600 " 1 d° " - - - 45 "

Le dévidage de la trame est au frais de l'ouvrier.

No. 5.—Are the prices stated in answer to question 4, for weaving only? If so, what is paid for warping and winding; what for cutting the gauzes; and what paid for any other kind of labour required in manufacturing?

Il faut ajouter au prix de tissage plusieurs autres frais, dont le detail suit:

A St. Etienne et St. Chamond :

Teinture, 1 kilog. soye, couleur ordinaire, en commune - - - - - f. c.

Dévidage, 1 kilog. soye cuite - - - - - 3 -

" 1 kilog. d° - écrue - - - - - 1 50

Ourdissage, 1 kilog. d° - cuite ou écrue - - - - - 1 -

Nota.—L'ourdissage se fait dans l'intérieur des fabriques par des femmes, qui sont payées de 1 f. à 2 f. par jour. Il n'y a point de dévidage à compter pour la trame; il est tout au compte de l'ouvrier.

Découpage se paie par pièce de 12 aunes, et varie selon que les dessins sont plus ou moins compliqués, et la largeur des rubans depuis 30 centimes jusqu'à 1 f. 20 c., et quelquefois, mais rarement, 2 f.

Quelque fabriquant ont des ateliers de découpage, et paient les ouvrières à tant par jour; cela revient plus cher que de les faire découper au-dehors. Le plus grand nombre envoie découper à Lyon, où il y a un grand nombre d'ouvrières habiles à ce genre d'ouvrage; elles gagnent de 90 c. à 1 f. 20 c. par jour.

Mr.
John Dillon.

4 June,
1832.

Les autres frais d'une fabrique des rubans sont ordinairement évalués de 5 à 6%. Ils comprennent le loyer et les menus frais de magasin, patente, appointements de commis, tant ceux de magasin que de ceux qui vont visiter à cheval les métiers dans les montagnes, dessinateurs, cartons, &c. &c.

A Lyon :

	f.	c.	f.	c.
Dévidage, 1 kilog. soye cuite	-	-	3	50
Ourdissage, 1 d° - d°	-	-	1	40

Frais divers d'une fabrique de rubans, de 8 à 10%.

Les autres frais comme à St. Etienne et St. Chamond.

No. 6.—What number of pieces of ribbon is made at one time in each number respectively?

A St. Etienne et St. Chamond :

No. 1 et 1½	-	-	-	-	-	de 28	-	-	à 30 pièces.
2 - 3	-	-	-	-	-	24	-	-	26 ditto.
4 - 5	-	-	-	-	-	20	-	-	22 ditto.
6 - 7	-	-	-	-	-	16	-	-	18 ditto.
9	-	-	-	-	-	14	-	-	16 ditto.
12	-	-	-	-	-	12	-	-	14 ditto.
16	-	-	-	-	-	10	-	-	12 ditto.
22	-	-	-	-	-	8	-	-	10 ditto.
30	-	-	-	-	-	6	-	-	8 ditto.

Les métiers à une seule pièce font le plus ordinairement les Nos. larges, 16, 22 et 30. Il y a en outre quelques métiers dans le genre de Lyon qui font de 4 à 6 pièces.

A Lyon :

4 pièces dans tous les genres et tous les Nos.—(Voir la Note, No. 18.)
(Il y a 25 à 30 métiers à une pièce ceintures riches.)

No. 7.—What number of yards or ells does a man generally make in a week or month?

St. Etienne et St. Chamond :

Du No. 1 au No. 4	-	-	8 aunes par jour	-	-	48 aunes par semaine.
Ditto 5 - - à 9	-	-	6 aunes - ditto	-	-	36 aunes - ditto.
Ditto 12 - - à 30	-	-	4 aunes - ditto	-	-	24 aunes - ditto.
L'ouvrier à une seule pièce faite de	-	-	6 à 8 aunes - ditto	-	-	40 à 45 aunes - ditto.

Lyon :

Tous les genres et numéros, de 1½ aunes à 2 aunes, 10 à 12 aunes, ditto.

No. 8.—How many hours do the weavers generally work?

De 14 à 15 heures par jour.

No. 9.—What are the present usual earnings of workmen?

A St. Etienne et St. Chamond :

Les ouvriers se divisent en deux classes :

- 1°. Le maître ouvrier, chef d'atelier ou passementier.
- 2°. L'ouvrier compagnon.

Le passementier possesseur de plusieurs métiers, se charge de la location, paye en outre le dévidage de la trame, le cannetage, la lumière, et tous les autres frais, entretien ou métier, &c. Les métiers, mécaniques, ustensiles, &c. lui appartiennent; seul il est responsable envers le fabricant, tant des matières qui lui sont confiées que de la bonne fabrication, quelques uns en outre (par une centaine environ) payent une patente d'environ 25 francs par an, ce qui leur donne le droit de voter pour la nomination des membres du conseil des prud'hommes. Il retient la moitié de la façon.

L'ouvrier compagnon est logé, mais il se nourrit et pourvoit à son entretien; il n'a de rapports qu'avec le passementier.

Le gain d'un ouvrier compagnon varie selon le genre d'ouvrage et son habileté.

Numéros - -	1	1½	2	3	4	5	6	7	9	12	16	22	30	40
Satins et Taffet. } unis - - }	125	130	140	150	160	170	190	200	210	225	235	250	275	290
Cordons et gr. grain, environ	-	-	-	-	-	-	210	225	240	260	275	300	320	340
Gazes rayées - - ditto	-	-	-	-	-	-	225	250	275	300	320	340	370	390
Ditto découpées - ditto	-	-	-	-	-	-	250	290	315	340	370	390	425	440

Le gain des ouvriers de la montagne est plus faible que celui des ouvriers à la barre; il ne fait qu'une seule pièce à la fois tandis que les autres en font plusieurs; ils ont quelques autres avantages, beaucoup moins de frais de métier et de tout genre, moins de dépense personnelle, moins de tems perdu; il tisse le double de longueur, ainsi un ouvrier de barre faisant un No. 30. Gage rayée fait 3 aunes par jour à 6 pièces, 18 aunes ou 1½ pièce.

1½ pièce gaze rayée, No. 30	- - - à 2f. 40c.	- - - - -	3f. 60c.
Moitié pour le passementier	- - - - -	- - - - -	1 80
L'ouvrier de montagne fait 6 aunes ou ½ pièce	à 2f. 40c.	- - - - -	1 20

Il ne partage pas avec un maître ouvrier, les métiers tiennent peu de place; donnent peu d'embarras; chaque ouvrier à la sienne; les autres ouvriers employés à la fabrique de rubans, tels que les ouvriers teinturiers, apprêteurs, et gagnent de 1f. 50c. à 2f. par jour; les femmes la moitié environ.

Lyon:

Il y a comme à St. Etienne et St. Chamond le même maître ouvrier et le compagnon; le compagnon gagne par jour de 2f. 25c. à 2f. 50c. (moitié de la façon.) Les autres ouvriers à-peu-près comme à St. Etienne.

No. 10.—What kinds or descriptions of ribbons are made?

St. Etienne et St. Chamond:

Gazes rayées à bandes satin, et simatin; ditto, façonnées et découpées.

Satins, taffetas, gr. grain, velours et unis; ditto, façonnées.

Galons, lacets de tout genre, soye et calon, et enfin tous les genres, mais fort peu des articles riches, 2 tats qu'on fabrique à Lyon.

Lyon:

Rubans riches, grand façonné, 1 et 2 tats en satins gr. grain, &c. broches et chinés, &c.

Teintures riches 2 tats et façonné ordinaire, peu ou point de gazes.

Quelques qualités moindres dans les mêmes genres pour la consommation d'Amérique et d'Allemagne.

No. 11.—In what proportions are they made, satins, figured and plain, gauzes, &c. &c?

St. Etienne et St. Chamond:

Gazes rayés diverses	- - - - -	30	-	} sur 100.
Ditto - découpées	- - - - -	25	-	
Taff. gr. grain satins façonnées	- - - - -	15	-	
Cordons, divers	- - - - -	10	-	
Taff. et satins unis, &c.	- - - - -	20	-	

Proportion des divers genres de Métiers:

Métiers à la Barre.

1500 à 1650 Taffetas toutes largeurs et genres.

750 à 850 Satins unis forts et légers.

175 à 200 Velours, doubles pièces.

450 à 500 Façonnés anciens métiers à tambour (gazes rayées.)

1900 à 2000 ditto, à la jacquard - - - - - Articles façonnés riches gazes

80 à 90 ditto, 4 à 6 pièces ditto genre de Lyon } ou autres.

4855 à 5290

Métiers à haute lisse à une pièce.

80 à 100 à la Jacquard, ceintures et garnitures riches, satins et gr. grain.

230 à 260 ordinaire ceintures, gazes, brochées, &c. &c.

310 à 360

Métiers Casse lisse à une Pièce.

16000 à 17000 Ces métiers sont dans les montagnes autour de la ville; ils fabriquent tous les genres de dispositions unis et raguses et petits desseins, &c.

Lyon:

Il y a trop de variété et de caprice dans les demandes pour pourvoir donner la proportion des divers genres de rubans à Lyon, articles pour la haute consommation; ce seront des satins brochés, riches ou chinés, pour l'hiver, gr. grain; idem pour le printemps, ou les deux genres, en même tems, fort peu de gazes.

Sur 100.

Satins brochés ou chinés grand façonné	- - - - -	75f. à 78f.
Gros grain - - do. - [ditto -]	- - - - -	- - - - -
Teintures brochés ou - ditto	- - - - -	20 à 25
Gazes, &c. - - - - - ditto	- - - - -	2 à 3

Mr.
John Dillon.

4 June,
1832.

No. 12.—Do the French continue to import plain sarsnet ribbons from Switzerland, and in what quantities?

La France importe de Suisse des rubans unis, taffetas et galons.

On suppose que la quantité est environ un tiers de sa consommation.

Il a été impossible d'obtenir des renseignements satisfaisants.

No. 13.—What is the quantity of silk used in the whole ribbon manufacture?

St. Etienne et St. Chamond - de 325 à 340 mille kilog.

Lyon - - - - - de 14 à 15 mille kilog.

No. 14.—What kinds of silk, and what proportions of each kind?

Il n'y a aucune règle fixe pour l'emploi des soyes dans la fabrique du rubans comme pour tous les tissus de soye en général; c'est indifféremment en soye de France ou soye étrangère, Piémont, Italie, ou toute autre, selon le genre d'articles ou les idées de chaque fabriquant. Il serait tout-à-fait impossible d'en donner les proportions.

No. 15.—What are the present prices of each?

Selon la Note ci jointe, cours du 20 Avril:

Organsin Piémont, jaune, 2^{me} sorte, titre de 22-23 à 30-32 deniers, de 33f. à 28f. 50c.

Organsin de Pays, jaune, 2^{me} sorte, titre de 20-21 à 28-30 deniers, 34f. à 30f. 50c.

Trame Piémont, jaune, 1^{re} sorte, titre de 25-26 deniers, 29f. à 55f. 60c. 24f. 50c.

Grège Milan, titre de 9-10 à 18-20 deniers, à 27f. 50c. à 23f.

Grège de France, 2^{me} sorte, titre de 9-10 à 18-20 deniers, 28f. à 24f.

Prix pour la livre poids de marc, 492 grammes, avec escompte de 11 %, payable à 3 mois, ou 12½ %, payable comptant. (Il est rare que les fabricants ne payent la soye comptant pour recevoir les 12½ %.) On appelle Don des soyes 1 %, qu'on donne sur les soyes grèges Françaises.

No. 16.—What is the present price of the silk used in manufacturing the gauze ribbons; is it more than 22s. the English pound weight?

La livre poids de marc de soye montée en marabout, toute teinte et préparée pour la fabrication des gazes, vaut environ 35 à 39 francs escompte d'usage.

On nomme marabout la soye qu'on emploie à la fabrication des gazes. Ce sont deux organsins blancs du titre de 30-35 deniers, assez fortement tordus ensemble. On emploie indifféremment pour cet usage la soye de pays ou la soye étrangère; les organsins de Piémont sont estimés.

On fait d'abord teindre l'organsin; on le fait diviser, et on l'envoie au moulin qui lui donne le tors voulu, et le rend sur des bobines (à-peu-près plié comme le fil de coton en peloton.)

La plupart des moulins pour maraboutage est dans les environs de St. Chamond. Il y en a quelques uns à Lyon, qui consomme une grande quantité de soye montée en marabout, pour tous les genres d'articles dont la gaze est le fond.

Le maraboutage coute environ 5 à 6 francs le kilog: il y a en sus un faible déchet, ainsi:

	f.	c.
1 Livre organsin, 30-32 deniers, blancs, vaut	31	-
Teinture en cru	1	-
Dévidage - ditto	125	à 1 -
Maraboutage	3	-

1 poids de marc, ou 492 gr. valent 36 -

La livre Anglaise n'étant que de 454 gram. ne coûterait que 33 25

à déduire escompte d'usage, 11 %; plus 1½ % pour comptant,

ci 12½ % - 4 15

Net - 29 10

Ajouter p^r menus frais, &c. - 25

Francs - 29 35

Or, the English pound weight, net, 23 s. 6 d.

No. 17.—What duties are paid in France on the silk used in the ribbon manufacture, or on the import of foreign manufactured ribbons?

Les droits d'entrée sur les soyes pour rubans sont les mêmes que sur toutes les autres espèces de soye, parce qu'il n'y a point de genre de soye destiné particulièrement à la fabrication des rubans:

1f. 20c. - - le kilog. soye grège.

2 40 - - d° - d° moulinée.

Les rubans fabriqués à l'étranger payent à leur entrée en France 8f. 17c. le kilog.; ce qui fait environ 15 à 17 %.

No. 18.

No. 18.—Have any, and what improvements been recently made in the looms, or generally in the manufacture of ribbons?

Mr.
John Dillon.

4 June,
1832.

Il y ad'as sez grands perfectionnemens apportés aux métiers de rubans, par l'effet de procédés qu'on a adaptés aux battans mécaniques, et qui rendent le passage de la navette beaucoup plus doux.

Le perfectionnement le plus remarquable est l'invention faite à Lyon il y a deux à trois ans, de battans mécaniques à quatre pièces et à plusieurs navettes. Ces articles riches, qui se fabriquaient à St. Etienne sur les anciens métiers à une seule pièce avec difficulté, et des moyens bornés, se font actuellement par 4 pièces, et la complication de broché ou lancé à plusieurs trames, jointe à toute la puissance de la mécanique à la jacquard, a créé un genre neuf qui est resté à Lyon, et que St. Etienne ne peut imiter :

1°.—Parce que les ouvriers de Lyon sont beaucoup plus habiles et plus intelligens pour les articles difficiles :

2°.—Parce que les dessinateurs de Lyon, accoutumés à vaincre toutes les difficultés par la complications des étaffes larges, gazes façonnés, &c. l'emportent de beaucoup sur ceux de St. Etienne pour le goût et la perfection des dessins :

3°.—Et enfin, par la faculté si précieuse d'adapter ces battans mécaniques à tous les métiers de façonné à Lyon, ce qui permet à l'ouvrier de faire des schalls ou tout autre espèce d'article, il lui suffit, aussi-tôt que la pièce est achevée, de changer le battans. Cet avantage est immense pour des articles de goût, qui perdent de leur valeur aussi-tôt qu'ils sont connus. St. Etienne, qui a essayé ces métiers, n'ayant que des rubans à fabriquer, ne pouvant les faire travailler toute l'année, ont été forcés d'y renoncer.

Par les raisons qui viennent d'être indiquées, Lyon peut avoir très facilement jusqu'à 15 ou 1800 métiers de rubans, et les réduire à volonté entre les saisons. C'est un article de plus en façonné, il peut s'arrêter, et se recommencer selon les caprices de la mode.

No. 19.—What is the supposed annual value of the ribbons made in France?

St. Etienne et St. Chamond, de 30 à 32 millions de francs.

Lyon, de 1 million à 1200 mille francs.

Addition.

No. 20.—On a supposed value of 100 francs in ribbons, how much is the silk? how much the making and expenses, &c.?

St. Etienne et St. Chamond.

Mr. Richard Bottrell, called in; and Examined.

Mr.
Richard Bottrell.

7748. WHAT experience have you had in French and India manufactured silk goods?—An experience of upwards of 20 years.

7749. During that period you have resided both in London and on the Continent?—I have.

7750. Have you been in the habit of attending the Custom House sales of silks?—Constantly for the last 20 years.

7751. Have you ever been called in to examine goods which have been seized by the Custom House officers?—Yes, occasionally.

7752. Do you import?—No; we had a concern on the Continent, to which we sent the goods bought at the Custom House sales.

7753. Have you been acquainted with the extent and manner and cost of smuggling before 1826, and since 1826?—Yes, I know something of it.

7754. Do you imagine that smuggling is carried on to a greater extent now than formerly?—Certainly not; and in different kinds of goods altogether.

7755. What were the articles smuggled before 1826?—Gloves, cambrics and laces, vast quantities of plain and twilled silks, silk hose, India bandannas and taffaties and China crapes; these are the principal articles; but almost all kinds of French and India silk goods were smuggled largely previous to 1826.

7756. At what expense were they smuggled previous to 1826?—The expense varied according to circumstances. I have known Mechlin lace smuggled as low

Mr.
Richard Bottrell.

4 June,
1832.

as five to seven and a half per cent. Bandannas were generally passed over for 3s. 6d. a piece, and silks from half a franc to 75 centimes the ell, which was from 12½ to 18 or 20 per cent.

7757. Can you state the manner in which the business was conducted in India bandannas?—Bandannas were purchased at the India House, and some few at the Custom House sales, for exportation; shipped to Ostend, Calais, Dunkirk and Boulogne, and there opened and repacked in convenient packages, containing from 20 to 30 and 50 pieces each; each package having three envelopes, one of calico, another of oiled linen, and the outside of canvass, and slung like a knapsack that they might be rapidly removed the moment they were landed. These goods remained in the dépôt at Calais, Boulogne, &c. and were taken out at a very small expense, as occasions offered, and sent over in lots of two, four or five hundred pieces at a time. India goods at one period left a much larger profit than French goods.

7758. What period are you speaking of?—I am speaking of the great smuggling period before 1826; after the battle of Waterloo principally. French silks are packed up in a similar manner as bandannas were, and in packages containing from six to twelve pieces each.

7759. If there had been a demand, could any quantity have been smuggled at the same price?—At that period there were large profits made; fifty to a hundred per cent. I believe as many were brought over as could be got over then.

7760. Supposing at that period there had been the power of introducing into this country ten times the quantity that were introduced, would there have been any difficulty in selling them?—Ten times is a large increase, but considerably larger quantities than were brought over could have been sold.

7761. If there was so large a profit as 50 per cent. how do you account for it, that there was not a greater quantity of smuggling carried on than what you represent?—I think they sent over nearly all the bandannas they could get; there were 50 or 60 houses along the coast that keep stocks of silk and other goods, and they were constantly occupied in sending to England.

7762. How did they dispose of those goods in England?—A great quantity no doubt was sold all round the English coast, and particularly at the watering places during the summer; London, Bath, Bristol and the other great towns took large quantities.

7763. Speaking of those that were disposed of at the watering places, was it not principally at the bathing rooms and the hair dressers' shops?—I should think not, compared with the whole quantity.

7764. Where were they disposed of in London?—At various shops and warehouses, and by various persons, almost all the servants of the nobility and gentry were dealers.

7765. Do you think the respectable shops and warehouses kept a stock by them?—Whether they always sold by pattern I cannot say, but many respectable concerns supplied their customers with prohibited goods.

7766. Have you any idea of the whole quantity sold in London in any one year?—The computation was, that in bandannas alone there was at least 50,000 pieces smuggled annually for some years.

7767. And what quantity of French silks?—I should suppose (at the least) to the extent of 400,000*l.*; formerly there were very large sales, not only at the London Custom House but at various out ports, of French silks that had been seized, but now the sales are much smaller, and much less frequent.

7768. Were not the quantities seized generally in very small parcels?—We have purchased to the extent of 1,500*l.* at one sale; and at the Custom House fire our loss exceeded 1,200*l.* in gloves, silks and bandannas which had been purchased only a few days previous to the fire.

7769. Did you frequently buy whole pieces under such circumstances?—Frequently.

7770. What kind of silk do you speak of chiefly?—Florences, levantines, satins, &c.

7771. Do you think that the large houses at the West end of London sold considerable quantities of those silks?—No doubt of it; they were obliged to sell them.

7772. What is the largest seizure that you ever recollect?—I have known sales arising from seizures of from one to two and three hundred pieces of silk.

7773. What

7773. What is the highest amount of expense you have known, in any instance, of the smuggling of French goods prior to 1826?—About 25 per cent.

7774. Then the goods purchased at the Custom House sales did not form a very considerable part of the whole of the French silk goods imported?—But a small part.

7775. Did you ever know an instance in which it was necessary to sink silks?—Such a thing has occurred; spirits are now generally sunk, but they scarcely ever sink silks.

7776. Can you explain how French silks are brought over?—The general plan of getting them over is to ship them from the French port in a lugger, the lugger having a galley on board; they then proceed a certain distance, and according to the information they receive from other boats they are in correspondence with, either continue their voyage or return. It frequently happens once, and sometimes even twice, they come back without making a landing; at other times they proceed smoothly, and as they keep up good communications, they have at least two notices on their way home; the sea risk is not considered great.

7777. There is before the Committee a Parliamentary Return from the year 1816 to 1826, of a period of eleven years, in which the whole number of seizures is stated at 11,318, the total value of the whole so seized in all those years being no more than 107,000*l.*, giving about 9*l.*, as the value for each separate seizure; how do you reconcile that with your opinion, that frequently 300 pieces of goods were seized at a time?—I have known instances of from one to 300 pieces having been sold. I know an equally large quantity to have been shipped from Calais, and they were seized in three different places. There is no doubt that the goods for exportation were formerly sold very cheap, for I have bought French gloves as low as 3*s.* a dozen; and then the Custom House sales were generally advantageous to the buyer. Within the last eighteen months I have purchased seized silk goods for less than one-third of their value. I did not sell them all in England, I shipped part to India, and part to Flanders, and the after sales was in accordance with my statement. The quantity of silk goods seized expressed in yards, or in lbs. weight, would enable the Committee to form a better opinion than the nett proceeds in money as sold at the Custom House sales.

7778. Were those goods sold for exportation?—They were.

7779. You have spoken of a purchase made when those goods were prohibited, at which you bought goods at one-third of their value, does not that prove that there was great difficulty and great danger in dealing in those goods, or you would have found persons to compete with you in the purchase of them?—I do not think that was the reason, because now when there is scarcely any profit to be made, we find a vast number of persons attending the Custom House sales. This may arise from there being a greater number of persons in business now than formerly; a greater competition, and a general diminution of profits in all branches of trade and industry.

7780. Is not it much easier to dispose of smuggled goods now than it was before 1826?—It is not so easy to dispose of them now, as during the period of prohibition.

7781. Was there not always a danger in having them in your possession?—There was.

7782. Does not the smuggler find it much easier to evade the laws now, in selling the goods than he did formerly?—A person that keeps a stock of silk goods does not run the same risk now that he did formerly,

7783. Prior to 1826 were not French goods, smuggled into this country, publicly sold in the shops in London?—They were sold by pattern to my knowledge; I do not recollect that I ever saw a piece exposed in a shop, but they were sold equally well by pattern.

7784. During the period from 1816 to 1826, did you ever see a piece of French ribbon exposed in a shop window?—I never saw any ribbons so exposed; nor had the French that variety of ribbons then that they produce now.

7785. What do you attribute that increased variety of ribbons to?—It must be owing to the changes in fashion, and the desire to have constant novelties.

7786. It has been stated to the Committee, that a great part of the import of ribbons are gauze ribbons, were gauzes manufactured in France to any extent before 1826?—I never saw any quantities of gauze ribbons before 1826, we have had craped gauzes, and plain gauzes in small quantities, and of very superior quality; plain and figured lutestring ribbons were followed and superseded by

Mr.
Richard Bottrell.

4 June,
1832.

Mr.
Richard Bottrell.

4 June,
1832.

the shaded ducapes and lustrings; when they went out gauzes came in, and ever since (but particularly during 1830 and the early part of 1831), the country has been completely inundated with them.

7787. Are not a great proportion of the gauzes introduced into this country smuggled?—There are vast quantities smuggled, more perhaps in 1830 and 1831 than paid duty.

7788. You have stated that from 50 to 100 per cent. has been made upon French silk goods, how then do you account for the rate of smuggling being so low as 15 or 20 per cent.?—There were 50 persons to one engaged in smuggling formerly to what there are now.

7789. Do you not think the diminution is owing to the difficulty, hazard and disgrace of the thing?—There was no greater difficulty formerly, than now.

7790. How closely could a vessel approach the shore, without being liable to seizure, if she had French silks on board?—An English vessel, four leagues from the North Foreland, or Beachy Head; a foreigner, one league.

7791. At the present time may a vessel anchor off the Custom House?—She certainly may; but if you allude to the manifest of the goods, that makes an essential difference now and previous to 1826.

7792. If those persons could make 50 per cent. by smuggling, and yet the trade was not increased so as to diminish the profit, must there not have been something to prevent persons from entering that trade?—Business in general was more profitable formerly than it is now; so with the men who worked the goods, they soon became dealers, and purchased in small quantities for themselves, but they never sold at small profits.

7793. If the profit was so large, how was it that all the parties engaged did not participate more equally in the profit?—Some did; it often happened that the smugglers themselves subscribed as far as their means would allow, and thus in addition to freight, shared a part of the profit.

7794. If such a great profit was made, must not a proportionate risk have been incurred?—Certainly; you cannot at any time smuggle without some risk.

7795. When you say that you could bring over bandannas at 3s. 6d. a piece, do you mean that that was the cost of bringing them over, or that you could insure the bringing them over for that sum?—That was the freight for bringing them over when you employed a boat's crew yourself.

7796. What could you have insured their being brought over for?—From 5s. to 7s.

7797. Do you mean to say, that from the large profits you have mentioned, there is to be deducted the losses in consequence of seizures?—Certainly.

7798. Can you state the proportion of seizures at that time?—I cannot; but I know that many insurers made upwards of 15 per cent. profit per quarter.

7799. When you speak of silks being smuggled at from 15 to 20 per cent., do you mean to say that they were insured for that?—They were; but I have known an instance where a quantity of silk goods were sent over (without being insured,) and they were landed safe at less than five per cent.

7800. What period do you speak of?—Just after the battle of Waterloo.

7801. What is the present rate of smuggling on broad goods?—From 15 to 20 per cent.

7802. Do you think that our coast system was so well organized at the period of the battle of Waterloo as it has been since?—Certainly not; but I think the Custom House officers were more upon the alert then than they are now.

7803. What is the present rate paid for smuggling ribbons?—I think I could get ribbons at a rather less rate than broad silks; but they could be charged just as high as broad silks if you had them from any of the large houses in Calais.

7804. You have stated that the present rate is from 15 to 20 per cent., does that include every expense?—Twenty per cent. would include every thing delivered at any place in London.

7805. Before the year 1826, would it have been the same?—Just the same. But when profits were large, persons could afford to be liberal; and in cases of success, douceurs were given by way of encouragement to the men.

7806. Then in fact there is very little alteration?—Very little.

7807. Except that there is the advantage of being able to dispose of the goods more readily?—No, there is the great advantage of more safely keeping them, but not in selling more readily; there is not now the same demand or desire for them.

7808. You stated that there was an alteration in the description of goods that are

Mr.
Richard Bottrell.

4 June,
1832.

are imported now from France, as compared with what were imported formerly?—Formerly rich broad goods, and I think of a very superior quality to any that come from France now; silk hose and kid gloves were then abundant, but now we rarely see a pair of gloves, or a pair of stockings, and but few plain silks; gauze ribbons and blond laces, are the principal articles now smuggled.

7809. You say that at that time it cost about 20 per cent. to smuggle, and that now it costs about the same; if you smuggle gauze ribbons, are you not also to take into consideration that gauze ribbons is an article much easier to smuggle than broad silk would have been; and that therefore the price of smuggling broad silks would be greater?—It would be rather more on broad silks, but a difference of a few pounds weight on a large quantity would not be of much consequence.

7810. You stated that the rate of smuggling was from 18 to 20 per cent., and that it is now from 15 to 20 per cent.; has it then decreased?—The rate varies two and a half to five per cent., according to the circumstances of the case.

7811. Can silk goods be smuggled now at the same rate as when they were prohibited?—It is about the same, but it will depend upon the quantity. If you have a large quantity, you may make a bargain with the insurance company, and two and a half per cent. may be reduced.

7812. Were the packages larger or smaller in 1826 than they are now?—Sometimes in larger packages, but principally of about 30 or 40 lbs. weight, as at present.

7813. Do you think that if the duties were reduced the price of smuggling would be diminished?—I can hardly give an opinion; but it is certain the small smugglers are nearly all annihilated in consequence of the diminution of profits.

7814. Do you think the amount of smuggling would be diminished?—I think it would.

7815. Are not the goods which are entered at the Custom House for duty examined at various places?—They are.

7816. Would it not be better, both for Government and the British manufacturer, that Foreign silks should be examined at one place and be subject to a greater check and better examination than at present?—It would be decidedly better than the present mode.

7817. What do you suppose to be the proportionate value of French manufactured silks smuggled into this country now, and before 1826?—The value was generally estimated at 400,000*l.* a year; now but few plain broad silks are smuggled.

7818. What do you suppose to be the quantity of ribbons now smuggled?—I can hardly form an estimate.

7819. Do you suppose that it is above 400,000*l.*?—No, I should think not above half that sum.

7820. Are any Indian bandannas smuggled at present?—None.

7821. What is the duty on Indian bandannas?—Twenty per cent.

7822. Taking the piece at the India House to be about 20*s.* per piece, the duty then is 4*s.*?—It is.

7823. Did smuggling in Indian bandannas cease in 1826?—Immediately the prohibitory laws were repealed.

7824. And you believe none have been smuggled since?—None from the Continent; but a few pieces are brought occasionally by the East India ships. We have India goods now in Flanders we cannot dispose of, that formerly commanded an immediate sale.

7825. Was the duty on bandannas always an *ad valorem* duty?—At the India House the duty was first at the rate of 1*s.* the square yard, but it was soon altered to the present duty.

7826. Do you think that upon the whole, at this moment, the price of smuggling is dearer or cheaper than it was formerly?—I think the insurance companies would charge rather more, because there is less to do, and fewer persons to do it. There were formerly as many as 50 or 60 houses concerned in this business, and now there are not one-tenth of that number.

7827. How do you mean concerned?—In keeping stocks to supply English smugglers.

7828. Would not the business of that class of persons naturally expire with the alteration of the law which allows every person to go to France and purchase his goods?—Certainly; that and the consequent diminution of profits.

7829. Was not the value of the goods imported before 1826 greater than the value

Mr.
Richard Bottrell.

4 June,
1832.

value of the same quantity of goods now?—The value must have been greater previous to 1826.

7830. What reduction do you think there has been in the price of silk goods in France since 1826?—The reduction in price has not been so great I conceive as the reduction in the quality of the article; and this is partly occasioned by new systems of dyeing. I should think the reduction at least 25 per cent.

7831. Were not some of the silks formerly imported foreign thrown silk, and not manufactured silk?—Very little thrown; the greater part manufactured; the last lot of thrown silk smuggled was in 1823; and then only ten small ballots.

7832. Was foreign thrown silk smuggled to any extent formerly under the 14s. 8d. duty?—There was some, but no very great quantity.

7833. Do you recollect when the preventive service was first established?—I cannot now state the exact date.

7834. Do you remember whether at that time it increased the cost of smuggling?—It paralyzed it for a short time, but afterwards it seemed to re-assume its activity.

7835. Do you not consider the price of smuggling to be regulated by the duty?—I think the duty ought to have some effect upon it; but there are so many men round the coast out of employ, that if a profit could be made the goods would soon be got over.

7836. Can you inform the Committee whether smuggling is more advantageous to the smuggler now than formerly?—It is not at all advantageous now; they cannot sell the goods with any facility when they are got over; formerly they could always sell them and at a large profit; I think the insurers get their work done cheaper now than formerly.

7837. If the importers could not pay the present rate per cent., would the smuggler endeavour to do it for less?—On some goods he might; fancy goods and gauze ribbons still pay.

7838. Would they take 10 instead of 15 per cent.?—It would not answer the insurer's purpose; he could not make a profit by the business at such low rates.

7839. The parties directly engaged in the transaction, exposing themselves to great personal risk, and the parties insuring the goods to a pecuniary loss; must not the price paid for smuggling depend upon those two circumstances?—Certainly; and the reason it is increased now is, that the men are subject to so many risks, and to be sent on board a man-of-war.

7840. Will a man ever have occupation in smuggling unless he can smuggle at a less rate than the duty?—Certainly not.

7841. Are any cambrics smuggled now?—None.

7842. Can you state what the average duty upon cambrics is?—The duty is about 6s. for six ells, from 8 to 15 per cent., varying according to quality; cambrics are very low in price, and not so much in fashion as formerly.

7843. Do you believe that any velvets or other manufactures of silks are smuggled from Germany?—None, the sea voyage is too long, and velvets too bulky to smuggle.

7844. Do you mean that they do not smuggle silks from Belgium or Holland, but only from the French ports?—To no extent, but from France; for unless you can keep up a telegraphic communication between the two shores, smuggling cannot be carried on to any advantage.

7845. Is that done between Calais and Dover?—It is.

7846. Will you state how?—The boat which leaves Calais with the goods communicates with other boats ostensibly engaged in fishing, and which do fish, and from them they receive intelligence as to the stations of the cutters, where cruising, &c., and they have carried it to such perfection that they consider the sea risk to be scarcely anything; in fact, not one per cent. Besides, there is very little inducement for sailors of King's ships to look out for smugglers, for when the men of war make captures the men get scarcely any thing. I attended a sale at Deal some time ago, and was curious to know how the money would be divided; I found, on searching the London Gazette, (17th January 1831) that the captain in one case had 258l. 3s. 9d., and the 8th class seamen 1s. 5½d., 7th class 2s. 11½d., 6th class 4s. 5d. This was a seizure of silks, spirits and tea; and upon another occasion (the 10th January 1832) likewise silks, spirits and tea, the captain received 30l. 6s. 11d., and the 8th class sailor had 7d., 7th class, 1s. 2d., 6th class, 1s. 9½d.; these facts speak for themselves.

7847. Is

Mr.
Richard Bottrell.

4 June,
1832.

7847. Is the difficulty greater in landing goods from France than formerly?—It ought to be greater than it was on account of the coast guard, but the difficulty in landing is much diminished in consequence of having such quick communication from coast to coast; the greater difficulty is in getting the goods up to London, and safely delivered.

7848. What kind of goods were formerly smuggled that are not smuggled at present?—Bandannas, and all descriptions of India goods, China crapes and tafetas, which formerly fetched from 7*s.* to 12*s.* a yard, and are now scarcely saleable at any price.

7849. What has been the effect of the repeal of our prohibitory laws at Ostend, Dunkirk and Calais, and other places along the opposite coast, as regards the sale of India and French silks?—There are no India goods sold, and but few French.

7850. What effect has smuggling generally upon the trade of this country?—It is my opinion that the quantity (except in fancy goods and gauze ribbons) has not been of so much consequence as the price at which they have been offered. Parties selling smuggled goods do great injury by jobbing the goods; thus reducing the standard of value, and depreciating similar articles in the public estimation.

7851. As you have resided in Belgium, are you aware whether any English goods are smuggled into France?—There are large quantities smuggled into France; it is estimated that Paris alone takes English goods through Belgium to the amount of ten millions of francs or 400,000*l.* English; vast quantities of bobbin nets, muslins, printed cottons, fine shirtings, quiltings, hosiery, in fact almost all description of fine Manchester and Scotch goods, besides articles of Sheffield and Birmingham manufacture, and even some double milled kerseymeres and best English superfine blue cloths, are smuggled into France; the prohibited numbers of yarns are likewise passed in; last year when I was in the north of France a holder of yarns assured me, although cash had been paid for them in Manchester, the market was so well supplied they could not realize ten per cent. profit upon them.

7852. For what purpose are the fine muslins of twist used?—For weaving muslins in France.

7853. What is the expense of smuggling goods into France through Belgium?—The expense of smuggling must be greater in France than in England; I should think the expense exceeds 30 per cent. in getting English goods to Paris.

7854. Can you state what is the expense of getting them across the Belgian frontier?—It is impossible to state precisely; it differs according to the description of the goods, the quantity and the season of the year.

7855. You say that the price of smuggling is greater in France than in England; what is that owing to?—It is owing to their having so many Custom House officers, gens d'armes, and fortified towns.

7856. Does not the prohibition in France make it more difficult to smuggle into France than into England?—English goods have always been prohibited in France, yet they have been smuggled.

7857. Are all the articles you have mentioned prohibited in France?—All prohibited except some few numbers of yarns.

7858. You have stated, that there are so many people hanging about the English coast that have nothing to do, that they are glad to employ themselves in smuggling at a very low rate, what rate of duty could protect the English manufacturer against so much competition amongst the smugglers?—I am not prepared to answer the question relative to duty now, it will require much consideration. As regards the men who are hired to work the boats, they do not earn much; but the risk is so great on the part of the insurers that less than 15 to 20 per cent. would at no time pay them. In fact some silk goods are as cheap in England as in France, and whilst our manufacturers continue to sell at such small profits there is scarcely an inducement to smuggle plain silks.

7859. Do you consider that prohibition will better protect the trade than any rate of duty?—It evidently was the case, that during prohibition vast quantities of silk and other goods were smuggled from France, but then there was a profit to be made, the material being dearer here, and wages much higher than in France. Prices more generally approximating now, I do not think that smuggling would go on to the same extent as it did formerly.

Mr.
Richard Bottrell.

4 June,
1832.

7860. Is not the question of smuggling altogether a question of profit?—Certainly.

7861. At present, has not the competition existing among the insurance companies in France brought down the rate of smuggling to the lowest possible extent?—The diminution of profits has decreased the contraband trade, and consequently the number of the insurers, and not a competition amongst themselves.

7862. Do you not believe that a renewal of the prohibition would restore some of those companies that have now ceased to do business?—It would depend upon the relative price of silk goods in France and England.

7863. At the period when so much smuggling did go on under the prohibition, was it not under the circumstance that an immense profit was to be gained, which you have stated would not be so great now, even if the prohibition were renewed?—That is my opinion.

7864. Do you think that the competition among the British manufacturers would keep down smuggling, or at least keep it within moderate bounds?—It does so now in a variety of articles.

7865. Might not smuggling be prevented or rendered more difficult than it is at present?—I think it might by good regulations.

7866. Have you any suggestions to offer to the Committee upon that subject?—I have, in my hand, a copy of a paper which was forwarded to the Board of Trade, suggesting several regulations upon the subject, which I beg permission to deliver in.

[The Witness delivered in the same, which is as follows:]

MEMORANDUMS relative to a proposed Alteration and Amendment in the System of paying Duties on Foreign Silk Goods.

Two DUTIES to be levied:

1st, An *ad valorem* Duty of 10 per Cent.

2d, A Duty (additional) by Weight, according to the following Scale.

	s.	d.		s.	d.
Silks - plain	6	—	per lb.		
Do. - figured	10	—			
Satins - plain black	6	—			
Do. - white and coloured	8	—			
Do. - figured	13	4			
Velvets, plain	13	4			
Do. - figured	16	—			
Crapes, Gauzes, Lisse, &c.	16	—			
of the Italian kind	—	—			
Crapes, Gauzes, Shawls,	16	—			
Handkerchiefs, Dresses,	—	—			
&c. of the China kind,	—	—			
plain	—	—			

Articles not decidedly plain to be considered figured.

When mixed with Thread, Cotton, or any inferior material, to pay the full Silk Duty.

All figured Ribbons exceeding 4 oz. to the piece of 18 yards, or 7 oz. to the garniture of 36 yards, to pay a further Duty of Two Shillings per oz. on the extra weight.

RIBBONS:

Gauze of all kinds - 16 - per lb.

Figured, without Gauze - 13 4 -

All others, plain, without Gauze - 8 - -

Velvet Ribbons, as Velvets.

Blonds, and all kinds of Lace, } 15 per Cent.

ad valorem of - - -

Shawls, of Wool, of Wool } 25 per Cent.

and Silk, or Wool and } - - -

Cotton - - -

Gloves to remain at present Duties, but the Duty on Lamb and Kid Skins to be abolished.

All articles whatever worked with Silk, or printed, to pay an additional Duty of 50 per Cent. on the rate by weight; and all articles mixed with metal to pay the highest rate of Duty, viz. 16s. and 50 per Cent.

REGULATIONS.

1st.—An Annual License - - - - - Importer - - - - - 10 guineas.

Wholesale - - - - - 4 ditto.

Retail - - - - - 2 ditto.

Ship (quere) - - - - -

All persons passing entries inwards for Foreign Silk goods above the value of 20*l.* to be considered importers. Goods not to be delivered till license is produced.

2d.—All Silk goods to pay duty at one place or depôt to be entirely devoted to that purpose. The *ad valorem* duty (should the declared value be approved of) to be first levied, then the duty by weight; and every import to be fully and particularly entered

entered in a journal and pasted into a properly ruled ledger. These, with the addition of a pattern book, would form a highly useful reference for the merchant and manufacturer.

3d.—Silks imported via "Dover," to be forwarded under seals of office to the *depôt* in London, where only silk goods should be examined for duty. British silk goods, entitled to "bounty on exportation," to be examined at same place.

4th.—All imports to be in cases; and when a case shall not be fairly full, to be liable to seizure.

5th.—All silk goods to be accompanied with a "Consular Certificate," specifying "marks and numbers," measurement of each case, gross weight (case included), shipper and consignee. In default, goods to be forfeited.

6th.—The ship's manifest to be without erasure or interlineation; and the particulars of all cases containing Silk goods to appear on the manifest in like manner, and to accord with the Consul's certificate. In default, forfeiture of goods and penalty.

Consuls to forward to Custom House, London, duplicate certificates, and to sign their names to all manifests, in such a manner that no insertion can afterwards be made above their signature.

Note.—The total number of packages, bales, cases, &c., written in words at length by the Consul when he signs, would render all manifests complete.

7th.—All Silk goods to be stamped.

7867. Are you not aware that under the present system goods are passed at a less rate per cent. at the Custom House, than was intended by law?—I believe it to have been the case with some goods.

7868. Can you state how much below?—The principal article is that of figured satin ribbons; it was never intended by law that any figured goods should come in under 30 per cent., and figured satins have been passed at from 17 to 20 per cent. If two duties were levied, one an *ad valorem* duty of 10 per cent., and an additional duty by weight, such a thing could not have occurred; but I beg to refer to the proposed regulations.

7869. Could the goods have been passed in the way stated at a less rate per cent. than 30, if the examiners had been more careful and attentive?—They might not have been judges of the goods, or of the silk trade generally. If they had, however, made inquiries as to the value, they would have discovered that they were not getting the full duty.

7870. Do you think it possible in an article which must depend so much upon fancy and fashion, for the officers, merely looking at the article, to say what would be its value?—The law allows a certain time to get information, and by communicating with the dealers in the articles they might obtain it. If the officer had sent to an English manufacturer, he would have cheerfully given his assistance, and the real value would have been discovered. It is important, as regards smuggling, to state, that no articles similar to those which have been passed at the Custom House at from 17 to 20 per cent. have been smuggled.

7871. Suppose those goods had been brought in at Dover, or any where else, would it be possible to call in the aid of a manufacturer?—That is another difficulty for which the regulations provide. I have proposed that all silk goods should be forwarded to London under seals of office, in order that the manufacturers should have an opportunity of inspecting them when applied to. It frequently happens that goods pay duty at Dover, and that they are sent up to London with others that have been smuggled.

7872. Is there any check between the person that weighs the goods and the officer that takes the account?—No check; that is one of the faults of the system, the weigher might give a wrong weight, or the landing-waiter might enter a wrong quantity.

7873. Have you not had various communications with His Majesty's Government upon the subject?—I have.

7874. In your communications with the Board of Trade, did you give them full information upon those points?—I did.

7875. As it is important if our manufacturers cannot have foreign goods prohibited, that at least they should have the utmost extent of legal protection rigorously enforced, can you inform the Committee whether any alteration has taken place?—I am frequently at the Custom House, and no alteration has yet taken place; perhaps they are waiting the Report of this Committee.

678.

3 L 3

7876. Would

Mr.
Richard Bottrell.

4 June,
1832.

Mr.
Richard Bottrell.

4 June,
1832.

7876. Would not a more detailed account, in fact an invoice of the goods, be advisable?—That is much wanted, and the *ad valorem* duty would insure a detailed account.

7877. Do you think if the trade generally had an opportunity of inspecting the entries at the Custom-House that it would be the best protection against the goods being undervalued?—Most certainly; a good understanding between the inspector and the manufacturers would be highly important.

7878. As it is at present, can the manufacturers refer, without trouble, to a detailed account of foreign silk goods imported?—They cannot.

7879. Do you think that the importation of French goods is owing to their being cheaper than the English, or to their being better in point of colour, manufacture and style?—Some are cheaper, others have certainly a better style.

7880. Can you state any reason why they should produce a superior style to the English?—Their pattern drawers are artists. The French have schools of design; we have not; until this deficiency is supplied, we must, in the generality of fancy articles, be their inferiors. In French figured gauzes, and gauze ribbons, there is generally a minute beauty, and general good effect, which the English have not yet attained.

7881. From what you know of the trade, legal and illegal, as well as the importation from England into France, as from France into England, do you believe that the balance is in favour or against this country?—The direct trade is greatly in favour of France; but we know by the exchanges, that the balance of industry is generally in favour of England; as a proof of it, the exchange is in favour of England, and one per cent. higher than gold.

7882. Have the Custom House officers ever stopped any of those goods, which instead of paying the minimum duty of 30 per cent., have really been passed at 15 or 20 per cent.?—Never.

7883. Mr. Dillon has stated to this Committee, that plain gros imported by his house, vary from 15 to 21½ per cent. on the cost price; can you explain how this is, when the law has kept 25 per cent. in view as the minimum duty on plain gros?—I cannot account for it in any way; as the rate of duty is 11s. per lb., and calculated on a higher price than the present value of plain manufactured silks, the duty ought, as the value of goods diminished, to exceed 25 per cent. rather than fall below it.

7884. You saw the gauze ribbons exhibited on Friday last to the Committee, do you consider the twenty-penny English gauze to be of very good quality?—No, a very bad quality.

7885. The price was stated to be 13s. 9d. for 36 yards, and the approximating French ribbons, No. 12's, at 10s., making a difference of 37½ per cent. in favour of the French; do you conceive the quality of the English ribbon to be a fair one for comparison?—Certainly not, the quality of the English gauze was very inferior; that of the French, one of the best I ever saw.

7886. Then an English ribbon of the value of even 10 per cent. more would make a considerable difference in the relative per centage of those two articles of French and English manufacture?—As the French is the lower priced and the best article, and the English the lower quality and the highest price, a better English ribbon brought against the French one would make the difference much greater than 37½ per cent. If you advance the English gauze 10 per cent., the difference would be 50 per cent. in favour of the French; but if you take 10 per cent. off the French price, and add 10 per cent. on the English, the difference would be above 66 per cent. in favour of the French gauze.

7887. Did you examine the qualities of all the English ribbons that were exhibited?—I did.

7888. Have you reason to think that the silk they were made from is of a different quality from that which the French use?—I should think the green gauze ribbon must have been made of a silk much inferior to any the French use.

7889. Did you examine and take an account at the King's warehouse of the goods seized from Messrs. Leaf & Co.?—I did.

7890. What description of goods were they?—They were principally gauze ribbons; there were some black satins and coloured gros de Naples, but principally gauze ribbons.

7891. Did the gauze ribbons in that seizure equal in quality the pattern of the French No. 12, exhibited by Mr. Dillon?—They were by no means equal in quality to that pattern.

7892. Did

Mr.
Richard Bottrell.

4 June,
1832.

7892. Did you inspect the other parcels of goods that have been seized within the last few months?—Yes.

7893. Can you state what seizures have taken place, and of what description of goods they have been?—There have been no seizures of any consequence this year, except a few trifling things out of East Indiamen, and three cases of striped silks French manufacture.

7894. Have you the means of knowing whether the articles subjected to high duties have been more smuggled than others?—Such goods as offer the most advantage will be most smuggled; the higher the duty, the greater the chance of gain.

7895. One of the witnesses has stated to this Committee, that goods might be delivered in London by a dealer in Paris on his being paid at the rate of a shilling for each franc; what rate is this per cent., and what advantage would arise to a London buyer by his doing business in this way?—I see no advantage in making such a contract; at the present rate of exchange it would equal $27\frac{1}{2}$ to 30 per cent.; exchange 25*f.* 50*c.* would be $27\frac{1}{2}$ per cent.; exchange 26*f.* would be 30 per cent.

7896. Can you give any information to the Committee upon the extent and present state of the silk manufacture in Russia?—I can; by inquiries that have been made, it is found that the quantity of silk manufactured at Moscow has more than doubled since 1820, the consumption of silk in 1820 was 10,000 pouds, or 355,000 lbs. English; and in 1830, 25,000 pouds, or 887,500 lbs. English; but manufactured silk goods in Russia have fallen in price 50 per cent. since 1820.

7897. Do you know what silk it consists of?—A great deal of China is used; but principally Italian thrown is imported into Russia.

7898. Is there not a large protecting duty imposed upon the entrance of manufactured silk goods in Russia?—There is.

7899. So that the Russian silk trade is thriving under a system of protection?—Increasing in quantity, and falling in price.

7900. Have they not increased the duties within the last 18 months?—The Russian tariff has been generally increased.

7901. Supposing the cost of smuggling 100*l.* worth of goods to be 20*l.*, how would you apportion that between the parties concerned, how much to the insurance, how much to the party undertaking to smuggle, and how much to the labourers actually engaged in it?—Above from one half to three-fourths goes to the insurers; there are many persons who employ boats without insuring, and it then costs them about 10 per cent.

7902. Do the insurers pay the penalty in case of a seizure?—In all cases.

7903. Do you know any thing of the wages paid in France in the silk manufacture?—I have made numerous inquiries, and have received very precise accounts from the manufacturing districts in France.

7904. Has the information you have received from different channels generally corresponded?—Generally; and they all agree on this point, that the cost for weaving plain silks in France is from one-sixth to one-fifth of the value of the article; or 16 to 20 per cent. My advices agree that at Lyons they are not at present making any quantity of low broad silk goods, and one great reason is, that the demand from America has almost entirely failed this year; that from the 1st of January to the 16th of April scarcely an order had been received.

7905. What is the rate of wages for figured goods?—It is impossible to draw a conclusion on figured goods, from 25 per cent. upwards; the difference is more in favour of France on figured goods than on plain. It appears that 100 cards ready cut for a Jacquard machine cost in Lyons only two francs and a half, or 2*s.*; whereas the price in England is from 10*s.* to 12*s.*

7906. Are you acquainted with the comparative prices of weaving in France and in England?—I have examined the printed tariff which the prefect, M. Du Momart, agreed to, and although it does not exactly agree with the prices now paid, the difference is not very great on the articles sent to England. For making a gros de Naples at Lyons of the value of 4 francs 50 centimes, the wages are 90 centimes, which is just 20 per cent. On comparing this with the tariff, I find it to correspond. In light coloured satins of 11–24 width, they are paying 60 centimes, and the tariff quotes 70; for plain black cravats 31 inches square, they pay one franc the handkerchief; that is 31 inches French, and the English inch is less, being in the proportion of 8 to $8\frac{1}{2}$. For making 4–4 and 5–4 crape shawls, there is no difference between the tariff and the prices now paid. The

Mr.
Richard Bottrell.

4 June,
1832.

four quarter is one franc 40 centimes, and the five quarter 2 francs 25 centimes.

7907. Have the hands been tolerably well employed?—In March they were better employed than in April. In March there were 1,324 ballots of silk sold at Lyons, but in April only 550.

7908. Do they make any remark as to the quantity of goods ordered for England this year?—They do not; in one of the letters it was mentioned that our English buyers had not found the market so favourable for purchasing as they had expected.

7909. And therefore it is supposed that the goods will come over into this country?—Only in the event that other markets should prove bad, and the French manufacturer should make on speculation.

7910. What kind of goods are they now principally occupied on?—On heavy rich goods.

7911. For what market are those goods intended?—For the principal cities of Europe; they had been likewise busy preparing for Leipsic fair.

7912. Do not you believe that they were principally intended for the London market?—Not principally.

7913. Are not large quantities of crape imported into this country?—There are.

7914. Are similar articles made in Spitalfields?—I never heard that they were.

7915. Then they are articles that do not come in competition with the manufacturers of those places?—They do not.

7916. Where are they made in this country?—They are principally made at Yarmouth and in Scotland.

7917. Do you believe that there is any considerable quantity of goods imported from France that come into competition with the manufactures of Spitalfields?—All the broad goods that have been imported come into direct competition with Spitalfields. This season they have generally been rich goods, but the quantity has not been very great.

7918. Was it the case last year that they were rich goods?—I think they are more generally so this year.

7919. Are not the rich goods you speak of, the quality of goods that give most employment and require most labour?—I do not know that they do require much more labour, but they of course consume a larger quantity of silk.

7920. Are they not now made in Spitalfields?—They are, and have long been; and in my opinion equal in every respect to the French, when the best silk is used.

7921. It has been supposed that France would send no other quality of goods into this country than the very rich goods, but if the French market should continue in the same stagnant state, is it not likely that the price will fall so considerably at Lyons, that considerable quantities of silk goods of other qualities will be brought here?—No other than rich goods will be ordered for the English market. I have understood that Leipsic fair has turned out well; that stocks in France are not large, and that the French manufacturers are not inclined to make on speculation.

7922. What kind of goods do they send to Germany?—All kinds of plain and fancy goods; and generally articles superior to those made in Germany and Switzerland. I beg here to mention, from the information I have received from the South of France, that of the last year's crop of silk the stock on hand is very inconsiderable; and that notwithstanding the absence of orders from America organzine had risen from the 16th to the 27th May 50 centimes the half kilogramme

7923. Do they consider that a rise of some importance?—It appears so. It is likewise stated that the demand since March has not been great for manufactured goods; in raw silks there has been some speculation, owing to the small stock remaining of last year's crop.

7924. Can you tell the Committee the extent of the silk manufacture in France?—I have discovered pretty nearly what the French have paid annually for raw and thrown silks imported into France; I have likewise collected from various sources the supposed quantity of silk grown in that country. The growth of 1831 exceeded 20,000 bales of 80 kilogrammes each; 1,600,000 kilogrammes give 3,527,675 lbs. English, as the quantity of silk grown last year in France.

7925. Do any of your French correspondents furnish you with the amount of the purchase of silk not of their own growth?—Yes; and it appears from their statements, and by the reports made to the Agricultural and other Societies of Arts and Industry in France during the last year, that the raw and thrown silk annually imported

imported into France is of the value of from 36 to 40 millions of francs, which is about 1,500,000*l.* English money.

7926. Can you state the number of looms at Lyons?—During the last few years they have spread very much into the country, but the number of looms is estimated in the city and neighbourhood at 30,000. St. Etienne is computed to possess 12,000 bar looms, besides single hand-loom, which are very numerous in the surrounding country. At Avignon the number of looms has much decreased; it is there where the Florences are made, of which the sale was so great formerly in England.

7927. Were the disturbances at Lyons owing to a dispute about the tariff?—Not as regards the tariffs signed by M. Du Momart, but it was in consequence of the previous low rate of wages.

7928. Did not the workmen wish to have a fixed, and on the whole an advanced price?—They did.

7929. Did that disturbance extend to St. Etienne?—No; there was some little agitation at St. Etienne, but nothing serious or similar to the affair at Lyons. The workmen at St. Etienne were in a different position; nearly all the bar looms at St. Etienne belong to undertakers.

7930. Do you know any public document relating to St. Etienne, which exhibits the state of prosperity or adversity in which they are?—No, I do not; but I have heard that they are alarmed at the great competition they experience, and that both wages and profits are exceedingly low.

7931. Have you not heard of their expressing their satisfaction?—I have not, although the quantity of silk consumed at St. Etienne has lately much increased.

7932. Did you ever see or hear any address from the mayor at St. Etienne to the French minister, stating that the people were at work for the British market?—No, I have seen no such address; but I have seen various publications from St. Etienne complaining of their prospects, and the low rate of wages.

7933. How do you reconcile the fact of their being in distress at St. Etienne with the increased consumption of silk?—That is a parallel case with our own; there is an increased consumption of silk in England, but no increase of wages.

7934. Do they manufacture a description of articles which consumes a great quantity of silk?—Their principal manufacture is gauze ribbons, but in large quantities.

7935. Besides what you have stated already upon the subject of smuggling, can you point out any other way in which the smuggling of silks may be prevented without any reduction of the duty. Would not stamping of the goods, and the personal punishment of smugglers, be effectual means?—Stamping has been recommended, but the Customs have reported against it, on the ground that it would be too tedious and consume too much time, besides being unnecessary. It is certain the quantity of goods seized formerly was very great, and there was not an article that was not stamped. If they stamped them then, I do not see why all imports should not be stamped now.

7936. Is there not a Board of Commissioners to superintend all the transactions at the Custom House?—There is.

7937. Do you know at what time in the morning those Commissioners come?—I believe their hours are from 10 till four.

7938. Is it your opinion that the officers whose duty it is to examine silk and other goods are adequately paid?—The landing waiters, and the surveyors particularly, are handsomely paid, but the weigher has a very small salary, and there is a sad disproportion in the pay of the superior and inferior officer; besides, as part is day-pay, the latter is subject to lose it in case of holiday, a fast-day, or any close day, whereas the annual and high salaries are not subject to such a deduction.

7939. So that the man whose duty it is to ascertain whether the account is correctly taken, may be tempted by a bribe which it would be well worth the while of some parties to pay?—I have understood cases to have occurred when offers have not been made to the officer, that the officer has made proposals to the parties attending. A circumstance occurred lately of this nature, but the transaction being exposed, the officer was discharged.

7940. Did you mention the occurrence of similar circumstances to the Board of Trade?—I did last year; and recommended that what are called “silk floors”

Mr.
Richard Bottrell.

4 June,
1832.

Mr.
Richard Bottrell.

4 June,
1832.

should be abolished, and that all silk goods should pay duty at one place, and be subject to a double check.

7941. Did they pay any attention to it?—All I know is, that the original system still continues of examining silks at various places. I understood the report from the Custom House was against the necessity of any change.

7942. Do not you think it would be a check against smuggling if all the silks, when embarked for import into this country, should have written upon them in large letters “silks”?—A certificate from the British consul would be better; this is provided in my proposed regulations.

7943. Will you state in what way the goods could be stamped without the liability of the stamp being imitated on the other side of the water?—By such a seal as was submitted to the Committee of silk manufacturers, and approved by them last January—a drawing of the impression was made by Mr. Ellis, of No. 15, Old Broad Street, and diagrams of the four sizes required, I beg to annex. The seal is a hand seal, and can be used with as much facility as a letter stamp. It contains five plugs, which are screwed in, or pinned, without trouble, and with little loss of time. The centre piece can, and is intended to be frequently changed, and may represent any number (at the option of the inspector), varying from 40 to 99; so that if 30 pieces of gros de Naples only were to be stamped, the centre plug might be changed, and the variable number altered three or four times, and in less than five minutes. Nothing can be more simple and effective, coupled with a pattern book as proposed in my regulation; and as to forgery, all chances thereof are removed, as no one could know what they would have to imitate. The other numbers represent the day, the month, and the year, the articles paid duty, and the right hand corner below, the importer's letter; viz. the 5th day, the 6th month, year 32.

DIAGRAMS of four Seals proposed by Mr. Bottrell for the purpose of Stamping foreign Silks, designed January 1832 by

Thomas Ellis, Engraver,

15, Old Broad Street, City.

7944. If you could have all the duty that the goods now smuggled ought to pay, would you not be very happy to undertake all the trouble and expense of stamping them?—I should indeed; there are persons of the first respectability in London who would give security to any amount. The Government might require that the duty of examining Foreign silks should be well and faithfully performed, and the Government held harmless from any loss that might accrue by detaining silk goods, which competent judges and the trade might consider undervalued.

7945. Are you well acquainted with the kind of goods that were smuggled in the years 1826 and 1827?—Yes; I have attended nearly all the Custom House sales since 1810.

7946. Are they the same kind of goods that are now imported?—Not the same

kind. The falling off from plain silk goods to gauzes was gradual; there are now large quantities of the latter, and but few of the former.

7947. What alterations have taken place in the goods imported from France?—The kinds of goods that used principally to be smuggled, and are not now, are the Florences.

7948. Can you state what articles were imported in 1827 and 1828, which it is no longer profitable to import?—It is no longer profitable to bring in any inferior kinds of broad silks.

7949. Is it your opinion that the duty ought to be levied *ad valorem*, or by the pound weight?—Both ways; there might be an *ad valorem* duty of 10 per cent., and an additional duty by weight; the first would insure a specific account or invoice of the goods, by which means the English manufacturer could refer to a detailed and correct account of all imports. The importations could certainly be put under much better regulations; indeed no other can be worse than the present system.

7950. Is it your opinion, that under all the circumstances a prohibition would be the best mode of protecting and extending the British silk manufacture?—I can scarce venture an opinion on a point of so much importance; there is no doubt, however, that every article of French manufacture brought in supplants a certain portion of British labour.

7951. Do you not believe that considerable improvements have taken place in the English manufactures in consequence of having the benefit of the French designs?—It appears to me that English silks are generally improved in style and colour.

7952. Do you know whether the Custom House officers have received any remuneration for the seizure of the goods belonging to Messrs. Leaf & Co., the prosecution of which was compromised?—They have not yet, I believe, received any compensation, and from not being paid I have understood that they have lost many opportunities of making seizures, not having the means of advancing money to informers.

7953. Is there not great dissatisfaction among the Custom House officers in consequence?—There certainly is; but it is not confined to that seizure, there is a general dissatisfaction throughout the House; the lower class of officers, who have often whole cargoes under their charge, not being (they consider) adequately paid, and I have heard it is in contemplation further to reduce the pay of the inferior officers; a measure which, in my opinion, would be highly injurious to the revenue.

7954. You have stated that there has been an improvement in the English manufacture in consequence of the removal of the prohibition?—I think so, as respects style and colour.

7955. Was there not an improvement before 1826?—Certainly there was, and very rich goods were made in Spitalfields long before 1826.

7956. Was it in as great a proportion as since?—Whenever good silk was used, good goods were produced, and this applies both to France and England. In dyeing of silk there is a greater deception now than formerly.

7957. Were crapes manufactured to any extent in England before 1826, of the kind now imported from France?—Of the Italian kind there were, but not of the China kind. The French have introduced the latter in a great variety, of a thinner and more elegant description than those imported from China, and the English have successfully imitated them.

7958. Have not the English manufacturers very much indeed lowered the price of crapes imported into this country from China?—Certainly; crapes from China are now at a mere nominal price.

7959. Have not the importers in consequence sustained very great losses?—They have.

7960. Are gloves, similar to those imported from France, manufactured now to any extent in England?—To a great extent.

7961. And that is a trade that has grown up entirely since 1826?—It has much increased; lamb and kid gloves having supplanted most other sorts of leather gloves.

7962. Do not various goods coming into general use, depend more upon fashion and demand than upon the ability of the manufacturer to produce them?—The English manufacturers can produce any article the public might fancy.

7963. Is it not the skill of the manufacturer that occasions what we call fashion?

Mr.
Richard Bottrell.

4 June,
1832.

Mr.
Richard Bottrell.

4 June,
1832.

—If the master has inventions, and the workmen skill, approved articles will doubtless be produced; the caprices of fashion cannot well be defined.

7964. Do you think that the goods that require the greatest skill will be always the goods most in fashion?—That depends whether the skill of the workman, and good taste in the pattern drawer, go hand in hand.

7965. Do you consider the artisan in a better condition now than formerly?—Decidedly not; he is obliged to work longer, and at less wages; but unfortunately it is the same in France and most other countries.

7966. Does not the condition of the manufacturer in Spitalfields depend rather upon the price of weaving at Manchester than at Lyons?—I should think in both he has rivals.

7967. Do you know of any mode or management by which goods can be got from the Custom House at less than the legal duty?—That is a question I cannot answer; all I can state is, as there is no check between the weigher and the landing waiter, a door is left open to possible fraud on the revenue. The best remedy is to be found in the regulation I have had the honour of proposing; the examination of all silk goods, to be superintended by competent persons, approved of by the government and the trade.

7968. Can you furnish the Committee with any information as to the manner in which individuals are occasionally employed, and how they are paid, and their duties at the Custom House?—I consider the employment of extra men at all to be very prejudicial to the revenue. The glut men are not employed at an average six days in a month, and when employed have only 3s. a day; and it has happened that some of those men, with such a miserable and uncertain pay, have been in charge of the scale without any check; of course where there is such temptation, there is a possibility of fraud.

7969. Is not the amount of duties that is to be levied on the goods passing through the hands of the Custom House officers, sometimes very great?—Very considerable; for example, on merely 120 pounds of gauze ribbon the duty would be 165*l.*

7970. Is it not the case that ships are often left in charge of a Custom House officer, who from their salaries being so small are under temptations to go home at night with small presents, leaving the vessel for an hour or more?—Such cases have occurred.

7971. You have stated that the protecting duties on silk goods in Russia have been increased; are you aware that the protecting duties in Prussia against foreign silks have been raised a crown a pound this year?—There has been an increase, but I do not know the extent of it.

Mercurii, 6^o die Junii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. *William Sedgwick*, called in; and Examined.

Mr.
William Sedgwick.

6 June,
1832.

7972. YOU are a partner in the house of Howell & James?—I am.

7973. Are you large dealers in silk goods?—We are.

7974. Of what description?—Broad silks and ribbons.

7975. Do you deal in every description of silk, both Foreign and English?—
Yes.

7976. How long have you been engaged in the business?—Myself ten years.

7977. Have you any calculations as to the quantities of silk, broad, figured, and ribbons, which you disposed of before 1826?—I have not.

7978. Have you of those you have disposed of since?—I have not.

7979. Before 1826 were you in the habit of selling French silks?—No, we were not; we sold English goods made from French patterns.

7980. Are you able to give the Committee any evidence with respect to smuggling before 1826?—I think it was carried on, but not to any very great extent.

7981. Were you aware of French silks being sold by other shops in the town, though not by yourselves?—Yes.

7982. What do you suppose was the quantity of French manufactured silks sold
at

at that time?—I should think it was very small, but I cannot state the amount; perhaps fifty or sixty thousand pounds' worth in a year, perhaps not so much.

7983. What description of goods were they that were principally sold at that time?—Figured and fancy silks, and plain silks.

7984. Were they what are called the rich silks or the plainer?—The rich silks.

7985. What is the proportion of English and of French silks you now sell?—I should say two-thirds of our sales are English and one-third French; I speak of broad silks; of ribbons we sell scarcely any English.

7986. When you speak of ribbons, do you allude to one particular sort of ribbon or all sorts of ribbons?—All sorts of ribbons; the English-made lutestrings we do not sell at all, they are not an article in demand with our customers; gauze ribbons are more used.

7987. Is that description of goods of which you sell French manufacture of superior quality?—Yes, it is.

7988. Do you sell in broad goods much English figured silk?—Yes, we do, but the greater part of the broad goods are fancy goods.

7989. That which you sell of English manufacture is confined principally to plain goods?—Yes, formerly; though we are selling now English fancy goods, they are increasing in demand.

7990. Where are they manufactured?—They are manufactured in Spitalfields, and a portion manufactured in Manchester, but our principal consumption is from Spitalfields.

7991. Where are the best produced?—I think that the same goods may be produced in both places, but those in Manchester cheaper.

7992. For what reason?—From the difference in the price of labour.

7993. Do you purchase any gauze ribbons from Coventry?—No, we do not; we have no demand for them; the French are cheaper.

7994. That applies to all ribbons?—Generally speaking.

7995. Your sales consist chiefly of the newest goods?—Yes.

7996. As the inventions are in France, your trade is a good deal dependent upon the French?—Yes, it is.

7997. If a ribbon manufacturer from Coventry were to wait upon you with patterns, you would hardly venture to give him an order, though they might appear very beautiful, even more so than the French?—We could not.

7998. For what reason?—The English market is dependent upon the French taste.

7999. Independent of their cheapness, can they manufacture gauze ribbons equally well at Coventry as in France?—I do not think quite so well; I have seen some very nearly equal to French, but not quite.

8000. Do you include striped gauzes?—The striped gauzes may be made at Coventry equal to the French, but not the figured.

8001. Do you sell any of the English striped gauzes?—We have not for some time.

8002. Are the Manchester manufacturers gaining a profit upon their manufactures, or are they merely trying experiments?—That is a question I cannot answer, but I should think, in many cases, the profit must be very small.

8003. Do you sell any Manchester goods?—Very few indeed.

8004. When you say that the Coventry figured ribbons are inferior to the French, is that in taste or in quality?—In taste.

8005. Have the Coventry manufactures improved?—I think they have.

8006. Were you acquainted with the style of those manufactured in this country before 1826?—Not much.

8007. Do you think that great improvements have taken place in their manufactures since 1826?—I think there have.

8008. Do you not attribute that to the introduction of French patterns?—I think that has given a stimulus to the trade.

8009. Was it not your practice before that to introduce French patterns, and send them to Coventry to be made?—Yes.

8010. Have you ever seen any Manchester fancy goods equal to those you have lately seen made in Spitalfields?—I have.

8011. What prices have you given for articles of that description?—I could not state the prices from memory; 4s. a yard, perhaps, and as high as 4s. 9d.

8012. Did you buy them of the manufacturers, or a house in town?—Of a warehouseman in London; they were Manchester manufacturers.

Mr.
William Sedgwick.

6 June,
1832.

Mr.
William Sedgwick.

6 June,
1832.

8013. You think them in general inferior in beauty of appearance to the goods made in Spitalfields?—Some of them are not so, but generally speaking they are.

8014. Their object there is to make cheaper for quantity, rather than to aim at excellence, is it not?—I think it is; I think they are more determined by the quantity they can sell; they depend upon that for their remuneration.

8015. You spoke of the description of goods you sell in your house; it is those generally sold by houses at the West end of the Town?—I should think it is; at least there are many houses at the West end of the Town sell the same goods.

8016. The consumption of the articles you speak of, such as French gauze ribbons, must be very large?—Yes.

8017. The English manufacturers used to make from their own designs, did they not?—They were generally copied from the French.

8018. Did they copy them quite to your satisfaction at the time?—Yes, they did copy exactly the pattern; they might have been better finished.

8019. You say that though the pattern might be even more beautiful than the French, if shown to you as an English design, you should not feel inclined to order it?—I should not, before we knew the state of the French market; this refers to ribbons.

8020. The extent of smuggling before 1826 you think was very small?—I think it was.

8021. The quantity sent was generally for patterns, was it not?—Yes.

8022. No respectable house sold French goods you think?—Not exposed on their counters.

8023. You think they were declined by houses called respectable?—Yes, in some instances.

8024. You have stated that the prices of Manchester articles you have bought, have been from 4s. to 4s. 9d.; what description of articles were they?—Broad and figured silks.

8025. Did you purchase them from the manufacturer?—No, we did not.

8026. How do you know they were Manchester goods?—They were represented to be so, and I have every reason to suppose that they were so.

8027. Can you distinguish Manchester from other goods, by inspection?—I cannot.

8028. Have you any reason to suppose they were manufactured at Derby?—I have not the least.

8029. Have you ever seen any figured goods which were made at Derby?—No, I have not to my knowledge.

8030. Did you ever hear what was the cost of smuggling before 1826?—I suppose it might be about 25 per cent. at that time.

8031. Have you any idea what it is at this time?—Much about the same; but it is done at considerably less in some cases.

8032. Do you conceive that the quantity of goods smuggled into this country has increased since 1826?—It has increased considerably.

8033. To what do you attribute that increase?—That the goods thus obtained, can be sold much cheaper than those for which the regular duty has been paid.

8034. What rate of duty do you think would put an end to smuggling?—It would be difficult to say; the same competition may exist in smuggling that there is in dealing.

8035. Do you think there is sufficient competition among English manufacturers, to provide a supply at a moderate price?—I think there is.

8036. Do you consider that the competition is an impetus to improve the manufacture, as well as to render it cheap?—I think it tends more at present to render it cheap than to improve it, though it does a great deal towards improving it.

8037. Did you not see great improvement between 1821 and 1826?—I cannot state that I did.

8038. Do you not know that there was?—I do not of my own personal knowledge.

8039. Had you any means of observing?—Not much at that time.

8040. When you speak of figured silks made at Manchester, are there a large quantity made there?—I think there are a great quantity.

8041. Are they made in Jacquard looms?—I do not know.

8042. Are they large figures, or small?—Small figures generally.

8043. Do you think if French goods were excluded from our market, there would still continue sufficient competition among the manufacturers to produce every

Mr.
William Sedgwick.

6 June,
1832.

every description of commodity, and with sufficient taste and excellence of design to satisfy the public?—I should hardly think there would.

8044. For what reason?—I think the English manufacturers require an impetus; I think when the competition ceased, there would not be altogether the same attention, and not the same variety of pattern produced.

8045. Did you see any patterns of French gauze ribbons before 1826?—No.

8046. Do you not understand it as a trade which has grown up principally in France since that time?—I cannot state that; I think the trade in ribbons in France was very considerable before that time.

8047. Were there many French ribbons smuggled before 1826?—I think not, not in proportion to the present quantity.

8048. Taking the proportions of broad goods and ribbons, what was the proportion you suppose smuggled before 1826; was it greater in broad than in narrow?—I do not suppose it was.

8049. Taking the total amount of goods smuggled, broad and narrow, was the greater proportion smuggled of broad, or of narrow goods?—I cannot state.

8050. Which do you suppose to be the greatest quantity smuggled at present?—Ribbons; I should think they are smuggled to a great extent.

8051. Supposing we were not to return to a system of prohibition, do you suppose that the kingdom would be continued to be supplied with English ribbons instead of French, as they were before 1826?—I think French ribbons would find their way into this country; before the year 1826, French goods were asked for, now they are not asked for.

8052. They were asked for as a rare commodity?—Yes.

8053. Now every body expects to find them?—Yes.

8054. Were they not more valued by the fashionable world, on account of their being a rare article?—I should think so.

8055. You do not mean to say they are not in the same esteem as they were?—No, but every body expects now to find them.

8056. You say there were goods smuggled previous to the year 1826; do not you think that as goods would be always smuggled, those which were, would be sufficient to give a kind of taste to our manufacture, supposing we were again to resort to prohibition?—The patterns might be obtained from the French if desired, and the English manufacturer might copy and improve upon them; the market is more open now, and there is scarcely a dealer in London who would not know where to go for French goods.

8057. Do you think there is a decided inferiority in the English ribbons now?—Not in all the English ribbons; in some instances the English goods are equal to French; in fancy ribbons, the French are better.

8058. To any material degree?—The English might make their goods equal to the French.

8059. At the same price do you mean?—I cannot say that.

8060. Do you think there is much difference in the manufacture of the ribbons now shown to you and French ribbons of the same kind?—(Some patterns being shown to the Witness)—These, I should say, are as good as the French.

8061. What do you think would be the difference in price?—These belt ribbons are much cheaper made in England than in France; I do not know the price of the French.

8062. Has there been an increase since 1826, in the sale of French ribbons by your house, compared with the total amount of English ribbons sold by you?—Yes, there has been.

8063. Do you mean that that increase has gone on progressively from year to year?—Yes, it has.

8064. Are you selling a larger proportion or a less proportion now than last year?—The same proportion.

8065. Does not your answer apply chiefly to French gauze ribbons?—Yes, we sell very few others.

8066. When you speak of the consumption of English ribbons having decreased regularly from 1826, do you mean only the finer gauze ribbons or all ribbons generally?—I should say on all ribbons.

8067. What is the proportion between French and English ribbons which you sell?—I should say that the English is not an eighth part of the French.

8068. Has the sale by your house of English ribbons decreased, and of French ribbons increased?—It has.

678.

3 M 4

8069. The

Mr.
William Sedgwick.

6 June,
1832.

8069. The Committee have heard a great deal about figured lutestring ribbons, will you inform the Committee whether the fashionable public use any figured lutestring ribbons?—I should say that they do not at present.

8070. If there are any made, they are sold in what you would call second rate trade?—Yes, in the common trade.

8071. The French having the superiority in the manufacture of gauze ribbons, take care to make that article richer, and the people of Coventry in vain attempt to cope with the French?—Yes, I think that is the case; the English market is so dependent upon the French taste, no English dealer will order goods until he knows what is the taste in France.

8072. Do not the importations of French goods at present very materially contribute to aggravate the pressure on the British artizan?—It depresses the English manufacturer certainly.

8073. Were there many broad goods smuggled before 1826, or only sufficient to stimulate British exertions and improve them?—I think only for that, the quantity was not large.

8074. And particularly for patterns to supply to the manufacturers?—Yes, to send to the manufacturers.

8075. Was it not very dangerous to deal in smuggled goods to any extent before 1826?—Yes, it was.

8076. You state that many respectable houses did deal in them however?—I cannot state that from my own knowledge; but it was generally supposed they did so, but not to any extent.

8077. When you say that fashionable houses chiefly deal in French ribbons, do you mean to say that only fashionable houses in London do so, or do you think fashionable houses in Edinburgh and different places in the United Kingdom, prefer French ribbons to English?—There are the same fashions prevailing in all parts of the kingdom, but more particularly in London.

8078. The fashionable houses, you think, in all parts of the kingdom, have that preference for French ribbons which the fashionable houses have in London?—Yes, undoubtedly.

8079. Suppose prohibition were again enacted, do you suppose it would be necessary for houses similar to yours to supply themselves with French silks to answer the demands of their customers?—I do not think it would, because they they might be made from French patterns.

8080. What are the articles now imported from France?—Principally fancy goods.

8081. What kind of ribbons?—The figured gauze ribbons and the striped gauze ribbons.

8082. Check and gauze ribbons?—Yes.

8083. What sort of broad silks are imported?—Figured silks.

8084. You mean figured gros de Naples?—Yes.

8085. Are there not great quantities of crapes imported?—I do not think there are; there is an article imported very much resembling the English crape, the Araphene.

8086. Of 100*l.* worth of French goods which you might have imported, what proportion would be ribbons, and what proportion broad goods, in your opinion?—Our importations are principally ribbons and fancy silks and gauzes.

8087. Are more than one-half gauze ribbons?—Yes.

8088. Would you say 60*l.* or 70*l.* worth of the hundred?—Perhaps seventy.

8089. Of the remaining thirty, how much would be of the Araphene character?—A very small quantity.

8090. What would the remainder consist of?—Of figured silks and figured gauzes.

8091. Of that 30*l.* how much do you imagine would interfere with the manufacture of Spitalfields?—I do not think the quantity of fancy broad silks imported from France does interfere materially with the English manufactures in broad silks.

8092. The gauzes are manufactured in Scotland, are they not?—We sell very few of English or Scotch.

8093. When you say that the ribbons you sell, and which the French are importing, are gauze ribbons, it is in that class of ribbons which are figured ribbons?—Yes.

8094. Do not you imagine that the French, having a superiority over us in gauze

gauze ribbons, will take care that ribbons, having more or less the character of gauze ribbons, shall be always made and introduced?—I do.

8095. Do you consider that the French manufacturer has got so considerable an influence in this market, that as things now stand the British manufacturer cannot successfully compete with him?—I think he can in broad silks, but not in ribbons.

8096. You say you have lately sold more English fancy goods than you did formerly?—Yes.

8097. For what reason have you turned your attention to the English in preference to the French?—From the feeling in favour of English manufacturers among our customers.

8098. Have the French fancy goods been made from French patterns, or from designs of the English manufacturers?—Some from French patterns.

8099. Have they been principally from French patterns?—I should think so; these (*producing some patterns*) are English manufactures made for us.

8100. Are those superior in quality to the French?—They are equal to the French.

8101. Were those made for you by a house in Spitalfields?—They were.

8102. It is a great object with you to have them well made?—It is.

8103. The customers who deal with you do not often care for 1*d.* or 2*d.* a yard provided they can have the article they desire?—Just so; provided it is of the best kind.

8104. Do you think that there are other houses that have customers who have the same desire to have that which others cannot procure?—Yes, there are other houses no doubt.

8105. It is not an object with some ladies whether they pay 3*d.* more or less, so much as to have something produced which every body cannot possess?—Yes.

8106. When it comes to be an object with the Government to take care that the people shall have the greatest possible substance for money, that is not the greatest object with your customers?—It is not.

8107. You say that now the gauze ribbons are nearly the only ones demanded?—They are by our customers.

8108. You say in addition to that, that the reason is because gauze ribbons are the only ones now peculiarly fashionable?—Yes.

8109. Supposing that the fashion were to change in France, and that gauze ribbons were no longer to be fashionable there, and other ribbons were to become so; would their other ribbons have the same superiority in the English market now possessed by the gauze ribbons?—Not to the same degree.

8110. Have you generally, as a house of business, given the preference to the Spitalfields manufacturer that you have lately?—We are obliged to provide things according to the taste of the public; and the French goods generally having the first entrance into the market, we are obliged to supply ourselves with them. If there had been a feeling in favour of English goods we should have purchased the articles manufactured in this country, provided they were equal.

8111. Have you always given the preference to the English manufacturer which you have given in some instances lately?—We should if the English manufacturer had produced as good goods.

8112. Have you done so always?—I cannot answer that.

8113. You say you have lately sold more English fancy goods than you did some time ago; have you, since the opening of the ports, sold more English fancy goods than of French?—No; at the opening of the ports the balance turned in favour of the French.

8114. Were you with the same house before 1826?—Yes.

8115. You say you have lately sold more English fancy goods than of French; to what do you attribute this greater success of English trade?—These English goods are equal to the French; and there has been most demand for the English goods.

8116. Do you attribute that to the improvement in the English manufacture?—Yes.

8117. Do you think increased protection would best enable the British manufacturer to produce novelties that would please the public?—If they were sufficiently protected.

8118. Is there any particular species of protection you would recommend, provided we do not return to prohibition?—I should recommend that the goods should be stamped, it would be an inconvenience, but it would be a protection.

678.

3 N

8119. Is

Mr.
William Sedgwick.

6 June,
1832.

Mr.
William Sedgwick.

6 June,
1832.

8119. Is there any other protection you would recommend?—Perhaps they might be licensed as well—20*l.* license; this would in some measure prevent so many French agents from hawking goods from private house to house, which is now done.

8120. Can you state what house or houses make those English silks which you have sold lately?—Bridges & Campbell, and Ames & Atkinson are the principal.

8121. Were those patterns that you produced partly from one house and partly from another?—I think they were all from Bridges & Campbell's.

8122. How are those articles as compared in point of price, with the French?—I should say they are rather high in price.

8123. And yet the French goods have paid a duty of 30 per cent. probably?—Not so much as that I think.

8124. Were the English goods manufactured exclusively for your house, so as to enable you to keep particular patterns to yourselves?—They were.

8125. Can you always secure the patterns to yourself in French goods?—No, certainly not.

8126. Have your customers made any complaints since the introduction of French silks, that they do not wear so well as they did many years ago?—I never heard of it.

8127. Do you think it possible that the French, by introducing a new description of ribbons combined with gauze for the next season, might interfere with any arrangement you might make with Messrs. Bridges & Campbell, for a similar description of goods with those?—They might interfere with them.

8128. Would they not put those out of fashion then?—Yes, but as the patterns would not be obtained at another house, they would command a sale.

8129. To a certain extent you would be able to get through them without particular loss?—Yes, I should think so.

8130. But you would decline ordering such goods beyond a certain extent?—Yes.

8131. Was silk more precious before 1826 than now?—Yes.

8132. Then fifty or sixty thousand pounds worth of goods imported then would be a smaller quantity of goods than would be imported now for that sum?—Yes.

8133. Have you not many rich silks made entirely in Spitalfields?—We have purchased them.

8134. A large quantity?—Yes.

8135. Have not rich broad silks been used lately?—Very much indeed.

8136. Have not the larger part of those been French?—Certainly; but principally the fancy silks.

8137. Do you think as large a proportion of looms in Spitalfields is employed on silks fit for the consumption of the upper class of society as there used to be before French goods were introduced?—I cannot say; I should think not.

8138. Do you think that many other houses in the same line of business as your's have had their rich goods made in Spitalfields?—I have reason to think there are some.

8139. Many?—Not many; I do not think it is the custom in England now to give orders, especially for plain goods.

8140. Do you send any orders to St. Etienne or Chaumont?—Yes.

8141. Is not the bulk of the goods made in Spitalfields now of a low quality?—I do not think they are.

8142. You do now sell a great many French silks of the descriptions of which you formerly sold the English?—Yes.

8143. Therefore your sale in English articles of that description has been decreased?—Yes, but it is now again increasing.

8144. Do you think there are more or less than 100 looms making the finer descriptions of goods in Spitalfields?—I cannot say.

8145. Are there as many as 50?—I cannot say.

8146. Was it not the practice in your house previous to 1826, to give your orders in October, November and December for the articles for your spring trade?—Yes.

8147. Formerly houses in Coventry and Spitalfields were engaged during the winter in making the articles for your trade?—They were; now we give no orders to Coventry at all.

8148. Supposing prohibition were again resorted to, and French ribbons were still smuggled into this country, would they be ordered after the pattern of the English goods which were in the market?—I should think not.

8149. Would

Mr.
William Sedgwick.

6 June,
1832.

8149. Would not they be easily detected if they were not?—They would certainly be detected.

8150. These goods being imported would be either of a different pattern from the English, and thereby detected, or they would be the same pattern as the English; consequently, giving the advantage to the English manufacturer of the French manufacturer copying him, instead of allowing to the French manufacturer the advantage he now possesses of the English manufacturer copying him?—Yes.

8151. Do you conceive your house would sell less silk manufactures than they now do if prohibition were again enacted?—I do not think we should.

8152. Prohibition would then produce a benefit to the artizans and manufacturers of this country?—I think it would; but I do not think prohibition practicable unless by severe laws against smuggling.

8153. If the same laws were re-enacted as were in existence before 1826, would not there be the same security?—I think not, because the market is open and there is not an English dealer in London who does not know where to find the goods.

8154. Was there not, before 1826, a very great inducement to sell them, in the great difference of price between English and French manufactures?—Yes, there was.

8155. If the price more approximated, would there not be that inducement?—If the price of English and French were nearer together, I do not think there would.

8156. Under laws for prohibiting French goods, it was necessary they should have a large profit to remunerate them for the risk?—Yes.

8157. Do you give orders for the manufacture of fancy ribbons, for the coming season?—Yes; for French, not English.

8158. Do you give orders for French fancy broad silk goods?—Not to any great extent.

8159. Have you not generally given orders for English fancy ribbons to be made for you?—Yes, formerly.

8160. And also for English broad goods?—Yes.

8161. It is quite impossible for your house, or any other of a similar description, to sell any goods as fashionable, which are opposed to the style of those goods which are fashionable in France?—Yes, I should say so.

8162. In almost every principal town and city in England, are there not houses who find it absolutely essential to deal in the same description of goods which you deal in?—Certainly.

8163. And whose trade is very considerable?—Yes.

8164. Therefore it is not referrible only to your house, however large its dealings may be, taking into consideration that there are other houses similar to your own in London, and houses of a similar description throughout England, who feel it is necessary to deal in such goods; the aggregate amount of goods sold must be very large, must it not?—Yes.

8165. You have produced certain patterns of fancy goods from the house of Messrs. Bridges & Campbell; were orders given for those before March?—I believe in February.

8166. Why did you not give orders for those goods as formerly, in December and January?—By that time we know what the French will produce.

8167. Do you know what number of looms there are employed now in Spital-fields?—I do not.

8168. Were there any complaints in your business, on the part of your customers before 1826, of a want of articles of taste in the English manufactures?—I should say no very great complaints, because the articles were supplied; though we had not the French goods, we had the patterns, and had them copied in England.

8169. Can you recommend any measure to prevent smuggling?—I should recommend a stamp.

8170. There would be no great objection, if the goods were stamped in four or five different parts on the edge?—No. It would be a great deal of trouble to the Custom Hoose officers; but for myself, individually, I should not object.

8171. Do you think it would injure the fine goods?—I do not.

8172. What do you think it would increase the expense per yard?—A fractional part, a very trifling sum indeed.

8173. Supposing the consumer were compelled to bear the expense?—The consumer

Mr.
William Sedgwick.

6 June,
1832.

sumer would not feel it if it was stamped at both ends, or it would be a very trifling expense if it was stamped in three places.

8174. Might not the stamp be imitated on the other side of the water?—At Goldsmith's Hall the stamp is varied frequently, to prevent imitation; no one knows the day beforehand what will be the stamp for the day.

8175. Do you not think that the lowering of the duty would be a much more effectual protection by putting an end to smuggling than stamping?—That would be met by competition from the smuggler; the smuggler would also lower his profits.

8176. Do you not know that the competition amongst the smugglers has brought down the profit to the lowest point?—I do not think it has.

8177. You think that smuggling is now carried on to a great extent?—I think it is.

8178. You have stated, that in your opinion 25 per cent. is the cost of smuggling, in some instances, now?—I should say it is.

8179. In some instances less?—Yes.

8180. What do you conceive to be the lowest?—I cannot say.

8181. Do you imagine it is done as low as 20 per cent.?—If smuggling silks, ribbons, &c. is done with the insurance, it cannot be at much less than twenty.

8182. Have you reason to think it is done, in any instances, as low as 20 per cent.?—I should think it may be.

8183. How much of that 20 per cent. do you imagine is paid for insurance?—I cannot say; I believe it to be about 25 per cent. upon the average; that includes the insurance.

8184. You do not know how much the insurance would be separately?—I do not.

8185. Do you think that the smuggler would continue his trade upon a very small profit?—I think he would, upon a very small profit.

8186. Has it been for many years 25 per cent.?—I should think it has.

8187. Has it not a tendency, when large profits are gained in trade, to induce persons to go into that trade?—It has a tendency, generally speaking.

8188. You have reason to believe that the smuggler would work for less, and that insurers, if compelled, would insure for less?—Yes.

8189. But as you state that smuggling was regularly transacted at 25 per cent. under the prohibitory law, do not you believe it might be done for half that amount, where there is no risk in bringing the goods into the Thames?—I think so.

8190. Do you think the skill of the manufacturer regulates the fashion, or the direction of the dealer or the milliner, governed by the taste of your customer?—I should say the dealer and milliner abroad, not in this country, and on that depends the English taste; and in all parts of Europe the fashion is regulated generally by the French.

8191. Do you consider that the communication of all classes of society with the Continent of late years, has tended greatly to increase and improve the English taste?—I think it has.

8192. Is there not more competition among English manufacturers than there used to be?—There is, as relates to prices.

8193. You have stated, that there is now, even in fancy goods, great competition between Spitalfields and Manchester?—Yes, there is.

8194. If French goods were prohibited, as they formerly were, do you not think there is sufficient competition amongst the English manufacturers to supply the public with goods of the best taste and quality, and at the lowest practicable price?—I should not say that there is as regards articles of taste, but quite sufficient as to price.

8195. Is not the trade of your house principally in articles made exclusively for your house, whether of French or of English?—It is to a great extent.

8196. Are you aware, that the importation of foreign silk goods has latterly become the more direct pursuit of the large retail houses, and less so of the large wholesale houses?—I should say that more of the large retail houses import than formerly; but I cannot answer as to the effect on the wholesale houses.

8197. Are not the importations by large retail houses in the West end of the Town, principally in job ribbons purchased in Paris after the season is over?—Certainly not.

8198. Does not your house, and do not other houses, either through an agent, or by visiting Paris, order from the French warehouseman goods in November and
December

December to be delivered to you in March?—We have an agent resident in Paris, orders are transmitted to this agent, and also to the manufacturer.

8199. Therefore you do not purchase job ribbons?—We do not.

8200. Do you believe that the fashionable houses in the West end of London do purchase job ribbons?—No.

8201. Is it understood among the trade, that smuggling exists to a considerable extent?—Yes.

8202. Is it the fact, that foreign silk goods can frequently be bought cheaper in London than they can be imported?—It is.

8203. Is it often considered necessary by the retail dealer in French goods to buy part in London, and to import the remainder, and thus make a cheaper average than if they imported the whole?—I cannot say.

8204. How are the job goods left in Paris at the end of the season disposed of?—A great many of them find their way to the English market.

8205. At a ruinous rate to the English manufacturer?—At prices at which the English manufacturer cannot compete with them.

Mr. *Emile Menetrier*, called in; and Examined.

8206. YOU have been engaged for some years in the manufacture of silk?—I have.

8207. In what branch?—In all kinds of plain and fancy broad silks, but not in ribbons.

8208. In what place?—In Lyons.

8209. When did you cease being engaged in the manufacture of silk at Lyons?—In 1822 I quitted Lyons for Paris.

8210. Were you acquainted with the quantity of silk imported into this country before the prohibition was removed?—It is very difficult, I apprehend, to ascertain that.

8211. You know that silk was imported at that time into England?—I know it well, because I was at a silk manufacturer's in Paris which received orders for England. Mr. De Ponilly, with whom I lived, had a manufactory at Lyons, as well as one in Paris; from Paris he sent me, in June 1825 to Manchester; there were orders given to us by English houses, and the goods were delivered to agents in Paris, who forwarded them to England.

8212. You had nothing to do with the importation of them into this country?—No.

8213. You know nothing of the expense and insurance for that importation, nor the nature of it as a smuggling transaction?—No.

8214. Are you aware of goods being imported into this country after 1826 in an illicit manner?—Yes.

8215. Do you conceive that the opportunities of their illegal import into this country after 1826, increased or not?—I think so. Smuggling was active the first year or two, but I believe lately it has decreased very much.

8216. Before 1826, and since that period, were the goods smuggled into this country of the same description and quality?—I think plain goods decidedly better before 1826; there have been more plain goods of an inferior quality since the opening of the ports than before.

8217. You mean to say, there has been a great quantity since imported, but of an inferior quality to those imported prior?—The qualities at first were much better than they have been since.

8218. Do you think that there has been an inferior quality of goods manufactured for the purpose of being smuggled in?—No, my opinion is, that it is to meet the English prices in the market. The French have been obliged to make articles to meet the market price.

8219. You think that has arisen from English competition?—No doubt of it.

8220. When such goods as you speak of first came into this country before 1826, there was a very great difference in the price, was there not?—There have been variations in the prices of silks; silk varies according as the season is favourable or unfavourable.

8221. You mean in France?—Yes.

8222. You were in the house of De Ponilly & Company at the time they manufactured goods in England?—I was.

Mr.
William Sedgwick.

6 June,
1832.

Mr.
Emile Menetrier.

8223. That

Mr.
Emile Menetrier.

6 June,
1832.

8223. That was since 1826, was it not?—Before and since; I arrived in Manchester 16th June 1825.

8224. Do you know any thing of a seizure made at that house?—No, I do not know the circumstances; I was at Manchester, and the seizure took place in London.

8225. Will you state what you know of the circumstances?—I cannot say any thing about it; I was quite ignorant of the transaction.

8226. Do you believe that those goods seized in London were made at Manchester?—All I know is, that a good many goods were sent up by us from Manchester to London; there were others made by our house in Spitalfields.

8227. Was it not the practice in De Ponilly's house to receive your silk dyed from France?—We received a certain quantity; but how much I do not know.

8228. So that if the warp came dyed, and the shute came dyed, there would be no difficulty in getting it wove in this country; and when it was, a person could not positively say whether the goods were of French or English manufacture?—It would be difficult; we had to contend with the prejudices of our weavers, and found it difficult to get them into our ways. Not finding the silk here good enough for some particular purposes, we were obliged to have the best Piedmont; but we likewise bought silk of houses in Manchester, in Macclesfield, and in London.

8229. Do you mean manufactured or unwrought silk?—Thrown silk for us to manufacture.

8230. Are you to be understood to say that a great part of that which De Ponilly & Company wove in this country was imported from France in the dyed state?—We had a great deal of silk dyed at Manchester, but I cannot say how much was dyed in London, nor what quantity the house had from France.

8231. Have you reason to believe that that you had was dyed in London?—The thrown we bought in this country was all dyed here; we received some dyed warps from France, and some white and ingrain, which were superior to the English.

8232. De Ponilly's house recovered those goods, did they not, and they were returned to them?—Yes, they were.

8233. Do you know any thing of the cost of smuggling goods into this country at the present time?—From what I know, I believe it to be about 20 to 25 per cent.; it is of course much lower when the goods are not insured, but then there is a great risk; on regular importation I believe many dealers have lost money.

8234. You have not much knowledge of it, but what people tell you?—It is from what I hear, and I see a good many people who are connected with smuggling, I do not believe there are any silk goods smuggled under 20 to 25 per cent., where the goods are insured.

8235. How long were Messrs. De Ponilly & Company manufacturers in this country?—Upwards of three years.

8236. Do you know why they gave up the manufacture?—Because they had manufactured a great many articles which were not in fashion here, although they were so in Paris; and they had imported goods in 1826, which likewise sold badly.

8237. Did they make the description of goods which were made in Paris?—Yes, they did.

8238. When they so made those goods, did they continue to make them for a longer period than the fashion continued in France for such goods?—Paris was always the standard as to fashion; but still there were some articles sometimes which did not take in England; and even when the article did not take in England, they often continued making it in Paris.

8239. Do you know whether the English Government gave to Messrs. De Ponilly & Company every facility for carrying on their operations successfully, by allowing them to import their silk free from duty, while organzine was subject to a duty of 14s. to the English manufacturer?—I cannot say.

8240. Were not they allowed a great many facilities?—I cannot say; I was residing at Manchester at the time.

8241. Did you hear that from your employer?—I did not.

8242. From whom did you hear any thing upon the subject?—I heard it spoken of, and I read of it in the newspapers.

8243. Do you know Monsieur Pelekat?—I knew him, but not intimately.

8244. Did

Mr.
Emile Menetrier.

6 June,
1832.

8244. Did he ever say any thing to you about that seizure made at Messrs. De Ponilly & Company's?—Never.

8245. Do you know whether Messrs. De Ponilly & Company made some furniture for Windsor Palace?—They did; or at least I have always understood it was for Windsor.

8246. Where was that made?—It was made in Spitalfields; I attended the weavers myself.

8247. Was any portion of that imported?—I cannot say, having quitted the house before the order was completed; we had three looms in our own house in Church-street, Spitalfields, and some out of the house.

8248. How many looms had you in all?—I cannot exactly say; we had, I think, about 300 looms at Middleton and other places in the neighbourhood of Manchester, of which about 60 were Jacquards; we had besides a manufactory in Spitalfields.

8249. How many looms had you in Spitalfields?—When I came to Spitalfields, they were winding up the concern; we had then 70 looms; there were many more looms previously.

8250. Have you ever imported thrown silk from France?—No; but some, I believe, direct from Italy.

8251. Was it not then that De Ponilly & Company were nearly ruined by the manufacture in this country?—They lost money by having manufactured goods which went out of fashion.

8252. Can you state whether De Ponilly & Company gave up the manufacture, and the grounds of their desisting from manufacturing in this country?—They commenced on too large a scale, and made a great many goods which did not answer, and when the panic came their losses were great.

8253. To what period do you refer?—About six or seven years ago.

8254. Were they manufacturers in this country before the prohibition was removed?—Nearly two years before.

8255. At what time did Messrs. De Ponilly commence their manufacture in this country?—About two years before the importation was allowed.

8256. Did they bring any French workmen here?—Very few; only four or five head men, to superintend the weavers and to put them in our way.

8257. Did they import any machinery from France?—We had some Jacquards, but we had also some manufactured in Manchester, but not many.

8258. Were you a partner in the house?—No, I was at the head of the manufactory at Manchester.

8259. Do you know what induced Mr. De Ponilly to establish himself in this country?—He did not communicate to me what his intentions were.

8260. How many years did you carry on the manufacture in this country?—Altogether I should say from three to four years, but it was not carried to any extent after the first two years.

8261. It was an unsuccessful speculation?—It was.

8262. Did you find that they succeeded in their speculation in the two last years they were in this country?—The speculation at no time succeeded.

8263. Was not the general introduction of French goods allowed just after that panic?—I cannot say now whether it was a little before or after; we had a great many boxes of French goods imported and sold in this market after I came from Manchester.

8264. When did you come up from Manchester?—The 17th August 1826.

8265. They succeeded in their manufacture for about eighteen months?—There was a great waste of money upon setting out on so large a scale; they expected it would answer, and it did in some few articles, but not on the major part; we had some weavers at Manchester that came from Paisley, who worked as well as any French weavers.

8266. In what articles?—In gauzes particularly; we found them much more careful in weaving, and more attentive.

8267. You do not know whether the panic came before they allowed the importation of French goods generally, or afterwards?—I cannot now say.

8268. You were allowed to manufacture goods in this country for two years before French goods were allowed to be sold?—Yes; it was free to any one to manufacture.

8269. Did Messrs. De Ponilly & Company, or did they not, bring over any

Mr.
Emile Menetrier.

6 June,
1832.

goods in a manufactured state?—I cannot answer that, being at Manchester; if any goods came they must have come to London, and I was 180 miles from it.

8270. Did you not say there were several cases?—When the goods were allowed to be imported, I knew of several transactions of gros de Naples brought in legally.

8271. You do not know anything of goods brought in illegally at that time?—I was in Manchester previously, and afterwards; the goods were sold in the Poultry, and I was at the manufactory in Spitalfields; I was very little acquainted with the sales; I merely know some boxes of goods were legally imported.

8272. When did Mr. De Ponilly give up his establishment here?—In 1827, I believe.

8273. Both his establishments at Manchester and Spitalfields?—The Manchester one was given up first, and from Manchester Mr. De Ponilly sent me to Spitalfields, to wind up the manufactory there, which I did. I was there about eighteen months.

8274. Is Mr. De Ponilly carrying on the manufacture at present?—Yes; in Lyons.

8275. Is this the house the late Mr. Huskisson boasted of as coming from Lyons to establish itself in this country?—I do not know.

8276. Do not you know that an inquiry was set on foot into the silk you made for Windsor Palace, whether it had not been made in France, and in consequence of that inquiry was not some alteration made in the manufacture of it?—No alteration; we had five looms occupied in London on that order; but the extent of it I do not know.

8277. Do you know how much you made in Manchester?—None in Manchester; the order was given about the time we had given up at Manchester, and it was made in Spitalfields.

8278. Had you five looms occupied upon that work?—We had.

8279. Do you know how many yards were ordered?—I do not.

8280. How long were you allowed to make this work?—I do not know; there was plenty of time, I think, allowed.

8281. Did you have any silk dyed in Manchester?—Yes.

8282. Was there any thrown silk used by your house in Manchester which was bought at Manchester?—Yes.

8283. Can you tell of whom your thrown was bought?—Some was bought of Mr. Royle.

8284. To what extent?—I cannot say; I was not there at the beginning; there was a friend of mine there at the commencement whom I succeeded; I was in Manchester for about eighteen or twenty months; then I came to Spitalfields.

8285. When did you come to England?—In 1825; Mr. De Ponilly had begun manufacturing at Manchester about eight months before I arrived.

8286. You attribute the loss merely to the panic?—If there had been no panic there would still have been great loss, owing to the goods going out of fashion.

8287. What prevented the sale of the goods that Mr. De Ponilly had manufactured?—There were goods made of the Paris fashion, and Mr. De Ponilly thought the Paris fashion would be successful here, but it was not; and he had a great many materials dyed of that same article which we were employed on, and he was obliged to sell them at what he could get for them.

8288. In what way did the panic affect your house?—Because we sustained great loss, many bills becoming due which we were obliged to meet.

8289. Did you work the goods at Manchester from French patterns?—From our own patterns.

8290. Were they originally manufactured here?—Our drawers in Lyons and in Paris were making the same kind of figures; we made those we thought most likely to suit the English taste; there were some which suited only the consumption of France.

8291. Did you bring any of De Ponilly's designers to this country?—No, we never had any drawers from France in this country to my knowledge.

8292. You say that some of your throwns were bought of Mr. Royle; did you receive any bales of silk from London?—We bought silk at Macclesfield, but I do not recollect the name of the throwster.

8293. You do not know whether you received any from London?—We received the greatest part in the dyed state from London, and some clouded warps from Lyons.

8294. Did

Mr.
Emile Menetrier.

6 June,
1832.

8294. Did you not receive bales of silk in Manchester from London?—We did.

8295. Were those bought of the merchant through the broker?—I cannot say; we received a great many thrown Piedmont silks.

8296. They came from London?—Yes.

8297. What were the names of Mr. De Ponilly's partners?—Nourtier & Cohen.

8298. Was there not a Mr. Schirmer?—He was partner in the house in Paris; but not in the house in London.

8299. Was he not the designer of the patterns you made from?—He was at the head; but we had sometimes ten or twelve different designers.

8300. He met with some accident at Lyons, did he not?—He was killed at the late disturbance.

8301. Can you state the quantity of silk your looms consumed on an average in Manchester?—I cannot say.

8302. Were you here in London before the trade was opened for foreign goods?—I was in Manchester all the time of the prohibition.

8303. What goods were you selling before the sale opened for the French?—They were English; we sent our goods from Manchester to London; I do not know what the house in London made, but we sent up every week to London.

8304. What description of goods were they?—Every description, except ribbons; satins, gros de Naples, &c.

8305. Any levantines?—Yes.

8306. Can you give any information relative to the blond trade in France, and what they pay in coming into this country, through the Custom House?—They pay 30 per cent.

8307. Is much blond smuggled?—There is.

8308. At what rate?—Ten, twelve, and fifteen per cent.

8309. Does that include insurance?—Altogether it varies according to the demand, and the circumstances.

8310. What do you suppose to be the amount smuggled into this country altogether?—I should say full two-thirds of it.

8311. What is the gross amount, do you suppose, imported?—It is difficult to say.

8312. How do you know that two-thirds is smuggled?—Because so many houses in Paris sell their goods, to be delivered here.

8313. What is the relative price of English blond and French blond?—There is none made I believe in this country, or very little, according to what I have been told by lace manufacturers.

8314. Can you tell whether the quantity of plain silk goods smuggled, is large, as compared with gauzes?—I do not know, but there are hardly any plain broad silks smuggled; they have declined to a very great extent the last two years.

8315. Are there any other articles besides ribbons and blond, which you consider to be smuggled to any great extent?—No.

8316. Does smuggling employ a large number of people?—It is difficult to say; three or four years ago smuggling was carried to a great extent.

8317. Do not a great many people now live by smuggling?—No, I do not think many people do; but many have been ruined by it.

8318. What are they ruined by; is it from the competition?—They are ruined by the losses incurred in smuggling.

8319. In what way are those losses incurred?—Sometimes the goods have been forwarded without being positively insured; and the goods being seized, they have sustained heavy losses.

8320. They did not insure them?—No.

8321. Did the persons who smuggle, vary in their prices with one another, and so create competition?—I have heard it is nearly the same; there is no competition, as I believe; there are now but few insurers; insurance may be stated in general from 20 to 25 per cent.

8322. That covers the insurance, and the guarantee of delivery?—Yes; it is insured at from 20 to 25 per cent.

8323. Do you mean the article is to be delivered here?—Yes.

8324. You say two-thirds of the blond lace is smuggled?—Yes.

8325. Do you think two-thirds of the ribbons and silks are smuggled?—No; it was carried to a great extent about four years ago; but I think it has, since 1830, very much decreased.

8326. You think that the commodity has declined in quantity?—I believe the

Mr.
Emile Menetrier.

6 June,
1832.

reason of it is, the losses which have been sustained by the parties, has tended to prevent smuggling.

8327. You think that the smuggler does not get so much by smuggling silks at 25 per cent. as he does by smuggling lace at 10 per cent.?—The profit is much lower on lace than on silk; but they carry what is most advantageous to them.

8328. You think that a great deal of the silk which does come, is smuggled?—Only in job goods; but as to fancy articles, I believe there are hardly any smuggled now; there are some houses, when they do not want the goods immediately, will buy job ribbons, to be delivered within a month or two; they want a cheap article, and they buy job ribbons on those terms.

8329. How many French houses are there now in London; warehousemen dealing in silks?—I do not know; I see very few of my countrymen here; there are some I believe at the West end, but I do not know them.

8330. Is it not the case that you will hear of a house this spring, but that you will not hear of that man next season; are there not several houses which were here two years ago, which are not to be found here now?—There are many people who come with small lots of silk and lace, but go away as soon as they have effected sales.

8331. Is not smuggling in blond done at eight per cent., because the dealers will not pay more?—Not to my knowledge.

8332. Is it at nine per cent.?—From what I know, it runs from ten to twelve, and fifteen.

8333. Is it not nearer ten than twelve?—It has been above ten for some time, I believe.

8334. You never knew it at seven and a half?—It might be, but in such a case as I mentioned before, goods that were not insured, then the whole might be lost.

8335. The 10 per cent. included the insurance?—Ten and a half altogether; that is the lowest I have heard of.

8336. The price of smuggling is regulated by the duties?—I suppose so; that must generally be the case.

8337. What duty would you recommend to prevent smuggling in blond?—From 12 to 15; if the duty was reduced to 15 per cent. I do not think there would be any smuggling in blond.

8338. What would you consider a fair protecting duty for French gauze ribbons, taking the price into consideration?—I believe few ribbons but job ribbons are smuggled; fashionable articles are wanted immediately, therefore they cannot resort to smuggling; I am told no smuggler will bind himself to deliver goods within a limited time.

8339. Are you in the silk trade now?—No, I very seldom do any thing in silks; some of my countrymen come with a lot sometimes and leave them for sale, and I sell them, but I am not regularly in the trade.

8340. How long have you left the silk trade?—About three years.

8341. What do you think would be the effect of inflicting a personal penalty on smugglers?—I think that when they are caught they are punished quite enough, by losing their property; the treadmill could not make the case much worse.

8342. Do you not think that the enactment of such a law would deter a person?—I think that those persons would not be much influenced by that; they would rather have six months at the treadmill, and not lose their money.

8343. The loss of the property is only the loss of the insurance?—The insurer has his claim upon the smuggler, and I have heard of instances of smugglers being obliged to deposit a certain sum of money for the security of the goods crossing; but the owner of the goods knows nothing of the smuggler.

8344. Whom do you mean by the smuggler; the man in France, or the person carrying on business here?—The parties who bring the goods over and land them here.

8345. The question referred to personal punishment on the person ordering the goods here; whether you do not think that the fear of personal punishment would deter such a person from ordering the goods?—Of course it would, if he is a respectable man.

8346. There would be no smuggling if there were not persons of that description who ordered the smuggled goods?—Certainly not.

8347. Those are the employers of the smugglers?—Exactly so.

8348. Therefore the way to prevent smuggling would be to discover some means of

of deterring persons from ordering the smuggled goods?—Yes, that may be one way, or another would be to impose such duties as would remove the temptation of the smuggler to engage in the trade.

8349. Do you think that any regulation about stamping would be effectual in the prevention of smuggling?—I cannot say; a stamp might be imitated, and they could stamp them any where, if they knew what the stamp was.

8350. Have you ever heard of the plan of stamping by a letter to be changed every day, indeed two or three times during one entry?—No, I have not.

8351. If the smuggler was subject to such a punishment as has been alluded to, is it likely that English houses of large capital would continue to carry on the trade?—I must leave that to the feelings of others; I know I should not engage in it myself; it depends entirely on the feelings of parties, and their views of the matter.

8352. Do not you think it would tend much to prevent smuggling?—I think it might, in some instances.

Mr.
Emile Menetrier.

6 June,
1832.

Veneris, 8^o die Junii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. John Ballance, called in; and Examined.

8353. ARE you concerned in the silk trade?—I am a silk manufacturer; I wish in the evidence I am about to give, to confine myself as strictly as possible to show the operation upon the interests of the silk trade, of the change of the laws of 1824, agreeably to the Resolution of the House of Commons, appointing a Select Committee, &c. &c.

Mr.
John Ballance.

8 June,
1832.

8354. Where do you carry on your manufacture?—In Spitalfields.

8355. How long have you been engaged in the trade?—Twenty-six years myself; my father, who is still with me, has been in it 60 years.

8356. Will you inform the Committee what was the condition of the silk manufacture in Spitalfields, before the year 1826?—It was a growing and a prosperous trade.

8357. How do you show this?—I show it in two ways, from the Custom House returns of raw silk, and from the rate of wages paid to the artisan for working up that silk; those returns trebled in 10 years previous to the opening of the ports, and the wages were such as enabled the artisan to live, without any dependence upon parish allowance. In the statement in my hand I have given averages of two years, for this reason, the importation of one year would hardly show the consumption of that year, and it often happens that the importation of one year forms part of the consumption of another.

“Custom House Returns of RAW SILK, between the years 1816 and 1825 inclusive, reckoning the average of two years, and exclusive of waste, knubs and husks, showing the increase per cent.

1816	}			lbs. 1,108,247	
1817	}				
1818	}				
1819	}			1,445,489	30 per cent.
1820	}				
1821	}			1,743,008	57 per cent.
1822	}				
1823	}			2,022,702	83 per cent.
1824	}				
1825	}			3,131,513	180 per cent.”

I select those 10 years because they were 10 years of peace on the Continent, when it is very evident our intercourse was much freer than during a season of warfare, and therefore, if smuggling were carried on to any extent it would have been likely to be carried on to a greater extent during the time of peace than that of warfare. Then as it regards the wages for working up this raw material the wages in Spitalfields, upon plain goods, averaged from 15s. to 16s. per week the year round from 1816 to 1826; I speak of nett wages to the workman. As it

Mr.
John Ballance.

8 June,
1832.

regards fancy silks it is difficult to form an average; the average given to me, from a large fancy house, during that period, upon ordinary fancy goods, would be from 20s. to 25s.; I give this as the average of wages, not only for Spitalfields during that time. The accounts from Macclesfield, where silk goods were then manufactured, will exhibit a similar rate of wages; Manchester the same; of course I can speak to these only as the accounts were tendered to me.

8358. When you mention a similar rate of wages, do you mean a similar rate in proportion, or an exact similarity?—Varying perhaps from 1s. to 1s. 6d. a week; I suspect, as it regards fancy silks, the averages must be very general; but it is more strict with regard to plain goods, which vary less.

8359. The statement you have made as to wages applies to what you yourself gave, and what you believe to have been the wages given by others?—Just so, in fact we all paid the same price. I exhibit these Custom House returns in proof of the growing state of the trade during that period. I exhibit the wages given to the artisan in proof of its prosperity, and I take both in combination when I say that during those ten years it was a growing and prosperous trade.

8360. There were periods of distress in the silk manufactory prior to the year 1826, were there not?—Yes; but there are only two periods worthy of notice; the one in 1792 and the other in 1816, or running into part of 1817.

8361. Do you know the causes and the extent of distress at the periods referred to?—I well recollect the distress in 1792, that lasted for six months; from the autumn of 1792 to the spring of 1793, there were I believe about 4,000 looms out of work at that period, I say about, speaking in round numbers; the distress arose from a new article coming into general wear, that of printed cottons, which for a time displaced silk. The trade revived in the spring of that year; I am not aware of any distress, strictly speaking, of the silk trade, between that period and the latter period to which I have referred. Then in 1816 or the beginning of 1817, I beg to remark that was not a distress so much of the silk trade as a distress of the district in which the silk trade was carried on, that arose from a transition from war to peace; the disbanding of the army and navy threw a number of loose hands upon that district, which could not find immediate employment; the distress was equally felt in other branches of business, bricklayers, carpenters, and other descriptions of trades carried on there. There were very few weavers out of employment.

8362. Was smuggling carried on to any great extent under the prohibitory laws, as compared with what it has been since?—It was not. Smuggling was then confined to the coast; silks were brought in by stealth, in small quantities; there was great concealment practised; now since the ports have been opened, there has been what I call a regular wholesale trade in smuggling, and it is done openly and without disguise.

8363. What were the principal inducements to smuggling under the foreign system?—I consider that the chief inducement to smuggling, at that time, was the very high duties on the raw material, which gave a fictitious value to English manufactures, to which if you were to add wages paid, and, speaking in round numbers, I suspect there might be as much as from 70 per cent. difference between English and Foreign silks: the temptation, therefore, was great, on account of the relative difference in price; had the difference been less, I feel quite satisfied that under the law of prohibition there would have been scarcely any smuggling.

8364. What is the present condition of the silk manufacturer of Spitalfields?—I would, in speaking of the present, be understood to speak of the last nine or ten months; there has been great distress in this district; it is computed that there are about 16,000 looms in the district of Spitalfields; from five to 6,000 of those looms have been standing still for more than six months, taking the average from the latter end of September to the middle of April. I beg to add, that in the beginning of April there were three districts in the parish of Bethnal Green, visited house by house; the one known to be a very distressed district for want of work, another not so much distressed, and the other between both: in the distressed district, I think out of 500 looms visited, there were about 200 without work.

8365. What do you state to have been the duration of the distress?—This distress began in 1826, and lasted six months; it returned in 1828, and continued through the greater part of 1829; it has, however, been more severe this last winter than at the two former periods; I link these together, because the distress in each period was identically of the same character.

8366. What

Mr.
John Ballance.

8 June,
1832.

8366. What are the principal features of the distress?—A miserably reduced rate of wages, and great scarcity of employment.

8367. When was the price of labour reduced, and in what proportion?—From July 1826 to July 1829 it fell about 20 per cent.; from July 1829 to 1832 it has fallen about 20 per cent. more, making together 38 to 40 per cent. or thereabout, from 1826.

8368. How do you account for the price of labour falling in 1829, and continuing to fall to 1832?—The protecting duty of 15*s.* upon foreign-wrought silks was reduced, in July 1829, to 11*s.* and labour fell in consequence.

8369. What do you apprehend was the intention of Parliament in lowering the duties?—To prevent smuggling. That appears from a conversation I had with the then President of the Board of Trade, Mr. Vesey Fitzgerald; he told me—"We have received letters from Calais, stating that goods had been smuggled into this country at from 25 to about 28 per cent., if we reduce the duty to 25 per cent. we shall crush the smuggler;" and that was the reason the right honourable gentleman assigned for reducing the duty.

8370. Do you think the manufacturer has been benefited in any respect by the lowering of the duties?—No; the smuggler immediately lowered his price, and smuggling has been carried on to a greater extent than it was before; I need no further proof that the smuggler has lowered his price than the evidence before this Committee, which has stated it to be from 15 to 20 per cent.

8371. What are the present average weekly earnings of weavers?—The present average, if my weavers are to be taken as a sample, and I am inclined to think I pay rather more than others; in fact, I pay seven-pence a yard for making gros de Naples, and it has been given in here at six-pence halfpenny; I should think the average is from 9*s.* to 10*s.* per week for plain goods nett, taking it for the year round.

8372. Do you refer to the earnings of both sexes?—Yes, including men and women.

8373. This you state to be the average of the wages you yourself pay, notwithstanding you pay more than the general average?—Yes; when I say the year round, I mean that is what I pay the persons the year round, out of which they have got their own incidentals to pay; I am speaking of wages that go from our house to them, out of which they have to pay for twisting in, turning on, and incidentals; this 9*s.* does not exclude, but includes those incidentals. I submit, in proof of the reduction of wages, a calculation of wages paid to my weavers on 5,000 lbs. weight of silk worked up in each year from 1816 to 1831 taken from our own books; these are wages paid to weavers only, not warpers and winders.

" Lbs. 5,000 of Silk in 1816 cost weaving	-	-	-	£. 3,362
5,000 - ditto 1817	-	-	-	3,273
5,000 - ditto 1818	-	-	-	3,356
5,000 - ditto 1819	-	-	-	3,357
5,000 - ditto 1820	-	-	-	3,390
5,000 - ditto 1821	-	-	-	3,256
5,000 - ditto 1822	-	-	-	3,253
5,000 - ditto 1823	-	-	-	3,304
5,000 - ditto 1824	-	-	-	3,290
5,000 - ditto 1825	-	-	-	3,170
5,000 - ditto 1826	-	-	-	3,146
5,000 - ditto 1827	-	-	-	2,842
5,000 - ditto 1828	-	-	-	2,480
5,000 - ditto 1829	-	-	-	2,267
5,000 - ditto 1830	-	-	-	2,214
5,000 - ditto 1831	-	-	-	1,944

8374. You have spoken of the reduction of wages consequent, in your opinion, on the state of the law, do you know the state of the parishes comprising the district commonly called Spitalfields?—I do; an account was taken in the beginning of March, of which the following are the particulars: in the district called Spitalfields there are included three parishes, St. Matthew Bethnal Green, Christchurch Spitalfields and Mile End New Town; previous to the appointment of this Select Committee we obtained from the parish officers the statement I will now read;

Mr.
John Ballance.

8 June,
1832.

"STATE of the THREE PARISHES of Saint-Matthew Bethnal Green, Christchurch Spitalfields and Mile End New Town, comprising the District called Spitalfields, taken from the Parish Accounts in February 1832 :

	Poor in the Workhouse.	Out-door Poor.
Bethnal Green	1,100	6,142
Christchurch	460	418
Mile End New Town	161	552
TOTAL	1,721	7,112

Bethnal Green in 1825 had no debt.
in 1832 is in debt £. 13,000.
in 1825 Poor's Rate 2s. in the Pound.
in 1832 - ditto - 4s. ditto."

I beg to add the rate cannot be higher, if they increase the rate they bring the poor into the house.

Christchurch in 1825 was in debt £. 928.
in 1832 is in debt 2,902.
Mile End New Town in 1825 was in debt 748.
in 1832 is in debt 1,414.
in 1825, Poor's Rates 2s. in the Pound.
in 1832 - ditto - 6s. - ditto."

8375. How did you become possessed of this document?—About a week before the debate came on on the 1st of March, the committee sitting at Weavers' Hall sent circulars to the three parishes for information. This is an extract from the papers which they furnished to the committee.

8376. How were those papers furnished?—By the parish officers.

8377. Did you make that extract yourself?—I did.

8378. Were they signed by the parish officers?—Yes, that is an extract from papers signed by the parish officers; it must be very evident to the members of this Committee, that Bethnal Green exhibits a much larger account than Spitalfields and Mile End; if there be 16,000 looms in the district of Spitalfields, I apprehend it will be found that about 12,000 of those looms are located in the parish of Bethnal Green; the population of Bethnal Green is something about 60,000; giving three persons to a loom, we shall have very nearly 40,000 of that 60,000 directly engaged in the manufacture of silk, leaving the remaining 20,000 either for children or for persons that subsist by the earnings circulated among them. I therefore submit, that the Paper I am now about to produce, which is signed by the parish officers of Bethnal Green, will exhibit a sort of gauge, if I may so speak, of the condition of the silk trade in that parish; it is dated May 1832.

[The same was delivered in and read, as follows:]

SAINT MATTHEW BETHNAL GREEN.

AN ACCOUNT of the Number of POOR in the WORKHOUSE of this PARISH, and likewise the Number of CASUAL POOR (or those receiving Out-door Relief,) from the Year 1821 to the present period, averaging the allowance per Head, One Shilling and Sixpence weekly.

YEARS	Casual, or OUT-DOOR POOR.	NUMBER OF POOR in the House.
1821	157	498
1822	196	526
1823	223	632
1824	289	721
1825	326	588
1826	984	842
1827	638	956
1828	1,319	796
1829	2,487	1,092
1830	4,693	1,380
1831	4,958	1,013
1832	6,218	1,160

R. Entwistle,

Master of Workhouse.

May 1832.
